ORNITHOLOGY and Lucien Buonaparte's American Ornithology, Vol. IV. edited by Professor Jameson, is the last-published portion of this long-continued and well-conducted Miscellany. The original work is so highly prized, that we need say nothing to commend this neat and cheap reprint of it.

The Waverley Novels, Vol. XXVIII. Power of the Peak, Vol. L. Edinburgh, Gaddell.

WITH a preface explanatory of the origin of this novel, and several notes of considerable interest, the present is a pleasant continuation of the series. An appendix, too, contains a good deal of the genealogy of the family of Christian, which their descendant, the actual Deemster of Man, has thought necessary to redeem the realities of his ancestors from the stigma attached to them by fiction.

ORIGINAL CORRESPONDENCE.

VEGETABLE STRATA.

To the Editor of the Literary Gazette.

SIR,—You have mentioned in your last *Gazette* some interesting facts connected with the strata found in excavating near the Thames: but you seem not to be aware that along the whole of the eastern coast of the kingdom, and, I am inclined to believe, from such opportunities of observation as have occurred to me, at about the same level, there is found a stratum of vegetable deposit very similar to that which you have described as found in Bermondsey Street. How far inland this stratum has been discovered, I cannot tell: but along the coast of Norfolk and of Lincolnshire, to the mouth of the Humber, it may be seen, at intervals, in the sea-cliff, with occasionally more than 200 feet of superjacent clay and sand. In digging a canal, also, a few years since, to render the small river Ant navigable to this place, the same stratum, or a similar one, and at much the same level, was found, but with numerous large trees of different kinds, among which the oak was still quite sound. Numerous stags' horns were also dug out, together with one human skull, and one of some large animal of the ox kind, now deposited, I believe, in the museum at Norwich.

The hazel-nuts, also, were very perfect, and very abundant; and it is to a circumstance connected with these, that I wish to call the attention of your geological readers. All these nuts—and, indeed, all such as I have observed to be dug up elsewhere—had arrived at one and the same period of their growth; viz. that in which the kernel was not quite large enough to fill the shell. My inference from which is, that this stratum of vegetable remains, mixed with animal spoils, was not a gradual deposit, but the result of some single and overwhelming catastrophe, that took place at the present season of the year.—I am, sir, &c.

W. T. SPURDENS.*

North Wiltshire, August 21st, 1831.

* A little time since, I had occasion to remove some of the peat in Kingsdown; this I found to be about

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR SEPTEMBER.
 23^d 7^h 46^m—the autumnal equinox. The Earth in its circle round the Sun attains that point of its course wherein every part of its surface, from pole to pole, receives an equal proportion of the solar influence. After this period the arctic regions will gradually sink into the darkening gloom of their long and dreary night; and the northern nations of the globe have, in sure succession, the misty morn, the fleeting cloud, the moaning gale, the ice-bound stream, and the snowy mantle of winter. The Sun, verging towards the south, will daily contract his course and diminish his meridian height—his rising and setting occasionally diversified with a splendour peculiar to the autumnal season. During the long absence of the Sun, the atmosphere, refined by frost, will reveal the beautiful and unimaginable depths of ether, glowing with myriad stars, and those mysterious phenomena which lie far beyond, where the stars of Orion and their bright companions send forth their keen scintillations—

The blue Pacific of infinity,
 Gemm'd with the sacred islets of the skies—
 Each isle a world upon a sapphire sea,
 And every world, perchance, a paradise.

13^d—Mercury stationary. 25^d—in conjunc-

tion with Mars. 26^d 6^h—inferior conjunction with the Sun.
 17^d—Venus stationary near 63 Virginia.
 26^d—in conjunction with 53 Virginia. Towards the end of the month this planet will appear with a delicate crescent.
 24^d 3^h—Mars in conjunction with the Sun.

twenty feet thick, and to rest on a fine alluvial soil. On this alluvial soil it was evident that trees and bushes once grew—for their stumps were found standing in their natural position, with the roots sticking in the ground. Upon this soil, and beneath the peat, the workmen found fragments of pottery, similar in shape and texture to that which we find in the ruins of the wharves, wood which had been divided by some cutting instrument, and charcoal. With these remains was squared piece of bone, whereon was cut the word *APRIL*, which completely identified the remains to be Roman. The letters of the inscription are shaped like those which were in use during the latter period of the Roman empire. Another fact is this:—at Bartle, on a sandy ridge a little elevated above the adjoining moor, there are the remains of a Roman pottery: a part of the foundations of this ruin runs towards the peat, and is covered with it. While making the new cut for the River Brue, at eighteen feet below the present surface, the workmen found many fragments of Roman pottery. In none of these cases did the soil appear ever to have been disturbed; therefore these antique remains could not possibly have been buried in it: nor, in the first instance, can they be supposed to have sunk through the bog from their greater specific gravity, because the accompaniments, wood and charcoal, have not that property.

At whatever date it happened that this dry land was changed into a stagnant pool of water, (for such must the aquatic plants which compose the peat have grown in), it is evident that it was occasioned by a sudden, and not a gradual alteration; since the branches, their leaves, and fruits, remained together; also that it must have occurred in the middle of summer—for the nuts were half filled with kernel—a degree of ripeness they would attain about that period of the year.

It may be said, that had a catastrophe so widely extended as this is guessed to have been, happened during the Roman empire, it would have been recorded by their historians. Gibbon says, from the account of Ammianus: "That in the second year of the reigns of Valentinian and Valens, on the morning of the 21st July, 365, the greatest part of the Roman world was shaken by a violent earthquake. The impression was communicated to the waters. The shores of the Mediterranean were left dry by the sudden retreat of the sea: great quantities of fish were caught by hand, and large vessels were stranded in the mud. But the tide soon returned with the weight of an immense and irresistible deluge. Large boats were transported and lodged on the roofs of houses, or at two miles from the shore; the people, with their habitations, were swept away by the waters; and the city of Alexandria annually commemorated the fatal day, on which 80,000 persons lost their lives."

2^d—Uranus in conjunction with β Capricorn.

Telescopic Objects.—The following telescopic objects will be in favourable positions for observation during the month:—

In the girdle of Hercules, between two stars of the eighth magnitude, is a nebula round and bright in its centre; between the knee and left leg of Hercules is another beautiful nebula, 5' in diameter, surrounded with great nebosity; near α in the same constellation is another bright nebula:—each of these is resolvable into stars. In the breast of Hercules is a planetary nebula. α Herculis is a double star—the large star red, the small of a bluish-green colour. ζ Herculis is a double star—the large star bluish-white, and the small of a fine ash colour:—these stars revolve about their centre of gravity. δ Herculis is a double star.

Between γ and β Lyrae is a round mottled nebula. Near α Lyrae is a very faint and small star. ι Lyrae with a telescope of low power appears only double; with a higher power, each star is seen to be double: under peculiarly favourable circumstances, a fifth star is visible—constituting ι Lyrae a quintuple star. β Lyrae is a variable star:—period of variation, 6^d 3^h; maximum and minimum brightness, third and fifth magnitudes: it is also a variable star—three of the combinations are white; the fourth, of a red colour.

Beneath γ Cygni is a mass of seven or eight stars. Near 16 Cygni is a perfectly round planetary nebula, with a bright central point a little extended, like two points close to one another. Near 34 Cygni is a double star, with a faint milky ray united to it. ν Cygni is a triple star—the large star white, the others red. 61 Cygni is one of the most remarkable objects in the heavens; it is found to have a progressive motion, the nature of which is not yet satisfactorily explained—it is probably of the same class with ξ Ursae Majoris, which is found to complete a revolution in less than fifty-seven years.

Between ϵ and δ Cassiopeiae is a mass of stars. 6 Cassiopeiae disappears periodically. Near δ Cassiopeiae is a mass of stars, like a solid ball, mixed with nebosity.

In the right foot of Andromeda is a collection of nebulous stars. 14 Andromedae is a round, bright, well-defined, planetary disc, 15" in diameter. γ Andromedae is a double-double star, and one of the most beautiful objects in the heavens—the larger star is red, the smallest of a sky-blue colour. The nebula in the girdle of Andromeda is visible to the unassisted sight: it is of considerable extent—40' in length, by 15' in breadth; the centre has the appearance of the undefined disc of a comet.

Near β Persei is a bright star, from which proceeds two faint nebulous branches. ζ Persei is a beautiful triple star. Near δ Persei is a double star—the large star yellow, the small blue. The clusters of stars in the sword-handle of Perseus is one of the most splendid telescopic views in the heavens—when the atmosphere is very pure, it suggests the idea of a hemisphere of stars. In Perseus there are no fewer than eight nebulae.

Four and a half degrees due north of α Piscium, in a barren space near the feet of Arias, is a double star—the large star of an intense ruby colour, the small star green. ξ Piscium is a beautiful double star.

In the head of Aquarius is a nebulous star. α Capricorni is double to the unassisted sight; with the telescope each star will appear to be double. Above the shoulders of Capricornus are three nebulae, one of which exhibits a planetary disc. In this part of the heavens are the planets Jupiter and Uranus, the former of which is at all times an interesting telescopic object: a remarkable configuration will occur of his satellites, 28^d 8^h; only the fourth satellite will be visible—the first will be on the disc, and the second and third in the shadow of Jupiter. Uranus may be seen about 2° west of Jupiter, appearing like a star of the fifth magnitude with a bluish-white light. The asteroid Pallas may be traced from 28 Aquilae (a star in a branch of the Via Lactes) moving southward in the direction of δ Aquilae, a double star—it shines with a faint rosy tint.

Deftford.

LITERARY AND LEARNED.

ACTUAL STATE OF THE EXCAVATIONS AT POMPEII.

It is only for these few years back that the excavations of Pompeii have been carried on with any kind of regularity, though still with a degree of supineness that is extremely despairing to the curious. Pompeii was, with the town of Herculaneum, buried by an eruption of Vesuvius in 79, and discovered in 1760. The extent scarcely exceeds that of the garden and court of the Tuilleries, and the fifth part is hardly laid open, though it is more than a century since the labours of excavation have been carried on. Twenty men, at the most, are at present engaged in these excavations. We are indebted to M. Raoul Rochette for some details on their present condition, which were read at one of the meetings of the united four academies of the Institute. It appears that the labours are at present carried on with great care; attention is paid to the preservation of the frail walls and delicate pictures, and even a sieve is made use of, that no precious relic of antiquity may escape. At the same time precautions are taken for the preservation of the ancient habitations, by propping up the walls and giving new roofs to the houses; and some old places have been transformed into guard-houses, where some old soldiers ensure the safety of the ancient town. This extreme attention paid to objects of antiquity is common

throughout Italy; and more money is expended in repairing the Colosseum or the Forum of Trajan at Rome, than for the palace of the chancellor of the modern capital; and the temple of Vesta is supported by the friends of the apostolic chamber in a much better condition than ancient basilicums of the first Christians.

The street by which we enter Pompeii is called the street of Tombs, and was discovered in 1812. It is a kind of suburb, where half country and half urban habitations were formerly found, mingled with sepulchres. At present the habitations have generally disappeared. On four green hills, which have not yet been excavated, the tombs alone have remained untouched; they shew themselves isolated, and arranged in two parallel lines, most of them in a state of preservation that is really extraordinary; and men carved on little monuments of charming proportions, of beautiful workmanship, and exquisite taste, some elevated by steps, the others simple cenotaphs, altars, or chapels, almost all built of marble, which has lost nothing of its primitive polish or whiteness, shaded with young trees or old cypresses, which grow spontaneously among these ruins, form a picturesque and unexpected *coup-d'œil*.

The effect, on entering the town, is that of disappointment; it is not without trouble that we represent to ourselves the polished Greeks and powerful Romans walking through such narrow roads and living in such small houses. It is true that the inhabitants of Pompeii were neither Greeks nor Romans, but a little of one and the other, and that Pompeii was a provincial town; but, as at Rome itself, it does not appear that the houses or the furniture of the generality of citizens were in relation with the ideas which we figure to ourselves of the great names of Rome and of Romans.

An amphitheatre, two theatres, two places surrounded with porticoes, a forum, a basilicum, thermal baths, eight temples, and a great number of edifices, even on the small scale on which these constructions have been erected, the forum of Pompeii, three hundred and forty-four feet long by a hundred and seven broad, bordered with porticoes, surrounded with temples and public edifices, covered with marble or bronze statues, whose pedestals with honourable inscriptions have remained in the same condition.

Among the ancients every thing related to public life, and the private life was almost entirely sacrificed to the political life. Almost all the houses consist of one or more open courts, often surrounded with porticoes or colonnades, and round which apartments are disposed, but so small and so obscure, that we are astonished how people could have resided there. They scarcely afford room for a bronze bedstead, a lamp, and a seat of the same metal; so that it is very evident that the citizens of Pompeii only retired there for sleep, and that their life was principally passed in the forum or at the basilicum, in temples or at theatres. Their senate-house had a part called *atrium*, which may appear spacious, and which is also the best decorated of the house: friends, clients, &c. were received here; and in the same place were hung the portraits of their ancestors, and, in the absence of these monuments, they surrounded themselves with voluptuous, or agreeable, or sometimes philosophical illustrations.

The eruption of Vesuvius, which succeeded an earthquake whose effects had hardly been repaired when the city became buried under cinders for eighteen centuries, was attended with the most sudden and fatal effects: parts

of skeletons and human bones are found in almost all the private or public edifices which they have laid open; the number of victims that has been found already exceeds one hundred and seventy, in the fifth part of the ancient town. Pompeii lost much in the form and decoration of its edifices; all the houses had their tops destroyed, their roofs driven in, and the lower parts disfigured by the falling in of the upper stories; yet the brilliant aspect of the walls, and the magical effect of pictures which appear to have lost none of their original freshness, surpasses every expectation; and this is more particularly the case in the vicinity of the forum, where the excavations are at present carried on. Every thing is painted in Pompeii in conformity with the importance of every habitation and the destination of the apartment. The floor is paved with mosaic; and in seeing this profusion of colours, of stucco, of mosaic, and of painting, we should be almost tempted to inquire what became of the poor; and yet poor there must have been, even in a city so richly decorated; though the most miserable condition must have had its charm, in the midst of these magic colours and luxury of art.

WESTERN LITERARY AND SCIENTIFIC INSTITUTION.

On Thursday evening Dr. Wood delivered the first of two lectures on Moral Philosophy in the theatre of this Institution, Leicester Square. In a few well-written introductory observations, the lecturer stated that his intention was more to indicate the nature of the subject, and designate its relation to the other sciences, than to notice in detail every point embraced in the term "moral philosophy." He then, in very appropriate language, pointed out the connexion between mind and the senses, those "portals of the mind;" observing, that it was not at all probable, a proper understanding of the constitution of the former could ever be attained. The lecture throughout was listened to with great attention, and considering that it was not illustrated by any striking experiments, was calculated to make a useful impression on the understandings of his numerous auditors.

FINE ARTS.

NEW PUBLICATIONS.

New London Bridge, August 1, 1831. Sketched on stone by T. S. Cooper. Ackermann. THERE is no end to London Bridge! This is a gay coloured affair, of which the *coup-d'œil* is flashy enough; with, as the peep-shownmen say, "all the boats and barges sailing backwards and forwards upon the river."

The Battle of Palm Sunday (from the Fair Maid of Perth.) H. Andrews. London, Dickinson and Co.

A LITHOGRAPHIC embodying of the splendid description of the conflict on the North Inch. It is a work of mind, but the difficulty of representing such a scene to the eye is insurmountable.

Monument in Memory of the Princess Charlotte. Drawn by F. Mackenzie. Engraved by H. Winkles and W. Greatbatch.

THIS engraving, though only now published, is a print of the high feeling and affecting monument erected by Mr. Matthew Wyatt, in the chapel which he also designed, in St. George's, Windsor, to the memory of the Princess Charlotte. This tribute of a nation's regard continues to be the admiration of foreign

visitors, as well as a boast of British sculpture, and we are glad to see a representation of it from a sister art which may adorn the portfolio of every individual. It is ably engraved, and has a very touching interest.

Sketches in Italy. Drawn on Stone by W. Linton.

THE fifth Number of this superb work has just reached us, and contains, "Il Ponte della Trinità, Florence;" "Il Lago d'Orta;" "Convent of St. Scholastica;" "Nessi;" "Cavi;" "The Temples of Paestum;" "Subiaco;" and "The Convent of S. Cosimato, at Vico-Varo." Independently of the variety and interest of its subjects, this publication evidently advances in depth of tone, brilliancy of effect, and powers of execution. In examples like these, lithography appears to have reached a climax beyond that which could have been calculated upon.

Paganini: on Stone. By H. T. Bulmer.

THIS is a vivid and striking likeness of the god of the bow. It is full of character, and altogether a fine production. The caricatures of Paganini must bow before it.

Part II. completing a Series of Coloured Views of the Liverpool and Manchester Railway. From Drawings by Mr. T. T. Bury. Ackermann.

SIX Views, completing the series, and certainly superior, both in execution and in interest, to those which appeared in the First Part. The representation of Parkside, where the unfortunate accident happened to Mr. Huskisson, excites melancholy recollections. At the present critical moment it is impossible not to feel deeply the loss which the country has sustained from the sudden deprivation of so able a public man.

Views in the Mauritius or Isle of France.

No. 3. Carpenter and Son.

OF the four Views of which this Number consists, "Baie du Tombeau" is the most remarkable and picturesque.

The Watering Places of Great Britain.

Part 4. Hinton.

"TORQUAY," "DOVER," and "Rottingdean," are the embellishments of the fourth Part of this pleasing publication.

SKETCHES OF SOCIETY.

A NEW VIEW!

Unappreciated Excellence; or, an Article on "Miscellaneous Poems" and "Political Pamphlets."

"I summon ye, from silence and from shade!"

THERE are two great motives which stimulate men to action—the desire of praise, and the desire of reward: it would be difficult to say which is the most powerful of the two; but to one or other of these, or sometimes to a mixture of both, may all human acts be traced. Unfortunately—and this puts one out in an argument—there never yet was rule so general as not to admit of an exception; and two large classes there are at this moment certainly unactuated by the two stimulants to which we have referred exertion. There are two opposite sets of writers, who are influenced neither by hope of praise nor by love of gain: we allude to the authors of political pamphlets and miscellaneous poems. Their pages are neither purchased nor perused. The individual who ever bought a political pamphlet, or read a volume of miscellaneous poems, would be shewn

about for a show—a wonder exhibited at a shilling a-head, and sixpence for servants and children. The pamphleteer and the poet have nothing in common—one being composed of facts, the other of fancies; and yet the line of conduct is the same in both. What motive can actuate them—the Courtiers of literature thus leaping into the gulf of oblivion—and for what? At first we thought there might be a little lurking vanity; for when the poet wrote—

"None without hope e'er loved the brightest fair—
But love will hope where reason would despair."

we always felt convinced he meant self-love, and literary self-love in particular. But there are some things, like Lord —'s disinterestedness, or Mr. —'s religious fervour—too impossible to be believed. Yet even the very writers themselves must admit, that the only inscription fit for their booksellers' shelves would be the one which Dante describes as being written over the gates of hell—

"Here hope comes not."

It is very much the fashion to talk of authors as an ill-used, ill-requited, unhappy race—from Molière's

"Pégase est un cheval
Qui mène les grands hommes à l'hôpital,"
down to Lord Byron's

"Hard is his fate on whom the public gaze
Is fixed for ever to detract or praise;
Repose denies her requiem to his name,
And folly loves the martyrdom of fame;"

or to Moore's

"In the woods of the North there are insects that prey
On the brains of the elk to his very last sigh;
Oh, Genius! thy patrons, more cruel than they,
First feed on thy brains, and then leave thee to die."

These are great names against our own peculiar opinions; and we all know that a great name is like the sun—it dazzles one's sight; yet, in spite of these "most high authorities," we consider authors a very fortunate race. They have the pleasure of seeing themselves in print—a pleasure only to be estimated by those who have enjoyed it. To see one's mental self in print is like seeing one's bodily self in the mirror; and the letters are so many looking-glasses, reflecting the attitudes of our mind. They have proof-sheets too, and proof-sheets are as good as love-letters. Then comes the enjoyment of being reviewed. Good, bad, or indifferent, a review has something satisfactory in it to its object—if it praise, there is the delight of belief; if it censure, there is the luxury of complaint; and, let us tell you, that newspapers are interesting when you have always a latent hope that they will contain something about yourself. Then there is, to use the modern phrase, "lionisation,"—a custom, however, derived from the ancients. What was the name of the Scythian who came from his deserts to have a good stare at Plato? Now, it rounds a phrase very prettily for popular authors to declaim about the heartlessness of society, the want of feeling, and the waste of time—to say nothing of the gentle insinuation of their being superior to such low flattery: but though we do not deny, you will permit us to doubt. Half our fine feelings originate in fine phrases; and indifference sounds well in a period. Vanity is the true alchemy which extracts its gold from the most worthless materials; and we must again say, we doubt whether the small flatteries, the "Who is she, or he?" the curiosities, and the introductions, are not, to use an American phrase, "so awfully despicable after all." But what part have the two unknown classes we now commiserate—what part have they in the very smallest of these pleasures? who has any curi-

osity to see the author of a pamphlet? or who asks to be introduced to the author of a volume of miscellaneous poems? They may take up reviews for ever, and newspapers till doomsday; but their works will be like the statue of Isis, whose veil mortal hand hath never yet raised; or, to repeat the assertion with which we commenced, that no rule is without an exception, a pamphleteer may take up a review and see the title of his work at the head of an article, from which, however, all mention of its contents is carefully excluded; while the author of a volume of miscellaneous poetry may see a quotation in a newspaper, accompanied with a wonder at his folly, and a sneer at his trash—small encouragement, in either case, for these "written troubles of the brain." We perfectly understand why we ourselves are writing about them:—to be very candid, our motive is ostentation. We are all proud of uncommon actions; and we quite pique ourselves on the seventy-two pamphlets and the fifty-nine poetical volumes we have just read—we feel all the pride of a traveller who has penetrated into unknown countries—

"Where never human foot before had trod."

We have traversed the Africa of the literary world, and we put forth our discoveries in the spirit of a Bruce or a Clapperton. But though we understand our own motive for writing about them, we are not a bit nearer their motives for writing at all; these, like Sir —'s principles, or Mr. —'s meaning, must remain mysteries—no one has ever yet ascertained what they are. Were a parallel to be instituted between the poets and the pamphleteers, the balance would be greatly in favour of the latter. Self-deception is the moral principle most developed in poetry; while invention, imagination, simile, and metaphor, have gone over—like deities abandoning an ungrateful country, or rats deserting a falling house—to the once drier and didactic ranks of politics. Allow us to explain why we use two images—the one of the deities has *l'air noble*, and may persuade; the other is common and actual, and therefore may convince.

We shall dismiss the miscellaneous poems first: verily they have been the sandy deserts of our way. It was a belief among the ancients, that mental blindness was a curse from the gods on those whom they predestined to destruction. The fate must surely be sealed of the writers of such passages as the following. A Mr. Henry Martin states, that

"Before the glance of beauty's eye
Trouble and pain the bosom fly;
And what mere mortal can withstand
The gentle squeeze of beauty's hand?"

We own we scarcely consider the last line "quite correct;" but, Young Ladies, we quote it as an example to be shunned—not a pattern to be followed. From Mr. D. Corkindale's *Sketches of Genius*, we select Lines to . . . We quote the verse on the same principle as we ask a riddle—to see if its meaning can be found out.

"When cold is now my darling's heart,
Whose throb was rapture's spell to thee,
Dear lady, aged as thou art,
O! thou art all to me."

From *Russet Rhymes* we take one verse: we beg to submit the resolution it contains to all unpopular members about to address their constituents:—

"Their hints may not be slighted—
Less hard I'll screw my pegs;
They else, as they one night did,
May poke me with eggs."

We will proceed with Mr. T. Cornish, a gentleman of most energetic and poetic patriot-

ism: he dedicates to "his country," and to his "king he tenders an undivided allegiance," and our modern Tyrtaeus sets out by declaring,

"I sing the tree of liberty:
Believe me, 'tis no joke, &c."

Least we should make it one, we go on to a "fashionable melody:" one verse will suffice:

"I go, I go, to drive dull care
Away from this crazy head;
I go—yes, I'll go every where,
By fashion still I'm led!"

We continue with a most pathetic farewell:—

"So, Rosa, kiss me ere I rove:—
One smack—ah! that was well done!
Adieu, sweet girl! my only love—
I'll think of thee—in London."

We can only find room for two lines from Mrs. Thomas's *Serious Poems*. They were written on the death of a lovely infant, who was born with a tooth.

"This little tooth was thine, 'twas born with thee,
Which, being rare, is a curiosity."

We leave Mr. D. Moore to the "broom," which, as he kindly informs us, "makes love upon the bosom of the sea." Mr. William Bennet may continue his meditations on—

"How pleasant to think that my bridal is nigh;"

or he can linger with the

"Wife of my friend, at thy piano sitting:"

or he may stay with the flower which a young maiden gave an acquaintance of his; of which he thus sings:—

"This evening, at tea,
I'd the pleasure to see
It fresh in the window as ever."

And of the remainder of the small volumes now piled up beside us, we can only quote Wordsworth, and say—

"There are forty footing like one."

We now proceed to make good our assertion, that more of invention, imagination, &c. &c., and all poetical requisites, are to be found in the pamphlets than in the poems. In good truth, these pamphleteers may be divided into two classes;—the followers of Coleridge, and the followers of Wordsworth. The anti-reformer exclaims, in the language of the first—

"I see with boding heart the near approach
Of an ill-starred, unblest catastrophe.
For of the wholly common man is made
And custom is his nurse! Woe, then, to them
Who have furnished hands upon his old
House furniture, the dear inheritance
From his forefathers! For time consecrates
And what is gray with age becomes religion."

In this spirit writes the author of a *Letter to a Friend*. "As a corollary to this state of things, it is not difficult to foresee that democratic anarchy will succeed; which, again, after rivers of blood have flowed through the land, and a universal desolation swept over its remotest corners, will yield, in its turn, to an iron military despotism." The reformers, on the contrary, take their motto from Wordsworth, and say—

"Of old things all are over-old;
Of good things none are good enough;
We'll help to show that we can frame
A world of other stuff!"

or, to quote the words of a *Letter to Lord Althorp*; the writer says of reform:—"From that most important measure, I should expect to find such a mass of intelligence and energy thrown into public affairs, as would speedily carry the country out of its present difficulties, and enable us as a nation to spring again into fresh manhood." It is quite delightful to a person of a domestic way of thinking, &c. one who considers contradiction to be the essence of mental development, that so much may be said on both sides of the question. There is also a pleasant diversity between Mr. Foster, author of *England's Liberty and Prosperity*,

and the author of the *Question of Reform Considered*. The first apostrophises "the old times of British hospitality, when the landlord had always good cheer for the tenant on festive days; and when the peasantry were happy, because their rights were respected, their hearts united, and their cares and troubles solaced by a religion taught to every child as soon as it could lisp, by a kind and fatherly priesthood: when cowardice and pride had not sapped the virtue of the wealthy, nor its re-action appeared in the vulgar insolence, insubordination, and discontent, of the poor." Now for the other side:—"To praise antiquity, and to extol the superiority of former times, is a natural, and it is a useful tendency of the human mind. If it were possible, by plunging into the dark abyss of time, to retrieve some lost model of political wisdom; which we knew had once existed, the success might reward the hazard of the attempt. But is there any rational ground to believe that such a thing ever was?—or that by going back to the dust and cobwebs of ancient records, we are likely to recover it?" We own we agree with the last opinion. Though Goldsmith asserts, that

"A time there was, ere England's griefs began,
When every rood of ground maintained its man,"

we never could ascertain when that time existed. Certainly not in the present day; Goldsmith witnesses that it was not in his time; to go back a little further, it was not co-existent with the civil wars of the times of the Stuarts, nor during the religious persecutions and risings under the Tudors; still less during the wars of York and Lancaster, or under the Plantagenets, when the English were treated as conquered enemies. The Saxons must have found the Danes a "perpetual grief;" they themselves were but invaders: the ancient Britons had to fight with, and succumb to, the Romans;—so that if a time ever did exist "ere England's griefs began," it must have been in her antediluvian days; and of these, most unfortunately, we have no record. We are sorry we have not room for the allegory of the horse-chestnuts, in "the papers picked up, at sea." The said horse-chestnuts pass for money; would to Heaven they did, and that we had an avenue in full bearing! But we cannot omit a "Free-born Briton's" idea of a Christian duty. He says—and to this we do not object—that "if any man offer violence to my person, or to my dwelling-house, I am a man who would quietly draw a pistol from my pocket, and shoot him on the spot;" but to this he puts a note, stating, "This is a Christian duty." But we must confess we are most amused by a threat held out in *An Address from a Mr. William Hussey to the Men of Hawk-hurst, in Kent*. After having set forth the fatal and inevitable consequences of their late riotous conduct, he puts the climax to denunciation by the following threat:—"For myself, I tell you that I am already thinking of one day quitting a country where I have been surrounded by such scenes: I do not say I shall go, but I am thinking about it." Next we come to a *Letter to the People of England*, whose self-appreciation is magnificent. Two shillings for four pages of ill printed and wretched paper! Why, my good sir, (the author,) two shillings would now-a-days pile a whole shelf with books. By its side we place an epistle to Mr. Jeffrey, *Lord Advocate of Scotland*. The writer dwells on the intellect which the *Edinburgh Review* has disseminated, and gives to the ex-editor the gratifying assurance that it has formed even "the mind which now addresses him." But, as the Greek sage

most wisely admonishes, *μὴν ἄνθρωπος*—which being put into English, means, that even in this world it is possible to have enough,—we shall proceed to a quotation from Mr. Charles Buller's pamphlet on reform: "I will not deny, indeed, that the notions of history entertained by some of those who talk of past periods of good government, and call for a restoration of parliamentary purity, are somewhat confused; that a hundred errors prevail among those who think and speak on this subject, as on every other on which nonsense is engendered by human reflection and discussion."

We may leave off here—for this paragraph is delightfully descriptive of the efforts of human reflection and discussion: and both time and space, those autocrats of life and periodicals, forbid further development of these unappreciated performances. Now we must say, works that can never hope to be bound, or published in family libraries, ought to be very thankful for what Mr. Galt calls the "amber immortalisation" of an article in the *Literary Gazette*.

DRAMA.

HAYMARKET.

ON Wednesday evening was performed the comedy of the *Road to Ruin*; and we must say we consider the character of *Old Dorniton*, as played by Mr. Farren, a great comfort to those who lament over the decline of histrionic talent. *Old Dorniton* is not merely a rich citizen and a fond father, but a character which, for truth and originality, has few equals in dramatic delineation. He is a man to whom credit is another word for morality, and whose very existence is routine; all the tenderness and energy of whose nature have found vent in affection for an only child: he has to forgive the yielding to temptation, for which his own experience furnishes no allowance, because it furnishes no parallel—and he has to excuse extravagance, which flings away in a moment what it has cost him years to accumulate—and his parental love is placed in opposition equally to his habits, opinions, and principles. Such is the moral outline which Farren so exquisitely fills up. He looks so respectable; a man to whom a dishonoured bill would be somewhat between murder and sacrilege; the powdered curls of whose wig and whose actions are equally regular. Accustomed to see him in characters of dry *brusque* humour, we were hardly prepared for the touching pathos he threw into the kind old merchant. After having, in conformity with his sterner resolution, and his partner's advice, parted for the first time in their lives from his son in anger, on which the sun had gone down, the manner in which he returned to say, "Harry, good night," was one of those affecting things it is impossible to describe. But the whole part was eloquent with these slight touches. Farren's performance of the elder *Dorniton* is a fine contrast to his *General Lumleigh*; it is scarcely possible to believe the same person can represent individuals so utterly opposed. The general, with his air of high and military breeding, his erect figure, his violent temper, his love for, and his pride in, his son, whom he nevertheless deems it proper to abuse;—*Old Dorniton*, not exactly gentlemanlike, but, as we said before, respectable, with the stoop contracted at the back, and a manner overflowing with native kindness; and both characters so fine, so entirely finished, that actor must be first-rate who performs them both as

Farren does. He was supported with spirit. ~~Vining made the serious parts very effective;~~ the lighter ones are rather laboured; but a "gentleman" is a difficult part to play in real life, particularly if he is to be lively. Miss Sydney made her first appearance in *Sophia*, which we prefer much to her *Amelia* in the *School for Coquettes*: she is utterly unfitted for sorrow or sentiment; but she has a very pretty figure, a foot and ankle which ought to turn the head of any youth under five-and-twenty, and a face which has no expression but that of vivacity; even the other night, as *Sophia*, she looked more inclined to laugh than to cry at the loss of her lover. Harley, as *Goldfinch*, over-acted his part at first; buffoonery may be too much of a good thing. Messrs. *Silky* and *Sulky* were respectably sustained by Messrs. Gattie and Webster; and Mrs. Glover was, as usual, the most natural of actresses: we have only one fault, her dresses were ludicrously shabby for the rich and extravagant widow. *My Wife or My Place* increases in attraction. Farren at the *carté* table is amusement enough for one piece. *No Song, no Supper, followed*, and nothing could well be worse; certainly there was no song; that is to say, if singing constitutes a song.

ENGLISH OPERA, ADELPHI.

THE *Picturesque*, an agreeable little piece by Mr. Haynes Bayly, and with pretty music by Barnett, was brought out here successfully on Thursday. The English Opera keeps up the character of its management by continual novelty and merit. Our charming little friend Regondi, also, with his guitar, has followed the English Paganini at this theatre, and won great applause.

VARIETIES.

French Academy.—At a sitting of the French Academy on the 9th inst. M. Montyon's prizes for virtue, eloquence, and poetry, were adjudged, if we may believe the caustic remarks of some of the Parisian journals, very unsatisfactorily. The Academy has offered two prizes for 1832; the first for the best Dissertation on the Operation of the Laws on Morals; the second for the best French Tragedy.

New Statues.—The statue of Mr. Pitt, by Chantrey, has been opened to view in Hanover Square; that of Mr. Canning, by Westmacott, in Palace Yard, is not yet upon its pedestal.

Paganini.—The best description we have heard or seen of this extraordinary musician's performance is in the *Last of the Mohicans*. Mr. Cooper gives the following account of an Indian war song. "The notes were in the extremes of human sounds; being sometimes melancholy and exquisitely plaintive, even rivaling the melody of birds, and then, by sudden and startling transitions, causing the auditors to tremble by their depth and energy."

Artillery: New Invention.—A custom-house officer at Milan, of the name of Console, has invented a machine which entirely supercedes, in the artillery, the matches, &c. necessary for the discharge of cannon; and does the same service in all weathers, by night or by day, and at the same time precludes all the dangers to which men loading guns are frequently exposed in the field, from too great haste or carelessness in the use of those burning substances. It has the advantage that the enemy perceive nothing till the piece is discharged, that the firing is more rapid, (one shot every four seconds); and, what is peculiarly worthy of attention, the saving of expense, in comparison with

other modes of firing, is very great. The machine consists of an iron cylinder, within which there is a ramrod; which being drawn and pressing on a case, or cap, in front, with fulminating powder, recoils with great force, and thus effects the discharge of the piece. The importance and the ingenuity of the contrivance are in the case. The secret is known to nobody, and the inventor will not disclose it till his improvement is adopted by the artillery in general. The machine is so light, that one man can use it without inconvenience like a common ramrod; at the same time it is so durable that 5000 shot may be fired in succession without weakening its power. The experiments fully satisfied all those who witnessed them.—*Foreign Journal.*

China.—“The present empress mother is not the parent of the reigning prince, though she has two sons, who at the death of their father were more than twenty years of age. These are superior in personal appearance to the emperor, who is thin and toothless; and the youngest of them is tolerably well educated; but the eldest is a drunkard. The second is also extremely immoral, and fond of plays, for which purpose he entertains a number of young companions. Though the emperor, their father, united in his own person all the vices of these his sons, he preferred his present majesty for a successor, as being the most virtuous. Some, however, attribute this preference to the good conduct evinced by Taou-kwang in the rebellion of 1813, when with an arquebuse he slew two or three of the rebels, and intimidated the remainder, who had already penetrated within the precincts of the palace; for which he obtained due eulogies from his father in the public decrees.”—*Padre Serra's Notices of China, in Trans. of Asiatic Society.*

The Reguli, or Nobles of China, are “allowed 100 pieces when they marry, and 120 for a funeral; from which they take occasion to maltreat their wives, because when one dies they receive the allowance for her interment, and the dowry of the second wife, whom they take immediately!”—*Id.*

Concubines and Servants of the Palace.—“Every third year the emperor takes a review of such of the daughters of Tartar officers and men of rank as may have reached the age of twelve (twenty years ago, the daughters of all the Tartars living about the court were reviewed); and from among these, of all whose families he is reputed the common father, he chooses wives or concubines. Those who are not chosen at the third review, become exempt. The servants, who amount to about 5000, are chosen from the three tribes; the girls of fourteen present themselves at a review taken by the emperor annually; and those who after the third review remain unchosen, are exempt. Those who have been selected are restored to liberty when they have reached the twenty-fifth year of their age, unless the emperor shall have had children by any of them, in which case he disposes of them as he pleases, making them illegal concubines; the legal, those acknowledged by the observatory, being only seven. Hence the late emperor, when contragulated by his father-in-law on the birth of a son (born of a servant), banished him with a nominal appointment. The present monarch refused to recall one of these servants who had been expelled with public disgrace when pregnant, through the jealousy of a favourite concubine; but at length, being apprised a second time by the magistrate that she had given birth to a son, he ordered her to be admitted into the palace with her child.”—*Id.*

Russia: Petersburg.—De L. Eschscholtz, Professor of Anatomy in the University of Dorpat, who twice went round the world with Captain Kotzebue, as naturalist, died in May last, at the early age of 37.

Allan Cunningham.—The old saying, that a prophet is never honoured in his own country, has found an exception in the person of Allan Cunningham, on a recent visit which he paid to his native county, Dumfriesshire. We observe, from the *Dumfries Courier*, so ably edited by a brother author, Mr. Macdiarmid, that a public welcome dinner was given on the occasion, at which Mr. Macdiarmid presided, and which was attended by about sixty of the neighbouring gentry and principal townspeople of Dumfries. The toasts, and compliments paid, must have been very gratifying to the meritorious individual, as a tribute to whose talents and worth the meeting was “convened;” the freedom of Dumfries was presented to him, and the day was spent in much social harmony.

Steamers.—Captain Basil Hall has published a very sensible letter in the newspapers, in which, by pointing out a way for elevating the steersman, and an improvement in the mode of steering, many of the accidents which constantly occur from the present navigation of steam-boats would easily be avoided.

Pimlico Palace.—Report says that Mr. Blore, the architectural draughtsman and architect, is to have 75,000*l.* placed at his disposal as the expense of rendering the palace habitable.

Hassuna D'Ghies.—This individual, who was suspected by some of our contemporaries of being implicated in the disappearance of Major Laing's papers, has arrived in London, and challenges inquiry.

Apologue of Saadi.—Two friends went into a garden of roses; both enjoyed the fragrance; but one, as he departed, filled his bosom with the leaves, and for days afterwards both he and his family rejoiced in their odour. Which of these two spent the summer-day most wisely?

The Lyonsese.—“I do not recollect having seen, in any of the manufacturing towns of England, so much to remind one of the fatal vicissitudes of trade, in the spectacles of poverty and wretchedness that every moment presented themselves; and it struck me, that, among the lower orders of this city, there seemed to exist, in a remarkable degree, the elements of turbulence and civil commotion. The look, air, and expression of the unemployed workman of Lyons, has nothing in it of uncomplaining suifrance. He carries an air of defiance in his countenance; and solicits alms in the manner of one who thinks he has a right to partake the purse of another, who wears a better coat than himself. Three years before I visited Lyons, 28,000 persons were employed in the silk manufactures; and three years later, in the year 1829, when I again visited it, not more than one-fourth part of this number was required.”—*Conway's Switzerland, France, &c., in 1830.*

Archæology: Russia.—Dr. Sjogren, associate of the Imperial Academy of Sciences, announces that he has discovered among the archives of the municipality of Wybourg an extremely interesting collection of very ancient authentic documents, and unknown to most of the authors who have written on the history of this province. The oldest of these MSS., bearing the date of 1316, is quoted by Northaan, in his *Sylloge Monumentorum ad illustrandam historiam Finia pertinentium*, but from inaccurate copies, which led him to doubt the existence of the original. Dr. Sjogren has

made an accurate copy of all the unpublished MSS., collated with care those that have been printed, and corrected their inaccuracies. This collection will be very valuable in the history of the province of Wybourg, as also in that of Ingria and Esthonia, particularly from the period when they fell into the power of Sweden; the documents presenting highly interesting illustrations of the ancient state of these last provinces, and of their commercial relations.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXXV. Aug. 7.]

The publishers of Constable's Miscellany announce, that the seventy-second volume of the Miscellany will contain Memoirs of the Empress Josephine, by Dr. Memes, the translator of Bourrienne's Napoleon.

A Conspectus of Butterflies and Moths, with Descriptions of all the Species found in Britain, amounting to nearly 8000, by J. Reulle, A.M.; who has also in a state of forwardness a Translation, with Notes and Synonymes, of Le Vaillant's Birds of Africa, Birds of Paradise, and Farnots, uniform with Montagu's Ornithological Dictionary.

Russian Literature.—Among the most recent literary announcements, are—1. Harald und Elisabeth; or, the Times of John (Ivan) the Terrible: an original picture, taken from the history of Russia in the sixteenth century, by M/W. von Oertel, 2 vols. 8vo. (in the German language): an edition in Russ is in the press. 2. The Extraordinary Man (in Ruse), a novel, by M. Yakoleff, 5 vols. 3. A Russian translation, from the German, of the novels of Henry Yschocke, 3 vols.

LIST OF NEW BOOKS.

Neander's Church History, translated by the Rev. H. Rose, Vol. I. 8vo. 10*s.* 6*d.* bds.—Dr. Ryan's Manual of Medical Jurisprudence, 8vo. 5*s.* bds.—Memoirs of Count LaVallette, written by Himself, 2 vols. 8vo. 1*l.* 4*s.* bds.—Lucy Barton's Bible Letters, 12mo. 3*s.* hf. bd.—Scenes in Scotland, 12mo. 4*s.* 6*d.* bds.—4*s.* hf. bd.—Winckworth on the Teeth and Gums, 4to. 10*s.* bds.—Dr. Thomson's System of Inorganic Chymistry, 2 vols. 8vo. 2*l.* 2*s.* bds.—Bernays' Key to the German Exercises, 12mo. 4*s.* bds.

METEOROLOGICAL JOURNAL, 1831.

August.		Thermometer.		Barometer.	
		From	To	30.00	to 30.09
Thursday	11	49.	75.	30.08	— 30.05
Friday	12	46.	74.	30.00	— 30.07
Saturday	13	49.	74.	30.00	— 29.97
Sunday	14	46.	76.	29.95	Stationary
Monday	15	44.	73.	30.01	to 30.03
Tuesday	16	44.	74.	30.07	to 30.05
Wednesday	17	50.	75.	30.00	to 29.91

Wind N.E. and N.W., the latter prevailing. Generally clear, till the 16th, when a little rain fell; the afternoon of the 17th was distinguished by a storm of thunder and lightning, which was awfully grand: in the immediate neighbourhood no particular damage was done by the electric fluid.

August.		Thermometer.		Barometer.

Tuesday	23	53.	76.	29.92	to 29.79
Wednesday	24	53.	73.		

Wind variable, N.W. prevailing. Except the 18th, 23d, and 24d, generally cloudy, with frequent rain.

Rain fallen, .225 of an inch.
Edmonton.
Latitude. 51° 37' 33" N.
Longitude. 0 3 51 W. of Greenwich.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

We are sorry to say N. N. In our last we accidentally omitted to mention that the sketch of Mr. P. Nasmyth was communicated to us late on Friday by an anonymous correspondent.

The notice of Mr. Scrymgeour's picture of the First Sign in Egypt, now exhibiting at the Egyptian Hall, was also accidentally put under the head of “New Publications in the Fine Arts.” It is well calculated for that place when it shall have been well engraved; and in the meantime the lovers of high efforts in our native school of painting may gratify themselves by visiting the original.

The Casket.—We acknowledge the Editor's letter, in which he reclaims against the imputation of pirating from the *Chronicles of London Bridge* the prints to illustrate his periodical. It is far from our wish to impeach the character of any of our contemporaries; but it does appear to us that two of the woodcuts are copied from the volume referred to, and that only one of these could have a common origin in Scott's old engraving. It is most while to go farther into the matter: we recommend to all editors the honest practice of quoting their authorities much more than is generally done.

ADVERTISEMENT,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools of Painting, is open daily, from Ten in the Morning until six in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

UNIVERSITY OF LONDON.

The following Medical Classes Open on Monday the 3d of October—

Anatomy and Physiology.—Dr. Quain; Fee for Session, 7s. Morbid Anatomy.—Dr. Carswell; Fee for Session, 3s. Demonstrations and Dissections.—Mr. Richard Quain; Fee for Session, 4s.

Principles and Practice of Medicine.—Dr. Elliotson; Fee for Session, 4s.

Principles and Practice of Surgery.—Professor S. Cooper; Fee for Session, 4s.

Midwifery and Diseases of Women and Children.—Dr. D. D. Davis; Fee for Session, 3s.

Maternal Medicine and Therapeutics.—Dr. A. T. Thomson; Fee for Session, 4s.

Chemistry.—Dr. Turner; Fee for Session, 7s.

Comparative Anatomy and Zoology.—Dr. R. E. Grant; for Four Months, 2s.

Medical Jurisprudence.—Dr. A. T. Thomson, Professor Ames, Professor of Law, &c.

Botany.—Professor Lindley; Fee for Session, 2s.

Dispensary.—John Hogg, M.D., Surgeon; For the Year, 6s. 6d.

Veterinary Medicine and Surgery.—Mr. Youatt; Fee for Session, 5s.

These Fees where they exceed 4s. maybe paid in two divisions—in October and January.

Particulars of these Courses may be had at the University; at Mr. Taylor's, 30, Upper Gower Street; and all Medical Bookellers.

* Dr. Quain and Mr. Cooper have consented to accept their appointments, subject to the decision of the Proprietors on the 3d of September concerning Professor Pattison's appeal.

By Order of the Council,

THOMAS COATES.

94th August, 1831.

FRAUDS IN PATENT PENCILS.

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Leads for refilling the same. To guard the Public against impositions, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case.

2d. S. Mordan and Co. Patentees and Makers, on the body of the case.

3d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

Cedar Pencils.—These pencils contain the same quality of pure Cumberland lead as their silver patent pencils.

Warranted Protection.—The Lock with seven guards is the most secure and the most durable one in use. The key cannot be copied, nor can an impression be taken from it; neither can a skeleton or other substitute key be made with success. The key admits of infinite variety, so that duplicates are entirely precluded, and dishonest, and are suitably equally guarded against.

"S. Mordan and Co. Makers, London," is stamped on each Lock.

* Scientific gentlemen and others are invited to inspect the

Manufacture, 29, Castle Street, Finsbury.

GENERAL CEMETERY COMPANY.

The Books of the General Cemetery Company will be closed on the 1st of September next; after which no new Shares will be issued to the Public. A General Meeting of the Subscribers will be held on Wednesday, the 7th of September, at One o'clock, at Exeter Hall, Strand, for the purpose of taking such measures as may best promote the interests of the Company.

Shares may be had of the Bankers, Messrs. Snow, Paul, and Fawk, 237, Strand; or of the Secretary, every information may be obtained.

19, Milk Street, Chancery.

C. B. BOWMAN, Sec.

Just published by R. Ackermann, 95, Strand; and to be had of all Book and Printersellers in Town or Country, Part II. completing a Series of Twelve coloured

VIEWS on the LIVERPOOL and MANCHESTER RAILWAY, with a Plate of the Machines, Coaches, &c. &c. Drawings made on the Spot, by Mr. T. T. BURY, with Descriptive Particulars; serving as a guide to Travellers on the Railway. Price 12s. each Part.

Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Neander's Church History.

1s. 8vo. price 10s. 6d. boards, the First Volume of

Spence in Scotland.

In 12mo. embellished with Forty-eight beautiful Engravings on Steel, price 4s. 6d. in boards, or 5s. half-bound,

SCENES in SCOTLAND, with Historical Illustrations and Biographical Anecdotes.

By JOHN LEIGHTON, Esq.

Author of Descriptive Illustrations of Views on the Clyde, &c.

"In few books of equal size with the present have we found such a mass of interesting information. The writer appears to be perfectly familiar with the scenes, persons, and incidents he undertakes to describe. His style is well adapted to his subject—concise yet perspicuous, and brings much matter into small compass. The whole work, embellished with forty-eight beautiful engravings on steel, is got up tastefully, and does great credit to the author, publisher, and printer."—*Literary Museum*, July 1831.

London: Published by Bumpus and Griffin, 3, Skinner Street; and R. Griffin and Co. Glasgow.

Books published by Whittaker, Treacher, and Co.

Ave Maria Lane, London.

In post 8vo. with Twenty Plates, a Map, price 12s. in cloth.

A GUIDE to the LAKES in CUMBERLAND, WESTMORELAND, and LANCASHIRE.

By JOHN ROBINSON, D.D.

Rector of Clifton, Westmoreland.

II.

In 12mo. with Two beautiful Engravings by E. Finden, and Maps, price 8s. bound and lettered,

The Cambrian Tourist; or, Guide through Wales. The 7th edition.

III.

In 8vo. price 10s. 6d. cloth, lettered,

Flora Domestica: Directions for the Treatment of Plants in Pots.

By the same Author,

In 8vo. price 10s. 6d. bound and lettered,

Sylvan Sketches; a Companion to the Park and Shrubbery.

IV.

In 12mo. with several Engravings and Maps, price 5s. bound and lettered,

Pinnock's Geography of the British Empire.

V.

In 12mo. with several Engravings, price 6s. bound and lettered,

First Lines of Zoology, by Question and Answer, for the Use of the Young. By R. Modie, Author of the "British Naturalist."

VI.

In 12mo. price 2s. 6d. half-bound,

French Phraseology; or, Traveller's Manual.

Being a Compendium of such Phrases as most frequently occur in Conversation. In French and English. By C. C. Hamilton.

In 8 vols. 8vo.

MEMOIRS of COUNT LAVALETTE.

Written by HIMSELF.

Including the Secret History of the Trials and Execution of Ney and Labedoyre, and of the Persecutions endured by the Author.

II.

The Octavo edition of

Captain Beechey's Voyage to the Pacific;

being a Completion of the Polar Voyages, with numerous Plates, engraved by Finden. 8 vols.

"This expedition will be for ever memorable, as one which has added immensely to our knowledge of this earth that we inhabit."—*Blackwood's Magazine*.

III.

The Last of the Mohicans. By Cooper.

Originally published in 3 vols. In small 8vo. neatly bound, price 6s.; forming the Sixth Number of the Standard Novels.

IV.

A Nine Years' Residence in Abyssinia. By Nathaniel Pearce. Including an Account of his extraordinary Life and Adventures. 3 vols. post 8vo.

"A work of great interest."—*Athenaeum*.

Also, in a few days,

The Scottish Chiefs. By Miss Jane Porter.

With a new Introduction and Notes, written expressly for this edition. In small 8vo. neatly bound, price 6s.; forming the Seventh Number of the Standard Novels.

Henry Colburn and Richard Bentley, New Burlington Street.

Tegg's Catalogue of Second-hand Novels, &c.

May be had gratis.

MR. TEGG'S CATALOGUE of MODERN NOVELS, VOYAGES, TRAVELS, &c. Second-hand, suitable for Circulating Libraries, Reading-Rooms, &c. This List, being printed on one large sheet, can be sent by post to all parts of the Kingdom. May be procured on personal application to No. 78, Chancery Lane, or through the medium of any London wholesale Bookseller.

In 12mo. price 6s.

PLAIN RULES for IMPROVING the HEALTH of the DELICATE, PRESERVING the HEALTH of the STRONG, and PROLONGING the LIFE of ALL.

By W. HENDERSON, M.D.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

THE CLUB-BOOK, consisting of Original Tales, by distinguished Authors:—

Contents.

Bertrand de la Croix, or the Siege of Rhodes. By the Author of "Richieu," "Darnley," &c.

Haddad-Ben-Ahab, or the Traveller. By the Author of "Annals of the Parthians."

The Gipsy. By the Author of "Lost Hells," &c.

Niebach, or the Adventures of a Stranger. By the Author of the "Dominie's Legacy."

The Fatal Whisper. By John Galt.

The Sleepless Woman. By Wm. Jerdan.

Dramatic Scenes. By Lord Francis Leveson Gower.

Gowden Gibbie. By Allan Cunningham.

The Deer-Stalkers. By A. Ficken.

The Peasantry. By John Galt.

The Laidlaws and the Scotts. By the Ettrick Shepherd.

The Bridal of Northwick. By the Author of "Mannie Whig."

The Unsuspected Heir. By John Galt.

The Cheats Packman. By Leitch Ritchie.

The Bogle of the Brae; a queer Coaching Story. By the Ettrick Shepherd.

The Book of Life. By John Galt.

The Three Kearsays; a Tale of the Dominie. By A. Ficken.

"The idea of this work is excellent. Here is variety to tickle the dull appetite of the public, and the feast is equal to the bill of fare; all parties, without exception, have done well. We have our favourite tales, of course, and so will every one else; but it will be admitted by all, that as a whole the collection is excellent."—*Athenaeum*.

"One of the most pleasantly attractive, and permanently interesting books of the season."—*Scots Times*.

The variety of the Club-Book will recommend it to every class of readers who read for amusement."—*Literary Gazette*.

Published by James Cochran and Co. 11, Waterloo Place.

Valpy's Greek Testament.

3d edition, with Improvements, 2 vols. 8vo. 5s. 6d.

GREEK TESTAMENT, with English Notes, containing Critical, Philological, and Explanatory Notes in English, from the most eminent Critics and Interpreters; with Parallel Passages from the Vulgate, and with Explanatory Notes on the Greek Text, and on the various Readings recorded under the Text. Greek and English indexes are added at the end.

By the Rev. E. VALPY, B.D.

Two Plates are given, one illustrative of the Travels of the Apostles, and the other a Map of Judea, and a Plan of the City and Temple of Jerusalem.

To this 3d edition have been added Parallel References, on the plan of Bishop Lloyd's little volume.

This work is intended for Students in Divinity, as well as the Library.

"After a minute examination, the author of the present manual considers the Edition of the Greek Testament as the most valuable of any that has yet been published with critical and philological apparatus, especially for students who wish to purchase only one edition of the Greek Testament."—*Horne's Introduction to the Bible*.

"The young divine will find this work not only a safe guide in his studies, but the best which he can obtain within the compass of the same price and size."—*Classical Journal*.

"This Greek Testament is a valuable accession to the aids of the under-graduate, the divinity student, and even the theologian. It is preceded by a very able summary of the important doctrinal of the Greek Article—a field on which Socinianism has been so signally foiled. We cordially recommend it to our readers; and those who wish to purchase only one Greek Testament, and that not very expensive, will find in this edition the very object of their search."—*Christian Remembrancer*.

Also, 6d edition, in 1 thick vol. 8vo. 9s.

Greek Septuagint, with the Apocrypha, edited by J. Valpy, from the Oxford edition of Bos and Holmes.

This edition is handsomely printed in 1 vol. 8vo. postpressed.

For use in churches and chapels, as well as the library.

"This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students in preference to the incorrect Cambridge and American editions) its price is so reasonable as to place it within the reach of almost every one."—*Horne's Introduction to the Bible*.

* The Septuagint and Testament may be had uniform in four vols.

Printed by A. J. Valpy; and sold by all Booksellers.

Dr. Brasse's Greek Gradus.—2s.

GREEK GRADUS; or, Greek, Latin, and English Prose and Verse; containing the Interpretation, in Latin and English, of all Words which occur in the Greek Poets, from the earliest period to the time of Ptolemy Philadelphus, and also the Quantities of each Syllable; thus combining the advantages of a Lexicon of the Greek Poets and the Greek Gradus. For the Use of Schools and Colleges. In 1 thick vol. 8vo. boards.

By the Rev. J. BRASSE, D.D.
Late Fellow of Trin. Col. Cam.

It has been the object to present, in a comprehensive form, a manual, containing the interpretation, in Latin and English, of such Words as occur in the principal Greek poets; the quantity of each syllable, and the quantity of each word; and an authority quoted for the existence and quantity of each word in those writers, and those terms set down as synonymous which appear to bear a similitude in sense to the principal word. The works of the Greek poets have been diligently examined, and such epithets and phrases annexed to each principal word as are of legitimate usage, and seem best calculated to embellish Greek composition.

"The indefatigable application required in the compilation of the Greek Gradus is manifest; and we heartily recommend the work as supplying a desideratum in our school-books, and likely to be advantageously used to a very wide extent."—*Literary Chronicle*.

Dr. Brasse has certainly conferred, by this publication, a lasting benefit on all classical students, and deserves the highest praise for taste, learning, and indefatigable industry."—*London Weekly Review*.

Printed by A. J. Valpy; and sold by all Booksellers in Town and Country.

By the same Author,

Sophocles.—*Œdipus Tyrannus*, Coloneus, Antigone, and Trachiniae, with English Notes. 8s. each; or together, 20s.

"The very useful illustrations given of all the difficult passages are well adapted to remove many of the obstacles which usually stand in the way of a young Greek scholar."—*Monthly Review*.

Abridged and Translated into English for Schools and Colleges, by the Rev. J. Seager.

VIGOR on the GREEK IDIOMS. Translated into English, and abridged. 8vo. 9s. 6d. boards.

"This volume is compiled with much industry and judgment; and altogether a more valuable service could not well have been rendered to the inquiring student of the classics."—*Oxford Literary Gazette*.

"But when they have made real advances in Greek prose, read over with them the whole of Vigorus. Mr. Berry, what I now recommend is really one of the most useful parts of education. You should make them read Vigorus in this way twice every year, for five, or six, or seven years."—*Dr. Parr*. See Johnstone's *Lives of Parr*.

2. **Mattaire on the Greek Dialects.** On the same plan. 8vo. 9s. 6d.

3. **Hoogeveen on the Greek Particles.** On the same plan. 8vo. 7s. 6d. boards.

"Hoogeveen's work on Particles has always been considered a valuable aid in the study of Greek; and Mr. Seager has compressed and translated it in a manner which we could not desire to be better."—*Epistola*.

4. **Bos on the Greek Ellipses.** On the same plan. 8vo. 8s. 6d. boards.

"Mr. Seager has contrived to retain the essence of all that is beneficial to the student, while he has placed it more easily within his reach, by the order in which it is reduced."—*Intelligence*.

"We have no hesitation in recommending this book to the teachers of Greek, as the best dictionary of elliptical expressions to which they can resort."—*Edinburgh Literary Journal*.

5. **Hermann on the Greek Metres.** On the same plan. 8vo. 8s. 6d. boards.

"My hero is Hermann; he is not only a scholar, but a philosopher of the highest order; and he smiles probably, as I do, at the petty criticisms of puny scholars, who in fact do not understand what is written by this great critic."—*Dr. Parr*.

The Five Works may be purchased separately.
Printed by A. J. Valpy and sold by all Booksellers.

In 8vo. price 7s. 6d. boards.

THE EASTERN ORIGIN of the CELTIC NATIONS, proved by a Comparison of their Dialects with the Sanskrit, Greek, Latin, and Teutonic Languages; forming a Supplement to "Researches into the Physical History of Mankind."

By JAMES COWLES PRICHARD, M.D. F.R.S. &c.
Oxford: Printed by S. Collingwood, Printer to the University, for John and Arthur Arch, Cornhill, London.

Price 10s. 6d. 8vo.; large paper, 11. 11s. 6d.

LORD BACON'S WORKS, Vol. XIV. By BASIL MONTAGU, Esq.

Containing Translation of the *Novum Organum*, &c. &c.

Also, on the 1st of September will be published,

Pickering's Aldine Edition of the British Poets. Vol. XVI. Containing the Poems of Goldsmith, with original Memoirs and Notes, by the Rev. John Mitford. Price 5s. "We have only to repeat the praise we have already most cordially given to the preceding volumes of the Aldine Edition of the Poets; the perfection of printing, beautiful paper, a neat engraving,—whose subject alone would give it interest,—works the most valuable in our literature, and every possible information carefully collected respecting the writers; we are justified in saying that the Publisher deserves all the patronage public favour can bestow."—*Literary Gazette*.

The Works of each Poet in this edition contain several poems not in any previous collection; and with original Memoirs, in which numerous letters and facts are new for the first time published. The following have already appeared, and may be purchased separately.

Volumes I. II. The Poems of Burns.

III. IV. The Poems of Thomson.

V. The Poems of Collins.

VI. The Poems of Kirke White.

VII. VIII. IX. The Poems of Cowper.

X. XI. The Poems of Sarsfield and Wyatt.

XII. The Poems of Beattie.

XIII. XIV. XV. The Poems of Pope.

William Pickering, 77, Chancery Lane, London.

BOOKS IN THE PRESS.

In a few days will be published, in 8vo. price 10s. 6d., **SERMONS** preached in St. James's Chapel, Cheltenham.

By the Rev. C. BRADLEY,
Vicar of Glasbury, Brecknockshire.
Sold by Hamilton, Baskerville, and Co. Stationers, New Street, Bristol.

Parochial Sermons preached at Glasbury. 4th edition, 10s. 6d.

Sermons preached at High Wycombe. 8th edition, 2 vols. 21s.

A Selection of Psalms and Hymns for Public Worship. 2s. 6d.

On the 1st of September will be published, in cloth, **ELEMENTS of the INTEGRAL CALCULUS**; with its Applications to Geometry, and to the Summation of Infinite Series, &c.
By J. R. YOUNG.
Published by J. Sonner, School Library, 73, St. Paul's Churchyard.

Of whom may be had, lately published, by the same Author, 2. **The Elements of Differential Calculus**; comprehending the General Theory of Curve Surfaces and of Curves of Double Curvature. 7s. in cloth.

3. **An Elementary Treatise on Algebra**, Theoretical and Practical, with attention to simplify some of the more difficult parts of the Science, particularly the Demonstration of the Binomial Theorem, in its most general form—the Solution of Equations of the higher orders—the Summation of Infinite Series, &c. 8vo. boards, 10s. 6d.

4. **An Elementary Treatise on the Computations of Logarithms**; intended as a Supplement to the various books on Algebra. 12mo. 3s. 6d.

5. **Elements of Geometry**; containing a New and Universal Treatise on the Doctrine of Proportions, together with Notes, in which are pointed out and corrected several important errors that have hitherto remained unnoticed in the writings of Geometers. 8vo. 8s.

6. **The Elements of Analytical Geometry**; comprehending the Doctrine of the Conic Sections, and the general Theory of Curves and Surfaces of the second order, with a variety of Local Problems on Lines and Surfaces. Intended for the Use of Mathematical Students in Schools and Universities. 7s. in cloth.

"If works like the present be introduced generally into our schools and colleges, the continent will not long boast of its immense superiority over the country of Newton in every branch of modern analytical science."—*Atlas*, July 25, 1820.

PRICE 8d.

REVIEW OF NEW BOOKS.

Poland; a Poem. By Thomas Campbell, Esq., author of "the Pleasures of Hope." To which are added, *Lines on the View from St. Leonard's.* 12mo. pp. 27. London, 1831. Cochrane and Co.

How much depends upon the choice of subject is evinced by the two poems before us, "extracted from the *Metropolitan Magazine*," and now published in a pretty little separate volume. The poet was stimulated by the same, or perhaps a superior, enthusiasm in the cause of Poland; but excitement is not always the parent of beauty in poetical progeny. Strong feeling has been awakened in the author's breast on behalf of a struggling people; but the everlasting sea has proved a far higher source of inspiration than the turmoil of human passions—the picture, however vivid, to the imagination of human wrongs and sufferings. We may therefore be excused if we pass over the first of these compositions, intended, as if in mockery, to be "inscribed in the new edition of the *Pleasures of Hope*;" and confine our attention to the last, which contains, within the compass of from 130 to 140 lines, several passages worthy of the utmost fame of Thomas Campbell.

Our personal pleasure in reading this poem may have been increased by seeing the bard in the full enjoyment of the scenery he describes; inhaling the refreshing breezes of St. Leonard's, musing along the sounding shore, and almost unconsciously (as it would appear to the common observer) gathering those deep impressions of external objects, which he has combined so finely with poetical images and associations. The verse opens delightfully:—

"Hail to thy face and odours, glorious Sea!
"Twas thanklessness in me to bless thee not.
"Great beautiful being! In whose breath and smile
My heart beats calmer, and my very mind
Inhalas salubrious thoughts. How welcome
Thy murmurs than the murmurs of the world!
Though, like the world, thou fluctuat'st, thy din
To me is peace, thy restlessness repose."

We will not indulge in hypercritical carping; but merely to shew that our admiration is not indiscriminate, we notice that there are slight points in this poem liable, in our opinion, to censure. For example, in the ensuing five lines—

"Ev'n gladly I exchange yon spring-green lanes,
With all the darling field-flowers in their prime,
And garden-gaunties by the nightingale's
Long trill and gushing cascades of song,
For these wild headlands and the sea-mew's clang;"

we disapprove, 1, of the pet-like epithet, "darling;" 2, of the possessive ending of the line, "nightingale's"

Long trills;"

and, 3, of the final word "clang" applied to the scream of the sea-mew. It does not convey a true idea of the sound; and that it does not, is curiously enough proven by its proper application in another passage, even in this short production:—

"True, to the dream of fancy, Ocean has
His darker hints; but where's the element
That checkers not its usefulness to man
With casual terror? Seashes not Earth sometimes

Her children with Tartarean fires, or shakes
Their shrieking cities, and, with one last clang
Of bells for their own ruin, strews them flat
As riddled ashes—silent as the grave!"

But we will not utter another word in the way of our vocation: it is far more agreeable to us to quote such charming lines as the following:—

"With thee beneath my windows, pleasant Sea!
I long not to o'erlook Earth's fairest glades
And green savannahs: Earth has not a plain
So boundless or so beautiful as thine.
The eagle's vision cannot take it in;
The lightning's wing, too weak to sweep its space,
Sinks half-way o'er it like a wearied bird:—
It is the mirror of the stars, where all
Their hosts within the concave firmament,
Gay marching to the music of the spheres,
Can see themselves at once."

How vividly this moment brightens forth,
Between gray parallel and leaden breadths—
A belt of hues that stripes thee many a league,
Flush'd like the rainbow, or the ring-dove's neck,
And giving to the glancing sea-bird's wing
The semblance of a meteor!"

Mighty Sea!
Cameleon-like thou changest—but there's love
In all thy change, and constant sympathy
With yonder Sky, thy mistress; from her brow
Thou takest thy moods, and wear'st her colours on
Thy faithful bosom; morning's milky white,
Noon's sapphire, or the saffron glow of eve,
And all thy balmy hours, fair element!
Have such divine complexion—crisp'd smiles,
Luxuriant heavings, and sweet whisperings—
That little is the wonder Love's own queen
From thee of old was fabled to have sprung—
Creation's common! which no human power
Can parcel or enclose; the lordliest flocks
And catenats that the tiny hands of man
Can tame, conduct, or bound, are drops of dew
To thee, that couldst subdue the earth itself,
And brook'st commandment from the heavens alone,
For marshalling thy waves."

Yet, potent Sea!
How placidly thy moist lips speak ev'n now
Along yon sparkling shingles! Who can be
So fanciless, as to feel no gratitude
That power and grandeur can be so serene,
Soothing the home-bound navy's peaceful way,
And rocking ev'n the fisher's little bark
As gently as a mother rocks her child!"

To us these extracts breathe the true spirit of song. Nothing can surpass the magnificence of the general view of Ocean, which the lightning's wing cannot sweep without sinking half-way like a wearied bird: nor is the more particular glance less beautiful, where we are presented with the meteor-like sea-bird between the varying belts of the ever-changing expanse of water. The exquisite thought, too, and so exquisitely expressed, of Love's own queen rising from Nature's common, is of the noblest class of poetical conception. But such writing requires no comment—it must reach every heart worth touching; and we now leave it to that proud effect of genius, quoting only the concluding lines:—

"Old Ocean was,
Infinity of ages ere we breathed
Existence; and he will be beautiful
When all the living world that sees him now
Shall roll unconscious dust around the sun.
Quelling from age to age the vital throng
In human hearts, death shall not subjugate
The pulse that swells in his stupendous breast,
Or interdict his minstrelsy to sound
In thundering concert with the quiring winds:
But long as man to parent Nature owes
Instinctive homage, and in times beyond
The power of thought to reach, bard after bard
Shall sing thy glory, bounteous Sea!"

A System of Geology, with a Theory of the Earth, &c. By John Macculloch, M.D., &c. 2 vols. 8vo. London, 1831. Longman and Co.

THIS work can hardly be said to impugn Dr. Macculloch's character as a geologist—for he states that it was written in 1821; and, therefore, it is not more than ten years behind the present state of the science: but it impugns his judgment—nay, even his veracity—to say that during that period no new facts have been added to the science,—a statement which occurs in the learned doctor's preface, and is in that preface surpassed by the assertion, that this little island contains every geological fact in the world, except volcanoes. There are two volumes, and the matter in them should have been condensed into one. The first contains some mere general essays; the second, a scanty supply of facts, not sufficient for an elementary work, and a still sorer foundation on which to erect a system. This, in the doctor's own dogmatic style, would, for any ordinary work, be enough; but we shall to facts. The general objects of geological science are knowledge and utility; and geology is an accurate science. It would be inaccurate only, if the author's statement in chap. 2 was true, that the positions and mutual relations of the accessible portions of the globe are irregular and intricate. The constancy of position and of mutual relation is the science of geology. The revolutions which the crust of this globe has undergone, are contained in a few, but striking phenomena, which Cuvier has endeavoured to enumerate; they are, according to our author, "a thousand fold." "The present duty of a systematical inquiry is to describe objects and actions which cannot all yet be classed under general divisions and laws." The objects, like all natural objects, must be capable of classification to a certain extent; and the laws, if physical, will be appreciated in proportion to the scientific attainments of the individual. If that individual cannot classify his objects, he must be unacquainted with them or their relations; if he cannot expound the laws of their actions, he must be unacquainted with science, and therefore unfit to be a systematist. We do not allude to inferences which constitute the results—they are retrospective, and imply a theory of the earth.

The third chapter embraces the form of the globe; geologically, this should not be deduced from observations on gravity, which regard an ideal surface, but from the harmony which is offered between the heights of the present continents and mountain chains with the depths of the ocean's waters, and then we are able to appreciate the aid which geology can be made to give to astronomy. Had the author been aware of this fact, he would not have asserted in his chapter on the general disposition of the surface of the globe, that the height of mountains is a mere object of curiosity; and the same remark applies to the well-established fact, of the distinction existing between the equatorial and polar regions in the general height of their

mountains; a distinction which our author says can lead to no useful geological result. Unstratified rocks are not those in which the forms are irregular, but rocks which observe no parallelism in their beds; as changes of the absolute quality of the rock in a stratum are not only rare, but we suspect unexampled.

The classification adopted by Dr. Macculloch is arbitrary and unscientific. Brogniart, like the first geognosts, has attempted a mineralogical classification of rocks; but he acknowledged its inadequacy to the purposes of geology. Dr. Macculloch has pursued a system which is somewhat of a mineralogical character, as he puts sandstones and limestones apart; but he does not assist the student by any specific distinctions, nor does he bring the very groundwork of his arrangement to elucidate the method adopted, or exhibit that method in its only favourable light—namely, the advantage of well distinguishing different rocks. In geology there should be no arbitrary classification—it must be a table of superposition, as far as regards stratified rocks; and with respect to the unstratified, it must be founded on their mineralogical characters, or the period of their appearance on the surface of the earth;—a subject which might involve some discussion, but which discussion would be attended with benefit to the science. In what concerns the sedimentary deposits or stratified rocks, the work is lamentably deficient; and not to enter into particulars, where the author is unacquainted with the labours of the Germans and the French, and with the important researches of Messrs. Sedgwick and Impey Murchison,* which have assisted in throwing so much light on what have been called the secondary and tertiary rocks,—we shall comprise our critique in stating that the details given do not even make an approach to what is at present known of the differences which they exhibit in various countries, (a fact which is denied by the author in his preface), and even in the same country;—of the variety in organic remains in contemporaneous formations, in various geographical situations;—of the relation of the secondary with the tertiary formations, and of these with each other;—of the relation of the sedimentary deposits to the rocks of plutonic origin; and in fact of that which embraces the most marked features of the science, and constitutes the brilliancy and glory which have characterised the progress of geology when other sciences remained almost stationary.

There is no such thing as a primary red sandstone,—a sedimentary deposit, alternating with primitive crystalline rocks. Why so tenacious in error? We more than doubt the transition of old red sandstone into granite. At the only place quoted by our author, the Ord of Caithness, we have excellent authority that it is not the case: "As the mountain limestone is conspicuously the next stratum in England, while sufficiently constant in Scotland,—and as an analogous one is similarly found on the continent, this must be esteemed the natural succession." If it had not been proved by the occurrence of mountain limestone between the rock in question and all other secondary rocks, we doubt very much if geologists would have admitted its natural succession, from reasoning like that presented in this

quotation. It is extraordinary that an author who proposes to write a system, should not know what a system is. "Should I," he says, "attempt to describe accurately the several geological connexions in which the rocks of this division exist, (alluding to the sandstones), it would lead to geological histories of the whole series of the secondary strata in every part of the world." Now, either strata are the representatives of one another, or they are not; if not, there has been accident in the formation of the earth, and there is no such a science as geology; but if, as is the case, there is a similarity either in superposition in mineralogical characters, or in organic remains in the same formation all over the globe, it is not the systematist's duty to ascertain and to describe them accurately? The sandstones of the coal formation have a paragraph occupied in their description! The red marl comes next in order. It is divided into three beds, separated by vast deposits of limestone, themselves distinguished by important mineralogical characters, and their application to domestic uses. It would hardly be believed, that out of these Dr. Macculloch describes only the red marl with saliform deposits.

Not only in the practical part of the science have we to complain of a want of labour and method, but in the very essays which comprise Dr. Macculloch's elementary and theoretical notions, one would be led to suppose that the principles of geological science had never been laid down. "Whatever analogies," he says, "may be found all over the world, not only among the natures of the strata, but in the relative order of their stratification, there is no where that resemblance which can authorise us in supposing that they have either been simultaneous, or under the influence of a universal law." Again, "The order of succession is only general, and very far, indeed, from being so particular as it has been imagined." Geology, we would answer, is a science of observation, not of imagination. Our author further remarks, "All successions are analogous, and not identical." Now, positive geognosy, or the order of succession of the various strata of the earth, and the succession of the different terms of the series, has been established from observations made in the two worlds. If by the term identity the author means identity of composition, his assertion would be correct; but if he means identity of formation, which is the only identity we can recognise in geology, then such is not to be found. The mineralogical characters of the rock may vary in different countries; even the organic remains may vary in their species or their genera, but their superposition is supposed never to vary. As mineral masses, they are, then, either similar or dissimilar; but when we consider them as terms in an ascending or descending series, their identity becomes almost certain. We shall here quote De Humboldt: "When geognosy was raised to the rank of a science, when the art of interrogating nature was improved, and when journeys to distant countries furnished a more exact comparison between different formations, great and immutable laws were recognised in the structure of the globe, and in the superposition of rocks; the most striking analogies in the position, composition, and the included organic remains of contemporary beds, were then observed in both hemispheres; and in proportion as we consider formations under a more general point of view, their identity daily becomes more probable." The hypothesis advanced as "a sketch towards a theory of the earth," is

founded on the radiation of heat, and differs very little from that of Professor Cordier. We shall here terminate our unpleasant labour of pointing out the inadequacy of the present work to occupy in our literature the important station of an accredited system of geology. Only last year an anathema of a similar kind was pronounced within the walls of the Geological Society on a work of similar pretensions, and gladly shall we avail ourselves of the first opportunity of awarding due merit to the author who may be the first successful representative of a profound, important, and interesting branch of science.

Looking at some of his more miscellaneous remarks, we agree with Dr. Macculloch—

"That the water in stones is actually saturated with earths, and probably with silica or lime, appears to be also proved by certain appearances which take place on breaking and drying some of these. In marbles raised very wet from the quarry, a whitish dusty surface soon follows from the deposition of the carbonate of lime; and a similar deposition of silica will account for that gray tarnish which is produced on pitch-stones within a very few hours after the specimens are broken from the rock, during which process of drying they become far less tender and more compact."

This fact is no less interesting in a geological point of view, than it is important as connected with the arts; for it shews the propriety of squaring and working stones for the ordinary purposes of building and ornamental architecture as early as possible after their excavation from the quarry. Independent of the heavy expense of carriage in transporting large blocks of granite, sandstone, or oolite, in mass, a considerable portion of which is subsequent waste—if such blocks were worked for all the ordinary purposes of building-stone at the quarry before removed, an immense saving would result both in carriage and labour. What, for instance, can be more absurd than the accumulation of a vast mass of freestone, sandstone, and granite, to lie hardening by the sun and air, for several years, on Ramsgate pier, in order to make extra work in finishing that fine structure, which has been already thirty years in progress!

In the latter sections of the work, "on the Theories of the Earth," the Dr. is not over nice in attacking the different views of other geologists. But whether the views he puts forth as a "Sketch towards a Theory of the Earth" be exempt from the charges he advances against contemporary geologists, we shall not take upon ourselves to offer any opinion. From the very diffuse style of the author, it is by no means an easy matter to arrive at his conclusions. So far as we can collect his meaning, the planet we now inhabit was a mass of gaseous matter, as it emanated from the fiat of its Almighty architect. That it became successively condensed into the liquid and solid form now constituting the terrestrial globe, through the radiation of heat from the surface; while the central portion of the mass still retains its igneous fluidity. But since the origin of things, the crust of this globe, or spheroid, has undergone no fewer than eight different eras or "conditions," easily distinguishable by geological evidence; such as the interruptions or change in the chemical nature of the rocky series, through the agency of fire, or water, or both agents combined. "I know of no mode (says the author) in which the surface of a fluid globe could be consolidated but by the radiation of heat. The immediate result of this must have been the formation of rocks

* "The evidences of geology." Dr. M. ventures to assert, "have indeed been multiplied, yet through identical facts only; since I do not perceive that a new one has been added to the science. This ought not to have been." Without appealing to foreign authorities, we shall leave Messrs. Buckland, Conybeare, Sedgwick, Murchison, Scope, Webster, Lyell, &c., to answer these sweeping charges.

on that surface; and if the interior fluid does now produce the several unstratified rocks, the first that were formed must have resembled some of these, if not all. We may not unsafely infer that they were granitic, perceiving that substances of this character have been produced wherever the cooling was most gradual. The first apparently solid globe was therefore a globe of granite." Now, although the above is perfectly intelligible, we have some doubts whether our readers will consider the following section of the sentence in the same light:—"And though we have not as yet even conjectured the causes of what is, nevertheless, a fact in evidence, we ought to admit it on the doctrine of final causes, or of a directing Power; seeing that it is necessary for that disposition, or management of the earth, the consequences of which are essential to its ends." Again: "If such is this view of the first, or truly primitive solid globe, I need not dwell on the quality of the evidence; since, be it what it may, it is apparent. But under the same evidence, there is now a second condition; or, from the presumed original one, a fourth, and that a terraqueous one, or an earth analogous to the present, however differing in many essential particulars; some obvious, and others only to be conjectured!" Need we adduce any farther instances to justify our remarks as to the obscurity with which our author has overlaid his subject in order to make out a system? Dr. Macculloch is unquestionably a man of profound science; but honesty obliges us to say, that he is also a skilful book-maker.

*The Waverley Novels, Vol. XXVIII. Peven-
ril of the Peak, Vol. I.* Edinburgh, 1831,
R. Cadell; London, Whittaker.

WE last week noticed this new volume of the *Waverley* series, and the novelties it contains. From these novelties we now think it but justice to offer an extract or two: the first is from the introduction, where the author says—

"If I had valued my own reputation, as it is said I ought in prudence to have done, I might have now drawn a line, and remained for life, or (who knows?) perhaps for some years after death, the 'ingenious author of *Waverley*.' I was not, however, more desirous of this sort of immortality, which might have lasted some twenty or thirty years, than Falstaff of the embowelling which was promised him after the field of Shrewsbury, by his patron the Prince of Wales. 'Embowelled? If you embowel me to-day, you may powder and eat me to-morrow!' If my occupation as a romancer were taken from me, I felt I should have at a late hour in life to find me out another; when I could hardly expect to acquire those new tricks which are proverbially said not to be learned by those dogs who are getting old. Besides, I had yet to learn from the public, that my intrusions were disagreeable; and while I was endured with some patience, I felt I had all the reputation which I greatly coveted. My memory was well stored, both with historical, local, and traditional notices; and I had become almost as licensed a plague to the public as the well-remembered beggar of the ward, whom men distinguish by their favour, perhaps for no better reason than that they had been in the habit of giving him alms as a part of the business of their daily promenade. The general fact is undeniable—all men grow old, all men must wear out; but men of ordinary wisdom, however aware of the general fact, are unwilling to admit in their own case any special instances of failure. Indeed, they

can hardly be expected themselves to distinguish the effects of the Archbishop of Granada's apoplexy, and are not unwilling to pass over in their composition, as instances of mere carelessness or bad luck, what others may consider as symptoms of mortal decay. I had no choice save that of absolutely laying aside the pen, the use of which at my time of life was become a habit, or to continue its vagaries, until the public should let me plainly understand they would no more of me; a hint which I was not unlikely to meet with, and which I was determined to take without waiting for a repetition. This hint, that the reader may plainly understand me, I was determined to take, when the publication of a new *Waverley* novel should not be the subject of some attention in the literary world. An accidental circumstance decided my choice of a subject for the present work. It was now several years since my immediate younger brother, Thomas Scott, already mentioned in these notes, had resided for two or three seasons in the Isle of Man, and, having access to the registers of that singular territory, had copied many of them, which he subjected to my perusal. These papers were put into my hands while my brother had thoughts of making some literary use of them, I do not well remember what; but he never came to any decision on that head, and grew tired of the task of transcription. The papers, I suppose, were lost in the course of a military man's life. The tenor of them, that is, of the most remarkable, remained engraved on the memory of the author. The interesting and romantic story of William Christian especially struck my fancy. I found the same individual, as well as his father, particularly noticed in some memorials of the island, preserved by the Earl of Derby, and published in Dr. Peck's *Desiderata Curiosa*. This gentleman was the son of Edward, formerly governor of the island; and William himself was afterwards one of its two dempsters, or supreme judges. Both father and son embraced the party of the islanders, and contested some feudal rights claimed by the Earl of Derby as king of the island. When the earl had suffered death at Bolton-le-Moors, Captain Christian placed himself at the head of the roundheads, if they might be so called, and found the means of holding communication with a fleet sent by the parliament. The island was surrendered to the parliament by the insurgent Manxmen. The high-spirited countess and her son were arrested, and cast into prison, where they were long detained, and very indifferently treated. When the restoration took place, the countess, or by title the queen-dowager of the island, seized upon William Dhône, or Fair-haired William, as William Christian was termed, and caused him to be tried and executed, according to the laws of the island, for having dethroned his liege mistress, and imprisoned her and her family. Romancers and readers of romance will generally allow, that the fate of Christian, and the contrast of his character with that of the high-minded but vindictive Countess of Derby, famous during the civil wars for her valiant defence of Latham House, contained the essence of an interesting tale.

"The character of Fenella, which, from its peculiarity, made a favourable impression on the public, was far from being original. The fine sketch of Mignon, in Wilhelm Meister's *Lehrjahre*, a celebrated work from the pen of Goëthe, gave the idea of such a being. But the copy will be found greatly different from my great prototype; nor can I be accused of borrowing any thing, save the general idea,

from an author, the honour of his own country, and an example to the authors of other kingdoms, to whom all must be proud to own an obligation. Family tradition supplied me with two circumstances, which are somewhat analogous to that in question. The first is an account of a lawsuit, taken from a Scottish report of adjudged cases, quoted in note to chap. vi. p. 129. The other—of which the editor has no reason to doubt, having often heard it from those who were witnesses of the fact—relates to the power of a female in keeping a secret (sarcastically said to be impossible), even when that secret refers to the exercise of her tongue. In the middle of the eighteenth century, a female wanderer came to the door of Mr. Robert Scott, grandfather of the present author, an opulent farmer in Roxburghshire, and made signs that she desired shelter for the night, which, according to the custom of the times, was readily granted. The next day the country was covered with snow, and the departure of the wanderer was rendered impossible. She remained for many days, her maintenance adding little to the expense of a considerable household; and by the time that the weather grew milder, she had learned to hold intercourse by signs with the household around her, and could intimate to them that she was desirous of staying where she was, and working at the wheel and other employment, to compensate for her food. This was a compact not unfrequent at that time, and the dumb woman entered upon her thrift, and proved a useful member of the patriarchal household. She was a good spinner, knitter, carder, and so forth, but her excellence lay in attending to the feeding and bringing up the domestic poultry. Her mode of whistling to call them together was so peculiarly fish and shrill, that it was thought by those who heard it [to be] more like that of a fairy than a human being. In this manner she lived three or four years, nor was there the slightest idea entertained in the family that she was other than the mute and deprived person she had always appeared. But in a moment of surprise, she dropped the mask which she had worn so long. It chanced upon a Sunday that the whole inhabitants of the household were at church excepting Dumb Lizzie, whose infirmity was supposed to render her incapable of profiting by divine service, and who therefore stayed at home to take charge of the house. It happened that, as she was sitting in the kitchen, a mischievous shepherd boy, instead of looking after his flock on the lea, as was his duty, slunk into the house to see what he could pick up, or perhaps out of mere curiosity. Being tempted by something which was in his eyes a nicety, he put forth his hand, unseen as he conceived, to appropriate it. The dumb woman came suddenly upon him, and in the surprise, forgot her part, and exclaimed, in loud Scotch, and with distinct articulation, 'Ah, you little deevil's limb!' The boy, terrified more by the character of the person who rebuked him, than by the mere circumstance of having been taken in the insignificant offence, fled in great dismay to the church, to carry the miraculous news that the dumb woman had found her tongue. The family returned home in great surprise, but found that their inmate had relapsed into her usual mute condition, would communicate with them only by signs, and in that manner denied positively what the boy affirmed. From this time confidence was broken betwixt the other inmates of the family and their dumb, or rather silent, guest. Traps were laid for the supposed impostor, all of which she skillfully eluded;

fire-arms were often suddenly discharged near her, but never on such occasions was she seen to start. It seems probable, however, that Lizzie grew tired of all this mistrust, for she one morning disappeared as she came, without any ceremony of leave-taking. She was seen, it is said, upon the other side of the English border, in perfect possession of her speech. Whether this was exactly the case or not, my informers were no way anxious in inquiring, nor am I able to authenticate the fact. The shepherd boy lived to be a man, and always averred that she had spoken distinctly to him. What could be the woman's reason for persevering so long in a disguise as unnecessary as it was severe, could never be guessed, and was perhaps the consequence of a certain aberration of the mind. I can only add, that I have every reason to believe the tale to be perfectly authentic, so far as it is here given, and it may serve to parallel the supposed case of Fenella."

We will not trouble our readers with the justificatory papers to rescue the memory of the real Christian family from the imputations cast upon the demi-ideal Christians in the romance; but conclude with a note on the eleventh chapter, which affords an interesting account of popular pastimes in the Isle of Man, &c.

"Waldron mentions the two popular festivities in the Isle of Man which are alluded to in the text; and vestiges of them are, I believe, still to be traced in this singular island. The Contest of Winter and Summer seems directly derived from the Scandinavians, long the masters in Man, as Olaus Magnus mentions a similar festival among the northern nations. On the first of May, he says, the country is divided into two bands, the captain of one of which hath the name and appearance of Winter, is clothed in skins of beasts, and he and his band armed with fire-forks. They fling about ashes, by way of prolonging the reign of Winter; while another band, whose captain is called Florro, represent Spring, with green boughs, such as the season offers. These parties skirmish in sport, and the mimic contest concludes with a general feast. *History of the Northern Nations*, by Olaus, book xv. chap. 2.—Waldron gives an account of a festival in Wales exactly similar:—"In almost all the great parishes, they choose from among the daughters of the most wealthy farmers, a young maid for the Queen of May. She is drest in the gayest and best manner they can, and is attended by about twenty others, who are called maids of honour. She has also a young man, who is her captain, and has under his command a good number of inferior officers. In opposition to her, is the Queen of Winter, who is a man drest in woman's clothes, with woollen hoods, fur tip-pets, and loaded with the warmest and heaviest habits, one upon another; in the same manner are those who represent her attendants drest; nor is she without a captain and troop for her defence. Both being equipt as proper emblems of the beauty of the spring, and the deformity of the winter, they set forth from their respective quarters; the one preceded by violins and flutes, the other with the rough music of the tongs and cleavers. Both companies march till they meet on a common, and then their trains engage in a mock battle. If the Queen of Winter's forces get the better so far as to take the Queen of May prisoner, she is ransomed for as much as pays the expenses of the day. After this ceremony, Winter and her company retire and divert themselves in a barn, and the others remain on the green, where having danced a considerable time, they conclude the evening with a feast; the queen

at one table with her maids, the captain with his troop at another. There are seldom less than fifty or sixty persons at each board, but not more than three or four knives. Christmas is ushered in with a form much less meaning, and infinitely more fatiguing. On the 24th of December, towards evening, all the servants in general have a holiday; they go not to bed all night, but ramble about till the bells ring in all the churches, which is at twelve o'clock; prayers being over, they go to hunt the wren, and after having found one of these poor birds, they kill her and lay her on a bier with the utmost solemnity, bringing her to the parish church, and burying her with a whimsical kind of solemnity, singing dirges over her in the Manx language, which they call her knell; after which Christmas begins. There is not a barn unoccupied the whole twelve days, every parish hiring fiddlers at the public charge; and all the youth, nay, sometimes people well advanced in years, making no scruple to be among these nocturnal dancers."—*Waldron's Description of the Isle of Man*, folio, 1731."

Dr. Lardner's Cabinet Cyclopædia. (Useful Arts.) No. XXII. A Treatise on the Origin, &c. and present State of the Silk Manufacture. London, 1831. Longman and Co.

INDEPENDENTLY of the mechanical processes here minutely described, there is a great deal of curious information in this little volume; so that while the former must recommend it to every manufacturer and workman, the latter will secure it the approbation of the more general reader.

Among the properties of silk, the following are stated:—

"Neumann found that but few materials afforded an equal quantity of volatile alkali. Tournefort observes that it contains more than hartshorn, as he obtained from fifteen ounces of silk two drachms of volatile salt: this, which was called the spirit of raw silk, when rectified with some essential oil, was the medicine formerly celebrated under the name of "Guttæ Anglicanæ," or English drops. The volatile alkali obtained from silk was then supposed to be of a different nature from that contained in any other substance, and it consequently was held to possess different virtues peculiar to itself. So, salt of tartar, and sub-carbonate of potass, were for a long time considered to be, and were used as two separate substances. The chemical philosopher had not then learned to generalise, and could not understand that the same substance, differing in no one particular as to its nature and properties, could be obtained from many apparently wholly dissimilar bodies.

"A silk covering of the texture of a common handkerchief is said to possess the peculiar property of resisting the noxious influence and of neutralising the effects of malaria. If, as is supposed, the poisonous matter is received into the system through the lungs, it may not be difficult to account for the action of this very simple preventive. It is well known that such is the nature of malaria poison, that it is easily decomposed by even feeble chemical agents. Now, it is probable that the heated air proceeding from the lungs may form an atmosphere within the veil of silk, of power sufficient to decompose the miasma in its passage to the mouth; although it may be equally true that the texture of the silk covering may act mechanically as a non-conductor, and prove an impediment to the transmission of the deleterious substance. We learn from Pomet's history of drugs, that silk was in his time used

as a medicine, by reducing the pure part of the cocoon into a powder. His volume contains many copious directions for preparing this powder, and for duly and carefully separating the chrysalis from the part which he considered medicinal. Silk thus prepared has, as he affirmed, 'the virtues of cleansing the blood, making the spirits brisk, and the heart pleasant.' Lemery, the editor and commentator of Pomet, adds, that the silkworm itself likewise possesses medicinal properties. According to his information, silkworms that had been dried into a powder and applied upon the head, which should be previously shaved for the reception of this plaster, were esteemed extremely efficacious in curing vertigo."

The work is both embellished and elucidated by about forty wood-engravings.

Examples of Gothic Architecture, selected from various Ancient Edifices in England, &c. &c. By A. Pugin, Architect; the Literary part by E. J. Willson, F.S.A. First Series. 4to. with plates. London, 1831.

To those who are acquainted with Mr. Pugin's former work, entitled *Gothic Specimens*, it will be ample recommendation of the present one to say that it forms a continuation of the same plan, and is executed with equal fidelity and taste;—or rather, exhibits a superior degree of research, and that fuller intelligence of the subject arising from continued study and experience. Like that publication, these "Examples" consist of plans, elevations, sections, and parts at large, so judiciously selected, as to furnish a series of highly instructive lessons; and, in fact, supplying, as far as can be so supplied, all the instruction to be derived from the edifices themselves,—nay, in some cases even more, since the drawings exhibit every particular, most carefully made out from the data supplied by the remaining parts, wherever the dilapidated state of the original structure has rendered such a process necessary.

In this and his former publication Mr. Pugin has effected more for the practitioner in this style of architecture than all his predecessors together, having given us its anatomy, and completely exhibited its *osteology*; in saying which, it should be observed, we are far from wishing to disparage the very tasteful and masterly graphic works produced by others. Yet these latter being merely pictorial, give only the general effect, and that from particular points of view; while Mr. Pugin's delineations are so complete, exact, and intelligible, even as to the minutest circumstances, that they are tantamount to so many models of the respective structures. His new volume, moreover, differs from the "Specimens," inasmuch as the subjects of which it treats consist, for the most part, of domestic architecture, and consequently offer the most suitable forms for adaptation to modern residences.

Independently of their positive merit, these studies are the more valuable, because the information they supply is not only highly useful and interesting in itself, but such, also, as we can obtain from no other sources. Some few of them, indeed, have been represented before—unsatisfactorily, it must be added, and imperfectly; yet others are now edited for the first time; and these latter may be said to open fresh and almost inexhaustible sources of architectural composition in this truly beautiful style; and that, too, of every degree of character, from the simplest to the most ornate. Wide as is the difference between this class of buildings and the ecclesiastical structures of the same periods, there is the same national

physiognomy, the same taste, the same feeling, only varied and modified according to actual circumstances; for this difference, it should be observed, is only such as arises from an *extension of*, not a *departure from*, the genius of one and the same style of art. This versatility of power is to architecture what copiousness of words and flexibility of expression are to a language; and in plasticity and ductility, Gothic architecture is inferior to no other style whatever.

Hitherto our modern *soi-disant* Gothic houses have been, almost without exception, either the most paltry and ridiculous erections that can well be conceived; or, if tolerably correct in some of the individual features, those features have been borrowed from churches and chapels, and, what is still worse, put together without the least attention to character. Such abominations as sash-windowed castles, with the windows themselves crammed as closely together as those in a Cheapside house, or designs of such gingerbread-maker's Gothic as we behold in the front of Guildhall,—are truly deplorable, and now almost incredible. Of such flagrantly vile taste, little danger (one might hope, if we did not witness the contrary in a multitude of instances) is to be apprehended at the present day; there is, however, a fault of an opposite description to be guarded against, and the more so, as it assumes the appearance of a merit,—we mean that of exclusively copying even the best examples of a former period; for even the very best are not without some defects, nor utterly incapable of all further improvement. Admirable as East Basham is,—and of its exquisite beauty no verbal description can convey an idea,—some of the windows are far from being elegant in themselves, or in unison with the other features. The same remark applies to those of Thorpland Hall, which, however suitable they may be for a grange or parsonage-house, where unpretending simplicity is all that we expect, are of too homely a character for a mansion, unless so introduced as to relieve and set-off other parts. The windows of the parsonage-house at Great Snoring are, on the contrary, of particularly handsome, yet chaste design, although not altogether applicable upon a large scale without undergoing some modification, and the addition of transoms.

Collegiate architecture, of which there are many admirable examples in this work, all taken from buildings at Oxford, presents numerous features, such as entrance gateways, oriel windows, towers, turrets, pinnacles, cloisters, &c.—all of which may be brought into play in an extensive residence; and it is from these and similar sources the architect will be able to derive abundant materials for almost every purpose of a modern habitation. While, however, he forms his taste upon these and similar models, let him beware of falling into the error of supposing that mere copying will suffice. He who thoroughly comprehends the spirit of the originals, who feels all their beauties, who has analysed both causes and results, and who has stored his mind with the ideas they furnish, will be in little danger of deviating from the path pointed out by his guides, because he does not happen to place every step in the impressions they have left. Such a one will endeavour to imitate—not be satisfied with copying; and between the two processes the difference is immense; for the plodding copyist will, at the best, produce but a tame fac-simile as to form; the imitator will extend and develop the ideas of his predecessors; the imperfect hints they may occasionally have thrown

out, he will pursue and carry forward, still keeping in the same direction. This is, of course, not to be attempted unadvisedly and rashly; nor ought it to be attempted by any one who does not both perceive the obstacles he has to encounter, and feel conscious that he possesses energies which will enable him to surmount them.

The species of imitation we here recommend, is countenanced by what Mr. Willson says in the introductory remarks to this volume; and he will hardly be suspected of advocating any practice that would be likely to lead to capricious innovation, and thereby tend to degrade and barbarise a species of architecture whose charms few persons can better appreciate than himself. To those *purists* who demand that we should strictly conform to precedent, we would submit this simple question—"Do you suppose that had no causes intervened to occasion a marked change in the style of the earlier part of the sixteenth century, it would not have gone on gradually receiving new accessions of homogeneous forms, and have kept pace with increasing refinement and opulence?" If this be answered in the affirmative, as we think it must, we are surely at liberty to do that now, which, but for accidental circumstances of the times, would have been done before;—to set out afresh from the point where our ancestors broke off. That we should first of all qualify ourselves for so doing, by understanding the whole of the previous progress, is, of course, an indispensable condition; but that precaution being taken, little apprehension need be entertained as to the result; and that we have artists among us who thoroughly conceive the spirit of their models, and can enter into the feelings of the architects of former ages, we have a tolerably convincing proof in several magnificent structures lately erected at Cambridge.

What Mr. Pugin has already performed will prove of material assistance towards the attainment of the object at which we have hinted; for while his publications furnish the most valuable practical instructions, they also supply standards of taste, to which we can constantly refer. We will not say that either himself or the public ought to be satisfied with what he has now accomplished; for much as has been done, still more remains to be effected in so wide a field; and we sincerely hope he will prosecute his interesting labours with unabated zeal.

Among other examples that we are anxious to see thus delightfully elucidated, would be some specimens of interior domestic architecture of the same period; also one or two of the best models of the Elizabethan style: for although we do not maintain so high an opinion of this latter as the writer of an article in the last No. of the *Quarterly Review*, entitled "Old English Domestic Architecture," deeming it in many respects inferior to, and less extensively applicable than, the genuine Tudor; yet it is highly curious both in itself, and as a connecting link between the latest Gothic and the Italianised English of the seventeenth century.

Even here, again, fresh modifications might easily be obtained: much that is merely quaint or impure might be expunged, without detriment to the rest, its place being supplied by details equally picturesque, and equally in character with its leading traits. We are of opinion, also, that our architects would do well to look at some of those singular and highly enriched specimens of domestic buildings to be met with in the north-west of France, several

of which have been delineated by Mr. Pugin himself in his *Antiquities of Normandy*. Although of a very distinct character from either our Tudor or Elizabethan styles, they offer a variety of details capable of being adapted to, and blended with, the one or the other.

Before terminating this notice, we may observe, that Mr. Pugin has published a series of Views illustrative of the principal buildings given in his *Examples*, accompanied with interestingly written descriptions from the pen of Mr. Leeds. He has also more recently produced another work, entitled *Ornamental Wooden Gables*, which has been commended as it deserves, and spoken of at considerable length in the 5th No. of the *Library of the Fine Arts*,—a periodical which we take this second opportunity of mentioning with approbation, especially on architectural subjects, though we sometimes differ from it on these, and still oftener on general art. Nevertheless it is a publication well worthy of the patronage of an intelligent public; for which patronage it will yield light and information in return, upon topics of common interest to all refined society.

Harper's Family Library, No. X. The Life of Mohammed, Founder of the Religion of Islam, and of the Empire of the Saracens. By the Rev. George Bush, A.M. 18mo. pp. 261. New York, 1830. Harpers.

THIS very neat American edition has hitherto consisted of reprints from Mr. Murray's publication; but the present volume is an original work, and one that does much credit to the author, the Rev. Mr. Bush. The plan is so clearly and well detailed in his own words, that we cannot do better than insert them,—though they will strike the English reader as full of *Americanisms*.

"The present work lays claim to no higher character than that of a compilation. This, indeed, must necessarily be the character of any work attempted at this day upon the same subject. All the accessible facts in the life and fortunes of the Arabian prophet have long since been given to the world. New theories and speculations, moral and philosophical, founded upon these facts, and many of them richly deserving attention, are frequently propounded to the reflecting; but they add little or nothing to the amount of our positive information. All therefore that can now be expected is such a selection, and arrangement, and investment, of the leading particulars of the impostor's history, as shall convey to the English reader, in a correct and concentrated form, those details which are otherwise diffused through a great number of rare books, and couched in several different languages. Such a work, discreetly prepared, would supply, if we mistake not, a very considerable desideratum in our language, one which is beginning to be more sensibly felt than ever, and which the spirit of the age loudly requires to have supplied. How far the present sketch may go towards meeting the demand, it becomes others than the writer to judge. He has aimed to make the most judicious use of the materials before him, and from the whole mass to elicit a candid moral estimate of the character of the founder of Islam. In one respect he may venture to assure the reader he will find the plan of the ensuing pages an improvement upon preceding memoirs; and that is, in the careful collation of the chapters of the Koran with the events of the narrative."

We extract the account of Mohammed's illness and death, as a specimen of the style,

which, as we have hinted, is certainly not free from the peculiarities of Transatlantic *English*.

"And now, having arrived at the sixty-third year of his age, and the tenth of the Hejira, A.D. 632, the fatal effects of the poison, which had been so long rankling in his veins, began to discover themselves more and more sensibly, and to operate with alarming virulence. Day by day he visibly declined, and it was evident that his life was hastening to a close. For some time previous to the event, he was conscious of its approach, and is said to have viewed and awaited it with characteristic firmness. The third day before his dissolution, he ordered himself to be carried to the mosque, that he might, for the last time, address his followers, and bestow upon them his parting prayers and benedictions. Being assisted to mount the pulpit, he edified his brethren by the pious tenor of his dying counsels, and in his own example taught a lesson of humility and penitence, such as we shall scarcely find inculcated in the precepts of the Koran. 'If there be any man,' said the apostle, 'whom I have unjustly scourged, I submit my own back to the lash of retaliation. Have I aspersed the reputation of any Mussulman? let him proclaim my faults in the face of the congregation. Has any one been despoiled of his goods? the little that I possess shall compensate the principal and the interest of the debt.' 'Yes,' replied a voice from the crowd, 'thou owest me three drachms of silver.' Mohammed heard the complaint, satisfied the demand, and thanked his creditor, that he had accused him in this world rather than at the day of judgment. He then set his slaves at liberty—seventeen men and eleven women; directed the order of his funeral; strove to allay the lamentations of his weeping friends, and waited the approach of death. He did not expressly nominate a successor, a step which would have prevented the altercations that afterward came so near to crushing in its infancy the religion and the empire of the Saracens; but his appointment of Abubeker to supply his place in the function of public prayer and the other services of the mosque, seemed to intimate indirectly the choice of the prophet. This ancient and faithful friend, accordingly, after much contention, became the first caliph of the Saracens, though his reign was closed by his death at the end of two years. The death of Mohammed was hastened by the force of a burning fever, which deprived him at times of the use of reason. In one of these paroxysms of delirium he demanded pen and paper, that he might compose or dictate a divine book. Omar, who was watching at his side, refused his request, lest the expiring prophet might dictate something which should supersede the Koran. Others, however, expressed a great desire that the book might be written; and so warm a dispute arose in the chamber of the apostle, that he was forced to prove their unbecoming vehemence. The writing was not performed, and many of his followers have mourned the loss of the sublime revelations which his dying visions might have bequeathed to them. His favourite wife, Aysha, hung over her husband in his last moments, sustaining his drooping head upon her knee, as he lay stretched upon the carpet, watching with trembling anxiety his changing countenance, and listening to the last broken sounds of his voice. His disease, as it drew towards its termination, was attended at intervals with most excruciating pains, which he constantly ascribed to the fatal morsel taken at Chaibar; and as the mother of Bashar, the companion who had died

upon the spot from the same cause, stood by his side, he exclaimed—'O, mother of Bashar! the cords of my heart are now breaking of the food which I ate with your son at Chaibar.' In his conversation with those around him, he mentioned it as a special prerogative granted to him, that the angel of death was not allowed to take his soul till he had respectfully asked of him his permission,—and this permission he condescendingly granted. Recovering from a swoon into which the violence of his pains had thrown him, he raised his eyes towards the roof of the house, and with faltering accents exclaimed, 'O, God! pardon my sins. Yes, I come among my fellow-labourers on high!' His face was then sprinkled with water, and that by his own feeble hand, when he shortly after expired. The city, and more especially the house of the prophet, became at once a scene of sorrowful, but confused, lamentation. Some of his followers could not believe that he was dead. 'How can he be dead, our witness, our intercessor, our mediator with God? He is not dead. Like Moses and Jesus, he is wrapped in a holy trance, and speedily will he return to his faithful people.' The evidence of sense was disregarded; and Omar, brandishing his cimeter, threatened to strike off the heads of the infidels who should affirm that the prophet was no more. The tumult was at length appeased by the moderation of Abubeker. 'Is it Mohammed,' said he, 'or the God of Mohammed, whom ye worship? The God of Mohammed liveth for ever—but the apostle was a mortal like ourselves; and, according to his own prediction, he hath experienced the common fate of mortality.' The prophet's remains were deposited at Medina, in the very room in which he breathed his last, the floor being removed to make way for his sepulchre, and a simple and unadorned monument [was] some time after erected over them."

In the Appendix all the Scripture prophecies supposed to have reference to Mohammed and the progress of his religion are carefully pointed out and collected; but their examination would be ill fitted for our pages. A list, explaining oriental names and offices, will be useful to the more juvenile reader: there is also (principally compiled from Prideaux) a list of the authors, with a brief account of each, who have written on the subject of Mohammedanism. Yet a fair proportion both of industry and of judgment has been bestowed on this little volume.

Memoirs of Count Lavallette. Vol. II.

[Second notice.]

WE shall forthwith proceed to our task of extract, reserving our own remarks till the conclusion. Lavallette enters into full detail of Mallet's extraordinary attempt, which took place during the Russian campaign.

"The disasters of that campaign are known. While they were going on, the city of Paris witnessed a prodigy such as is often seen on the eve of the great convulsions of nature. What all Europe in arms had not dared to plan for the last twenty years, namely, the conquest of Paris, a single man, in prison, without friends, money, or reputation, was bold enough to attempt, and almost succeeded. I had served with Mallet as staff officer in 1793. He was a man of an extraordinary turn of mind; his manners were eccentric, and he was tormented with a deep melancholy, that made him morose and disagreeable to his comrades. The accession of Buonaparte to the throne had displeased him, and he had not attempted to hide his feelings. The loss of his

liberty, added to the grief of seeing his career stopped when so many officers of younger standing than himself rose to the highest rank and acquired great reputation, made him take a part in an ill-conceived conspiracy, consisting of those old remains of brawling Jacobins, who take no counsel but their rage, and have no means of realising their wretched projects. Mallet was discovered; and the particulars of the plot having been laid before the eyes of the emperor, he shrugged up his shoulders through contempt. After some years' imprisonment, Mallet obtained leave to remove to one of those private hospitals (*maisons de santé*), which surround Paris, and which were for the police a sort of seminaries, where they kept, subject to a severe supervision, all such persons who could not be convicted, but whom, however, it would have been dangerous to set entirely free. We had remained during twenty-six days without any accounts from the army. Sinister reports were beginning to circulate, when Mallet, after having combined his plan with the Abbé Constant, a companion of his captivity, found means to get out of prison, dressed in a field-marshal's uniform, and went at four o'clock in the morning to the barracks of the Municipal Legion. Having called up the colonel, who was still asleep, he told him with an air of dismay that the emperor was dead; that the senate was assembled to restore the republican government in France; and that he, Mallet, who had been appointed commander of Paris, wanted six hundred men of the regiment, to go to the Hôtel de Ville and protect the senate, that was assembling there. At this fatal news the colonel was at first seized with alarm, and his grief for the death of the emperor made him shed tears. The disorder of his mind did not permit him to reflect on the news he had heard, nor cast his eyes on the suspicious person that stood before him. He ordered the guard to assemble, and, overwhelmed with consternation, left Mallet master of his forces. The name of a republic, which recalled to mind licentiousness, was a counterpoise to the death of the emperor. The most brilliant promises and temptations were held out; the officers all believed what Mallet chose to tell them. Each soldier was to be rewarded by advancement and double pay; the officers were to get drafts on the treasury, of twenty and even fifty thousand francs,—for Mallet had provided against every difficulty. He soon got together four hundred men, at whose head he went to seek his accomplices, and the future ministers of France, in the prison of La Force. In that prison there had been in confinement, for some time, an adjutant-general, named Guidal, and General Lahorie, of whom I have already spoken. Both had served with Mallet, but had heard nothing more of him, and were totally ignorant of his plans. Mallet entered the prison, claimed his two old comrades, and told the great news. The jailer refusing to deliver his prisoners, he signed their liberation, introduced two hundred men, and went to Lahorie's chamber. The first words Mallet said to him were, 'You are the minister of police. Rise, dress yourself, and follow me.' Poor Lahorie, who now saw, for the first time during a lapse of twelve years, a man whom he had never looked upon as quite *compos mentis*, imagined all he heard was but a dream, and rubbed his eyes while looking at him. At last the assurance of the death of the emperor, of the assembling of the senate, of the re-establishment of the republic, convinced him that he once more witnessed another of those revolutions so common in modern history. He rose, dressed himself, and found

six hundred men at the gate. With Guidal by his side, he immediately went to the minister of police, who was still in bed. The soldiers entered quietly, and without any obstacle; when, finding the door of the minister's chamber locked, they broke it open with the butt-ends of their muskets. The minister, waking at the noise, jumped out of bed, and, without waiting to dress himself, rushed upon the murderers. He was seized, and treated in the most brutal manner; but at last, at sight of the prisoner Lahorie, and the intelligence of the death of the emperor, he began to comprehend that he was the victim and the dupe of a revolution. He obtained, not without some trouble, leave to dress; and Guidal led him, escorted by a detachment, to the prison of La Force. On the Pont Neuf he jumped from the cabriolet, but was retaken. When he arrived at the prison, the jailer burst into tears. Savary whispered to him, 'Place me in your darkest dungeon, and hide the key of it. God knows what is the meaning of this; but it will all clear up.' A few moments later, the prefect of police was also brought to the prison: a detachment had gone to fetch him, and had dragged him along. Whilst the heads of the police were thus treated, Mallet went to General Hullin, commander of the military division and of the city of Paris. The general was just getting up to receive an order from the minister of the war department, which could be delivered into no hands but his own. Mallet was accompanied by some officers of his troop. On seeing the general, he said to him, with the greatest coolness, and with an air of gravity, 'I am very mortified, general, to have so painful a commission to execute; but my orders are to arrest you.' Hullin remonstrated; and looking at Mallet, whose face he knew, he said, 'How! Mallet, is it you? You arrest me—a prisoner? How did you come here? What is your business doing here?' 'The emperor is dead.' These words struck Hullin dumb, and Mallet repeated the fable he had invented. However, the arrest and the order to go to prison appeared wondrous strange to the general. He continually spoke of the death of the emperor and his own imprisonment:—at length asked Mallet to shew him his order. 'Very willingly,' replied the other: 'will you step with me into your closet?' Hullin turned round, and as he was entering the closet, he fell, struck by a bullet that touched his head. While lying on the ground, he saw his murderer looking coolly at him, and preparing to fire once more; but thinking him dead he left the place. He crossed the Place Vendôme, and went to the staff, whither he had sent before him a letter, acquainting the adjutant-general, N***, that he was advanced to the rank of major-general. The latter, when he saw Mallet, could not disguise his doubts. Struggling between his duty and his ambition, he was perhaps at the point of yielding, and entering into arrangements, when one of the heads of the military police, the old Colonel Laborde, came into the apartment. The appearance of that man shewed sufficiently that he could be neither deceived nor seduced. Mallet was therefore going to blow out his brains, when Laborde seized him abruptly by his arm, called for assistance, and had him arrested. This Laborde was an old soldier, who, having long retired from active service, had chosen Paris for his camp and the scene of his observations. Attached to the police under all possible governments, no one could impose upon him by illusions. His youth had been passed in vice, and he now felt pleasure in pursuing

it in its last holds. He made use of his privilege with all the despotism which subalterns of that class love to exercise upon the rabble. Rank, titles, glory, virtue, crime itself, is sacred to them as long as it remains prosperous; but as soon as the day of misfortune arrives, they trample upon every thing, and neither respect nor pity must be expected from them. Laborde had seen Mallet in prison. At the first report of the minister of police being arrested, he set himself at the head of a platoon of infantry, went to the office and found Lahorie calmly seated at his desk, writing orders, after those he had given at the Hôtel de Ville. He had him immediately seized and tied to his arm-chair, while he addressed to him reproaches that opened the unfortunate Lahorie's eyes to the madness of Mallet. He then went to the staff, where he arrested the latter, and flying to the prison, he delivered the minister and prefect of police. The prefect went home; but his hotel being still full of the soldiers who had arrested him, they pursued him, and he was glad to find a refuge in a neighbouring house. All these scenes, well deserving of a place in the Arabian Nights' Entertainments, happened between five and eight o'clock in the morning. By nine all was over; and the happy inhabitants of Paris, when they awoke, learned the singular event, and made some tolerably good jokes upon it."

Certainly never did princes, to whom conciliation was of such paramount necessity, so neglect it as did the Bourbons.

"The following circumstances have been related to me by Count d'Erlon. The Duke de Berri was one day reviewing some regiments garrisoned in the province of which Marshal Duke de Treviso was governor, and Count d'Erlon commander. An officer came out of the ranks and asked the prince for the cross of St. Louis. 'What have you done to deserve it?' 'I have served thirty years in the French army.' 'Thirty years' robbery!' replied the prince, turning his back on him. It is true, that the marshal having remonstrated, the officer obtained the next day what he had solicited; but the words were reported about, and I leave the reader to judge of the effect they had among the troops.

Valuable Library.—"The day before the emperor left Paris for the fatal campaign of Russia, he kept me with him at the close of the evening; and after giving me all the necessary orders for his journey, he said to me: 'Go to the grand marshal; he will give you drafts on the treasury for 1,600,000fr; you will convert them secretly into gold, which the minister of the treasury will procure you the means of doing; and you will wait my orders to send it me.' So much gold was difficult to hide. I addressed myself to the keeper of the ordnance dépôt, (M. Regnier), who was a very ingenious mechanic, and who made for me, in a very clever manner, several boxes which looked exactly like as many quarto volumes. Each of them contained 30,000 fr., and I placed them in my library. When the emperor came back from the Russian campaign, he seemed entirely to have forgotten the money, and he returned to Germany for the campaign of Leipsic without giving me any particular orders on the subject. The only reply he made to my question respecting it was, 'We shall speak of that when I come home.' At last, when, a few months afterwards, he was going to leave Paris for the campaign of France, I insisted on his relieving me from the charge of a treasure, for which I might perhaps not be able to answer in the midst of the important

events that might threaten Paris. 'Well, then,' he said, 'hide it at your country seat.' It was in vain that I remonstrated, observing, that the castle of La Verrière, situated on the road leading from Versailles to Rambouillet, might be plundered by stragglers of the enemy; that my occupation in Paris never permitted me to remain long in the country, and that chance and the slightest imprudence might make me lose the money. He would listen to nothing, and I was forced to obey. My steward was an honest and intelligent man. He made, in my presence, during several nights, a hole under the floor of a closet on the ground floor. There we deposited the fifty-four volumes of Ancient and Modern History. Never would any work have been read with more eagerness, nor appreciated nearer to its real value. The inlaid floor was carefully replaced, and nothing was suspected. The taking of Paris threw the emperor into Fontainebleau. I most ardently wished to share his fate, or at least to receive probably his last orders. But he sent me word by the Duke de Vicenza, that it would be dangerous if I were to come to see him; that he wished me to remain in Paris, where I might act as I pleased; and that he would let me know at some later period how I was to dispose of his money. That circumstance was one of the motives that made me keep so carefully at a distance from government. My attachment to the person of the emperor, the oaths of allegiance I had made to him, my gratitude for his kindness and generosity, made me shudder at the idea of not devoting to him the remainder of my life; but, on the other hand, honour forbade me to embrace the party of the Bourbons, when I was placed in the necessity of maintaining a correspondence with him. What punishment would I not have suffered and deserved, if the king's government, after having received my oath, had discovered that I had in my possession a part of Napoleon's fortune, and that I disposed of it according to his orders? At the time I was making those painful reflections, three hundred Prussians occupied the castle of Verrière. Fifteen slept in the very room where the treasure was hid. These soldiers were far from suspecting that they would have had only to raise with the points of their swords two boards of the floor, to fall upon heaps of gold. They remained there nearly two months. During all that time, I was in continued agony. I expected every day to learn that all had been discovered. Fortunately the Prussians went away at last, and I was easy, at least in that respect."

The details of Napoleon's return from Elba abound in curious matter, but they should be read as a whole; we select, however, one anecdote very characteristic of the manner in which Louis was served by his officers.

"The conduct of the ministry in those last days, and especially that of M. Ferrand, was inexplicable. The king, before he went away, had issued a proclamation, wherein he exhorted the Parisians, and consequently all France, to submission. This proclamation was inserted in the *Moniteur* of the 20th. Its aim was to make all the royalists lay down their arms, and still one of my crimes was stopping the departure of the *Moniteur* and other journals. But if such great importance was attached to the publication of that last will of the king's, why did not M. Ferrand despatch it the day before by expresses? It might have travelled sixty leagues in twenty-four hours, in all directions, except on the road to Lyons, and the prefects would, at least, have known how to

act. I always suspected that the reason why M. Ferrand did not send it off was because it did not please him. The man has so publicly acknowledged his wishes and his opinions, that I do not think I speak ill of him in saying that he wanted a civil war to break out, which the proclamation might prevent. As for the rest, I own I did wrong in stopping the journals; they could do no harm. Besides, the proclamation was stuck up in all the streets; and whoever wished to read it might do so. Though I wish to be sparing in anecdotes, I cannot, however, omit one that paints admirably well the men who at that time had so fatal an influence over our affairs. The proclamation I mentioned had been digested by the Chancellor d'Ambray; but the order for its insertion in the *Moniteur* had not been delivered. The editor of that journal went at ten o'clock in the evening to M. de Vitrolles, secretary of the council, to ask for the order. M. de Vitrolles sent him to the chancellor. After having repeatedly rung the bell, the porter appeared at a small window, and said that no one could then see his master, who was asleep. M. M***, vexed at not being able to obtain an audience even of the porter, made a great noise, saying that he came by order of the king, and at last they were obliged to let him in and walk up stairs. There he had a fresh ceremony to go through before he could penetrate to his excellency. The valet-de-chambre was to be awakened and dressed, and afterwards the master himself roused from the arms of Morpheus. At last M*** found himself in the presence of the head of the law, whom he asked for an order of insertion in the *Moniteur*. 'Oh yes, to be sure, the proclamation! Have you seen it?' Then, without waiting for an answer, my lord took it from under his pillow, and began to read it slowly, complacently, and with pauses and inflexions of his voice, which shewed all his paternal affection for that masterpiece of composition. 'This is,' said he, 'one of the things I have written most correctly, and I fear not to say that it is one that will make the greatest sensation. Yes, you may print it.' So saying, he laid himself down again on his pillow and closed his eyes."

Change at the Tuileries.—"In the apartments, the two sisters-in-law of the emperor, the Queens of Spain and of Holland, were waiting for him, deeply affected. Soon after, the ladies of the household and those of the empress came to join them. The fleurs-de-lis had every where superseded the bees. However, on examining the large carpet spread over the floor of the audience-chamber where they sat, one of the ladies perceived that a flower was loose: she took it off, and the bee soon re-appeared. Immediately all the ladies set to work, and in less than half an hour, to the great mirth of the company, the carpet again became imperial."

The conduct of Fouché is thus described by Lavallette.

"Fouché had been far from wishing the return of the emperor. He was long tired of obeying, and had besides undertaken another plan, which Napoleon's arrival had broken off. I shall, perhaps, resume this part of his history another time: I suppress it at present without any scruple, because it has nothing to do with mine. The emperor, however, put him again at the head of the police, because Savary was worn out in that employment, and a skilful man was wanted there. Fouché accepted the office, but without giving up his plan of deposing the emperor, to put in his place either his son, or a sort of a republic with a president.

He had never ceased to correspond with Prince Metternich; and if he is to be believed, he had tried to persuade the emperor to abdicate in favour of his son. That was also my opinion; but, coming from such a quarter, the advice was not without danger for the person to whom it was given. Besides, that advice having been rejected, it was the duty of the minister either to think no more of his plan, or to resign his office. Fouché, however, remained in the cabinet, and continued his correspondence. The emperor, who placed but little confidence in him, kept a careful eye upon him. One evening the emperor had a great deal of company at the Elysée; he told me not to go home, because he wished to speak to me. When every body was gone, the emperor stopped with Fouché in the apartment next to the one I was in. The door remained half open. They walked up and down together, talking very calmly. I was therefore greatly astonished when, after a quarter of an hour, I heard the emperor say to him gravely—"You are a traitor! Why do you remain minister of the police, if you wish to betray me? It depends on me to have you hanged; and every body would rejoice at your death!" I did not hear Fouché's reply, but the conversation lasted above half an hour longer, always walking up and down. When Fouché went away, he bade me cheerfully good night, and said that the emperor had gone back to his apartments. In truth, when I went in he was gone; but the day after, he spoke to me of that conversation. 'I suspected,' he said, 'that the wretch was in correspondence with Vienna. I have had a banker's clerk arrested on his return from that city. He has acknowledged that he brought a letter for Fouché from Metternich, and that the answer was to be sent at a fixed time to Bâle, where a man was to wait for the bearer on the bridge. I sent for Fouché a few days ago, and kept him three hours long in my garden, hoping that in the course of a friendly conversation he would mention that letter to me; but he said nothing. At last, yesterday evening, I myself opened the subject.' (Here the emperor repeated to me the words I had heard the night before—"You are a traitor," &c.) 'He acknowledged, in fact,' continued the emperor, 'that he had received such a letter; but that it was not signed, and that he had looked upon it as a mystification. He shewed it me. Now that letter was evidently an answer, in which the writer declared over again, that he would listen to nothing more concerning the emperor, but that his person excepted, it would be easy to agree to all the rest.' I expected that the emperor would conclude his narrative by expressing his anger against Fouché; but our conversation turned on some other subject, and he talked no more of him. Two days afterwards, I went to Fouché to solicit the return to Paris of an officer of musketeers, who had been banished far from his family. I found him at breakfast, and sat down next to him. Facing him sat a stranger. 'Do you see this man?' he said to me, pointing with his spoon to the stranger; 'he is an aristocrat, a Bourbonite, a Chouan; it is the Abbé M***, one of the editors of the *Journal des Débats*—a sworn enemy to Napoleon, a fanatic partisan of the Bourbons: he is one of our men.' I looked at him. At every fresh epithet of the minister, the abbé bowed his head on his plate with a smile of cheerfulness and self-complacency, and with a sort of leer. I never saw a more ignoble countenance. Fouché explained to me, on leaving the breakfast-table, in what manner all those valets of literature were men

of his; and while I acknowledged to myself that the thing might be necessary, I scarcely knew who were really more despicable,—the wretches who thus sold themselves to the highest bidder, or the minister who boasted of having bought them, as if their acquisitions were a glorious conquest. Judging that the emperor had spoken to me of the scene I described above, Fouché said to me, 'The emperor's temper is soured by the resistance he finds, and he thinks it is my fault. He does not know that I have no power but by public opinion. To-morrow I might hang before my door twenty persons who have that opinion against them, though I should not be able to imprison for four-and-twenty hours any individual favoured by it.' As I am never in a hurry to speak, I remained silent; but, reflecting on what the emperor had said concerning Fouché, I found the comparison of their two speeches remarkable. The master could have his minister hanged with public applause, and the minister could hang—whom? Perhaps the master himself, and with the same approbation. What a singular situation! and I believe they were both in the right: so far public opinion, equitable in regard to Fouché, had swerved concerning the emperor."

There is a curious account of a letter, the truth of the contents of which, though them doubtful, have been somewhat strengthened since.

"Napoleon had undoubtedly expected that the empress and his son would be restored to him: he had, at least, published his wishes as a certainty; and it was, in fact, the worst thing the Emperor of Austria could have done. His hope was, however, soon destroyed. About a month after his arrival, the Duke de Vincenza called upon me, and presented to me a letter without address, which a courier, just arrived from Vienna, had delivered to him among several others, saying that it had been sent to him by M. de * * *, who had not dared to put the direction on it. I was not intimate enough with M. de * * *, to suppose he could have written to me, so I refused to take the letter. Caulaincourt said: 'Be not too hasty; I am convinced it is for you. You would perhaps do well to open it; for if you persist, I shall give it to the emperor.' 'You may do so,' I replied; 'I have no interests in Vienna, and I wish the emperor may read it.' In the evening I was summoned to the palace. I found the emperor in a dimly lighted closet, warming himself in a corner of the fire-place, and appearing to suffer already from the complaint which never afterwards left him. 'Here is a letter,' he said, 'which the courier from Vienna says is meant for you; read it.' On first casting my eyes on the letter, I thought I knew the handwriting of * * *; but as it was long, I read it slowly, and came at last to the principal object. The writer said that we ought not to reckon upon the empress, as she did not even attempt to conceal her hatred of the emperor, and was disposed to approve of all the measures that could be taken against him; that her return was not to be thought of, as she herself would raise the greatest obstacles in the way of it, in case it should be proposed; finally, that it was not possible for him to dissemble his indignation; that the empress, wholly enamoured of * * *, did not even take pains to hide her ridiculous partiality for that man, who had made himself master of her mind as well as of her person. The handwriting of the letter was disguised, yet not so much but that I was able to discover whose it was. I found, however, in the manner in

which the secret was expressed, a warmth of zeal and a picturesque style, that did not belong to the author of the letter. While reading it, I all of a sudden suspected it was a counterfeit, and intended to mislead the emperor. I communicated my idea to him, and the danger I perceived in this fraud. As I grew more and more animated, I found plausible reasons enough to throw the emperor himself into some uncertainty. 'How is it possible,' I said, 'that * * * should have been imprudent enough to write such things to me, who am not his friend, and who have had so little connexion with him? How can one suppose that the empress should forget herself, in such circumstances, so far as to manifest hatred to you, and still more, to cast herself away upon a man who undoubtedly still possesses some power to please, but who is no longer young—whose face is disfigured, and whose person, altogether, has nothing agreeable in it?' 'But,' answered the emperor, ' * * * is attached to me; and though he is not your friend, the postscript sufficiently explains the motive of the confidence he places in you.' The following words were in fact written at the bottom of the letter: 'I do not think you ought to mention the truth to the emperor; but make whatever use of it you think proper.' I persisted, however, in maintaining that the letter was a counterfeit; and the emperor then said to me: 'Go to Caulaincourt. He possesses a great many others of the same handwriting. Let the comparison decide between your opinion and mine.' I went to Caulaincourt, who said eagerly to me: 'I am sure the letter is from * * *; and I have not the least doubt of the truth of the particulars it contains. The best thing the emperor can do, is to be comforted: there is nothing to be expected from that side.'"

[To be continued.]

Rapport à M. le Ministre de l'Intérieur sur les Monumens, &c. des Départemens du Nord.
Par M. L. Vitet, Inspecteur-Général des Monumens Historiques de la France. Paris, Imprimerie Royale.

THIS is at least one of the good effects of a ministry composed of men of letters and study; such as, under the name of *doctrinaires*, formed the first cabinet of Louis Philippe. Even amidst all the difficulties of his position as minister of the interior, M. Guizot found time to attend to the interest of the arts. He appointed M. Vitet inspector of the historic monuments of France.* The opposition journals instantly clamoured, that the minister was creating sinecures for his literary friends. The inspector has sufficiently answered them by this, his first report, being the produce of six months' research employed in the north of France. Although unpublished, and not circulating beyond the ministerial offices and the scientific establishments of France, we have procured a copy, and proceed to render a brief account of its contents.

The reason assigned by M. Vitet for first directing his attention to the north, is, that this portion of the kingdom is most essentially French, or Frankish; and that there, if any where, were to be discovered whatever relics existed of architecture under the Merovingians, or descendants of Clovis. The result of this search was, that no such vestiges remained, although the more ancient ones of Roman architecture

were frequently to be met with. This nowise surprises us; it corroborates what history, if carefully examined, indicates, viz. that the Franks were the most barbarous of all the barbaric tribes that settled on the ruins of the empire. Throughout the north of France, M. Vitet found nought anterior to the year 1000; and even of the eleventh century he can cite but part of the church of St. Remi, at Rheims. From the twelfth century truly dates the resurrection of architecture.

"In another work," says the inspector, in his Report—"I shall endeavour to demonstrate that the history of architecture in the west, from the sixth century to the close of the twelfth, is nothing else than the history of the successive importations of that taste which reigned during this period in Greece, and throughout the coasts of the Mediterranean, from Constantinople to Alexandria. These importations—more or less happy, more or less welcomed, according to the circumstances of times and places—form a study full of variety and interest. Wherever there was river navigable from the sea, wherever there were riches with the people, or genius in the sovereign,—you may be sure that there the exotic taste made rapid progress. Wherever, on the contrary, want of communications, absence of commerce and prosperity, prevailed, there the art of building remained confined to old Roman ideas, disfigured by barbaric rudeness. Hence it happened, that in the same country the Oriental taste appears and disappears, as circumstances invited or repulsed it. Thus in France it was unknown during the sixth century, at which epoch it dawned in Italy under the auspices of the Exarchs of Ravenna. Later, on the other hand, it was banished from Italy by the barbarism of the Lombards, and welcomed in France by Charlemagne. It became extinguished, indeed, soon after the death of this great man, and gave way, towards the tenth century, to a rude and bastard system; whilst at the close of the same age it flourished in Germany under the reign of Otho. But a prodigious event occurred to put a term to these oscillations"—the Crusades.

These, according to the French inspector, spread oriental taste no longer partially, but generally and equally over Europe, in the several regions of which it was differently modified—on the Rhine, for instance, and in Normandy.

"But by the side of these remains, where the oriental style bears the marks of its naturalisation in different regions of the west, there are to be found some in which this oriental style is pure, unalloyed, and as if directly imported from Greece or Ionia—so perfect and untouched is its native character. These buildings, executed by Byzantine architects, or by those immediately from their schools, are rare and precious, and belong chiefly to the twelfth century. This is the style of architecture which I call *pure Byzantine*, without any Roman or barbarian alloy."

Specimens of this architecture M. Vitet declares to have been found at Soissons, in some ruins of the old church of Notre Dame, in the church of St. Pierre, in that of St. Martin at Laon, and in that of Coucy le Château.

"As to that other style of architecture," continues the Report, "generally esteemed oriental, that of the *ogive*, improperly called Gothic, I will try to prove, that it is no relic of oriental origin, that it is essentially indigenous, and has never flourished but in the west."

Another part of the Report is devoted to the sculptures of the middle ages, and to such speci-

mens of it as M. Vitet could discover in his tour. We have not space to follow him in these researches, and shall indulge in but one more extract.

"I remarked at Laon a piece of sculpture, interesting in its kind: it is a tomb at the entrance of the church of St. Martin, representing Enguerrand I. lying in his armour. The story of the tomb is singular. Enguerrand, dying, ordered that his body should be interred in the abbey-church. The monks, resentful against their old enemy, refused to receive his remains, and erected his tomb outside of their church, before the portal. The descendants of Enguerrand were indignant, and war ensued betwixt the counts and the abbey. It lasted, with intervals of peace and accommodation, for a century, when the monks were obliged to yield. But how? They threw down the old front of the church, and erected another further, including the tomb of Enguerrand, which thus was inside the church. But the monks, in despite, never consecrated the part lately taken in; so that Enguerrand still slept out of holy ground."

This anecdote is fully confirmed by the architecture of the church.

Mythological Fictions of the Greeks and Romans. By Charles Philip Moritz. Translated from the fifth edition, in German, with Improvements. By C. F. W. J. 12mo. pp. 276. New York, 1830. G., C., and H. Carvill.

WHAT! is Saul also among the prophets? we exclaimed on seeing this ultra imaginative publication from the Transatlantic press: we mean nothing uncivil to brother Jonathan; on the contrary, we congratulate the editor on the accomplishment of his task, who thus expresses himself:—"Well aware of the importance of making them the groundwork of a *thorough education*, I cannot but indulge the hope, that this little work of Moritz may be of use in advancing among us a department of literature, which, it must be confessed, is not estimated as its importance merits." We echo these laudable sentiments, and indulge a hope that, with a taste for the elegant fictions of the ancient mythologists, the arts also may come in for a share of their regard; as, by way of illustration and embellishment, the translation has the designs belonging to the original work. These are taken for the most part from antique gems, which is not only in good taste, but also in good keeping, as it gives to the little volume a truly classic appearance. And no where could have been found a more ample store applicable to the purpose of such publications, embracing, as they do, subjects of imagination, rites and ceremonies, effigies of ancient divinities, heroes and philosophers, and especially objects connected with heathen mythology. It might have been wished that these embellishments had been of a higher order of art. As it is, they serve rather (as tokens where better coinage is not at hand,) to convey some idea of the forms and designs of these relics of antiquity, whence Raphael, Michael Angelo, and other great masters, have frequently enriched their finest compositions.

The preliminary remarks point out the view in which mythology ought to be considered:—"Mythological fictions (observes the author) are to be considered as a language of imagination: viewed in this light, they are taken out of the connexion of realities, and constitute, as it were, a world by themselves." After which a poetic effusion in praise of Fancy, from the pen of Goethe, is very aptly introduced;

* We have already noticed this matter, on the authority of another valued and impartial correspondent:—our friend, the writer of the present critique, had probably not yet seen that Number of the L. G. in Paris.—Ed. L. G.

and the volume ends with the beautiful allegory of Cupid and Psyche, in which the story is concisely, though efficiently told; and we are surprised that among the multitude of beautiful gems on that subject, none of them should have been introduced among the embellishments.

The language throughout is highly poetical, and the fabulous stories are given like fairy tales. Care has also been taken that nothing offensive to delicacy, or detrimental to the morals of youth, should be introduced.

How far a work of this kind may be calculated to refine the minds of the Americans, or, indeed, the youth of any other civilised country, may by some be questioned. Certainly it should not, we think, be put into the hands of very young pupils, without some more plain preparatory remarks than it offers. Upon the whole, we would say this book contains much information on the subjects of classic lore, conveyed in figurative but suitable language, and is calculated to excite the attention of youth to elegant and polite literature, in connexion with what is termed a liberal education.

The Family Library, No. XXIV. The Life of Sir Isaac Newton. By D. Brewster, LL.D. F.R.S. London, 1831. Murray.

THIS is a plain, sensibly written, and scientific memoir of one of the greatest men that ever lived. It was difficult to produce any new facts, or throw any new light upon the biography of one so well known to the public, and whose labours have, for more than a century and a half, fixed the attention of the civilised and philosophical world; but Dr. Brewster has shewn much industry in both respects. His efforts are particularly worthy of examination where he refutes the opinion that Newton was for a period in a state of insanity, and where he investigates the question of his Scottish descent. We are sorry we can only refer to these points, in consequence of the space they occupy; but the whole work is so deserving of being perused, and so readily within the attainment of all classes, that our regret is qualified by the assurance that they will be generally read in the original. We do not think Dr. B. mentions the circumstance, that the last representative of Newton, Mr. Newton, bequeathed his property to that truly excellent charity *The Literary Fund*; the source of relief and comfort to multitudes of suffering authors and their dearest connexions.

The Eastern Origin of the Celtic Nations proved, by a Comparison of their Dialects with the Sanskrit, Greek, Latin, and Teutonic Languages. By J. C. Prichard, M.D. F.R.S. &c. 8vo. pp. 194. London, 1831. Arch.

THIS volume is a supplement to the learned philologist's *Researches into the Physical History of Mankind*; and a man must be a curious linguist to be able to follow its arguments not only through learned tongues, but through Welsh and other dialects far less generally understood. As an analysis of languages is unquestionably an important key to the earliest annals of our species, though the comparisons are too often fanciful, and the conclusions uncertain,—we always refer with pleasure to productions of this class. With regard to Dr. Prichard's labours in particular, we shall only notice that he has here thrown considerable light upon the subject, by applying to its elucidation an able inquiry into the grammatical forms of the Celtic, as still extant in the Welsh, Cornish, Armoric, Irish or Erse, Gaelic or

Highland-Scottish, and the Manks; and especially into the suffixes of the verbs. That this branch of philology has not been previously explored, is ascribed to the German authors, who have principally cultivated the sciences, being less acquainted with the Celtic than with other languages.

Almanach auf das Jahr 1831. Carlsruhe.

WE have opened the book, we have examined its embellishments, we have scanned its literature and criticised its arts,—and we set out under great difficulties and apprehension to endeavour to do justice to the immense task before us. Far be it from us to confine the measure of our eulogy to the measure of the *Almanach auf das Jahr 1831*; or to stint ourselves by any relative proportion of notice (merely because it is a foreign production) to the size of this gem of Carlsruhe. It is a genuine almanach, replete with almanachal information, slips into a handsome cover like one of our most showy annuals, is gilt edged, and adorned with many engravings of high merit, though small bulk; and these are its dimensions:—

Having by its silken riband drawn the ponderous volume from its case, we proceed to examine its embellishments and contents. On the external covers we find full-length figures, excellently cut, of "*Algierin*" and "*Algierin*;" the former a long-bearded old, the latter a middle-aged man. We open the tome itself, and discover that it is the produce of the lithographic "institut" of C. F. Muller; and, certes, it does credit to his types and stones. Useful intelligence, reigning kings and their ages, quarters of the year, months and their particular days, &c. &c. &c., follow throughout some twenty leaves; but the grand merit of the book (we must call it so, for want of a better name) lies in the portraits. We have Sontag, Paganini, "Franz Napoleon" (i. e. young Nap. in an Austrian uniform, with two stars), Diebitsch who is dead, Paaskewitch who is living, Hussein Pascha Dey von Algier,—all as like as life, if not of the life size. In short, this is a literary curiosity: we are obliged to our German friends for sending it to us; and we think our English publishers might pick up a few £'s, which none of them are loath to do, by making it a pattern for a London bijou. To the same kindness we are indebted for the Göthe autograph, of which, thinking it might be a pleasant variety, we purpose giving a fac-simile in an early No. of the *Literary Gazette*.

A Professional Survey of the Old and New London Bridges, &c. Pp. 46. London, M. Salmon.

THERE is no end, as we said, to London Bridge. The present survey censures Mr. Rennie for making a job of a new, instead of altering the old bridge, which, it contends, was both practicable and cheap, and would have been sufficient for all needful purposes, and not so injurious as its removal is likely to be, by the increase of tides up towards Chelsea and all the low lands on the banks of the river. It also contends that Mr. Joseph Gwilt was ungenerously treated in respect to the plan he sent in; though Mr. Rennie's plan is preferred,

and the bridge, as finished, declared to be the finest in the world. The publication is adorned with a number of very clever wood-cuts; and besides its popular intelligence, contains some good practical remarks on bridge-building and the science of hydraulics generally. It is a neat, cheap, and meritorious performance.

The Monastic Annals of Teriotdale. By the Rev. James Morton, F.S.A.E., &c. Part I. 4to. pp. 48. Edinburgh, Lizars; J. Hamilton: London, Longman and Co.

MR. MORTON, advantageously known as the editor of Leyden, has here conferred, or rather begun to confer, another obligation on the literary public. The *Monastic Annals of Teriotdale* must be replete with interest; and the specimen before us, confined to Jedburgh and its abbey, gives promise of a valuable work, whether we look to its research or its embellishments. The latter are executed in a very fine style by W. H. Lizars, and consist of:—1. a beautiful view of the old abbey from the south-west; [plate 2. is not in our copy—we know not whether from accident in this instance, or from being generally deficient]; 3. a highly ornamented Norman door-way; and 4. a ground-plan of the building.

The letter-press offers a frightful picture of border outrage and barbarism. Truly the Men of pleasant Teriotdale, Fast by the river Tweed,

however picturesque their country, led no very pleasant lives in these olden days. Foray, robbery, murder, and desolation, *pro* and *con*, filled up the turbulent measure of their existence; and it was, indeed, a boast if their residences

"Had not been burnt for a year, and mair."

We have been so charmed with Sir W. Scott's writings on the same subject, that it causes Mr. Morton's work to appear rather dry; but its system and *entirety* are great recommendations; and we can only wish that he would throw us a little of legendary and anecdotal interest into its historical worth.

A Topographical History of the County of Leicester. By the Rev. J. Curtis. 8vo. pp. 227. Ashby-de-la-Zouch, W. Hextall; London, Sherwood.

THE first of a proposed series of the counties of England and Wales. This is rather an index than an history; but it is an index eminently useful, and comprehending almost every particular which the topographer can need to refer to. The ancient intelligence is compiled from public documents, the modern from actual survey; and the whole does great credit to the industry of the reverend head master of Ashby-de-la-Zouch Free Grammar-School.

Family Classical Library, No. XXI. Thucydides, Vol. II. London, 1831. Valpy.

THE continuation of the Peloponnesian war, the version of Dr. W. Smith, Dean of Chester.

A Manual of Medical Jurisprudence, &c. By Michael Ryan, M.D. 8vo. pp. 309. London, Renshaw and Rush.

THE contents of this volume originally appeared in the popular form of contributions to a medical periodical. It consists of the ethics of the medical profession; of charters and statutes relating to the faculty; and of decisions, &c. on medico-legal cases; and is altogether full of valuable information. There is a little too much of political dash for a scientific work;

but medical jurisprudence is so little understood, that the usual uncertainty of the law is doubled wherever the question is connected with it; and we cannot be surprised at Dr. Ryan's denouncing the ignorance and folly which prevail.

Divines of the Church of England. No. XVI.
By the Rev. Dr. T. S. Hughes. London, 1831. Valpy.

THIS, the fourth vol. of Jeremy Taylor, contains some of that eminent divine's most striking sermons, and the "Contemplations on the State of Man." It is a powerful and interesting volume.

Roscoe's Novelist's Library, Vol. III. Peregrine Pickle, Vol. I. London, 1831. Cochran and Co.

THE frontispiece of "the three black hairs," is a genuine bit of illustration à la George Cruikshank, and "Davy Jones" is also worthy of his characteristic and humorous pencil. We do not think so well of the other subjects chosen; but still the volume is worthy of the series—very ably got up, and very cheap.

The Commercial Vade-Mecum. Glasgow, 1831. T. Allan and Co.

A TOM-THUMB of a book, but as full of commercial knowledge as if it were a giant folio. Here are interest tables, travelling routes, lists of cities, &c. calendars, tables, fairs; and, indeed, almost every kind of information which mercantile men may seek. Tables of the comparative value of coins throughout the principal countries of the world, are among the useful references; but, indeed, the whole is well deserving of its Vade-Mecum title.

Key to the Familiar German Eserotess, adapted to the Compendious German Grammar. By A. Bernays, Professor of the German Language and Literature in King's College. pp. 110. London, 1831. Treuttel and Co.

WE are glad that Professor Bernays has so promptly complied with our suggestion to publish this Key. This book, in a great measure, completes his series of works on the German language, and will much facilitate the labours of those who, during their residence in the country, may wish to continue their study of this beautiful and useful, but certainly difficult, language.

ARTS AND SCIENCES.

The New Planetarium, for accurately finding the true and apparent Places of the Planets on any Day during the present Century. By T. G. Bunt, Bristol. London, 1831. Fauntleroy and Burton.

MOST of the modern engravings illustrative of the solar system, though superior as works of art, are far inferior to many of their predecessors in conveying correct ideas of the planetary phenomena, being in general merely a number of concentric circles representing the paths of the planets, which are out of proportion to their true distances from the sun—very rarely of their true elliptical form, without any reference to the ecliptic, and, consequently, conveying no information relative to the positions of the nodes, perihelia, and aphelia of the bodies of the system. The principal features of the *New Planetarium* are, its simplicity, varied utility, and the introduction of several particulars not in general found in similar publications; among others that are

interesting may be mentioned the following:—it accurately points out the places of the planets during a period of two centuries, ending at the year 1940; the sun's entrance into the signs, and the variations of his apparent diameter; the time of Mercury and Venus making their transits over the disc of the sun; the relative velocities and distances of the planets, and the changing appearances of Saturn's ring—open, closing, and invisible, marked in their true places round the orbit. We do not hesitate to say, that this diagram (which is accompanied with a book explanatory of the uses of the *New Planetarium*) will be found superior, in point of accuracy, to any orrery hitherto constructed; that the youthful astronomer will find it of extensive utility, and an excellent companion to the celestial globe; and that those who are engaged in laborious astronomical computations will, with its assistance, be enabled to dispense with an ephemeris.

COTI RIVER.

THE *Singapore Chronicle* of the 31st of March contains a portion of a journal written by a Mr. Dalton, of a tour up the Coti River, on the east coast of the island of Borneo. Mr. Dalton's progress is traced as far as Marpow, a distance of 600 miles from the fall of the river into the sea. The following is an extract of the editor's remarks on the subject:—"With the exception of the unfortunate Major Mullen, who was murdered, with the most of his party, three days' journey beyond Marpow, no European that we have heard of has ever penetrated so far into this unknown but interesting island. It appears that the Sultan of Coti, whilst at Marpow, (where he was then residing, for the purpose of carrying on a war against the Diak chief, Sedgen,) sent for Mr. Dalton, for the purpose, as Mr. Dalton himself stated, of making him taste of poor Mullen's fate; and though strongly advised against going by his Bugis friends at Tongarron, the capital of Coti, he nevertheless placed himself under the guidance and protection of Saib Abdullah, the Bandarre, and proceeded to Marpow, in company with him. His description of the journey we consider to be highly interesting, as it opens to us new, and in many parts beautiful scenes, along the banks of a river in a country hitherto unknown and shut up to European eyes. During his short stay at Marpow, he informs us that he made that fictitious, but in his peculiar case excusable, contract with the rajah, to supply him with money and goods from Singapore, by which alone he saved his life, and obtained permission to leave the country."—*Times*.

ROYAL PORTABLE FILTERS.

ALWAYS desirous of giving public intimation of such clever and ingenious contrivances as are calculated to promote the comfort and health of the community, we feel rather ashamed at not having sooner noticed Mr. George Robins' excellent filters. Custom has familiarised the residents of London so much to filthy and impure water, that the majority, perhaps, scarcely feel that nicety of taste which would prefer a pure beverage; and, from indolence or custom, go on imbibing a slow daily poison, merely because it does not affect them at the moment, but imperceptibly produces painful diseases and death. One would suppose that to know a remedy for this evil would be sufficient to lead to its general adoption: but this is far from being the case. These very handsome and effectual filters, it is true, are widely used; but the wonder is, that any person who can

afford to drink wholesome instead of deleterious water should be without them. They are very simple and very convenient. We recommend them cordially.

FINE ARTS.

NEW PUBLICATIONS.

Etchings. By C. Read. Close, Salisbury. GREAT as is the skill requisite in the arrangement of lines, and in what is technically called "tooling," in a finished engraving, and beautiful as the result is when such skill has been judiciously exerted, there is a charm in the free outpouring of an artist's conceptions, when the etching-needle is in the hands of taste and feeling, which far transcends that arising from mere mechanical excellence. The difference is as great, and is of the same nature, as the difference between soul and body. This truth is strikingly exemplified in the spirited little productions under our notice, which do Mr. Read the highest credit. Some of them are wonderfully fine, and may fairly be ranked with the similar works of Rembrandt and Worlidge.

National Portrait Gallery, &c. With Memoirs by W. Jerdan, Esq. F.S.A. &c. Part XXIX. London, 1831. Fisher, Son, and Co.

THE Part for the present month contains fine portraits of Lord Bexley, after Lawrence, by Dean, of Sir Ralph Abercromby, after Hopper, by H. D. Cook, and of William Gifford, after the same painter, by Freeman; which latter is from the picture in the possession of John Murray, Esq. The financier, the soldier, and the man of literature, form an excellent trio; and the fine arts are illustrated in this preservation of their lineaments. The Part is therefore well calculated to increase the great popularity of this publication.

The History and Topography of the United States of North America. Edited by John Howard Hinton, A.M. Parts 19 and 20.

IN these Parts the History of the United States is completed. The succeeding Parts will contain their Topography, &c. The interest and value of the plates remain undiminished; of which the "View of the Catskill Mountain House," and the "Timber Raft on Lake Champlain," are very satisfactory proofs.

Lithographic Views of the Cinque Ports, and Watling Places from Hastings to Broadstairs. Drawn by G. Rowe. Wooll, Hastings. PLEASING reminiscences of beautiful scenery.

The Right Hon. Mary Elizabeth, Countess Grey. M. Colnaghi.

DIGNIFIED, matronly, and interesting. The 81st of the Series of the Female Nobility, in *La Belle Assemblée*.

Fac-Similes from Drawings of Portraits, by the late Sir Thomas Lawrence, P.R.A. made at different periods of his life. In nine plates. Engraved by Mr. F. C. Lewis, Engraver of Drawings to the King. Colnaghi, Son, and Co.

A CHARMING little collection of engravings, from the drawings of this great master; and not the less interesting from their being a family party. They consist of himself, at the age of thirty-five, from a drawing in the possession of Mr. Keightly, his executor; his parents, from drawings made in the year 1797; his sister Lucy, from a drawing taken at her request in 1813, when she was very ill; and three of his nieces, and two of his nephews, from drawings

produced at various periods. They are all full of delicacy and taste, and bear the unequivocal impression of Sir Thomas's peculiar style of handling the porte-crayon; and several of them possess an additional value from shewing that that style was adopted by him at an early age. Mr. Lewis has transferred the drawings to copper with his usual faithfulness and felicity.

ORIGINAL POETRY.

PHYSIC AND POETRY; OR, A MIXTURE.

Know ye Gradus, the doctor *sui generis solus*,
Who handles by turns knife, pestle, and lyre;
Who will cook up a sonnet, or roll up a bolus,
As the demons of poesy or physic inspire?

Some men are contented with one claim to glory,
[than one kind;

But the claims of our Gradus are of more
For with physic, prescriptions, and verses in store, he

Administers *drugs* to both body and mind.

Thus armed at all points, 'tis clear, and the curse is,

He meets with a *patient* wherever he goes;
Those that won't take his nostrums must needs read his verses, [dose.

And they ne'er forget either, for either's a
And with certain effect each acts to the letter,
And so true in result to their nature they stick,

That not one of his patients can ever get better,
Whilst all his poor readers are sure to get sick.

Nor can we well wonder at these reversed motions, [enough;

For this double effect there is reason
Since whoe'er has to swallow his rhymes or his potions, [stuff.

Is obliged to confess they are made of sad
Thus, while letters and physic alternately claim him, [backs,

As for death and the muse he successively
All proud of his fame exult and proclaim him,
The quack of the poets, the poet of quacks.

G. V. D.

SKETCHES OF SOCIETY.

SIERRA LEONE.

Observations on the Manners and Customs of the Native Tribes in the vicinity of the Colony of Sierra Leone. By Major Ricketts.*

THE natives who inhabit countries in the neighbourhood of the colony, are designated Bulloms, Temanias, and Sherbros. These people are extremely well-formed, their skin is sleek and soft; they are lively, and of a pleasing countenance. The manners of the young females, in particular, are rather graceful than otherwise; they wear, until they are married, a slip of cloth about two inches in breadth attached to a girdle, two inches wide, composed of various coloured small beads neatly strung together, and hanging down behind and before nearly to the ankle. After marriage they wear a cloth which they twist round the lower part of the body, in the form of a petticoat; they have also a second cloth, or handkerchief, to throw over the shoulders. They wear silver ornaments, a kind of bracelet, of native manufacture, made out of Spanish dollars. Generally, they are extremely partial to coral beads, the red nature of which form a pretty contrast with their sleeky black neck. Both males and females plait and braid their hair very neatly, in various

forms. The females bathe every day, and often several times in the day, and anoint themselves with oil, to preserve the smoothness of the skin. They are here slightly tattooed, which is not general among them. The men dress generally with a check shirt and trousers.

Their houses are built with clay, plastered over laths, built in a circular form, and comprising, in general, but one apartment; the roof is neatly covered with grass thatch, projecting a few feet beyond the building, forming a piazza, the floor of which is a circular bank of clay, under which the men swing in their hammocks. They have seldom more than one or two entrances to the house, which close with a mat.

In every town of consequence a building called a palaver-house is erected in the centre: it is composed of high posts, which support a roof made of sticks covered with grass; round the building is formed a bank of clay for seats: in these places the public business of every description is openly transacted.

There are blacksmiths, architects, and weavers, in their way, among them: some of them employ themselves in cultivating the soil, shooting, and fishing in the canoes. They weave, in the Sherbro, cotton cloths, six inches broad and five feet long. The women in general occupy themselves in sewing, reaping and cleaning the rice, cooking, and in other domestic affairs.

The men, however, pass much of their time in talking palavers, as they style it; and they will undergo any toil to obtain tobacco and ardent spirits.

During the heat of the day, every thing is still in the villages, but in the cool of the evening the people become animated, and the towns resound with merriment. The natives who reside further up the country are much more simple in their manners, more devoid of art, and more free from suspicion, than those on the coast: they are mild in disposition, but possess more pride, and are easily insulted. The natives, in general, are hospitable to strangers; and when a message is sent from any of them, it is accompanied with a present, and the answer is also accompanied with one in return. They are very superstitious, and believe in witchcraft.

The calo, which is produced by a beautiful large tree, is the size and shape of a chestnut when cleared of its shell, and is used by the natives in fever cases as bark; it is of an astringent nature, and has a pungent bitter taste: after chewing a bit of it, a draught of water is taken with delight. They are a token of hostility or amity between the tribes. Two white caloes announce peace and friendship, and two red ones indicate the contrary. The women do not eat with their husbands, but attend them at their meals, and partake of what they leave.

A man may have as many wives as he can maintain; they are never jealous of each other, and the first wife generally has the management of the others. When a young female is given in marriage, her choice is never consulted, and many of the children of that sex are betrothed from their birth. Courtship is carried on by presents to the girl's friends, which, if accepted, denote the approbation of the suitor's purpose; and marriage is celebrated by the distribution of presents of cloth, tobacco, and rum to the bride, and some to the relations of the bride. The match, however, can be broken off by the presents offered being refused.

The chief Delamoodo on the Bullom married the whole of the wives of his brother who had died, amounting to above forty. "No other

ceremony was observed except drinking, dancing, and singing, which was kept up for nearly a week.

Those who profess the Mahomedan religion are not permitted to have more than four wives; but they may at the same time have as many other ladies as their means will allow them to maintain; and these latter usually live with their wives, but are considered as slaves or menials.

These men copy the dress of the Foulahs and Mahomedans, which is a white shirt like a surplice, and very wide drawers which reach as far as the knee, with sandals, and a blue or red cap of woollen: if he wears a turban, which is formed of muslin, and calico rolled round the bottom of the cap, he assumes the air and is looked upon as a man of consequence.

MUSIC.

NEW PUBLICATIONS.

Songs of the Days of Chivalry. The Poetry by T. Haynes Bayly, Esq.; the Music by T. H. Severn. London, C. J. Farn.

A PLEASANT volume, though without any thing very striking to recommend it to such high favour as many of the author's delightful songs deservedly enjoy.

Songs of the Old Chateaux. The Poetry by the same; the Symphonies and Accompaniments by H. R. Bishop. London, Goulding and D'Almaine.

WE can justly allow a much warmer tribute of praise to this truly beautiful set of songs, with not one of which can we find fault; though, of course, some of them are more to our taste than others. "Those joyous village bells" is an especial favourite; the air sweet and melancholy. "I've heard my own dear mother sing," is also a delightful ballad; and altogether we most cordially recommend this volume to our fair friends. A portrait of the author adorns the first page. We quote the words of the composition already specified, as one to which we listen with feelings of gentle gratification.

"Oh! I cannot bear the sound
Of those joyous village bells,
Mournful music should be found
In the halls where sorrow dwells.
Once for me those bells were rung,
And the bridal song was sung;
Wretched is the bride that hears
Sounds like those with tears.
Now I see the laughing train,
Youths and maidens dancing forth;
I'll not look on them again,
Eyes like mine would mar their mirth.
Once for me those bells were rung,
And the bridal song was sung;
Wretched is the bride who hears
Sounds like those with tears."

Britannia's Wreath. Written by Agnes and Susanna Strickland, and composed by J. Green.

DEDICATED, by permission, to the King. Even if the other songs were indifferent, the "Life-boat" would be sufficient to give this volume popularity. We might remark, fond of simplicity as we are, that the music is in general too simple: to several of the songs there is scarcely any accompaniment.

The Sicilian Lover's Serenade. By G. C. Davida. Composer, Louisa Pyne. Davida. WE are pleased with the talent displayed in this song, which is sung with much applause by the father of the youthful composer. We formerly noticed, with merited approbation, Miss Pyne's variations on "Cease your fanning;" this new effort is equally clever.

* We have to express our thanks to Major Ricketts, whose volume on the Ashantee war, &c. was reviewed in our last two Numbers, for this communication.—Ed. L. G.

Drawing-Room Lyrics. Seven Songs, written by F. W. N. Bayley. Composed by J. Green. A PRETTILY got-up book of songs, and well fitted for the drawing-room table. For playing or singing our report must be unfavourable.

Hast thou known what 'twas to smile, Love? Words by a Lady; Music by R. Sutton. Clementi and Co.

A PRETTY composition, and by a very deserving composer.

Favourite Airs for the Harp. Part II. By C. Egan. Barnet and Co.

To beginners we could not recommend a more agreeable or easy selection. The airs are simple and pleasing. We have not seen the first Part.

Melodies of the Singers of the Alps of Styria. Carl Fischer. Johanning and Whatmore.

A SET of old favourite airs, pleasingly arranged as waltzes, and well worthy of ladies' favour.

Strike, oh strike those Chords again. A Ballad. The Poetry by C. Greville. Music by C. Eulenstein. Chapell and Co.

A SIMPLE, pretty, and easy ballad; composed by our excellent acquaintance Eulenstein, the extraordinary performer on the Jew's harp.

I'm the merry little Drummer. Alex. Lee. COMPOSED for Miss Poole in the *Legion of Honour*; a nice rattling tune, and already as familiar as household words, in consequence of the naive singing of Miss Poole.

The Stranger's Bride. A Ballad; written and composed by George Linley, Esq. J. Duff. ONE of the sweetest ballads of the season; the *Stranger's Bride* is both touching and melodious. It need only be known to be very much liked.

DRAMA.

HAYMARKET THEATRE.

VARIETY is charming, says the old song; and we are now enjoying that rare and agreeable variety in a critic's life—being in a good humour. The performances for the last week at this theatre have been very lively and varied, always leaving out the conclusion; for the Haymarket seems resolved on reversing the proverb, "All's well that ends well;" on the contrary, every evening ends badly. There's Mr. Bianchi Taylor, a musical walking-stick, and not very musical either; Mr. Hacket, who enacts the sturdy and independent English farmer, very much after one's ideal of a bailiff; and as for the feminine stock, the manager may quote Shakespeare and say, "'tis a commodity lies fretting by me." It is quite amusing to observe how the first song clears pit and boxes. But now to return to the beginning and our good humour. The principal novelties have been, *She would, and she would not*; with Miss Taylor as *Hippolyta*, whose leg and foot, at least, defy criticism, and who acted with great animation: so did Vining, who really looked so well in his monkey's cowl, that we did not wonder at the young lady's taste who chose him as her confessor: it was quite enough to give the catholic faith female popularity. Of Mrs. Ashton's face we can say something civil, but of nothing else. Farren's acting was, as usual, such as to make Othello of critics, and let them find that their "occupation's gone." The scene where he takes leave of his daughter—his delight at her marriage, softening into sorrow for her loss, was at once ludicrous and touching: the audience did not know

whether to laugh or to cry, and so some did both.

On Thursday a comedy, founded on Cibber's *Double Gallant*, was produced, and was completely successful. Love, jealousy, and stratagems, produced some most dramatic situations. Vining's universal lover was very good; we have rarely seen him enter into a part with more spirit. We beg to congratulate Mrs. Glover, first on her excellent *Lady Sadlife*, and secondly on her new dress: her matrimonial shrew, and her full-blown coquette, are true to the very life. We shall take the words out of her own mouth, and say as she says, in an intended quarrel with her husband, that she may safely leave the issue to "tears and nature." Of Miss Sydney we shall only repeat what we said last week, and what we suspect we shall always have to say, that she looks rather pretty, dresses beautifully, and smiles in precisely the same manner. Miss Taylor improves, is improving, and will improve; she has the talent and the feeling in her: *Clarinda* was not a part of much importance; its only incident was her appearance as a midshipman; but we suppose the appearance was to be what appearance often is in this world—every thing. We have kept Farren to the last for the sake of climax: Sir Solomon is one of those citizens in which the old school of comedy delighted—jealous, yet easily duped; rich, yet mean, cowardly, and cunning: it is a caricature, but one copied from nature; and every line of this is filled up by Farren with that exquisite finish, which he of all actors carries to its perfection. Two new characters were introduced—failures both: the dastardly Bully belonged to the old school, and the refined Exclusive to the new, a heterogeneous mixture, and both of them overdrawn and absurd.

My Wife and my Place continues its course of popularity. We mention it again—first, to say how very sweetly (though without much voice) Miss Taylor sings the pretty ballad of "May thy lot in life be happy!" and secondly, to remark on the costumes. Vining, for example, wears a full-dress evening coat, with loose white morning trousers; and Miss Taylor sits at work the next day in the ball dress of the night before. Now it is one of the great merits of the French stage, that such inconsistencies of costume are never tolerated. The propriety of Farren's dress, which is always perfect, is a good example to his fellow-comedians.

SIGHTS OF LONDON.

Exhibitions.—We have already noticed the splendid Clarence Vase in Oxford Street, which must be seen by those who have any curiosity to learn what can be done in glass: till we saw it, we confess we could as readily have imagined what a mountain in the moon really is. Ergo, we advise a visit to this Broddignagian specimen of glass manufacture, and not less beautiful than extraordinary for size—the Gustavus Vasa of art. Upon a smaller scale, we must anticipate that chimney-ornaments, candelabras, lustres, and a hundred other articles of ornament and luxury, will soon spread the fame of this parent vase, of which it was aptly said, that it was fit for St. Peter's church at Rome.

Another of the spectacles of London, at this late hour of the season, with which we have been much gratified, is a glass window, executed for Lord Dudley by Mr. Egginton, and now to be seen in Bond Street, where Mr. Collins's fine sculpture (already noticed in the

L. G.) is open to inspection. The stained glass represents St. Thomas Aquinas performing high mass before Louis IX. (we believe); at any rate, it is a copy from a picture by Mabeuse, and admirable for its execution. Being an interior, it has few of the positive and gaudy tints which give richness and effect to ancient glass windows; but it is a charming composition, with every colour in keeping, and altogether an honour to the modern school in a department of art which is distinctly reviving.

VARIETIES.

Selected from American Periodicals.

A Curiosity.—An ingenious piece of workmanship was lately manufactured in Philadelphia. It is a pitcher or cream jug, which holds about half a pint, made of wooden staves, hooped with silver, and a glass bottom. The staves were taken from the tree under which William Penn made his treaty with the Indians. We expressed some surprise, says the editor of the *Democratic Press*, when we were told that the pitcher had been taken to pieces to decide a wager of twenty dollars, and that one thousand and six staves were counted in it! It was made by Mr. Joshua Peddle, and is the property of Mr. John Johnson.

March of Intellect.—A person reading a quotation from the *London Literary Gazette*, respecting the consumption of oil, found the usual abbreviation, *London Lit. Gaz.* Upon asking the meaning of a neighbour, he replied, it means that *London is lit with gas*.

Underbidding.—A Frenchman assured one of our friends that his countrymen never buy an article at the seller's first price. "For instance," said he, "one of them came into my store the other day, and priced a pair of silver buckles. I asked seven dollars. 'Eleven! I give you nine.' 'Seven is the price, sir, not eleven.' 'Seven! I give you five!'"

Bull and no Bull.—"I was going," said an Irishman, "over Westminster bridge the other day, and I met Pat Hewins. 'Hewins,' said I, 'how are you?' 'Pretty well,' said he, 'I thank you, Donnelly.' 'Donnelly!' said I, 'that is not my name.' 'Faith, no more is mine Hewins,' said he. So we looked at each other again, and sure it turned out to be neither of us,—and sure where's the bull in that now?"

Original Anecdote.—A few years ago, a couple of Dutchmen, upon the high hills of Limestone, though very friendly, had a dreadful falling out about one killing the other's dog, for which he sued for damages. They were called into court, and the defendant in the case was asked by the judge, if he killed the dog? "Pe sure I kilt him," said the Dutchman; "but let him proof it." This being quite satisfactory, the plaintiff in the case was called on to answer a few questions: he was asked by the judge, to what amount he estimated the damages? He did not understand this question so well; so, to be a little plainer, the judge asked him what he thought the dog to be worth? "Pe sure," said he, "the dog was wot noting; but since he was so mean as to kill him, he shall pay de full value of him."

Reasons for discontinuing a Periodical.—The publisher of a Scottish periodical, which recently went the way of all things, gives, in his expiring number, two reasons, which he terms "cogent" ones, and they certainly are so, for the demise of his journal. The first is, "that all his contributors left him;" and the

second is, "that all his subscribers, in obedience to the scriptural injunction, went and did likewise."

Speaking Aside.—A diffident lover going to the town-clerk to request him to publish the banns of matrimony, found him at work alone in the middle of a ten-acre lot, and asked him to step aside a moment, as he had something particular for his private ear!

Short Correspondence.—Mr. Brown's compliments to Mr. Smith; thinks it unnecessary his pigs should go through his grounds.—**Reply.** Mr. Smith's compliments to Mr. Brown; thinks it equally unnecessary to spell pigs with two gees.

Flattery?—As the sun in all his splendour was peeping over the eastern hills, a newly married man exclaimed, "The glory of the world is rising!" His wife, who happened to be getting up at that moment, taking the compliment to herself, simpered out, "What would you say, dear, if I had my silk gown on?"

The New Island.—Further and interesting accounts have been received, and published in the newspapers, respecting the new volcanic island, of which we described the appearance in the *Literary Gazette* of the 20th ult. On the 18th of July it was observed *creating itself* by Captain Swinburne, of H.M.S. *Rapid*; and was again visited, landed upon, and taken possession of by planting the British flag, at the end of the month, by Captain Senhouse, flag captain of the *St. Vincent*. The phenomena, altogether, are described as wonderfully grand. To the latest, the island had increased in height and extent; and there is every appearance of its becoming a permanent fixture on the face of the globe; though one of the letters expresses an anticipation, that this as yet nameless isle may sink, as Sabrina did a few years ago. It is a remarkable circumstance, of which we are just informed by a letter from Gibraltar, that simultaneously with this volcanic eruption on the Sicilian coast, there was, at that great distance, a considerable agitation of the sea, and an unprecedented rise of the tide.

Wilson the Ornithologist.—We observe, with sorrow, an account of the death and burial of poor Wilson, somewhere in the state of Philadelphia, even while the Edinburgh journals are anticipating his return laden with scientific treasures. We have now before us No. 1.* of his *Illustrations of American Ornithology*, on a reduced scale, to sort with Professor Jamieson's edition—a pretty and attractive publication. The coloured prints are extremely correct and well done.

Coronation Medals.—Orders have been sent to the Mint to strike a handsome coronation medal, in gold, for every member of the House of Commons. The peers have them of course; but this is, we believe, a new royal compliment.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXXVI. Sept. 8.*]

Literary.—A monthly American journal of natural science has been projected at Philadelphia, and was to appear on the 1st of July. We have not yet seen the opening No., but from the prospectus, we can gather that a well-conducted periodical of this description must be very acceptable to "the other hemisphere." After alluding to the efforts of European naturalists, the announcement says:—"Amidst these general contributors to science, it is painful to perceive what conspicuous blanks are yet left for America to fill up, and especially in those important branches, American geology and American organic remains. This feeling is greatly increased by the occasional taunts and sneers we see directed against us in foreign scientific works. They are aimed, it is

true, against individuals insignificant enough to elude them, and, therefore, the larger body, the nation, is hit and wounded by them. Neither is there any defence open to us. We send abroad gigantic stories of huge antediluvian lizards, 'larger than the largest size'; and we ourselves are kept upon the stare at our own wonders, from Georgia to Maine, until we find out we have been exulting over the stranded remains of a common sperm-cet whale. At this present moment, a huge animal, dug out of the Big-bone-belt, sixty feet long, and twenty-five feet high, is parading through the columns of the European newspapers, after making its progress through our own. This is, what every naturalist supposed it to be, also a great imposition. Within these few days, drums and trumpets have been sounded for other monsters. A piece of one of our common coal plants is conjured into a petrified rattle-snake; and one of the most familiar fossils solemnly announced all the way from Canada, under a name exploded, and long forgotten by naturalists. All these jibes and reproaches we ought to have been spared. There ought to have been the ready means amongst us, together with the independence and intelligence, to put down these impostures and puerilities as they arose. It is for this object, as well as for the diffusion of the love of science at home, that this monthly journal is about to be established." If it put an end to the sea-serpents alone, it will deserve favour. Since writing the foregoing, we have received No. 1.; which, without possessing any remarkable feature, is a fair specimen of the work.

We are requested by a friend, who will act a prominent, and we hope a successful part in the London world, by and by, to notice with favour a new critical journal, to be called the *Literary Spectator*, and published weekly, at twopenny. Such an appeal we are too liberal to resist, and therefore we hail our promised twopenny contemporary with the welcome of kindness; though we do feel a little the difficulty of standing by "our order," if our order will demean itself to such prices. All we can say is, that periodicals may be as sagacious enough to appreciate their own public value; and from a whole shilling to eightpence, sevenpence, sixpence, fourpence, threepence, twopenny, yea, to a penny, we wish them well.

LIST OF NEW BOOKS.

Lardner's Cabinet Cyclopædia, Vol. XXII. Treatise on Silk Manufacture, foolscap, 6s. bds.—Dibdin's Sunday Library, Vol. V. fcp. 5s. bds.—Bright's Medical Reports, Vol. II., in 2 parts, col. pts., royal, 40s. 6s. bds.; plain, 7l. 7s. bds.—The Preacher, Vol. II. 8vo. 7s. 6d. bds.—Whittingham's Pocket Novellists, Vols. XXXVIII. and XXXIX. 8vo. 18mo. 7s. 6d. bds.—Major Rickett's Narrative of the Ashantee War, 8vo. 10s. 6d. bds.—Johnson's Sportsman's Dictionary, 8vo. 1l. 11s. 6d. bds.—Valpy's Classical Library, No. XXI. Thucydides, Vol. II. fcp. 4s. 6d. bds.—Hughes's Divines, No. XVI. Jeremy Taylor, Vol. IV. 8vo. 7s. 6d. bds.—Rev. Robert Hall's Works, Vol. III. 8vo. 12s. bds.—The Pulpit, Vol. XVII. 8vo. 7s. 6d. bds.—Rev. C. Bradley's Sermons at Clapham, 8vo. 10s. 6d. bds.—Romeo's Novellist's Library, Vol. III. Peregrine Pickle, Vol. I. fcp. 5s. bds.—Lect's Cæsus, Latin and English, 8vo. 15s. bds.—Standard Novels, Vol. VII. Scottish Chiefs, fcp. 6s. bds.—Aldine Poets, Vol. XVI. Goldsmith, fcp. 6s. bds.—Dodley's Annual Register, Vol. LXXII. for 1830, 8vo. 16s. bds.—Irving's Confession of Faith, and the Books of Discipline of the Church of Scotland, 18mo. 8s. bds.—Austin Hall; or After-dinner Conversations, 18mo. 5s. bds.—Young's Integral Calculus, 18mo. 8s. bds.—Priestley's Eastern Origin of the Celtic Nations, 8vo. 7s. bds.—The Mother's Present to her Daughters, 32mo. 3s. 6d. fcll.

TO CORRESPONDENTS.

A pamphlet on the alleged decline of science in England, by a foreigner, merits more mature consideration than we can this week bestow upon it and its important subject; we trust to be able to give it due attention in our next.

Though we have resigned so many of our columns to-day to the notice of monthly publications, we are still in arrears with that class, which has now become the leading source of literary employment. We continue to speak of the volumes individually as we find them; but, as a whole, we cannot but regret the prevalence of a fashion which tends so decidedly to make literature indeed a trade and manufacture—put an end to original works, and discourage all the higher efforts of genius.

ERRATUM.—In our last, p. 544, col. 3, line 21 from bottom, for "variable" read "quadruple."

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALM MALL.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools of Painting, is open daily, from Ten in the Morning until Six in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

KING'S COLLEGE, LONDON.

The Senior and Junior Departments of this Institution will Open on Monday the 17th of October next.

The Senior Department.

The Students who enter for the prescribed course of Education will receive regular instruction in—

Religion and Morals, in conformity with the principles of the established Church.

The Greek and Latin Classics.

Mathematics.

English Literature and Composition, and History.

The Matriculation Fee is 1l. 1s.; and the Fee for the Year's Course will be 5l. If the Student be nominated by a Proprietor, and 20s. 6s. if not so nominated.

The Students will also be admitted to attend particular Lectures not comprised in the regular Course. This Course will occupy four or five hours each day, commencing at a Quarter before Ten o'Clock, A.M.

There will be annually a Public Examination and Distribution of Prizes.

Lectures, which will be open to the attendance of all Students, whether entered as "Regular" or "Occasional" Students, will be given on the following Subjects:—

Theology, by the Rev. the Principal of the College.

Classical Literature, by Professor Anstie, B.A. of Chr. Ch.

Mathematics, by Professor the Rev. T. G. Hall, M.A. Magd. Coll. Camb.

English Literature, by Professor Anstie.

History, by Professor Hall.

Natural and Experimental Philosophy, by Professor the Rev. H. Wood, M.A. St. John's Coll. Camb.

Jurisprudence, by Professor J. J. Park, Barr. at Law.

Political Economy, by Professor N. W. Senior, M.A. Oxon.

Geology, by Professor C. Lyell, M.A. F.R.S. For. Sec. Geol. Soc.

Chemistry, by Professor J. P. Daniel, F.R.S.

Botany, by Professor G. Burnett, Esq.

Commerce, by Mr. Joseph Lowe, who will attend every day to give private instruction.

The Professors in these Departments will be shortly appointed.

French Language and Literature, by Professor Venturini.

German ditto, by Professor C. Bernays.

Italian ditto, by Professor Rossetti, LL.D.

Spanish ditto, by Professor De Mendibila, LL.B.

Each of the Professors of Foreign Languages will give instruction to private classes twice a week.

A Preliminary Statement, containing additional particulars of the plan proposed, and of the Fees, &c. connected with the preceding Course, may be had either at the Office of the College, or at the Office of Mr. B. Peile, 20, Ludgate Street (Publisher to the College); or of the Bookstallers.

A complete Course of Medical Instruction, the details of which have been already laid before the Public, and may be had at the College, will Open on Monday the 16th of October next.

The Junior Department.

The Rev. J. B. Mayor, M.A. Head Master.

The Rev. Joseph Edwards, M.A. Second Master.

The course of Education in King's College School will comprise Religious and Moral Instruction, in conformity with the principles of the Established Church—the Greek, Latin, and French Languages—Writing, Arithmetic, and Elementary Mathematics—History and Geography, Ancient and Modern—and English Composition. Opportunities of receiving instruction will be afforded in other branches when required, for which, however, an additional charge will be made.

The Entrance Fee is One Guinea, and the Terms for Pupils are 18l. 18s. annually if nominated by a proprietor; and 18l. 18s. if not so nominated. These terms include every expense, excepting that of books and stationery, which will be supplied at reduced prices.

The general age for admission will be nine years and upwards.

Arrangements are made for the reception of Pupils in the Masters' houses, upon terms and under regulations sanctioned by the Council.

One of the Masters will be constantly in attendance at the Office of the College.

Any further information may be obtained upon application at the Office, No. 3, Parliament Street.

By order of the Council, W. OTTER, M.A. Principal.

FRAUDS IN PATENT PENCILS.

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Leads for refilling the same. To guard the Public against impostures, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case.

2d. S. Mordan and Co. Patentees and Makers, on the body of the case.

3d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

Cedar Pencils.—These pencils contain the same quality of pure Cambric lead as their silver patent pencils.

Warranted Protection.—The Lock with seven guards is the most secure and the most durable one in use. The key cannot be copied, nor can an impression be taken from it; neither can a skeleton or other substitute key be made with success. The key admits of infinite variety, so that duplicates are entirely precluded, and dishonesty and curiosity equally guarded against.

S. Mordan and Co. Makers, London, is stamped on each Lock.

Scientific gentlemen and others are invited to inspect the Manufactory, 24, Castle Street, Finsbury.

COPYRIGHT of WORKS by SIR

WALTER SCOTT, Bart.
To be sold, by public roup, in the Royal Exchange Coffee-house, on Thursday the 20th of September, at Two o'clock P.M. the entire Copyright of the following Works, written by Sir Walter Scott, Bart.; viz. *The Life of Dryden—The Life of Swift—Biographical Memoirs*; consisting of Lives of Charlotte Smith, Sir Ralph Sadler, John Leyden, Miss Seward, Daniel De Foë, the late Duke of Buccleugh, and Queensberry, Lord Somerville, George III., Lord Byron, the Duke of York, Samuel Richardson, Henry Fielding, Tobias Smollett, Richard Cumberland, Oliver Goldsmith, Samuel Johnson, Lawrence Sterne, Henry Mackenzie, Horace Walpole, Clara Reeve, Mrs. Ann Radcliffe, Dr. Baile, Charles Johnson, and Robert Bage. Abstract of the *Eyrbjugga-Saga*—and *Essays on Chivalry, Romance, and the Drama*; all as included in the collection entitled *Sir Walter Scott's Miscellaneous Prose Works* in six volumes 8vo. of which the works above specified comprise about five volumes. No Auction Duty.
For particulars apply to Walter Dickson, W. S. 3, Royal Circus; or to Alexander Chalmers, Esq., at the House of Archibald Constable and Co. 17, Princes Street, Edinburgh.

THE OBSERVER, of Sunday, Sept. 11, as well as the Monday edition, will contain a full Account of the Coronation, illustrated with explanatory Prints. One Sheet, and the price, as usual, 7d. Copies gratis to send it to any part of the Kingdom free of postage. A Monday edition of the *Observer*, price 7d., is printed at 4 every Monday afternoon, which is best for Country and Foreign circulation.

They comprise 20 Studies from Lavater, 9 Monkeyana, 16 Old Nick's Divinations, 11 Dramatic Illustrations, and 84 Fancy Sketches. Such a concentration of frolic, wit, and humour, was never before offered to the Public at such a price. They are received as the best and most sure for the Cholera Morbus. Sold to the Trade at 2s. for 18, and uncoloured Copies taken back, if returned before the end of the year. The *Coronation Observer*, price 7d., will be on sale at 109, Strand, for one week after Sept. 11.

New Series! Price reduced!! Size doubled!!!
The Cheapest Periodical ever published is
THE LITERARY BEACON.—In order that our exertions in the good cause may keep pace with the strenuous endeavours now making to prop up the corrupt and mercenary system, which has been for some time permitted to exist under the name of Literature, we have resolved at once on extending the size, and diminishing the price of the Beacon, and have determined on offering, on Saturday, Sept. 10, 1831, No. 1. of a new Series, which will contain Sixteen Quarto Pages, Forty-eight closely printed Columns, &c.

The enlargement of the work will enable us to admit a greater variety of original matter, and to accept the proffered aid of several writers of the highest eminence and celebrity.
The *Literary Beacon*, being the cheapest periodical published, will, of course, be found a most eligible channel for advertisements.
Printed by T. Richardson, 24, High Holborn, London. Published every Saturday Morning, by E. Steill, 29, Paternoster Row; and sold by all Booksellers and News-vendors.

MAJOR CARTWRIGHT'S LIFE and CORRESPONDENCE.

Edited by his NIECE.
Comprising Letters from Fox and Burke, the Duke of Portland and Lord Shelbourn, the late eccentric Earl Stanhope, Mr. Whitbread, Sir Philip Francis, Horne Tooke, Dr. Parr, &c. 2 vols. 8vo. with Portrait, 18s.
"He was one whose enlightened mind and profound constitutional knowledge placed him in the highest rank of public characters, and whose purity of principle and consistency of conduct through life commanded the most respectful attention to his opinions."—*Fos.*

II.
The Empress Josephine's Private Correspondence. Forming the Third and concluding Volume of her Memoirs.
"A curious and entertaining piece of domestic biography of a most extraordinary person, under circumstances almost unprecedented."—*New Monthly Magazine.*

Purchasers of the first two volumes are advised to complete their Sets forthwith.

III.
Memoirs of Mrs. Siddons. By James Bowden, Esq. Interpersed with Anecdotes of Authors and Actors, and intended as a Companion to the Author's Life of her Brother, Mr. Kemble. Printed uniformly, in 2 vols. 8vo. with a fine Portrait, engraved by Turner, from a Picture by Sir Thomas Lawrence, price 28s.

IV.
Conversations of James Northcote, Esq. R.A. with William Haslitt. In 1 vol. post 8vo. with Portrait, 10s. 6d.

V.
The Political Primer; or, Road to Public Honour. Small 8vo. 5s.

"This is a book of very considerable talent, and well worthy the attention of readers, both for the information which it contains, and the style in which it is written."—*Times.*
"We have been not a little gratified by the 'Political Primer; or, Road to Public Honour.' The author displays no slight knowledge of human nature, and of the arts by which public men in this country make the people subservient to their views."—*Morning Chronicle.*

Also, nearly ready, in 2 vols. 8vo. 18s.

VI.
Memoirs of the Peninsular Campaigns; comprising the History of the Campaign in Portugal, by the Earl of Manners—the Personal Narrative of Captain Cooke, 43d Regiment—and a Narrative of the Campaign of 1816 in Holland.

Price 2s. 6d. No. 21 of

THE MAGAZINE of NATURAL HISTORY, and Journal of Zoology, Botany, Mineralogy, Geology, and Meteorology.
Conducted by J. C. LONDON, F.L.S. &c.
(Continued every Two Months, alternately with the *Gardener's Magazine*.)
Printed for Longman, Ross, Orme, Brown, and Green.

Interesting New Works.

In 2 vols. 8vo.

MEMOIRS of COUNT LAVALLETTE.

Written by HIMSELF.
Including the Secret History of the Trials and Execution of Ney and Labédoyère, and of the Persecutions endured by the Author.
"A work of great entertainment."—*Times.*
"One of the most interesting publications of recent appearance."—*Globe.*

II.
The Dutchman's Fire-side. A Tale. In 3 vols. post 8vo.

"The Dutchman's Fire-side is fully worthy of the pen of the author's early friend and conductor, Mr. Washington Irving. The fine and fresh descriptions of Transatlantic scenery will not fail to arrest the reader of taste; and these alone, independently of the domestic power of the work, will stamp the author as second to few living novelists."—*Morning Post.*

III.
The Octavo edition of
Captain Beechey's Voyage to the Pacific; being a Completion of the Polar Voyages, with numerous Plates, engraved by Pindar. 2 vols.
"This expedition will be for ever memorable, as one which has added immensely to our knowledge of this earth that we inhabit."—*Blackwood's Magazine.*

IV.
Jacqueline of Holland. By the Author of "Highways and Byways," the "Heiress of Bruges," &c. 3 vols. post 8vo.

"Beautiful and unfortunate, yet bearing up against every reverse of fate with the spirit of a hero."—*Jacqueline of Holland* is the very being in whom romance delights."—*Literary Gazette.*

V.
Nine Years' Residence in Abyssinia. By Nathaniel Pearce. With an Account of his extraordinary Life and Adventures. Written by Himself. 3 vols. post 8vo.
"This work forms an interesting sequel to Bruce's Travels, and must prove peculiarly acceptable, as relating to a country hitherto so imperfectly known to Europeans."—*Globe.*
Henry Colburn and Richard Bentley, New Burlington Street.

In 1 vol. price 6s.

TREATISE on the SILK MANUFACTURE.

Being Vol. XXII. of Dr. Lardner's Cabinet Cyclopaedia.
Published August 1.
Lives of Eminent British Statesmen, (3 vols.), Vol. I.

To be published Oct. 1.
Treatise on the Manufactures in Metal, Vol. I. Iron and Steel.
The last published Volume contains a List of those which are published and forthcoming.
Printed for Longman and Co.; and John Taylor.

Books for Travellers.
Published by Henry Colburn and Richard Bentley, New Burlington Street.

THE TRAVELLER'S ORACLE; or,

Maxims for Locomotion.
By WILLIAM KITCHENER, M.D.
New edition, in 2 pocket vols. price 15s.

"We recommend the 'Traveller's Oracle,' as a very amusing and instructive publication—it is worth buying and reading, and will become, we doubt not, a popular book."—*Atlas.*
"We hope to give such an analysis as shall induce thousands to become purchasers of these two well-printed and useful little volumes."—*Blackwood's Magazine.*

II.
The Continental Traveller's Oracle; or, New Maxims for Locomotion. By Dr. Abraham Eldon. In 2 pocket vols. price 15s.

"It is long since we have met with so clever a publication. There is a fund of sound sense and valuable counsel for travellers."—*Literary Gazette.*

III.
Portugal; comprising Sketches of the State of Society in that Kingdom, under Don Miguel. With a Narrative of the Author's Residence there. By William Young, Esq. H.P. British Services. 8vo. 10s. 6d.

IV.
English Fashionables Abroad. New edition, in 3 vols. post 8vo. 18s.

V.
Travels to and from St. Petersburg, through Flanders, along the Banks of the Rhine, through Prussia, Russia, Poland, Saxony, Bavaria, and France. By A. B. Granville, M.D. F.R.S. F.L.S. M.R.S. &c. New edition, considerably improved, in 3 vols. 8vo. with a Map and Seventy Plates, 48s. neatly bound.

"As a book for tourists to consult, Dr. Granville's is certainly a very superior guide; and its ornaments are another great recommendation. He enjoyed opportunities of seeing more than any writer upon that city with whom we are acquainted."—*Literary Gazette.*
"It should find a place in every drawing-room in England."—*Atlas.*

VI.
Italy. By Lady Morgan. Being the Substance of a Journal of her Residence in that Country; exhibiting Views of the present State of Society and Manners, Arts, Literature, and Literary Institutions, interspersed with numerous Anecdotes of the most eminent Literary Characters, &c. New edition, revised. In 3 vols. 8vo. 24s.

"This is not merely a work of opinions, expressed in the ornamental style of the writer. It is a substantial account of Italy, and may be consulted for its facts by the historian, the traveller, and the topographer."—*Monthly Magazine.*

VII.
Four Years in France; or, Narrative of an English Family's Residence there during that period. By Henry Best, Esq. 8vo. 10s. 6d.

"Having lived between three and four months in Paris, and between three and four years in the South of France with my family, I have made observations which I hope may be useful to those who have the same plan of foreign residence or travel, and not less interesting, both to them and to those who are content with their English home, than the remarks of a more hasty tourist. The care of a household, and of the education of children, brings the heart of a family to the knowledge of many circumstances and combinations which escape the notice of the single traveller."—*Introduction.*

VIII.
Italy as it is; or, Narrative of an English Family's Residence for Three years in that Country. By the Author of "Four Years in France." 8vo. 10s. 6d.

"This is one of the best works on Italy that we have seen."—*Literary Gazette.*
"We know of no work that we should prefer as a travelling companion."—*Atlas.*

IX.
The Hermit Abroad. By the celebrated Author of the "Hermit in London." 4 vols. 28s.

Published by W. H. LIZARS, 3, St. James's Square, Edinburgh; and Longman and Co. London.

Medium 4to. 7s.; in imperial 4to. paper Proof, 18s.; Part I. and II. of the

MONASTIC ANNALS of TEVIOT.

DALE; or, the History and Antiquities of the Abbeys of Jedburgh, Kelso, Melrose, and Dryburgh. To be completed in Six Monthly Parts.
By the Rev. JAMES MORTON, B.D.

Corresponding Member of the Society of Antiquaries of Scotland, Honorary Member of the Antiquarian Society of Newcastle-upon-Tyne, &c. &c.
The magnificent remains of these Abbeys have often furnished subjects for the artist, and have always commanded the admiration of every person of taste and intelligence who has visited them, yet no work of graphic elegance and literary research, combining detailed and scientific details of their architectural beauties, with a full and accurate inquiry into their history, has yet been offered to the public. It is the purpose of the present publication to supply this deficiency, together with a History of the Abbeys, drawn from the most authentic and original sources, with an Account of their Revenues and Possessions, the Superstitious Legends, and the Local Events connected with them, embracing some interesting particulars of Border History never before published. The work will contain Eighteen Volumes, Ground Plans, and Architectural Details, drawn and engraved in the most finished style.

BLACKWOOD'S EDINBURGH MAGAZINE, No. CLXXXV. for September 1831.

Contents.
I. The Whig Tree—II. On Parliamentary Reform and the French Revolution. No. 9—III. An Awa! Lein-like Story. By the Ettrick Shepherd—IV. Sir H. Farnell on Financial Reform—V. An Hour's Talk about Foreign—VI. on the Foreign Policy of the Whig Administration. No. 1. Belgium—VII. Opinions of an American Republican, and of a British Whig on the Bill; North American Review, and Colonel Stewart—VIII. Dreams of Heaven. By Mrs. Hemans—IX. To a Buttery near a Tomb. By the same—X. Necres Ambrosiana. No. 58.
Printed for William Blackwood, No. 45, George Street, Edinburgh; and T. Cadell, Strand, London.

In 1 large vol. 8vo. price 18s. illustrated with numerous Engravings.

A PRACTICAL TREATISE ON RAILROADS AND INTERIOR COMMUNICATION in general; containing an account of the Performances of the different Locomotive Engines at and subsequent to the Liverpool Convention—upwards of Two Hundred and Sixty Experiments—with Tables of the Comparative Value of Canals and Rail-roads, and the Power of the present Locomotive Engines.

By NICHOLAS WOOD.

Colliery Wrecker, Member of the Institution of Civil Engineers, &c.

"In this the ablest and most thorough treatise to the date of the latest improvements in this nationally important plan. We consider the volume to be one of great general interest."—*Literary Gazette*.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Army and Navy.

On the 1st of September was published, the

UNITED SERVICE JOURNAL, and Naval and Military Magazine, enlarged, containing a great Variety of Papers, interesting to both Services.

Opinion on this Work.

"We have been looking pretty closely into the United Service Journal, and have been very much gratified at discovering the quantity of activity at work under its able hands. We perceive that this vent for the military and naval officers, who are, ex officio, greater scribblers than attorneys, will turn to admirable use. Military men are always drawing up papers, representations, and formal memorials, and get into a great habit of composition. They are very methodical, and this serves them instead of Oronotus logic; and they have generally something to write about, which is more interesting than Cambridge mathematics. As soon as any journal is considered and held to be an organised channel of communication of any large and important branch of profession, it must necessarily be useful, and to a certain degree entertaining. For the great mass of interesting others to be interested in it. But what profession or class can embrace such interesting subjects as the United Service? The hairbreadth escapes by land and sea—the chivalrous achievements of great-souled men—the deep reaches of an able tactician—the grand crisis of war and battle—the ebbs and flows of an individual contest—these and ten thousand other points make the army and navy service a most admirable material and subject matter for a journal."—*Spectator*.

Henry Colburn and Richard Bentley, New Burlington Street.

Portrait of the Right Hon. John Wilson Croker.

FRASER'S MAGAZINE for TOWN and COUNTRY. Price 2s. 6d.

The September Number contains—

Influence of the Newspapers. Some Passages in the Life of an Idler. Parliamentary Eloquence. Oliver York, No. II. House of Peers. The Abbey; a Fragment. German Poetry. Taylor's History. Robert Brown. A Pilgrimage to Loch Dherg. Poland. The Plats and J. gelios.

Miss Porter's last Romance.

In 2 vols. 18mo. a new price 16s. 6d.

THE FIELD OF FORTY FOOTSTEPS; a Romance of the Seventeenth Century.

By MISS JANE PORTER.

Authors of "Thaddeus of Warsaw," "The Scottish Chiefs," &c. Henry Colburn and Richard Bentley, New Burlington Street.

Of whom may be had, by the same Author,

new editions of

The Pastor's Fireside. 4 vols. price 24s.

Duke Christian of Luneberg; or, Traditions from the Harz. 3 vols. price 12s.

Thaddeus of Warsaw. 3 vols. price 12s.

The Scottish Chiefs. 4 vols. price 24s.

The Garrick Papers.—In 1 vol.

THE PRIVATE CORRESPONDENCE of DAVID GARRICK with the most celebrated Persons of his time, now first published from the Originals.

This highly interesting and important work comprises upwards of Two Thousand Letters, from Persons of the greatest eminence in the Political, Literary, and Dramatic World. Among other Names may be mentioned, besides those of the leading Nobility, Warburton—Burke—Johnson—Hume—Gibbon—Sir Joshua Reynolds—Goldsmith—Robertson—Janus—Beattie—Churchill—Mason—Cum gratia—Rowell—Canning—and J. Warton. Dr. Barne—Sheridan—Murphy—Dr. Hoody—Mrs. Montagu—Mrs. Cowley, &c.

"When we consider the vast space that the first actor of ancient or modern times occupied during his busy career in the world's eye; when we remember that from the first year of his appearance in London, in 1741, down to the moment of his retirement from the stage, in the year 1778, he was constantly before the public; that during this protracted period he was on terms of more or less intimacy with all the wise, the illustrious, the patriotic of Great Britain; that he was the favourite of Dr. Johnson, the friend and companion of the celebrated Lord Camden, the associate of Quin and Foote, and Barry and Henderson, the protégé of Pope, the correspondent of Bishop Warburton, the fosterer of the early genius of Sheridan and Siddons,—when we remember all this, we can readily comprehend the interest that even at this comparatively distant period must attach to the biography of such a man: the present volume, we repeat, will not disappoint such expectation. It is introduced by a well-written memoir of Garrick, and contains his voluminous correspondence with all, or nearly so, the illustrious characters of his time. The letters of Bishop Warburton, in particular, are uncommonly entertaining, and clear up many points in the great actor's life, hitherto obscure and unexplained."—*Sun*.

Henry Colburn and Richard Bentley, New Burlington Street.

THE METROPOLITAN MAGAZINE,

No. V. for September.

Edited by THOMAS CAMPBELL, Esq.

Author of "the Pleasures of Hope."

Contents: 1. Lines on the Camp-Hill, near Hastings. By Thomas Campbell, Esq.—2. The present Condition of Ireland. An Indian Story. By the Author of "the Kasabash"—3. House of Recovery for the Young and Beautiful—5. Journal of the Reform Bill in the House of Commons—6. A Retrospect of Literature, from the Earliest Period to the Thirteenth Century of the Christian Era; No. III. By James Montgomery, Esq.—7. A Tale of Trafalgar; a Poem. By Delia—8. Scientific Letters to a Lady of Quality; No. I. The Study of Physiology—9. Biography of Odd Fellows; No. II. The Long Lawyer—10. Sonnet; Ugo Foscolo—11. Club Colloquies: Cormorants; Scense, Athenaeum Club-House—12. William the Fourth and the New Bridge—13. Poland Sketches of the Civil and Military Characters of the Revolution (derived from authority); Sketches of the Hero, and Niemcewicz, the Walter Scott of Poland—14. The General Assembly of the Church of Scotland—15. National Gallery; Mr. Holwell Carr's Pictures—16. The Garrick Correspondence—17. Moore's Life and Death of Lord Edward Fitzgerald—18. The Italian Opera, containing the whole of the Prospects of the New Season, Thomas Monck Mason, Esq. (exclusively)—19. Sir Arthur Brooks's Sketches in Spain and Morocco—20. Huskisson's Speeches and Biographical Memoirs. With original Articles, by distinguished Writers, on the Drama, Music, and the Fine Arts, &c.—Reviews of New Publications—and a great variety of Useful Information.

Published by James Cuthbert and Co. 11, Waterloo Place. "a" Orders received by all Booksellers, Newsmen, and Clerks of the Roads.

The First Volume of "the Metropolitan" may now be had, handsomely bound in cloth, price 14s.

Portrait of Lord Normanby.

THE NEW MONTHLY MAGAZINE and LITERARY JOURNAL, for Sept. 1, is embellished with a striking Likeness (accompanied by a Memoir) of Lord Normanby, now Earl of Mulgrave.

Since the first issue of this popular Periodical has been published under a new and highly active management, which has brought to its pages the aid of several very distinguished authors, in addition to those whose contributions had already secured to this Magazine a firm and permanent hold on the favour of the Public. Among other novel features, it is a series of engraved Portraits of Living Literary Characters, accompanied respectively by Critical and Biographical Notices. The following Portraits have already appeared: January, Sir Walter Scott, after the Bust by Chantrey—February, Hon. Mrs. Norton, Author of the *Undying One*, &c.—March, Author of "the Spy," after Painting by Pickersill—April, Mr. Cooper, Author of "the Pilot," &c.—May, E. L. Bulwer, Esq. Author of "Fetham"—June, T. H. Bayly, Esq.—July, T. C. Grattan, Esq. Author of "Highways and Byways"—August, R. P. Ward, Esq. Author of "Tremaine." For the information of those unacquainted with the character of its general contents, it may be sufficient to state, that this Periodical is not only distinguished by powerful efforts of the imagination, and by interesting personal narratives, but may be considered as the depository of the thoughts and opinions (grave and humorous) of first living Writers on all subjects, more particularly those which are connected with the character of the age.

Each Number, price 3s. 6d., contains about 150 pages of Letter-press, handsomely printed, and comprises more matter than is usually contained in an ordinary octavo volume. And those who desire to commence the Work with the present year, are requested to send their orders forthwith to any Bookseller or Newsmen.

Printed for Colburn and Bentley, New Burlington Street; Agents for Scotland, Bell and Bradburn; for Dublin, John Cumming. Orders received by all Booksellers and Newsmen.

THE GENTLEMAN'S MAGAZINE, for August (published September 1), contains, among other Articles—a Memoir of the late James Northcote, Esq. R.A. (with a Portrait)—an Article on Coronations, particularly that of Richard the Second (with a Plate, shewing the forms of eleven English Crowns, from Edward the Confessor to Charles II.)—the History of the New London Bridge (with a View of both the Old and New Bridges)—Anecdotes of Mrs. Siddons, &c. &c.—Four Articles in the department of Classical Literature—Reviews of New Publications—Intelligence in Literature and the Fine Arts—Obituary, with Memoirs of the Earl of Drummond, Admiral Lord Torrington, General Denny, William Roscoe, Esq. John Jackson, R.A., &c. &c. &c.

Published by John Harris, St. Paul's Churchyard.

Popular Novels, Recently published by Henry Colburn and Richard Bentley, New Burlington Street.

TALES OF MY TIME. By the Author of "Blue-Stocking Hall." In 2 vols. 28s. 6d.

II. Waldegrave; or, the Casa Viviana. A Tale of the South. 3 vols. 27s.

III. Stories of a Bride. By the Author of the "Mummy." 3 vols. 28s. 6d.

IV. Rank and Talent. 3 vols. 28s. 6d. "A book exhibiting unusual sagacity in the sketches of character."—*Advertiser*.

V. Rybrent de Cruce. 3 vols. 28s. 6d. "This novel contains more original portraiture of character, and a story of greater fertility in incident, than any novel of the day. The author is stated to be a student of the celebrated Captain Head, who wrote a Journal of his Travels across the Pamper."—*New Monthly Magazine*.

VI. Tales of Woman, illustrative of the Female Character. 3 vols. 28s. 6d. "These 'Tales of Woman' do credit to the sex, and deserve well of the gallant and the polite."—*Literary Gazette*.

VII. The Man of Two Lives; a Narrative, written by Himself. 2 vols. 18s. "The Man of Two Lives" is the most curious in design of all the fictions of the day. It is the history of an individual who is conscious of a previous state of existence, and who becomes acquainted with the friends of his former life. The idea is exceedingly original and striking, and gives rise to many curious incidents and effects."—*New Monthly Magazine*.

Revue's Novels: Library, with Illustrations by George Cruikshank. Publishing in monthly Volumes, price only 5s. uniform with the Waverley Novels.

Handsomely bound, **SMOLLETT'S PEREGRINE PICKLE**, Vol. I. London: Printed for James Cuthbert and Co. 11, Waterloo Place.

Of whom may be had, Vol. I. Smollett's Humphrey Clinker. Vol. II. Smollett's Roderick Random.

Each complete in 1 vol. "The Novelist's Library.—The two first volumes of this work, containing Smollett's 'Humphrey Clinker' and 'Roderick Random,' edited by Mr. Renshaw, have just made their appearance; and very tempting specimens of the work they are. They are beautifully got up, and the genius of George Cruikshank has been employed to illustrate each of the chief incidents of the story. Those who are acquainted with the talent of this artist (and who is not?) will recognise at once the affinity between his broad humour and that of the celebrated author. One sketch of George Cruikshank's pencil is worth all the criticisms and commentaries that ever were written in praise of the novels of Tobias Smollett."—*Morning Herald*.

"a" Orders received by all respectable Booksellers throughout the Kingdom.

2d edition, 1 vol. 8vo. pp. 408, price 10s.

NEW ILLUSTRATIONS OF PROPHECY, in which an Attempt is made to elucidate some highly interesting Predictions of Scripture that appear to be now accomplishing, in the present disorder and agitated Circumstances of Europe.

By W. VINT, Tutor of Alresford College.

Containing, 1. Five Dissertations:—On an Infidel Power—The Abyss, or Bottomless Pit—The Symbolic Dragon—The Millennium—2. Strictures on the Rev. Dr. Morrison's Dissertation on the Millennium.

REVIEW OF NEW BOOKS.

The Phrenological Journal and Miscellany, Vol. VII.; No. XXIX. Edinburgh, 1831, J. Anderson, jun.; London, Simpkin and Marshall.

WE trust that, at the end of seven hundred and sixty-three weekly sheets, containing the compass of about two hundred and fifty 8vo. vols., we need not profess our love for the literary efforts, our regard for the scientific progress, or our ardent desire for the general improvement of our country. Every idea suggested, every opinion given, every syllable printed, in the *Literary Gazette*, has had no other view but to encourage the labours in these various paths, and to advance the people of England in refinement and intelligence. In taking this high and lofty line, with such means and abilities as we possessed, we have considered it not only below, but inconsistent with, our aim to nibble at every petty error or offence which might be detected by a microscopic eye, and a determination to pry for faults, rather than to look for beauties; to impute unworthiness, rather than to acknowledge excellence; to carp at, rather than to praise, sought done by our living or recently dead contemporaries; and we have accordingly acted on the opposite principle, that even apparent mediocrity may be cherished into estimable worth; and that to be a little blind to early indiscretions, can do no injury to the sterling interests which it was our object to strengthen and promote.

We know full well how easy it is to find fault, and how delightful too, to weak and ill-constructed minds, is the pleasure of picking out little holes. We know full well, that to attract an ephemeral notoriety, abuse and personality are engines more effectual than good offices and kindly expressions. We know full well that impertinence is often allowed to pass current for cleverness; and that to impose upon many, it is a common and successful trick to proclaim the facilities of slander and prostitutions of censure to be impartiality and independence. We know full well that all this is in the power of the most contemptible ignorance; while to be simply judicious and just, is without the *célar* of folly, and at the same time surrounded by difficulties.

Having the different paths before us, we have preferred the least clamorous, but, if we may judge by the sure test of public approbation, the most respectable, prosperous, and permanent; and we hope we shall be judged by this avowment of our motives and chosen course, when we proceed to denounce our utter abhorrence and detestation of the publication before us.

This No., the only one we have seen—at least, for a long while—of the *Phrenological Journal*, sets out with a letter to the conductors of the periodical press (for that reason, we presume, sent to us), calling upon them to advocate the “utility of phrenology as a system of moral improvement.” We will not argue the question, or animadvert upon the absurd lengths

to which the apostles of phrenology, as a science, carry their dogmata; but we will at once go to the fourth paper, that which has provoked our indignation, and ask if the detail of such abominable cruelties, under the name of experiments, instead of procuring allies to the cause of phrenology, is not sufficient to revolt human nature against it and its atrocious professors?

The paper is entitled “Bouillaud’s experiments to discover the functions of the brain, concluded;” and so cold-blooded a narrative of barbarities, perpetrated on a worthless plea, it never has been our painful duty to peruse. We doubt that man has a right to inflict such tortures on the animal creation, under any pretext whatever; and we stretched the principle to the utmost when we only slightly reprehended the publication of M. Magendie’s experiments,

• The following, from a correspondent, has lain by us for some time: we cannot take a better opportunity for inserting it than now.—Ed.

“The poor beetle that we tread upon,
In corporal suifance feels a pang as great
As when a giant dies.”

Stunned and sickened with the eternal repetition of “the wonderful march that intellect has made, and is making, towards perfection,” how was I astonished and horrified on reading in a periodical publication, under the title “Spirit of Discovery,” the following recipe for killing insects for preservation in cabinets:—“Enclose the insect in a paper, or thin wooden box (a pill-box, for instance), and expose it for one or two seconds to heat, near the fire: the heat immediately kills insects the most tenacious of life. This process does not alter the most delicate colours; but if the heat be continued too long, the wings and other parts of the body begin to wrinkle.” Is this discovery one of the blessed fruits of the march of intellect? In describing locusts, we are told that the Bedouins of Egypt roast them alive, and devour them with the utmost voracity. The Bedouins of the desert have, then, made as much progress in the intellectual art of killing insects, as the scientific entomologist of England!—unless we make some allowance for the voracity with which they devour them, which philosophers may perhaps attribute to instinct. But what is the motive, instinctive or intellectual, that induces our refined and sensitive dandies and (forgive the term) dandies to inflict such infernal cruelty upon the most harmless and helpless of God’s creatures? Is it anything more or less than the vanity of having a scientific, a fashionable, and withal a very cheap pursuit? That the insect world is well deserving the attention and admiration of the larger worm that arrogates to itself the title of “lord of the creation,” I am most willing to allow—I am even of opinion that the study of natural history in all its branches is one of the most useful, moral, and entertaining, for children of all ages;—but collecting specimens is not study—let them be taught to study living nature. It is the wonderful adaptation of the powers, instincts, and habits, of the living world, that fills the mind with deep reflection, and lifts it from the creature to the Creator, that may teach us lessons of wholesome humility, and excite a spirit of useful inquiry. View insects in a microscope, make drawings of such as are extraordinary, and then restore to them their liberty; or, if you want to ascertain their habits, confine them in pairs or families, with strict attention to their appetites and accommodation, till your curiosity is satisfied: always bear in mind that your own mortal remains will in all probability be first revisited in the insect or reptile state of existence; and do as you would be done by. But to roast them to death in a pill-box, or pin them through the body to a board till they die of pain or hunger!—good God! is it credible, at this enlightened period, when butchers and carmen are punished for unnecessary cruelty to oxen and horses, that men of science! ladies of the order blue! should be found so inhumanly cruel, or so un-humanly stupid—(stupid as beasts, if they are unconscious of the torture they inflict)—as to torture to death the objects of their darling pursuit. Is there no second Lord Erskine, no Mr. Martin, whose eloquence might call down shame, if not punishment, upon the roasters of live insects, and the dissectors of living animals? “Not a sparrow shall fall on the ground without God.”

justified as they were upon the ground that by them the alleviation and cure of the severest maladies which afflict mankind would be facilitated. Even then and in that case the general voice of the community condemned the unguarded promulgation, not confined to medical men, but addressed to all classes of readers, of experiments necessarily so repugnant to the feelings, and so evidently calculated to blunt, if not to destroy, the best sympathies of humanity. But if those experiments, and especially their minute publicity, were hardly defensible, when so important a good was aimed at, what shall we say of these phrenological butcheries for the sake of gratifying a foolish curiosity respecting the functions of peculiar portions of the brain?

“The 18th experiment,” we are told, “consisted in the entire removal of the cerebral lobes from one pigeon, the removal of the cortical substance from the convex surface of the brain of a second, and the removal of the anterior part of the central hemispheres of a third. In the first the operation was performed gradually, one lobe being first removed. In this stage it preserved all its intelligence; not recognising objects, however, when presented to the eye on the side opposite to that of the destroyed lobe. After partially removing the other lobe, it walked about, extending its wings, but without any design—both being completely removed, it remained motionless. It continued in the attitude of sleep, and made no rational movement; but when disturbed, as by placing it in an inconvenient position, it made automatic efforts to disengage itself and resume its ordinary attitude. It did not digest, and frequently attempted to vomit; it perfectly regulated the various motions of which the act of vomiting consists; it displays no intelligence; it opens its eyes and shakes itself when disturbed; it neither eats nor drinks. On examining the head after death, it was found that the whole of the cerebral lobes, with the exception of a thin shred, had been subtracted. It is evident that this pigeon had lost, with the cerebral lobes, the faculty of recognising external objects and the other intellectual powers which originate in this knowledge; that it at the same time performed many simple and compound motions which do not depend on any such knowledge, and displaying no determined end or motive. We ought, consequently, to conclude, that the brain is the seat of the different intellectual powers concerned in the knowledge of external objects, and that from it emanate those acts of volition necessary to the gratification of those wants and desires which are excited by these objects.”

Again:—

“Experiment XVII.—A hen was deprived of the anterior part of the brain. The phenomena exhibited were precisely the same as in former instances, with the following more striking particulars—it did not recognise another hen, formerly its companion, nor follow it as before the operation; it frequently lost its equilibrium, and fell from its perch; it walked,

but without object, and destitute of its former cunning; it did not avoid those who approached to seize it, although it cried and struggled when seized; it fled when it was struck; it did not follow the flock of fowls to which it belonged, and when attacked by another hen, did not comprehend the signs of anger she displayed, but neither fled nor defended itself; it sought for corners, and tried to escape by every opening that offered. On one occasion it rained violently; it sought shelter, and when it found a place where the rain did not reach it, it remained there; but it was accident and not intellect that conducted it—it did not, *a priori*, know that this place was sheltered, for before going there it frequently took refuge where the rain fell in torrents. What proves that it did not distinguish between external objects is, that entering the kitchen, it approached the fire, advanced upon the hot irons, and did not retire until severely burnt. It continually traversed the same space, following closely the circuit of the walls of the court, sometimes running as if deranged, stopping, again beginning to run, but without any other cause or motive than the instinct of moving and change of place. When pursued, or struck with a handkerchief, it fled, but no longer avoided what might obstruct its progress. Placed on a table, it advances to the edge, stops, retires, returns, and at last descends, rather by a kind of fall than a true leap. It seems, from these facts, that it preserved some feeble knowledge of distances, the height of objects, &c. But, at the same time, it did not recognise external objects; we might have exposed it to various dangers without alarming it: it would not have felt dismay if placed beside a fox. It died in consequence of another experiment."

Shocking as were the seventeen mutilations of wretched birds, &c. of which we have quoted these two examples—distressing as it must have been to see the poor pigeons and hens with their brains scooped out, shivering, and their helpless wings flapping extended—trying to vomit for relief to an agony, the seat of which no remedy could reach—crying, struggling, and seeking shelter from ruthless persecution in vain,—distressing as this must have been, it was mercy and compassion to what follows.

"Experiment XVIII.—March 8th, I forced a thick gimlet into each of the anterior lobes of the brain of a young dog, about two months old, and very intelligent. In withdrawing the instrument I carried with it, on one side, a small portion of cerebral substance; this gave rise to considerable hæmorrhage. The animal walked immediately after the experiment, but soon lay down as if to sleep. At the end of an hour it ate and walked.—9th, It eats, walks, and even plays with another dog.—10th, I forced a burning iron into each anterior lobe, and removed a small portion of cerebral substance that lay adjoining the openings made in the osanium: the animal remained for a moment as if dead, but soon roused itself and uttered plaintive cries: its head turns to one side, and retains that position as if spasmodically; there succeeded a comatose lethargy, accompanied by plaintive cries.—11th, Respiration stertorous; a gangrenous smell proceeds from the wounds, from which a portion of cerebral substance has escaped: the head is turned forcibly to the right, and returns mechanically to this position when displaced: the animal cannot hold itself up: placed on its back it struggles with its feet, but in vain attempts to get up: it cries less than yesterday, is still in a comatose state, and gives no sign of intelligence.—12th, Nearly in the same state; it barks

when irritated, when I, for example, pour chloride of soda on its head to clean the wounds: it is very sensible of the smell of this liquid, and in some degree resists its effects by strong expirations and sneezing.—13th, the respiration is more and more laborious; it resembles that of an animal affected with peripneumony. It shakes its head when water is poured on it, tries to rise, but cannot; all its motions seem automatic, independent of all intellect and reflection: it barks occasionally, although still plunged in the same comatose state.—14th, If we attempt to raise it, its legs cross each other, and cannot support it, the left appears most feeble; nevertheless, on pinching them, it draws them back, and expresses its pain by cries more or less acute according to the violence of the injury. It recognises no object, not even its aliments: it sees, notwithstanding, and hears, and even appears to turn its head mechanically towards the person who calls it: it swallows milk when poured into its throat, but never seeks to drink spontaneously. A piece of flesh being placed in its mouth, it made some attempts at mastication, but soon discontinued these, and retained the meat between its teeth, without attempting to swallow it.—15th, The head is more movable, less inclined to the right: it cannot walk nor stand: respiration very laborious: it exhibited no power of recognising external objects; cried or groaned continually, and died in the evening."

We declare before Heaven, that we think the barbarian who could, during a whole week, thus inflict unendurable torments upon an animal, and calmly count its writhings and agonies, deserves to be put out of the pale of society as a monster. Hamlet says, "Hang up philosophy!" we say, "Hang up philosophers who dare commit such outrages as these." The next trial was equally horrid, and prolonged during sixteen days. We quote on, marking in italics some of the most obnoxious points of heartless cruelty it was ever our misfortune to read.

"On the morning of the 28th of June, I transfixed the anterior part of the brain of a young dog, which possessed the reputation of being lively, docile, and intelligent: the instrument, in making its way from the right to the left side, inclined slightly in an oblique direction upwards and backwards. Immediately after the operation, the animal struggled, cried, fell, and could not raise itself. It continued to hear and see: at the end, however, of some minutes it presented all the symptoms of cerebral compression, arising very probably from the internal hæmorrhage produced by the operation.—June 29, 30, July 1, 2. Is plunged in a profound lethargy: it sometimes cries and shakes its limbs: if placed in a constrained posture, it relieves itself by automatic and instinctive movements: water is poured down its throat, and it eats a little softened bread: its eyes are inflamed and suppurate.—3d, The comatose sleep continues: if we irritate with the view of awaking it, it cries, and attempts to bite the objects with which it is touched. It was made to take 50 grains of camphor (it had previously taken 20); almost immediately after, it raised itself for the first time, and walked, but very unsteadily: it sometimes gets up on its hind legs, but falls on its back; at other times it bends its head, supports itself upon it, and throws a sort of somersets; it then lies down and sleeps.—4th, It walks, and begins to eat: its walk is still, however, staggering, disordered, and without design. We repeated the camphor, but the greatest part of it was rejected.—5th, Its attitude and walk are somewhat

wild: its legs embarrass each other and cross: it staggers as if drunk, and with difficulty avoids objects placed before it: it carries its head low, so as almost to touch the ground. It, however, still hears when called on, and even wags its tail when caressed. The sense of smell remains perfect, and it licks its food before eating it. Its eyes are still covered with pus: when touched briskly, it cries, and turns to bite.—6th and 7th, I set it at liberty; it goes, comes, and runs to and fro, as if it were insane; licks every object, and does not appear to recognise any by means of vision: its walk is somewhat ridiculous; it raises its fore feet too high. It does not know how to mount a staircase, and if it leaps up a few steps, will very ill regulate its movements; it experiences the same difficulty in descending. It with difficulty avoids obstacles placed before it; sometimes attempts to pass through holes much too small to admit its body, and, when placed in such a dilemma, it extricates itself mechanically and awkwardly. When menaced, it crouches as if to inspire mercy, but does not in consequence obey. It, on the contrary, utters cries which nothing can repress, similar to those of a young uneducated dog, whose intellect is undeveloped. It eats with great voracity, and is in good health. I watched it attentively for the remainder of this and for the first fifteen days of the succeeding month. It enjoyed the perfect use of its external senses. By a kind of instinct of imitation it walked when it saw any one else walk, following the individual wherever he went. Its want of docility was remarkable: when called, it did not come, but lay down and wagged its tail with an air of stupidity. When we tried to lead it, it resisted, rolled upon the ground, and cried, but at last walked, again stopped, drew back, and cried anew. When confined, it cried continually in spite of all correction. It appeared astonished at every thing; and its air of stupidity was remarked by all those who were not aware of the operation which had been performed, and strangers to physiological observations. It was easily alarmed; and when menaces were succeeded by blows, in place of flying or hiding, as it is to avoid them, it merely lay down in a suppliant posture, and cried. It did not cover us on our return, although absent for many days. It lived with another dog, which it frequently licked, but never played with: nor did it resent the blows which its companion, as witness, to its speech, of its idiocy, rarely failed to inflict when it approached. It did not keep itself clean, and became singularly fat. It had a strong inclination to remain in the kitchen; we pretended to chase it from thence, but it always returned. Its voracity, as we have already said, was extreme: its maintenance became expensive. It applied itself on one occasion, for instance, to eating the boiling frittlers, overturned the frying-pan, and scalded its muzzle, lips, and feet severely. It did not want cunning, when urged, to obtain food: it was often observed to watch the rabbits that ran about the court, and to approach the place where they concealed themselves. It often amused itself in the same way as other dogs, in snapping at the flies that flew about; but was exceedingly awkward in this as in every other kind of exercise. One day carried it into a wood in the vicinity of the country-house which I then inhabited, and left it there in order to ascertain if it could retrace the road; but it could not do so, nor did it return until I went for it. Some days afterwards, I led it to the river, and, regardless of its terror, threw it in; on this occasion it quickly swam on shore and returned to the house. I sometimes put

out at the door, menacing to make it go away, but it remained, or, if it did go, it was only for a few steps, when it returned, uttering alight cries, as if entreating us to re-open the door. It looked at strangers with a dull stupid air, sometimes went to them, especially to children; but when they caressed it or wished to play with it, it merely lay down and wagged its tail. It did not bark, either to testify its affection, or to prevent strangers from approaching the house; upon one occasion only did it attempt to bark, I cannot say that it actually did bark, at some one passing. *All its docility consisted in coming when, after caressing it, we called upon it in a tone of kindness; or, if we had menaced, beat, or called upon it in vain, in going away, holding down its head and tail, and in crouching down as if in the act of supplication.* Its eyes became animated, its ears were erected on the slightest noise, but it still preserved a look of imbecility. *It was sacrificed, August 16, in the performance of a new experiment.*"

We will not waste a line in holding up the publication of such villanies to the abhorrence they excite. If the art of refining torments be necessary to science, which we deny, prudence at least might suggest to scientific inquirers by such means, the expediency of not rendering their pursuits odious, by exposing them to the vulgar eye. It is the depraved appetite for dwelling on all manner of unnatural guilt, and beastly details of heinous crimes, and prurient circumstances of infidelities and seductions, and sanguinary executions,—it is the rage for glutting the public with minute descriptions such as these, that makes the press of England so injurious to the morals, and so brutalising to the minds, of the people. We have become so accustomed to it now, that it does not strike us with the astonishment, nor appeal to us with the horror, it is so pre-eminently calculated to inspire. Yet if we look abroad, we can discover no such continual ebbing of the feelings of a country, no such oversteering familiarity with scenes of criminality and blood. A murderer of Fieschi lived France for years; in Germany, we scarcely remember an atrocity since the story of Sissi. In England they are our daily and hourly diet; every journal teems with them in all their vile particulars, from the ripping up of pregnant women at Newtonbury, to the covering of the dead limbs of Mrs. Holloway at Brighton. Lady Macbeth only yapped full of horrors,—we have them before us in the morning papers at our breakfast tables, in the evening papers for our dessert, every day of the week, and in the Sunday papers for our Sabbath edification. The stream of pollution flows on for ever; and ribaldry, occasionally sedition, appeals to the worst passions of the multitude; and those literary scandals noticed in the outset of these remarks, are, throughout far too great a proportion of the press, the only varieties of the shameless course. The engine is indeed powerful: would that it were equally respectable! Its perfect liberty is the sheet-anchor of our national freedom and happiness: would that it were more anxious to avoid the commission of evil in its component operations!

But we are digressing from phrenological magazines to periodical literature: we will, however, end with the former. The tortures of dogs, and hens, and pigeons, &c. lead, it would seem, to the following conclusions in that amiable and sagacious science.

"Very young persons ought not to marry, because, by the laws to which God has subjected our physical constitution, the offspring

of very young parents are generally deficient in bodily and mental qualities, or both. The municipal law allows males to marry at fourteen, and females at twelve; and the divines take no cognizance of the sin of marrying at an unripe age; whereas Nature, in this climate, is inimical to marriage before twenty or twenty-two in the female, and twenty-five or twenty-six in the male. One consequence of marriages in extreme youth is, that the first-born child, or children, are, in general, deficient in the organs of the moral and reflecting faculties, and have an excess of the organs of the animal propensities. A single illustration of the consequences of such a union will suffice to show how deeply it may affect the order of the moral world. Suppose a British peer of forty, possessed of ordinary qualities, to marry an immature girl of seventeen, and that the first-born child is a son, he would prove greatly deficient in moral and intellectual powers. The organs of the propensities would be large, and the anterior and superior portions of the brain, which manifest the higher faculties, would be relatively small. In consequence of this combination, his natural inclinations would lead him to prefer animal gratifications to study, and his innate consciousness of a low mind would render him sceptical of human virtue, and proud of his 'order,' as the only mark of superiority in his person over the base-born vulgar. The law would give him the family estates, and a seat in the upper house of parliament, and the customs of society invest him with a vast influence in his native country; but the low formation of his brain would render the high rank, the large property, the legislative voice, and the social influence, so many inlets of temptation to immoral conduct in himself, and so many instruments of perpetrating mischief to his fellow-men. The priest might give his benediction at his father's marriage, and his mother be unconscious of sin; but the Creator's laws being violated, His blessing would not fall on the first-born. The children produced after the mother arrived at maturity would manifest superior qualities. The result would be still more harmful were old men to marry very young women; for bodily imperfection would then be added to mental imbecility."

We hope few of our peers of forty in the last generation have married too young wives; for if so, their eldest sons in the present house, from "the low formation of their brains," will not be able to understand the Reform Bill about to be sent up to them.

Catalogue of several Hundred Manuscript Works, in various Oriental Languages. Collected by Sir William Ouseley, LL.D. &c. London, 1831. Valpy.

PRINTED for a limited distribution at home and for foreign libraries, we received a copy of this catalogue from its amiable and respected owner, some weeks ago, with a feeling of regret, that the scholar, whose delight during many years must have been great in making such a collection, should be induced by any cause, prurient or worldly, to part with so pure and perpetual a source of enjoyment in his latter years. Sir W. Ouseley was one of the Associates of the Royal Society of Literature; and we have known when even so small a deprivation as that which he, in common with the rest, experienced by the unexpected withdrawal of the royal endowment, has led, with men of moderate fortune, to sacrifices equally poignant as the disposal of a collection of favourite manuscripts. We trust it is not the case in the

present instance,—but the bare suspicion of its possibility carries us to immediate still more that act of miserable national parsimony.

But whatever reason induces Sir William to part with his collection, certainly the most important which has been seen in England since that of Mr. Rich, happily assigned to the British Museum at a price of five or six thousand pounds, we trust that it will not be allowed to go out of our country. Some of the MSS. are intrinsically of great value, and others are unique. Surely the British Museum is the natural resting-place for such a treasure of literature, amassed by the spirit and industry of a British subject; and it would grieve us to hear of its being transported to a foreign land. We quote a few passages from the preface, both on account of the information they contain, and of their offering grounds for our opinion.

"Those (says Sir W.) engaged in accumulating Oriental MSS. may be gratified by a few anecdotes of this collection. When I began to form it early in life, and long before my Persian travels, London alone furnished so many MSS. that a short time rendered the owner of all those quoted throughout the 'Persian Miscellanies,' published in 1796, (as that work declares, *Introd. p. xxv.*) Two years after, the number had increased to nearly four hundred, (see *Oriental Collect. vol. i. p. 300. 1797*), of which several were described in a catalogue prefixed to an 'Epitome of the ancient History of Persia,' (1799). During the subsequent lapse of two-and-thirty years, many hundred more have been in my possession; but of those I rejected, perhaps too fastidiously, considerable numbers, often exchanging eight or ten volumes of Indian writing, (duplicates or inaccurate transcripts,) for one handsome, rare, or curious MS. of real Persian execution. The following pages will evince that I have been fortunate in acquiring many books of this class—works transcribed during the best ages of penmanship, and when brilliant illumination and miniature painting had, like calligraphy, attained in Persia the utmost perfection of Eastern art; from which, within the last two centuries, they have most lamentably fallen. Besides splendid and beautiful volumes, this collection possesses numerous works, plain in appearance, but precious for their antiquity, the interesting nature of their subjects, or their extreme rarity, as of some, there is reason to believe, no second copies exist in Europe. It was my object to collect not only the oldest and finest Persian works, but several copies of each, that by collation a perfect and accurate text might be obtained; for among various literary projects that long haunted my imagination, one was to print a complete edition of the Persian classics.

"This Catalogue notices many entertaining works of fiction unknown in Europe (as I have reason to think) beyond the narrow limits of my library. Such compositions have long been the delight of Eastern nations. An old English traveller says, concerning the Persians, 'They have romances of famous heroes and their deeds, among which are pleasant encounters, huntings, love-intrigues, banquetings, descriptions of flowers and delightful groves, emphatically set down with cuts and pictures represented lively enough,' &c. — *Fryer's Travels*, p. 369. Of those 'lively pictures,' as the following pages will shew, several MSS. in this collection exhibit a considerable variety; and if some are merely ornamental, others (by far the most numerous,) may be considered extremely useful, as they not only explain difficult passages, but faithfully represent the state of many arts at the time when they were executed; for Per-

sian painters have always delineated with scrupulous accuracy the architecture, domestic furniture, dresses, arms, musical instruments, and other objects, as they existed in their own times, although the text illustrated by their pencils may relate to kings, heroes, and princesses of the earliest ages."

"Respecting (continues the writer, and concluding with, to us, a very affecting statement) the value of Eastern MSS. no just opinion can be formed by those accustomed only to printed books. Of a few articles, this Catalogue states the former prices, which, perhaps, to many will seem exorbitant, and I must acknowledge my own surprise at the considerable sums demanded in various towns of Persia for splendid, rare, or curious MSS., and my still greater surprise at the sums which were refused. A magnificent offering to the triumphant *Nâdir Shâh* comprised the vanquished prince's diadem, three hundred camels, two hundred horses, and twenty fine Persian MSS.; and of a single volume brought from India by General Carnac, the price was *one thousand rупes* (125*l.*). That the beautiful *Jâmi* (marked No. 91.) had once been estimated at a sum nearly equivalent to 140 guineas, was noticed in the 'Epitome of Persian History,' (1799. Pref. p. xxiii.); and for a handsome *Shâh Nâmeh*, which I examined at Isfahân in 1811, the proprietor asked 180, but subsequently accepted 120 *tumâns*, (between 80 and 90 pounds,) as a letter from an English gentleman informed me; yet that MS. was not, in many respects, equally valuable as the two copies (Nos. 1 and 2) of my own collection. It is not without some painful efforts that an enthusiast in any line of literature can relinquish those objects which have amused his youth and afforded him solace amid the troubles of mature or declining life. Several times were the names of certain books erased from my list, and again with a reluctant hand inserted as they now appear; and many of these pages had actually passed through the press before I could induce myself to offer for sale the *Nuzhat Nâmeh Ellâiy*, the *Sûr al beidân*, the *Mekâmât Hamidi*, the *Zein al Akhbâr*, and other rare works noticed in the latter part of this Catalogue. But the die is now cast; and they must accompany all the others. I am, however, consoled (for 'even in our ashes live their wonted fires') by the hope that these MSS., transferred from the obscure shelves of a private collection to some great national or royal library, and rendered accessible to the public, may furnish interesting subjects for translation into various languages, and promote throughout Europe a taste for Oriental literature."

A System of Chymistry of Inorganic Bodies.

By Thomas Thomson, M.D. F.R.S. 7th edition. 2 vols. 8vo. London, 1831. Baldwin and Cradock; Edinburgh, Blackwood.

CHYMISTRY being in its very essence a progressive branch of science, it follows, that, independent of the regular demand for works of the standard class from each generation of readers, there will be an additional demand, created by the successive improvements and new discoveries in science, for revised editions, which must render former editions of such works comparatively of little value. How far this remark will apply to the earlier editions of Dr. Thomson's *System of Chymistry*, we shall not here undertake to determine. That the doctor's labours have been duly appreciated by the public is manifest from the fact, that the volumes before us virtually constitute the seventh edition of his elaborate treatise, though the author and editor tells us in his preface,

that, "instead of a new edition, it might, without impropriety, have been styled a new work; for at least nine-tenths of the whole has been written anew. Though I have given the title of *Inorganic Chymistry* to the present work, yet I thought it advantageous to include in it an account of all the acids at present known, even those derived from the animal and vegetable kingdoms, because I wished to make it a work to which my practical students could apply for information in every department of elementary chymistry; and many of these acids are occasionally employed in chymical researches."

Now, we must break a lance with the doctor, on account of the grave errors he has here committed, considering his high station as preceptor of a numerous class of students, more particularly in the several departments of practical chymistry. First, our author, without any obvious reason, except that of novelty or eccentricity, makes a distinction of title which cannot be sustained during the investigation of at least three-fourths of the whole field of chymical inquiry. And then immediately, as if conscious of the misnomer, tells us "that he thinks it advantageous to include in his treatise on *Inorganic Chymistry*, the acids and other products obtained from organic substances derived from the animal and vegetable kingdoms!" But, to shew that the author still farther stultifies the title he has assumed for the present work, he says: "I intended also to have introduced an account of all the lately discovered compound alkaline bodies belonging to the vegetable kingdom; but I found, that this could not be done without swelling the size of the second volume too much, or obliging me to omit some part of my account of the salts; which I was unwilling to do, because an accurate knowledge of these bodies is indispensable to the practical chymist." The doctor, therefore, as it appears to us, felt the embarrassment in which he has placed himself by his new coinage, while he takes the opportunity of informing us that he is employed on a second, or separate work, which he intends to publish, "On the Chymistry of Vegetable Bodies."

Now, we are convinced every chymist will agree with us in opinion, that no actual line of demarcation can be drawn between "*inorganic*" and "*organic*" chymistry; or what our author quaintly denominates the chymistry of vegetable bodies. Vegetable physiology necessarily includes chymical combination and decomposition, equally with the formation of mineral masses, or the combination of different gases; therefore it is superfluous to multiply terms which have no distinct meaning. We are the more inclined to notice this coinage, from observing it in more than one or two other instances of Dr. Thomson's present treatise. For instance, in p. 256, vol. ii. sulphuretted hydrogen, sulphuret of phosphorus, &c. are termed *sulphide* of hydrogen, *sulphide* of phosphorus, &c. &c. [The author admits that he "was frequently under the necessity of contriving new terms, and of extending or altering the present chymical nomenclature," "though these innovations have been introduced as sparingly as possible."] Additions to chymical nomenclature ought never to be made without some obvious necessity, or, at least, some palpable advantage; for the burden it imposes on the memory of the chymical student is one of the greatest impediments to the cultivation of that beautiful science. We could point out a multitude of other instances in which our author shews himself too much attached to *systemising*, by the unnecessary coinage of terms; while in other

cases he pertinaciously adheres to terms which in the present state of chymistry ought to be exploded, as conveying wrong ideas. For example, he still retains the term *affinity*, in lieu of *attraction*. Since the splendid discoveries of Davy in electro-chymical agency, by which the intensity of all chymical action was demonstrated to be dependent on the opposite states of electricity of any two substances, it is surely more consonant with scientific accuracy, to employ the term *attraction* for that power by which two chymical bodies seek to unite, than to use the term *affinity* between two opposite or dissimilar bodies. There may be an affinity (or kindred) between any two acids, or two alkaline bodies; but voltaic electricity has shewn us that it is the very opposite of affinity, or, in other words, the contrary state of electricity which two bodies relatively possess, that induces chymical attraction and chymical union.

The above-mentioned exceptions to the work on our table, may, however, only be considered as spots in the sun; and we should not have been induced to notice them but for the high authority of their author in chymical science, both as a writer and public teacher. We therefore proceed to the more agreeable task of noticing the meritorious parts of the present volumes.

The Introduction contains the best definition we have hitherto met with of the atomic theory. This, though yet incomplete, may be called the very basis of chymical research; and it is obviously most important that distinct ideas as to the comparative weights and volumes of the ultimate atoms of bodies should be conveyed to the chymical student. We would therefore recommend the doctor's introduction, as a very valuable abstract of the *substantum* of chymistry, according to the most generally received doctrines of atomic proportion.

In the different chapters under the respective heads of *acidifiable* and *alkalifiable* bases, we find a good deal of new matter; particularly in the latter division, including the alkaline metallic bodies recently discovered.

The *hydrocyanic* (or prussic) acid having of late years been very generally kept in the shops, (and improperly, without such precautions as shall prevent its being sold to any but medical practitioners,) we think the following extract may prove valuable to the profession, through the wide dissemination of our journal. "As hydrocyanic acid is very much employed in medicine, and as its efficacy is very much connected with [dependent on] its strength, it comes to be an object of considerable importance, to be in possession of a method by which it may be easily prepared by a common apothecary, in a state exactly the same in point of strength at all times. The following process, suggested by Mr. Clarke, of the Glasgow infirmary, possesses this requisite. In 100 drachms of water dissolve 84 drachms of cyanide of potassium, and add to the solution 183 drachms of crystallised tartaric acid, previously dissolved in 20 drachms of water. A double decomposition takes place. Bitartrate of potash falls down, and about 120 drachms of water will remain, holding in solution 34 drachms of hydrocyanic acid, or 2.81 per cent of the solution is hydrocyanic acid. Of acid of this strength, eight drops may be given thrice a day in a glass of water. The only impurity in the acid when thus prepared, is a small quantity of cream of tartar, which, in a medical point of view, is of no consequence whatever. Hydrocyanic acid thus prepared is a colourless liquid, having a strong smell, like that of peach-blossoms. Its taste is sharp, and at first appears cooling:

but it soon excites a burning sensation in the mouth, and it is very asthenic, and indeed a virulent poison."

But the most valuable portions of Dr. Thomson's system, and those which give it most pretensions to the title of a new work, are the several heads and sections of Vol. II. which include the *saline* compounds, classed by the author under the heads of "oxygen acid salts," "cyanogen acid salts," and "sulphur acid salts." Without questioning the propriety of the infinite latitude to which the doctor carries nomenclature, by way of simplifying the science, we have no hesitation in saying, that the practical chymist, dyer, calico-printer, and others interested in the manufacture or use of pigments, will derive a vast mass of valuable information from the latter half of this elaborate treatise. The work is accompanied with an Appendix, containing, among others, two highly interesting tables, exhibiting the "atomic weights of bodies," arranged first in the order of their densities, and then alphabetically. These tables, together with a copious index, render these volumes, containing about 1700 pages, a valuable work of reference; more especially when we take into account the experimental tests, which the author states he has resorted to in every case that admitted of any doubt respecting the atomic proportion, or other properties, of the several substances.

We think the work would have been far more complete as an elementary treatise, had it included the third volume, which the author promises, on Organic Chymistry, and been free from typographical errors. As it is, however, it may be considered a standard class-book, and as a much more condensed (and therefore more valuable) work, than the former editions of Dr. Thomson's *System of Chymistry*.

Standard Novels, No. VII. The Scottish Chiefs.
Vol. I. By Miss Jane Porter. London, 1831.
Colburn and Bentley.

A VERY prettily written introduction ushers in this popular romance, the beginning of which we shall quote, as far as relates to Sir William Wallace. "The story of Jeannie has already been published in one of the *Annuals* (the *Ferry-boat's Net*), we think; but it is quite interesting enough to be preserved in a less perishable form. We shall, however, confine ourselves to Miss Jane Porter's account of the origin of the fiction itself.

"In seeking to go back, by the traces of recollection, to the period when the first impression of the heroes which form the story of the 'Scottish Chiefs' was made on my mind, I am carried so completely into the scenes of my infancy, that I feel like one of the children old tales tell of, who, being lost in a wood, tries to find her way home again by the possibly preserved track of a few corn-seeds she had chanced to scatter on the ground as she came. To wander in these memories has, however, a pleasure of its own; many pleasant places presenting themselves to stop at, and thence to review with a sweet sadness, through the long vale of past days, some distant, lovely scene, under the soul-hallowed twilight of time. Such scenes are peopled with beloved forms, living there before our hearts' eye; but, in reality, long removed from us into an eternal paradise. Born on the border lands of Scotland, my mother, in an early widowhood, took her children thither, then almost infants, to bring them up in good air, and in the future advantage of a good education at a moderate expense. But in Scotland it is not the 'pastors and masters'

only who educate the people—there is a spirit of wholesome knowledge in the country, pervading all ranks, which passes from one to the other like the atmosphere they breathe; and I may truly say, that I was hardly six years of age when I first heard the names of William Wallace and Robert Bruce—not from gentlemen and ladies, readers of history; but from the maids in the nursery, and the serving-man in the kitchen: the one had their songs of 'Wallace wight!' to lull my baby sister to sleep; and the other, his tales of 'Bannockburn' and 'Cambuskenneth' to entertain my young brother, keeping his eager attention awake evening after evening, often to a late hour, and sending him to his bed, still asking for more, to see the heroes in his dreams. I remember with delight even now how I was amused for hours in the same way, by a venerable old woman called Luckie Forbes, who lived in a humble but comfortable occupation, near some beautiful green banks, which rose in natural terraces behind my mother's house, and who, often meeting me there when playing about, would walk by me, and talk to me, with her knitting in her hand; or I used to run to her own little home, and sit down on a stool by her side, while she told me of the wonderful deeds of William Wallace—of his fighting for Scotland, against as many cruel tyrants as those whom Abraham overcame when he recovered Lot and all his herds and flocks from the five robber-kings, in the vale that was afterwards called the Kings' Dale because of that victory. My lowly instructress never omitted an opportunity of mingling a pious allusion with her narrations. In like manner, at many a cottar's fireside in Scotland, the seed of the bread for this life and of that which is to come are sown together. From this custom of hers, I often listened to her with an awful reverence, as well as with delighted interest in the events of her stories. She described the person of Wallace from head to foot, as if she had seen him, telling me how comely he was, and how lofty in spirit, and that no temptation from 'bonnie leddy' or powerful prince could ever bribe him from the cause of Scotland. But she seemed to have most satisfaction in talking of the friendship between Wallace and Bruce; and she dwelt on it over and over again, comparing it with that of David and Jonathan, 'whose souls were knit together, and whose love for each other was wonderful, passing the love of women!' 'My bonnie bairn,' said she, 'there is a Friend that sticketh closer than a brother!' I never can forget that dear old woman—so shrewd, yet simple-minded, and cheerfully religious: she performed her humble duties with activity and content; her recreation, and 'exceeding great reward,' was reading her Bible, which she did every day. I do not recollect ever seeing any other book in her house, though she knew the history of Scotland, and the biography of its great families, as accurately as if the top of her *muckle kist*, on which her Bible lay, had been filled with historical chronicles. Luckie Forbes was not singular in this simplicity of book-learning and comprehensive knowledge with regard to her own country. I remember to have met much of the same amongst most of the Scotch of the lower orders with whom, whether as a child or in later years, I became acquainted. I do not say that I did not hear of the 'doughty deeds' of her favourite heroes from the lips of our revered school-instructor, Mr. Fulton, of Niddry's Wind, whose lessons were always chosen from the noblest subjects; nor, indeed, from occasional references, made by several accom-

plished scholars and esteemed friends who visited my honoured mother's unpretending tea-table;—but I must avow, that to Luckie Forbes's familiar, and even endearing manner of narrating the lives of William Wallace and his dauntless followers—her representation of their heart-sacrifices for the good of their country, filling me with an admiration and a reverential amazement, like her own—and calling forth my tears and sobs, when she told of the deaths of some, and of the cruel execution of the virtuous leader of them all,—to her I must date my early and continued enthusiasm in the character of Sir William Wallace, and in the friends his truly hero-soul 'delighted to honour.'

"Though my earliest associations, it may be seen, were all in favour of 'the Scottish Chiefs' being the first of my writings; yet, having quitted Scotland while still a child, eager to read books, and little dreaming of ever writing one,—the 'Fairy Queen,' 'Sidney's Arcadia,' and other tales of English chivalry, soon took their share in dividing my admiration with the Scottish heroes, whom almost deifying tradition had taught me to worship. Sober history came in in good time to sift the wheat in this mingled growth of weeds and harvest; and my late preface to the Standard Edition of 'Thaddeus of Warsaw,' shews how the time-honoured names of Sobieski and his followers wrought on me first to dare becoming myself a narrator of heroic deeds. That work was written in London, surrounded by living characters, whose corresponding military fame seemed to hold me examples I need only copy, to produce all I wanted to portray. But 'the Scottish Chiefs' was composed under very different circumstances. Our revered parent had retired with us into the country;—she wisely took us from a world that might have presented too many charms for young and ardent spirits, and which was then opening in many ways before us. In the quiet seclusion she chose, where we had then few acquaintances, recollections of the past could not but be our frequent amusement; and those of dear Scotland often presented themselves. We talked of our walks on the Calton Hill, then a vast green slope, with no other buildings breaking the line of its smooth and magnificent brow, but Hume's monument on one part, and the astronomical observatory on another; then of our climbing the steeper height of Arthur's Seat, and of our awed visits to St. Anton's Well!—all haunted by the ever-inspiring images of William Wallace and his brother heroes; or, the not less interesting, though more modern remembrances, attached to the misfortunes of the house of Stuart, from unhappy Mary to her expatriated descendant, Charles Edward. In these discourses I often found myself again by the side of Luckie Forbes and her spinning-wheel, listening to the delightful hum of her legendary lore; and while I dwelt in recollection on all she had told me of the champion of Scotland, and on all I subsequently had read of him and his associates, whether in history, or in the old native poems of 'Blinde Harrie' and 'Barbour's Bruce,' some of the earliest friends of my youth successively died—persons descended from the bravest and the best of those honoured associates; and, under the impulse of a votive sorrow, I conceived the idea of writing 'the Scottish Chiefs.'"

The Life of Thomas Ken, D.D. deprived Bishop of Bath and Wells; seen in connexion with the Spirit of the Times, political and religious, particularly those great Events, the Restoration, 1660, and Revolution of 1688: including the Period of fanatical Puritanism from 1640 to the Death of Cromwell. By the Rev. W. L. Bowles, M.A. M.R.S.L. Vol. II. 8vo. pp. 309. London, 1831. Murray.

THE anticipation of the concluding volume of Bishop Ken's Life, excited by the interesting matter contained in the development of the earlier period of his history, is now fully gratified by the manner in which Mr. Bowles has completed his undertaking. Not only does industrious research, coupled with acute judgment and a graceful style, claim our commendation, but a warm tone of kindred feeling glows throughout these pages, identifying the principles of the author so closely with those of his subject, that the admiration kindled towards the exemplary Ken cannot fail of extending to his biographer. The period in which Ken flourished in power or laboured in retirement, was pregnant with events various and of the deepest importance, not only as stern historical lessons, but from their consequences being still felt. The personal career of one who, although uncontaminated, still mingled in the troubled waters of the times, must necessarily lead us into private and intimate acquaintance with many of the principal actors in the peculiar and more striking *postcentia vias* which the broad narration of history as necessarily withholds from our view. Hence arises the deep interest of biography, when, as in the present case, it rests in able and judicious hands. We doubt not but that many of our readers will fully enter with us into the warmth of feeling which drew the following picture of the place where Ken was educated.

"After the business of examination in the election-chamber is over, one of the most affecting sights, if duly considered, is the parting dinner, in the college hall, before the youthful *superannuates* separate from their school-fellows, passing from years of seclusion into the 'great Babel,' the world, the scene of their future fortunes. On this day the wardens of Winchester and New College, the Fellows of Winchester, their visitors, and the parents of boys about to enter, are seated at the high table, 'under the portrait of the pious founder,' on a raised platform in the hall. To those seniors who, for many succeeding summers, have witnessed the same annual spectacle, and who now again, when young and old are brought together, feel as if no time had passed since yesterday, when they were boys, and to-day, now they are old,—and yet feel their time stealing more rapidly away, and that few more years remain—to them, as they look down and around them, and see the well-known groups, and the generous and educated youth on tiptoe to start into untried life—the scene must be doubly affecting. They know, and have long confessed, that, as Christians, they have here 'no abiding city.' They know, also, that when old age shall have placidly laid down its staff, they shall be succeeded, perhaps, by some of those now seated below them, who, also, in their turn, may live to witness the same scene with the same pensive recollections.

'Stand up, boys!

We'll wave our bonnets—unto the ground!

Let us drink their health, for the sake of him of the 'old crozier,' and wish they may live

* Pie, donc, Monsieur Canon—misquote the Bible!
* No continuing cry," if you please.—Ed. L. G.

many years, to disappoint the hopes of the younger aspirants to their station and honours! In the middle of the hall is placed what is called the New College table, for the younger members of that society, whose road in life is opened, but who have scarce yet turned their thoughts as to where it may lead them. Around the hall are the several tables of the boys, from the youngest to the seniors: and last, near the entrance, is the table set out for those who are to dine with their long-associated friends and youthful companions for the last time, as scholars together. They have lived immured indeed, but happily, through the early years of life; friendships have been formed which will last through all 'the changes and chances' of their future lot. A few remaining on the stage, sober in the vale of years, and gray-headed, whilst many have been separated for ever, and many gone to their graves,—occasionally meet, in after life, and talk of 'auld lang syne.' The number of early friends now lessens every year: Dr. — is dead; Archdeacon — is dead; Sir — is dead! so they count on, till their time comes, and some old friend sighs, 'Poor — is dead!' Most are decently provided for—few amply—the chief part retired to college livings; but almost all, wherever placed, mingling in society, the lights of scholarlike intelligence and virtuous example. On this day, the day of annual election, all those youths at that table near the entrance of the hall, are about to enter on the same journey of life. The dinner is now ended; and let him who has any feelings of man within him, listen, without emotion, if he can, to that grace, which has been chanted to guests of the same character, in the same place, and to the same words, for nearly five hundred years! 'Agimus tibi gratias, omnipotens Deus, pro fundatore nostro Gulielmo de Wykeham, reliquique quorum beneficiis hic, ad pietatem et studia literarum, alimur, rogantes ut nos, his donis tuis recte utentes, ad gloriam perducamur immortalem, per Jesum Christum Dominum nostrum. Amen.' The old song of Dulce Domum, whose origin is so dark, succeeds this grace, sung to most appropriate and affecting music, and friends, among those 'who had been young, and now are old,' shake hands, perhaps never in this world to meet again. And against such foundations, which have done their duty to society in every generation, a more rancorous hostility is now directed, more rancorous and more universal, than in the days of Cromwell!"

We do not marvel at this concluding burst of Mr. Bowles's *sava indignatio*, nor can we deny that there may be some "soul-ravishing spiritualists" whose hearts could find in such a scene no gratification, and before whose "grace-pouring-down countenance" such foundations as that of William of Wykeham would seem but as rocks of offence; but we differ, *totò calo*, in thinking that this "rancorous hostility" is or speedily will be even general, much less universal. We give the annexed curious anecdote relative to Nell Gwynne, and then proceed to introduce our readers to the court of Charles the Second.

"The well-known anecdote of Ken, respecting a celebrated female favourite of Charles the Second, is related in this volume, in spirit at least, as the story was told by Ken himself to his biographer Hawkins: but I am informed by my venerable and venerated friend, the Bishop of Hereford, well acquainted with all Wintonian anecdotes, that there wandered, in his early days, another report of this story. That the celebrated lady having taken possession, in the

king's name, of the bachelor prebendary's ecclesiastical residence, refused, except *vi et armis*, to move! Possession had been taken in the absence of the owner, who, on his return, finding the unexpected guest deaf to entreaty, was obliged to order a part of the roof to be taken off; when the lady, thus forcibly dislodged, scudded to the deanery, to make her report of the obdurate prebendary to the king!"

"To shew the origin of this remarkable transaction we must revert to some prior historical circumstances. In the year 1677, the Prince of Orange came to England to solicit in person a marriage with Mary eldest daughter of the Duke of York, which had been before proposed. William had never seen the lady, but having been introduced, he professed the most ardent admiration, and formally demanded her in marriage. The Duke of York received the proposition with coldness; but his brother the king, only anxious that France, for his own interest, should consent to a peace, sought to detach the young soldier and lover from his political connexions, by promising that the royal maiden should comply, as soon as he (the Prince of Orange) would agree upon the terms of a general peace. This circumstance had nearly prevented the union. The language of Charles was, 'no wife unless peace be first agreed on.' But William was so much of the Dutch lover, that, struck as he was with the charms of the youthful Mary, then in her sixteenth year, he determined to resign her, and leave England in *two days*, if the king, previously to the marriage, insisted on these terms. But all obstacles were removed when the king found William resolved coldly to relinquish the lady; and he frankly said to Sir William Temple, 'I will trust him; he is honest, I can tell by his countenance. *He shall have his wife*, and you shall go immediately, and tell my brother so.' The day after, the king publicly declared the marriage; which led to William's possessing the English throne. With the Prince of Orange, at this time of the age of twenty, came over his half-uncle, Count Zulestein, who afterwards was confidentially employed by him, and who, at the battle of Landen, had saved his life. If William was struck with the charms of Mary, Zulestein was no less struck with a young lady, her attendant, who went in her train, as maid of honour, to the court of the Hague. The gallant William was less romantic than the brave chevalier who came to England with him, and when the beautiful lady with whose charms he was smitten appeared again in Holland, an honourable attachment and engagement succeeded the first impression. He won her heart—he promised marriage; and but for the virtuous Ken, that promise never would have been fulfilled. If we might venture to describe her feelings in poetical language, in such a song as would suit Ken's lute, we might thus imagine her to have expressed them:—

* *Young English Lady to the Princess's Chamberlain.*

Though his words might well deceive me,
Though to earth should I bend,
Christian Guide, thou wilt not leave me
Thus on earth without a friend.

I thought his vows were oaths in heaven,
Nor dare I here myself deny,
For all my soul to him was given,
God knows how true, how tenderly!

Though wrong'd, and isolate, and dying,
His pride, his coldness, I forgot;
And fell upon his bosom, crying,
'Forsake me not! forsake me not!'

I left my father and my mother,
Whom I no more on earth may see;
But I have found a father, brother,
And more than every sign, in thee!

Though his words might well deceive me,
Though wrong'd and desolate I lie,
Christian Guide, thou wilt not leave me—
Oh! teach me to repent and die."

This Count Zulenstein was the son of General Zulenstein, natural son of Henry Frederick de Nassau, Prince of Orange and Stadtholder, grandfather of William III. He was in the greatest confidence of King William through his whole reign. We have said that he came with him when he first appeared at the English court, and was sent to congratulate James on the birth of the Prince of Wales, afterwards the Pretender. He was a kind of military Mentor at this time to William, his nephew; and, as we have related, when his disciple was impressed with the charms of the youthful Mary, Mentor himself became no less suddenly enamoured of one of the young ladies who attended Mary in the character of maid of honour from England. But who was the young lady?—for Ken mentioned no name, either of the one or the other. The young lady was Jane, daughter and heir of Sir Henry Wroth, of Durants, Enfield, in the county of Middlesex, descended, on the mother's side, from the 'noble Sidney,' she being the eldest daughter of Robert the great Earl of Leicester. My ideas were unexpectedly confirmed by a passage in a note of Lord Dartmouth, in Burnet's History, where the name is accidentally mentioned: 'Ken,' says Lord Dartmouth, 'had been chaplain to the Princess of Orange, but sent back on some disgust the prince took to him, for the marriage of Zulenstein with Mrs. Wroth,' &c. Jane Wroth was this injured young lady. An English lady of birth and honourable rank, no chevalier in the court of the Prince of Orange need have disdained; and it is no wonder, both from Christian principles as a minister, and from kind and virtuous feelings as an Englishman, that Ken became interested, when the affections of Jane Wroth, under the sacred and solemn pledge of plighted troth, were won by a soldier of thirty-five, so near in relationship to the cold and haughty William of Orange. Ken, in utter disregard of any consequences to himself, appeared the sole friend of a destitute woman, who would otherwise have been an outcast, but who, by the remonstrance of the princess's chaplain, became the honoured wife of Zulenstein, afterwards Lord Rochford, by whom he had four sons and four daughters. The reader will see in Collins, that Count Zulenstein was married to Jane Wroth; Jane Wroth was, in her youth and beauty, mad of honour to the Princess of Orange; and Count Zulenstein and Jane Wroth are the persons of whom Ken spoke so obscurely. [We have now, owing to carelessness in writing or correcting the press, a repetition of a statement already just given.] By Ken's many remonstrances and interference, utterly regardless of whom he should offend, Jane Wroth thus became the honoured and lawful wife of Count Zulenstein. He succeeded to the domains of his wife's father, the barony of Enfield, as the first Lord Rochford, from whom is lineally descended the present possessor of St. Oysth, William Nassau, Esq. But the indignity done to high Dutch pride, by a private English lady marrying the uncle of the Prince of Orange, was by him never forgiven. This was the secret ground of William's personal aversion to Ken, and Ken's mortal dislike of William, besides his political principles."

We have not space or time to follow Bishop Ken through the fluctuations of his life; we shall therefore take our farewell at his grave.

"The Grave of Ken."

On yonder heap of earth forlorn,
Where Ken his place of burial chose,
Peacefully shine, O sabbath morn!
And, eve, with gentlest hush repose.
To him is rear'd no marble tomb
Within the dim cathedral fane;
But some faint flowers of summer bloom,
And silent falls the winter's rain.
No village monumental stone
Records a verse, a date, a name:
What boots it? When thy task is done,
Christian, how vain the sound of fame!
Oh, far more grateful to thy God
The voices of poor children rise,
Who hasten o'er the dewy sod,
'To pay their morning sacrifice.'
And can we listen to their hymn,
Heard, haply, when the evening knell
Sounds, where the village tower is dim,
As if to bid the world farewell,
Without a thought, that from the dust
The morn shall wake the sleeping clay,
And bid the faithful and the just
Up spring to heaven's eternal day?"

These beautiful lines of Mr. Bowles' are a congenial tribute to the author of our morning and evening hymns. We have only to add, that in all controverted points of Ken's character, his memory has found a powerful vindicator in his present biographer.

Memoirs of Count Lavallette. Vol. II.

[Conclusion.]

WE continue our extracts from these entertaining Memoirs: and the first thing that strikes us with astonishment is the singular insatiation of security which seems to have pervaded both Lavallette and his companions: what, under their circumstances, could they expect but vengeance? Lavallette consoled himself with the reflection that "the royal resentment would undoubtedly vent itself on those who are absent,"—a surmise very much at variance with all experience. He says of Labedoyère, "Far from having any uneasiness on my own account, my whole anxiety was for the fate of my friends. The Countess de Souza, the aunt of Labedoyère, knowing that he was still in Paris, entreated me to go and see him, to thrust him, if necessary, by the shoulders out of the barriers, and to persuade him to seek refuge with the army of the Loire, from whence he might go abroad. I went therefore at eight o'clock in the morning to Labedoyère. He was still in bed, playing with his child, and his lovely wife next to him. When we were alone, I warmly pressed him to depart, and, by a singular prepossession, I gave him the same reasons, made him the same entreaties, placed before his eyes the same dangers, with which my friends harassed me on my own account. He listened to me with a smile and a yawn, and turned himself round in his bed. I was obliged to put an end to that discourse, and talk of the fate of the Emperor and France, which interested him more than his own. We had already lost more than three hours in useless conversation, when his valet-de-chambre came to tell him that two Prussian officers who were billeted in his house, refused the apartment that had been offered to them, and insisted on taking possession of his wife's. At these words Labedoyère flew out of bed like a madman, and taking scarcely time to slip on his clothes, he wanted to go immediately and cut off the ears of these two insolent fellows. It required considerable exertions on my side to make him keep quiet and wait the result of his wife's mother's remonstrances. He did not set off till the evening. He gained the banks of the Loire. I shall mention hereafter how he returned from thence."

We now give the sequel.

"Having made up my mind to this, I was the more obstinate in my refusal to fly; and I proposed to the Princess de Vaumont to give her a letter addressed to M. de Talleyrand, in which I should explain my conduct. She consented to lay it before him. In that letter I unfolded to the ministry my whole conduct since the restoration; all the steps I had taken on the 20th of March; and I concluded by soliciting my trial. My wishes in that respect were soon complied with. On the 18th of July I was sitting at dinner with Madame Lavallette and M. de Meneval, when an inspector of the police came to tell me that the prefect, M. Decazes, wished to speak to me. When I stepped into the hackney-coach, I saw that I was surrounded by three or four spies, who were good enough to act the part of footmen, and stepped up behind the carriage. In less than half an hour I was in the registering room of the prison of the prefecture. I was introduced to the jailer, who paid little attention to me, being busy with distributing lodgings to several new comers, among whom I discovered M. de P***, who had been long secretary to the Duke de Rovigo, and appeared to be the person in whom he placed the greatest confidence. He seemed so grieved and mortified to be where he was, that I went up to him, and had already begun to express my pity for his misfortune, when all of a sudden he turned aside, and, pointing to me, said to the turnkey, 'Conduct this gentleman to No. 17;' after which he disappeared. This man, thought I, has very cleverly turned his coat; and I followed my guide, blushing at the mistake I had made. He introduced me into a dirty garret with a window that opened in the roof at twelve feet from the floor. I was permitted, if I could, to open it by means of an iron bar with notches, but so heavy that it was not possible for me to raise it. When one enters into prison, anger always follows the first surprise. I began by throwing out some energetic exclamations against the prefect, who had not deigned to receive me in his apartments, though he had sent for me to come and speak to him. I was not yet acquainted with the code of politeness of the prefects of police; but I soon made great improvement in that branch of knowledge. As there was no bell, I was obliged to wait three hours before I received a visit from the turnkey, who brought me for dinner some disgusting prison ragout. I made some inquiries respecting the prisoners who lodged on the floor above me. I had seen through a key-hole, men carrying bottles, and all the preparations for a feast. 'They seem to be very merry,' I added. 'They are two aides-de-camp of General Labedoyère.' 'How! is he then arrested?' 'I believe so.' The next day these two officers were set at liberty; and I afterwards learned the following particulars. The unfortunate Labedoyère, after the army of the Loire had been disbanded, had retired to the outskirts of Riom, with several of his friends, among whom was General Flabaut, his near relation. The latter, who possesses a cool head, and unites prudence to much courage, immediately perceived the danger of their position. He was convinced that nothing remained for them to do but to repossess the frontiers as quickly as they could. Labedoyère was of the same opinion; but no persuasion could make him alter his plan. He wanted to go to the United States, but on his way to pass through Paris, where he wished to take leave of his family and raise some money. All the exertions of friendship had no power over him. He stepped into the diligence under a false

stance, and found among his travelling companions two wretches in regimentals, who pretended they came from the army of the Loire, and who were scarcely arrived in Paris when they informed against him. These were the two prisoners who were tearfully feasting on a part of the money they had received as the reward of their treachery.

A very singular instance of the celebrated V***'s skill in putting together the smallest circumstances for conviction is recorded.

"Among the conspirators of the infernal machine was one M. N***, an intimate friend of Limollan, the first inventor of the plot. He had served among the Chouans, and the police supposed, reasonably enough, that he was in Paris. After being hunted like a fox for several days, he slept at night in the charcoal-boats in the Pot au Bled. When the pursuit had ceased in that part of the town, he ventured to seek a retreat in a miserable garret in a public-house. The next day, the police came back; but he had escaped, and was seen no more. His room was searched, and near the bed was found a scrap of half-burned paper, which he had used to light his pipe. This paper contained, however, some written lines, which seemed to be part of the rough draft of a letter addressed to some general, who was supposed to be Georges. On the last line were the following words: 'I cannot write any more to-day, as I have a great pain in my eyes.' This unfortunate man was afterwards implicated and taken in the conspiracy of Georges, and I had the pleasure of examining him. He was sitting where you are, his face between two wax-candles, as your's is. While I was talking with him I continued writing. He was my countryman. I spoke to him of his parents, of his first affections, of his schoolfellows; and having observed that he began to gain assurance, and that his answers betrayed a little more cheerfulness, I stopped all of a sudden, and said in the most natural tone I could: 'But the light annoys you: you may put out the candles if you choose.' 'No; I have no pain in my eyes.' 'I thought you had.' 'No, not at present; my eyes were bad, it is true, about two years ago.' We continued our conversation. At last I slowly read to him his examination: he was surprised to find I had inserted in it so trivial a circumstance, and asked why I had done it. 'It is my custom.' Now, will you believe that this very trivial circumstance convicted him? The half-burned scrap of paper had been preserved. The writing was compared with his, and his presence in Paris, at the time of the infernal machine, was proved." "And what became of him?" said I. 'He was guillotined,' answered V***, with a most fiendish look and gesture. He said to me: 'I am fond of my profession: I cannot remain one day out of this apartment. I might go to the play, and divert myself with my friends, my wife, my children. But, no; I must be here.' While listening to him, I observed that by custom he constantly leered to the left side, where the prisoners were placed; and I am convinced that if they had been put at his right, he would have lost half his skill."

Anecdote of Marshal Ney.—"He played tolerably well on the flute, and during several days he amused himself with his instrument. He was, however, deprived of this resource, under the pretence that it was against the rules of the prison. He repeatedly played a waltz, which I long recollected, and frequently hummed in my evening musings. I had never heard it any where else, till once again it struck my ear in Bavaria: it was at a *bal champêtre* on the borders of Lake Starnberg, I had before

my eyes young peasant girls merrily skipping on the fresh greenward. The air was sweet and melancholy, and when played on the flute, it immediately recalled to my memory the Condegarrie; and I retired, unable to repress my tears, and repeating with bitter feelings the name of the unfortunate marshal."

The heroic conduct of Madame Lavallette must render the ensuing account of her interesting. During the imprisonment of her mother, Madame Fanny Beauharnais, in the time of the revolution, "young Emilie was intrusted to the care of a governess, or rather abandoned to the vulgar caprice of some domestic who shared the movements and passions of the mob. Born of emigrant parents, the poor child was obliged to assist at the patriotic processions which took place every month on the republican holidays. She often said: 'I was very ill-used on those occasions by my companions, the young girls of the neighbourhood. They could not forgive me my tall stature and genteel features, which contrasted with those of the greatest part among them. The daughter of an emigrant marquess and an imprisoned mother could scarcely share the honour of their company. As for me, the exclusion had nothing disgraceful in my eyes; but my governess, though she had none of the prejudices of my companions, took great care to conduct me to their assemblies for her own interest. The least reluctance she would have shewn for it might have exposed her to be arrested.' At that terrible period of madness and fanaticism, private life was subject to jealous and perpetual supervision. The porter of a nobleman's house was obliged, for his individual safety, to become a spy and an informer. The servants were again the masters, or rather the tyrants, of those who employed them. They were displeased that the daughter of an emigrant was not bound in apprenticeship, and that she maintained in her manners and occupations something genteel and delicate. The two cousins of Emilie were both apprentices,—Hortense to her mother's mantua-maker; Eugene to a joiner in the Faubourg St. Germain. The 9th Thermidor having overthrown tyranny, Madame de Beauharnais got out of prison, and Emilie was sent with her cousin to a boarding-school which Madame Campan had established at St. Germain-en-Laye. There she continued her education, which had been interrupted during two years."

Their marriage was arranged in Buonaparte's usually imperative style.

"All my comrades had obtained advancement: the general wished to reward me also; but not willing to expose himself to a refusal from government, he determined to bring about a marriage between me and Mdlle. Beauharnais. One day, when I had accompanied him to the treasury, to expedite the sending off of the sums that were required at Toulon for the fleet, he ordered his coachman to drive along the new boulevards, that he might have at his leisure a conversation with me. 'I cannot make a major of you,' he said; 'I must therefore give you a wife;—you shall marry Emilie de Beauharnais. She is very handsome, and very well educated. Do you know her?' 'I have seen her twice. But, general, I have no fortune. We are going to Africa: I may be killed—what will become, in that case, of my poor widow? Besides, I have no great liking for marriage.' 'Men must marry to have children; that is the chief aim of life. Killed you certainly may be. Well, in that case she will be the widow of one of my aides-de-camp—of a defender of his country. She will have a

pension, and may again marry advantageously. Now, she is the daughter of an emigrant that nobody will have: my wife cannot introduce her into society. She, poor girl! deserves a better fate. Come, this business must be quickly settled: Talk this morning with Mad. Buonaparte about it: she mother has already given her consent. The wedding shall take place in eight days; I will allow you a fortnight for your honeymoon. You must then come and join us at Toulon on the 29th.' (It was then the 9th.) I could not help laughing all the while he spoke:—at last I said: 'I will do whatever you please. But will the girl have me? I do not wish to force her inclinations.' 'She is tired of her boarding-school, and she would be unhappy if she were to go to her mother's. During your absence, she shall live with her grandfather at Fontainebleau. You will not be killed; and you will find her when you come back. Come, come! the thing is settled. Tell the coachman to drive home.' In the evening I went to see Mad. Buonaparte. She knew what was going forward, and was kind enough to shew some satisfaction, and call me her nephew. 'To-morrow,' she said, 'we shall all go to St. Germain. I will introduce you to my niece. You will be delighted with her: she is a charming girl!' Accordingly, next day, the general, Mad. Buonaparte, Eugene, and I, went in an open carriage, to St. Germain, and stopped at Mad. Campan's. The visit was a great event at the boarding-school: all the young girls were at the windows, in the parlours, or in the courtyard; for they had obtained a holiday. We soon entered the gardens. Among the forty young ladies I sought anxiously her who was to be my wife. Her cousin Hortense led her to us, that she might salute the general, and embrace her aunt. Shewas, in truth, the prettiest of them all. Her stature was tall, and most gracefully elegant; her features were charming; and the glow of her beautiful complexion was heightened by her confusion. Her bashfulness was no pret; that the general could not help laughing at her; but he went no farther. It was decided that we should breakfast on the grass in the garden. In the mean while I felt extremely uneasy. Would she like me? Would she obey without reluctance? This abrupt marriage, and this speedy departure, grieved me. When we got up, and the circle was broken, I begged Eugene to conduct his cousin in this solitary walk. I joined them, and he left me. I then entered on the delicate subject: I made no secret of my birth, nor of my want of fortune; and added: 'I possess nothing in the world but my sword, and the good will of the general; and I must leave you in a fortnight. Open your heart to me. I feel myself disposed to love you with all my soul; but that is not sufficient. If this marriage does not please you, repose a full confidence in me; it will not be difficult to find a pretext to break it off. I shall depart; you will not be tormented, for I will keep your secret.' While I was speaking, she kept her eyes fixed on the ground; her only answer was a smile, and she gave me the nosegay she held in her hand. I embraced her. We returned slowly to the company; and eight days afterwards we went to the municipality. The following day, a poor priest, who had not taken the oaths, married us in the small convent of the Conception, in the Rue St. Honoré."

The narrative of Lavallette's escape has all the interest of a romance, but is too long as a whole: we shall only mention Mde. Lavallette's harsh treatment.

Mrs. de Lavallette, a little easier after half an hour, began to get the better of her agitation; and she would have enjoyed her happiness, if the brutal turnkeys, who had left her door open, had not uttered against her the most horrible abuse, and assured her it was impossible I should not be retaken in a very short time. The arrival of the procureur-general, Bellart, put an end to their abusive language. He sat himself gravely down to examine her, and addressed reproaches to her that were only ridiculous. By his order she was treated with so much severity, that, in the state of health in which she then was, that usage became the chief cause of the disorder under which she laboured during twelve years, but from which she has at last recovered. They placed her in the chamber of Marshal Ney, where there was no chimney, but a German stove, the suffocating heat of which made her suffer a great deal night and day. The window opened into the women's yard. To hear the noisy cries of those wretches during the whole day, and their vulgar and obscene language, was agony to so delicate a female. No person could come near her; even her maid was excluded, and she was attended by one of the female turnkeys. None of her letters could cross the threshold of the prison, nor could any communication from her friends reach her. She was for ever assailed with a thousand different terrors, especially in the night, when the sentries were relieved. She always imagined it was her husband they were bringing back. During more than five-and-twenty days and nights, she did not enjoy one moment's sleep. I was far from thinking she could be so unhappy. I had been told, with the view of comforting me, that she was lodged in the apartments of the lady of the prefect of police, treated with the greatest attention and respect, and that she would soon obtain permission to return home. My daughter had returned to her convent in an ecstasy of joy, and agitated with so strong an emotion that she could not explain in what manner she had contrived to save her father. But when, next day, the whole business was explained, the superior, who had just succeeded in obtaining the protection of the Duchess of Angoulême for her house, was seized with alarm; my daughter was ordered to hold her tongue; and the nuns and some of the boarders shrunk away from her, as if she had had the plague. Will it be believed? when I add, that she parents of several of those boarders declared to the superior, that they would take their children home if Josephine Lavallette remained in the convent? So that a virtuous, generous action, which ought to have been presented as an example to be followed by young persons, was, through fear, personal interest, and perhaps also by meaner passions, regarded as a sort of crime and a cause of proscription. Six weeks afterwards, when Mde. de Lavallette was set at liberty, she hastened to take her daughter from the convent."

We conclude with the account of her present state.

"At last, the health of Mde. de Lavallette recovered sufficiently to permit me to take her home. A deep melancholy throws her frequently into fits of abstractedness; but she is always equally mild, amiable, and good. We pass the summer in a retired country-house, where she seems to enjoy herself."

Our extracts, which of course can embrace only a small part of two thick volumes, will shew how interesting are their contents. Lavallette writes like a man on his defence, and

in the spirit of a partisan; but who has written on the subject in any other? Comparison will best extract the truth; and, beside their present attraction, all these contemporary memoirs will be valuable material for the historian. We must again repeat our praise of the translation.

J. Montgomery's Voyages, &c. of Tyerman and Bennett.

[Fourth Notice.]

WE resume the thread of this narrative, without circumlocution;—the parts are so distinct, that they speak for themselves, and, we hope, so interesting as to speak well both for our selection, and for the work whence they are selected. By way of change, we shall begin this notice, however, with a few pieces of natural history. The following is the description of an aca tree, or oro:—

"This grotesque tree (the banyan of India) grows upon one side of a rock, nearly perpendicular, over the front of which (being from thirty to forty feet high, and as many broad) hundreds of its roots descend, singularly imbricated, and forming a kind of net-work. The stems of the tree above rise up thirty feet at least from the rock, being supported by multitudes of roots, which find their sustenance in the soil below. These occupy a space nearly a hundred feet in compass, and display various arches and recesses, of most curious appearance. On one side, the impending branches have sent down a root of forty feet, which, having got footing in the ground, has given birth to a young tree. Multitudes of other long fibrous shoots, of a black colour, are growing downward from the horizontal branches above, which, though dangling wildly in the air now, will strike root as soon as they reach the ground, and add their antic columns to the pillared shade. The natives have a tradition that the seed of this gigantic plant was brought by a bird from the moon."

A bird, as remarkable as this tree, is also described.

"A white bird, with a long blue bill, and web-footed, about the size of a dove, was brought to us. The natives call it *pirai*; and this harmless creature was also one of the lords many, and gods many, worshipped here. It was supposed to preside over accidents, and, being often found sitting in the bread-fruit trees, its protection against falls in climbing them was sought. It was believed that when this bird perceived any one thus precipitated by an unlucky slip, it would immediately fly beneath his body, as if to rescue him before he reached the ground, or, at least, lighten his descent. The chief who gave us this curious information assured us that he had proved it to be true by personal experience; for, on a certain occasion, when he was dislodged from a bread-fruit tree, one of these compassionate birds glanced under him so closely as to touch his neck with the flapping of its wings, and he sustained no injury, (as he presumed) in consequence of this happy interference of one of the gods; whereupon he immediately cut a large bunch of bananas, and went and offered them to his deliverer at the marae. This day, in the course of our ramble, we caught a *vici*, a giant of a grasshopper, which measured nearly five inches in length. The body was green, the wings red."

It is to be regretted, that the most curious creatures are so loosely defined that we cannot ascertain what they are; but our missionaries were intent on other matters, and their notices

of animals, &c. are but incidental. Here is another extract:

"While we were exploring the neighbourhood of the cascade, this day, some of the men, whom we had left at the landing-place, caught two very curious fishes of the lobster species. The native name of this animal is *caroo*. The general form is that of the lobster; the length nine inches; the body is covered with a delicate shell, of which the jointed compartments, nine in number, beside the tail-piece, admit of freedom of motion. Under the five central ones there are fringes, like fins, and to that which lies between these five and the tail are attached two flappers, on either side, projecting outward and backward. Under each of these there is a strong, bony, sharp-pointed weapon, with which the creature can defend itself, and probably secure its prey, by claspings the latter beneath its belly, when the forks must pierce whatever comes between them. These are said to be venomous, and the natives are much afraid of being wounded by them. To each of the three plates of the shell, next the head, are fitted two legs, one on either side. The head is an inch and three quarters long, and narrowing in width from an inch and a half, at the hinder part, to three quarters of an inch at the frontage. Towards the middle are the eyes, the mouth, and four antennae, with a kind of fin on each side. But the most singular and novel characteristics of this animal are its large claws, which grow from the upper part of the body and the neck. These have four joints each, that at the extremity being a fine and almost transparent bone, with ten sharp rays shooting outwards, longer and longer, and stronger also in proportion to the outermost. This ten-toothed appendage closes down into a corresponding groove, or slit, of the inner joint, which exactly fits it as a sheath—the whole resembling a common pocket-comb that shuts into a case. The mouth and adjacent organs are like those of the lobster. The colour, when alive, is pale yellow with lilac and black spots."

These also were objects of worship. Another "strange fish."

"A singular fish, which had been struck with a spear and caught in the bay, was brought to us. It is called *avere*. It resembles an eel, and is a yard long, with a remarkably projecting snout, one-fourth of its whole length, at the extremity of which is the mouth. The upper part of this proboscis consists of several bones, so exquisitely articulated, side by side, as to be capable of enormous expansion; while below, where these bones seem to unite closely, by an equally curious contrivance, there is a connecting membrane which falls inward and admits of corresponding distension with the cavity above; so that this small snout (in shape like a gun-barrel) might be enlarged enough to receive a substance equal in bulk to the whole body of the animal itself. It has pectoral, dorsal, and ventral fins, of very delicate structure. The tail-fins are finely arched backwards, and from between them, as from the centre of a crescent, shoots out a tapering tail four inches long, and ending in a point. The colour is blue on the back, and grey below; the eyes are large, and the pupil is surrounded by a glaring yellow iris. It is said that this arrow-like animal can dart itself out of the water with such violence as to pierce with its snout the body of a man. This fish is esteemed delicious food."

Our countrymen having sailed for the Marquesas, touched at the Sandwich Isles, informing us, on their way, of "the nocturnal amenity of the sea," which is a very fine phrase indeed:

human beings are not always so susceptible of amenity.

"At the village of Wytiti, about four miles to the east of Hononuru, there formerly lived a chief of singular ferocity; Giant Despair himself, in the Pilgrim's Progress, was not more brutal and reckless. When he had a fancy to offer a human sacrifice, he would set out in his canoe, with a single servant, in the dead of the night, and come down the bay till he got along-shore close by the town. The two harpies would then raise a lamentable cry, as though they were perishing in the water; when the first person who happened to be alarmed, and, from the instinct of humanity, flew to their relief, was pounced upon, his back broken, and his corpse carried off to be presented at the marae. In the year 1804, when the late king, Tamahameha, was on his way from Hawaii, to invade Taui, he halted with an army of eight thousand men at Oahu. The yellow fever broke out among the troops, and in the course of a few days swept away more than two-thirds of them. During the plague, the king repaired to the great marae at Wytiti, to conciliate the god, whom he supposed to be angry. The priests recommended a ten days' tabu, the sacrifice of three human victims, four hundred hogs, as many cocoa-nuts, and an equal number of branches of plantains. Three men who had been guilty of the enormous turpitude of eating cocoa-nuts with the old queen (the present king's mother), were accordingly seized and led to the marae. But there being yet three days before the offerings could be duly presented, the eyes of the victims were scooped out, the bones of their arms and legs were broken, and they were then deposited in a house, to await the *oup de grace* on the day of sacrifice. While these maimed and miserable creatures were in the height of their suffering, some persons, moved by curiosity, visited them in prison, and found them neither raving nor desponding, but sullenly singing the national *Awia*—dull as the drone of a bagpipe, and hardly more variable—as though they were insensible of the past, and indifferent to the future. When the slaughtering time arrived, one of them was placed under the legs of the idol, and the other two were laid, with the hogs and fruit, upon the altar-frame. They were then beaten with clubs upon the shoulders till they died of the blows."

It is curious that the natives, so filthy in most other matters, have a terrible aversion to flies. The authors relate: "Two of the queens dined with us to-day. They brought their own provisions—two raw fishes, and a bowl of poi. Of the latter they sometimes drank, but occasionally employed their fingers to carry the slimy beverage to their mouths. One of the fishes was dressed by their desire; the other they ate raw, just as it came out of the water, scales, fins, and intestines unremoved. This they tore to pieces with their hands and their teeth, as best served their purpose; first one and then the other helping herself to such portion as she liked best, each taking special care that none of the blood which oozed from the mangled fragments should be lost. But, though it excited very inconvenient qualms of stomach in us to see their filthy feeding, when a common fly was found drowned in one of their messes, they seemed at once to grow sick, and turned away their faces with no equivocal expression of utter loathing. Flies, indeed, may be said to be an abomination with these savages,—probably from some superstitious prejudice, for vermin far more disgusting are greedily picked by them from their own bodies—nay, from the very dogs—and devoured."

Some of their superstitions are not only interesting in themselves, but also from their resemblance to the fables of our ancient world. They had an idea of a God who was not "made by any one, as the rest had been, and who was above them all. His name was Taroa. He was the parent from whom all men sprang:—these were, in their view, the population of the islands known to them. He was also believed to be the maker of the land, and they thought he could destroy at pleasure what he had made. This idea was probably suggested to them (if not derived from European information) by the changes which they observed in the coral formations around them. He was represented as living in a shell, which he cast from time to time, and as he did so, the world grew larger and larger, till it had reached its full size. He is said to have made a woman, whom he himself married, and lived with her from island to island, assuming a different form in every one, as though he were another husband, till in each they had a family of children, and thus peopled all the islands. The Raiateans had this tradition of the deluge. One of the gods, of enormous bulk, heedlessly gambling at the bottom of the sea, got entangled by his long hair among the weeds, and, in his struggles to free himself, caused the waters to overflow the shores, and rise even above the highest mountains. In proof of such a catastrophe, they say there are rocks of coral and shells found on the loftiest peaks, whither they could not have come in the common course of nature.

"Evil spirits, they believed, did not exist formerly, but were miscreated things of modern and corrupted times. This strange idea probably has its foundation in the origin of infanticide, which certainly did not prevail to any great extent till a late era, otherwise the islands must have been long ago desolated. Tamatoo himself had been enrolled among the gods. This impious ceremony, with the particulars of which we must not pollute our pages, took place at the principal marae here, dedicated to Oro. As one of the divinities of his subjects, therefore, the king was worshipped, consulted as an oracle, and had sacrifices and prayers offered to him. There is now, we trust, good reason to believe that the same man is become a humble, self-denying, and devoted servant and disciple of the Lord Jesus Christ.—In what follows, we must be merely considered as narrators. Tamatoo assures us that, during the reign of idolatry, he has seen one of the priests, when the fit of demoniac inspiration was upon him, thrust his hand and arm up to the shoulder in the solid ground. And though one of these frantic hierophants could thus plunge his arm into the earth, as though it were water, yet, if the paroxysm went off while it remained there, he pretended that it required the strength of several men to help him to withdraw it. When this was done, the skin was found sound and undiscoloured, notwithstanding the violent friction it had encountered. Tamatoo is of opinion (notwithstanding the incredulity which we evinced) that no deception was practised; for the priest would perform this marvellous feat on any spot of ground, where the people desired him, while they stood around looking on, and some vainly endeavoured to do the like; which indeed he himself could not achieve without his 'enchancements.' Captain Henry (son of the missionary of that name at Eimeo), also states that he has witnessed this prodigy of juggling himself, without being able to detect the fraud. The infuriated priest, on that occasion, foamed at the mouth, distorted his eyes,

balls, convulsed his limbs, and uttered the most hideous shrieks and howlings.—After he had seemingly buried his arm, like a spear stuck suddenly in the ground, he held it there for a considerable time; then, drawing it out uninjured, he rushed towards the shore, and laying hold upon a large canoe, which ordinarily required three or four men to launch, he shoved it before him with apparent ease, and sent it adrift. He afterwards threw himself into the sea, wallowed about in it, and kept his head under water for a long time. When this act of the tragical pantomime was finished, he sat among the waves, and delivered his prophecies in very figurative and hyperbolical language, at the same time sufficiently ambiguous to be fulfilled in one of two senses, whatever might happen.

"There was a tradition here that the sky originally lay flat upon the face of the earth and ocean, being held down by the legs of a huge cuttle-fish. But, at a certain time, a man named Maui dived to the bottom of the sea, and, grappling with the monster, utterly dismembered him; whereupon the sky flew up, and expanded into its beautiful convexity, reaching on the horizon, and having the vertical sea as its key-stone. But Maui may have rendered his countrymen a much less doubtful service, as he is said to have invented the ingenious mode of obtaining fire by rubbing a grooved stick with a pointed one, as formerly described. If so, his name must be considered as the most illustrious on record, in this part of the globe, where, over thousands and tens of thousands of savage leagues, no authentic account of warrior, legislator, or patriot, can be found of earlier date than the last generation. Indeed, there existed among the people, no form of writing, hieroglyphic, or mnemonic (like the Peruvian quippos, or knots, and the Sandwich Islands ropes, for registering population and taxes), but the traditions of past ages, were literally oral.

"When a new king was consecrated, by ceremonies too filthy to be detailed, he was invested with the *maro*, or hereditary robe of royalty, of net-work covered with red feathers, and to which an additional lappet is annexed at the accession of each sovereign. This splendid train, which was wont to be wound about the body, and flowed upon the ground, is twenty-one feet in length, and six inches broad. The needle by which the fabric was wrought is still attached to it, and, according to report, no stitch could be taken with it, but thunder was forth with heard in the heavens. The symbolical marks, which are apparent on the plumage and texture, indicate that many hundreds of human victims have been sacrificed during its gradual making and extension, when the sundry monarchs, by whom it has been worn in succession, wrapped themselves with its folds, as their insignia of authority. This sacred *maro* has, therefore, never been completed, nor might have been, so long as the ancient system continued; for it was intended to be lengthened to the end of time, or at least to the end of empire in the island. Hence, almost every hand-breadth of the patchwork that composed it represented a separate reign, and reminded the national chroniclers of the prince's name, character, achievements, and the main incidents of his time: this robe might be regarded as an hieroglyphic tablet of the annals of Raiatea. Tamatoo has cast off this relic of idolatry, and sent it, as another trophy of the gospel victories here, to the Museum of the London Missionary Society."

Again we must pause; and, though there are

several matters which court our observation in these volumes, we are afraid it will not be in our power to illustrate them farther.

The Sunday Library. Vol. V. London, 1830. Longman and Co.

THE penultimate volume of this work, of which, good as it is, one of the best properties is, that its limits are defined, does so much credit to Dr. Dibdin's editing, that we rejoice to see his labours are not to cease with Vol. VI.; but to be prolonged by a sequel, under the title of "Christian Classics," being a collection of popular treatises on the leading truths and doctrines of Christianity. The volume now before us has a portrait of Dr. Thomas Newton, Bishop of Bristol, and contains fifteen miscellaneous sermons by clever and eminent preachers.

The Preacher: containing Fifty-four Sermons by eminent Living Divines. Vol. II. 8vo. pp. 440: double columns. London, 1830. Griffiths.

WE do not remember whether we noticed the first volume collected of this periodical; but most probably we spoke of its weekly *début*. Now that we have no fewer than fifty-four sermons in one point of view, we can more properly deliver an opinion. As compositions, few of these sermons claim much praise; and as to the doctrines they inculcate, we, who never take any part in theological controversy, must say that they are as various as sectarianism in this country. They are, we think, of what is called the evangelical school; but even in these the preachers enforce the most opposite sentiments on minor acts and habits of life. Altogether, the volume presents a strange study to the inquirer after truth; from Dr. Grey to Mr. Bulteel—from Dr. Chalmers and Mr. M'Neile, to the Bishop of Chester and Dr. Busfield. The editor seems to have taken due pains to be accurate; for instead of sermons taken in short-hand, as at first, he has recently procured the original MSS., and the correctness of the preachers.

Polynesian Researches, during a Residence of nearly Eight Years in the Society and Sandwich Islands. By W. Ellis. Second edition, enlarged and improved. Vol. IV. Fisher, Son, and Jackson.

REUBLISHING in the form found to be well adapted for general diffusion, viz. in small monthly or periodical volumes, we know of no work better suited to popular reading than Mr. Ellis's interesting productions. We, however, reviewed the original work at such length, that it would be an unjust allotment of our space, upon which there are so many claimants, were we again to enter upon the subject. Suffice it to say, that the account of these missionary labours, mingled as it is with excellent information on other points, the manners and customs of the natives, natural history, superstitions, traditions, past events, present condition, and prospects, &c. &c. affords altogether the most valuable view of Polynesia, rising from darkness and barbarism into civilisation and commercial importance.

ORIGINAL CORRESPONDENCE.

Freedom of the Press in Germany during the Thirty Years' War.—In August 1625, the Austrian general, Tilly, who is equally celebrated for his military talents and for the frightful scenes of pillage and massacre which marked the course of his army, sent two plenipotentiaries to the deputies of the circle of

Lower Saxony at Brunswick, who, according to Tilly's instructions, urged the deputies of the circle to exert all their authority peremptorily to forbid all writers and printers from speaking in an improper manner of the imperial troops, and inflaming people's minds by such publications; and the resolution of the deputies of the circle, passed on the 30th of August, is literally in the following terms:—"With respect to the alleged libellous publications, the counsellors and deputies here present can do no more than to prohibit all libels, libellous poems,* and the like, on pain of exemplary and inevitable punishment, as is certainly conformable to the constitution of the empire; and they therefore request his excellency not to doubt of the speedy execution of this resolution. But it is a very different thing when events are related historically and nude, without acrimony and *violenta verborum*, which cannot be prohibited without injustice; for otherwise it would be necessary to prohibit and abolish all historical descriptions, though it is both necessary and highly useful, *publice et private*, to preserve *memoria rerum gestarum*. But to attain this end, there is no means but historical description, which, as all *politice* judge, is *custos virtutum*, and also a *testis malorum facinorum*. If, therefore, his excellency will seriously exert himself entirely to restrain the soldiery from inhumanly wicked actions, on pain of inevitable corporeal chastisement and capital punishment, all such publications will soon die away." It seems that Tilly must have contented himself with this answer; for we do not find that he made any farther complaint—still less that he proceeded to rigorous measures.

FINE ARTS.

NEW PUBLICATIONS.

Landscape Illustrations of the Waverley Novels. Part XVII. Tilt.

A CHARMING number. Nothing can exceed the beauty of "Powis Castle," drawn by Coppley Fielding, from a sketch by Lady Lucy Clive, and "Ben Lomond," drawn by G. F. Robson; both engraved by E. Finden.

Devonshire and Cornwall Illustrated. No. 26. Fisher, Son, and Co.

WE have seldom seen more picturesque forms of rocks than in "Pewsey Harbour," or of ruins than in "Restormel Castle." These are happily contrasted by the polished scenery of "Bicton House," and "Haldon House."

History of the County Palatine of Lancaster. By Edward Beines, Esq. Part VII. Fisher, Son, and Jackson.

A VIEW of "Halton Hall, near Lancaster," and a portrait, *en profile*, of the celebrated "Duke of Bridgewater," to whose indefatigable and undaunted perseverance in the establishment of canals, the commerce of the county of Lancaster, and of the whole kingdom, is so

* Such publications, as well in Latin as in German, some in prose, some in verse, were very numerous: they represented the conduct of the Austrian court in the blackest colours, and excited much sensation both in and out of Germany. But no publication made in the sequel more noise, and met with more approbation from the learned, than the Latin work of Hippolytus à Lapide. This is one of the most venomous writings ever published against the house of Austria. The name of the author was long doubtful; but it is now well known that it was Bogislaw Philip von Chemnitz, who wrote the history of the Swedish war. He was Swedish counsellor and historiographer; the sworn enemy of the house of Austria, whose character it was the aim of his work to depreciate—in which he had considerable success. This work, in twelve books, bears the title of *Dissertatio de Ratione Status in Imperio nostro Romano, Germanico, & Lapide*.

deeply indebted, are the embellishments of the present Part of this valuable topographical work.

The Napoleon Ladder. W. Cousins.

THE common idea of representing the changes of life by the steps of a ladder, is applied, in this little publication, to the fortunes and misfortunes of Buonaparte. The up-ladder commences with Toulon, where he signalled himself in 1793, and ascends, step by step, through Lodi, Arcola, Marengo, &c., till, in 1804, he was declared emperor. The downhill dates from Moscow, 1812, and as going down is more rapid than rising, we find the steps Leipsic, Abdication, Waterloo, Surrender, very close on each other. He sleeps at the foot, 1821, St. Helena. The sides of the ladder are cannon, on which are prints, of no value, but offering slight designs of the events alluded to on the strands.

The New Costume of the Officers of the British Army. No. 1. London, W. Spooner.

THIS Number, besides the King in plain uniform on horseback, consists of, 1. "An Officer of the First Life-guards on his Charger;" 2. "An Officer of the Grenadier Guards;" and 3. "An Officer of the Coldstream." It is a splendid work, and worthy of our splendid army. The men and horses are admirably drawn, and the prints carefully and beautifully coloured. The continent has produced several superb publications of this class; but we are not acquainted with one English work of the least pretension either to accuracy or art. The publisher, therefore, deserves the patronage not only of our gallant soldiers, but of their fair admirers, and of the country they so bravely defend when defence is needed. We could wish that the officers were not made so effeminate as they appear in 2 and 3; for though our exquisitely do fight like men, on service and in the presence of an enemy, it would be as well to represent them at home like manly fellows.

Rome, August 18.

THE celebrated engraver, Professor Giovanni Folo, of the academy of St. Luke, has completed his engraving of the famous Last Supper of Leonardo da Vinci, in a manner which renders it worthy of being esteemed among the most admirable and perfect of his performances. This print is peculiarly valuable, because the artist has had the opportunity of correcting the design after the celebrated sketch presented by Francis I. king of France, to Pope Leo X., (which sketch is still preserved in the Vatican,) so that he could supply, with great ability, many things which are unhappily obliterated in the original painting of Vinci, at Milan. On the 8th instant, Signor Folo had the honour to present a proof of the print to his holiness, who was pleased, not only to express his high admiration of the work, but to honour the artist by a present of two medals, one of gold and one of silver, with his effigy, and by placing his name on the list of subscribers.

ARTS AND SCIENCES.

ROMAN ANTIQUITIES ON THE ISLAND OF MAJORCA.

THERE are in the island of Majorca two men of letters, Don Joaquín Maria Bover and Don Antonio de Juria, who have applied themselves from their youth to the study of heraldry, numismatology, &c. They have also been engaged for many years in collecting information respecting the kingdom of the Balearic islands, and their MSS. on this subject fill 200 volumes. Having been indefatigable in making researches

and excavations in the forests and burying-grounds of the Balearic islands, they possess a highly interesting and rich cabinet of Roman medals and monumental stones. A marble tablet, which was recently dug up, bears an inscription, which positively fixes the site of the ancient town of Palmaria, founded by the Roman consul Quintus Cælius Metellus; a point which the researches of the learned had not been able precisely to determine. A portion of the results of their labours is now in the press.

LITERARY AND LEARNED. FAC-SIMILE OF THE WRITING AND SIGNATURE OF THE VENERABLE GOETHE.

ACCORDING to the promise in our last Number (page 570, middle column), we this week present our readers with an interesting fac-simile from the pen of Goethe, authenticated by his autograph. Written only last year, this literary curiosity is a striking example of the vigour still found in the poet's green old age.

Chaque jour est un bien que du ciel je ne crie,
Profite aujourd'hui de celui que'il nees donne,
Il n'appartient pas plus aux jeunes gens
qua moi,
Et celui de demain n'appartient a personne.

Goethe

1830

ORIGINAL POETRY.

THE AGE OF BRASS.

I've sigh'd, but I will sigh no more,
For silver and for golden ore,
And thought 'twould ever pass;
But these their virtues off have lost,
And I have found that — to my cost —
True virtue's in the brass.

I once adored a maiden fair,
With eyes of blue and auburn hair,
And thought to win the lass;
But soon steep'd in a rival — who
Came, too, with brazen face to woo,
And won her by his brass.

I brandish'd next an author's pen,
And hoped to be successful — when,
True merit's all a farce;
But striving here, I found, again,
'Gainst impudence, was all in vain —
I wanted still the brass.

Next, as a fop upon the town,
I sought to gain a slight renown,
And dress'd by fashion's glass;
But here full soon I was cut out,
And driven to the right-about
By those who had the brass.

Rejoice, ye brazen bullies, then,
And laugh to scorn all honest men —
Ye have the magic pass.
Let others wish for baser ore,
Give me, kind Fate! I ask no more,
Sufficiency of brass. E. Grove

LINES ON THE APPROACH OF WINTER.

THE summer's gone, and the winter hour
Gomes fiercely on with its chilling blast,
And the stricken grove and leafless bower
Proclaim the pride of the year is past.

O, whither is gone the violet-wreath,
That threw its loveliness o'er the spring?
It has sunk beneath the hand of death,
And decay'd, like every beauteous thing.

And where is now the bright summer's pride,
The blushing rose with its sweet perfume?
That, too, has shed its flowers and died,
And where they fell they have found a tomb.

Thus all mortal things must stoop to fate:
They may boast awhile of beauty's glow,
But death will approach, or soon of fate,
And his ruthless hand will lay them low.

Spring will return, and the violet-bank
With its scented flowers, again be gay,
And the rose bud afresh, when it has drank
Again the enlivening dews of May.

So Man, though he yield his fleeting breath,
And lie awhile in the grave's deep gloom,
Shall waken again and vanquish death,
And in heavenly bowers for ever bloom.

SKETCHES OF SOCIETY.

OLIVER THE DAIN, OR DEVIL.

[We have been favoured by a learned foreigner with a letter addressed to Sir Walter Scott, in which he throws a curious light over the real biography of Oliver, the barber of Louis XI., so famous in the novel of *Quentin Durward*. After an introduction very complimentary to the author, he tells us that]

OLIVER was born at Thielt, a little town in western Flanders, fifteen miles south-east of Bruges, whereof Pontus Heuterius says, "*On certus illi pago de loco juxta Gaudarum natus*."

It is unknown at this day, he continues, even amongst the most prying of his antiquarian fellow countrymen, whence his primitive name of "the Devil" was derived; whether he acquired it by family inheritance, or from the

satanic constitution of his inward man. One Dupleix has reported, that his royal master instead of putting an extinguisher on an affix symbolical of the offices on which his confidential agent was employed, dubbed him "le Malin," or the Evil one; but Dupleix is treacherous authority, and proof exists under Master Pierre's own hand, that he once ennobled him by the style and title of "le Mauvais," or the Bad one. By letters patent granted to him in the year 1474, it appears that, in a former grant of letters of nobility, Lewis, reckless of "the stuff that men make knights of," had omitted to assign unto his "trusty and well-beloved valet de chambre, Master Oliver the Bad one, (le Mauvais)," the distinction of armorial bearings; wherefore, by these second letters, his liege and sovereign lord presents him with certain arms, "cypointes et armoyées," perpetually and for ever to the use of said Master Oliver and his posterity, in consideration of "the good, great, continued, and commendable services, which from day to day he had not ceased to discharge around our person"—and mark the sequitur,—"and which we hope he will still render to us." It is a curious peroration of this document, that wherein Lewis "takes away and abolishes Oliver's surname of le Mauvais, prohibits any mouth to call him by that cognomen, and declares it to be his will and pleasure, that, in every place hereafter, he should be surnamed 'the Dain,' or Buck."—*Gaudens cognomine molles auricula;* and of a truth, Master Pierre and his men must have felt, that neither men nor things ought always to be called by their proper names.

I have not been able to ascertain at what period Oliver entered his master's service; some will, that it occurred when Lewis, as dauphin, fled from the resentment of his parent and found an asylum in Brabant (1466-1468); and others, that his first employment was as one of the swarm of spies whom Lewis maintained in foreign countries, and especially at the court of his personal enemy, Philip of Burgundy. Be this as it may, his original capacity of barber admitted him under the noblest roofs; for at that time of day it was conjoined with the dignity of "chirurgien;" and there can be little doubt that his medical, no less than his *chirurgien* requirements, must have been efficient passports to royal favour with a monarch who shuddered before nerve and limb at the very idea of dying.

You have not, sir, exaggerated the ascendancy into which Oliver had wormed himself with Lewis; for Father Mathieu tells us, that travellers, when quitting France, were perpetually importuned with—"Prithee, stands King Lewis still in favour with Master Oliver?" But I doubt whether, in speaking of the napkin slung over his arm, which "indicated his menial capacity," the reader will not have imagined it to be that useful appendage, which came into use at a later date. It was the linen cloth mentioned in the constitution drawn up by St. Agnes for the monastery of Fontenelle,—the *linen ad manus torquatus*: or else the cloth, which was thrown over the bread or knife of great personages, and removed when they had taken their seats. This was the purpose for which the two pieces of linen, worked in gold, and enumerated in an old inventory of the ducal house of Burgundy, were designed. The mouth and hands appear to have been cleansed with the *doublier*, or table-cloth, in Master Oliver's times.

The cunning, which served as a ladder to his inordinate ambition, and the humility in which

he enwrapped himself as a cloak to either, could not have been depicted with more prominent effect by the most skillful of contemporary chroniclers, than by your arch and natural pen. We have seen that he seated himself on the bench of nobility; but his purse was become well freighted, and he was weary of ascending the shade of petty intrigue. The Duke of Burgundy's death whetted the edge of Lewis's cupidity; it was not to be satiated by the acquisition of St. Quentin and Peronne, and his mind revelled by anticipation in the success of an embassy to Ghent, where Oliver appeared as his representative: the which appointment savoured strongly of his master's humour "in employing small people on large affairs, and working," as good father Mathieu hath it, "great machines by little engines."

In 1477, Master Oliver set forwards with letters of credit to Mademoiselle de Bourgoyne, with the ostensible view of inducing her to throw herself and her fortunes into Lewis's hands; but *sub rosa*, for the more profitable purpose of goading the malecontent citizens of Ghent into seditious acts, for which, indeed, they had no inconsiderable predilection. Where the fox prowls, caution naturally pricks its ear: Master Oliver's designs were bruited about by the suspicious tongues; and at the end of a couple of days, as he shewed no haste to come to any public explanations, the court called upon him to disgorge them. So "he came into the presence of the said princess. And the afore-mentioned Oliver appeared in better apparel than belonged to him: he laid down his letters credential. The said damoiselle," continues Comings, "was seated in her chair, and the Duke of Cleves stood beside her, together with the Bishop of Liege, and several other great personages, and a crowd of people. She read his letters; whereupon the said Master Oliver was commanded to declare his purpose; to which he replied, that none had been entrusted to him, saving to confer with her in private. He was here made to understand, that such was not customary, and especially with respect to the young lady, who was of marriageable estate; but he continued to allege that he would not speak another word, excepting into her ear. He was then told, that he should be forced to speak out; whereas fear came upon him, and I believe, that before the moment in which he presented his letters, he had not given a thought to that which he should say. For this was nowise the chief duty on which he was sent; as you may have heard. For this time, therefore, the said Oliver took his leave without further opening his mouth.—And no mockeries were put upon him; and he suddenly took to his heels from the town, seeing that he had been warned, had he not so done, that he would be in danger of being thrown into the river; and, in truth, I believe so." To this account, Gaillard adds, in his history of Mary of Burgundy, that she observed—"What can this barber want with me? I have neither a beard to be shaved nor an ailment to be cured." Disguise himself as he would, the Count de Meulan could bring none to forget his pole and basin.

The earldom to which I here allude, was certain waters and sheep-grounds at Meulan, conferred upon him by Lewis in the year 1477; and as late as 1649, his coat of arms was to be seen upon a lodge and two houses in that place. They consisted of a chevron armed on points with a buck passant; the escutcheon being accented on the right by an olive-branch, and on the left by a buck's horn; the whole

surmounted by a count's coronet. Besides his earldom, Oliver was captain of Loches castle, governor of St. Quentin, and a gentleman of the king's chamber.

As a peace-offering to the "crafty keeper among wild beasts," as you have pertinently designated his master, Oliver, in his way homewards, fell upon Tournay, though it was a sort of neutral town between France and Burgundy, packed off its magistracy to Paris, and, as our friend Gaillard says, "returned in triumph to shave his master, and court new favours;"—meet brother-tool with the tailor, whom Lewis converted into his herald-at-arms, and the quack, who administered hellebore to his subjects as lord chancellor.

Master Oliver was again summoned in the succeeding year (1478) to fish in troubled waters; for a puritan-cordelier having drawn together a host of female converts, and denounced as traitors to the public weal those by whom Lewis was surrounded, he was despatched to plaster up the reformer's mouth. But he seems to have sagely avoided contact with edge tools, by leaving the preacher in peace within his own convent, to which "a number of women resorted curiously, night and day, who armed themselves with stones, cinders, concealed knives and other weapons and sticks, to smite such as would have hurt him, or impeded his harangues, and bade him dispense all fears, and sworn to die before aught of mischief should come to him."

It appears that Oliver continued to ascend, step by step, the ladder of royal favour; inasmuch as we find him, in 1479, associating with Cardinal de la Rovère, then cardinal and legate, and subsequently better known as Julius II., "whom he feasted, in company with the Cardinal of Bourbon, and a number of other ecclesiastics and noblemen, as gallantly as could be; and after dinner, he took them to the Bois de Vincennes, to beat up and hunt the deer in the said wood; after which each returned to his own hotel."

The thread of his fortunes was, however, about to snap; Lewis was laid on his death-bed, and the favourite's conduct towards the dying monarch shews how little of gentle blood flowed in his veins, and how eager he was to rid himself of a galling yoke. Out of Oliver's mouth,—from lips that had been used to pour incense into his ears,—the "proud and haughty" was brutally admonished, that the time was come when it behoved him to attend to the concerns of his conscience, and to cast away all confidence in physic, or prayers, or relics, as a means of prolonging his lease of earthly days. Yet the infatuated sovereign clung to his barber until his last hour had knelled, and with his dying breath recommended Master Oliver le Dain and Jehan de Doyac to the Dauphin's special favour, saying, that "he would have been nothing without the said Oliver, and that, being a foreigner, he ought to make use of him and maintain him in his service, and the enjoyment of the offices and estates which he had bestowed on him."

But the reign of impunity was at an end; and Oliver found to his cost, that the youthful sovereign Charles VIII. was not disposed to connive at a violation of the laws of God and man, into which his reliance on royal smiles, and a depraved heart, shortly betrayed him. The tale of his last offence is quickly told. The wife of a young nobleman having applied to him to procure the king's pardon for some offence committed by her husband, Oliver made her seduction the price of his promised intercession; and at the very moment she was

lying in his arms, directed his minions to consign the husband to a watery grave. The next morning the body of the nobleman, which had been drawn to shore by some boatmen, was the first object on which his wife, who was hastening to impart the tidings of his approaching release, cast her eyes. At this sight the unfortunate, horror-struck female called upon the bystanders to condole with her in the calamity which had befallen her; Oliver was arrested and committed to the rack; but before the torture began, he made confession of his crime, under the impression that his sovereign would protect him, and the judge be deterred from visiting him with the terrors of the law. Charles, however, was well pleased with the opportunity, which this tragical event afforded, of evincing his desire to check the atrocities which had stigmatised his father's reign: Oliver and Daniel, one of the executioners, were consequently hung, or, after a softer term, "dubbed knights of the order of St. Patibularius;" and Doyac, the other murderer, who had been formerly called "Lewis's admiral," after losing his ears and having his tongue slit, was expelled the kingdom.

Such, sir, was the ignominious exit of a wretch, whom Tristan himself would have delighted to count among "the acorns hanging on his old, doddered oak." His beginnings and endings are quaintly summed up in this epitaph from the pen of Bouchet, the annalist of Aquitaine:—

Je Olivier qui fuz barlier du Roy
Loys onzieme. et de lui toujours proche
Par mon orgueil fuz mis en desarray
A ce gibet, tout rempli de reproche;
En hault parler, en estat, et approche
Je me faisois aux grands princes pareil;
Mais de malheur on m'a rompu la broche
Par ce piteux et horrible appareil.

DRAMA.

THEATRES.—On the coronation night the theatres and Vauxhall were, by his Majesty's command, opened gratuitously for the entertainment of the people. For Vauxhall 750*l.* were given, for the Haymarket 300*l.*, for the Adelphi 200*l.*, and for Sadler's Wells, 150*l.* The whole cost was between 1800*l.* and 2000*l.* The rule, we understand, is to pay for whatever the house would contain if all the seats were full; and on the same principle with respect to other places of amusement. Had Drury Lane and Covent Garden been open, they would each have had 1000*l.* One of the effects of this royal command is, the sort of recognition it affords to theatres as yet standing in rather an anomalous posture with regard to patents, lord chamberlains' and magistrates' licences, vested rights, and new claims. Thus, the Queen's theatre, which, by the by, from the clever pieces it brings forward and has well acted, deserves every encouragement; and the Milton Street theatre; the Pavilion; and, we believe, others, having been honoured by the King's command, the question will probably be, "Who shall shut what his Majesty has opened?"

VARIETIES.

Death of the Baroness de La Motte Fouqué.—On the 21st of July died Baroness Caroline de La Motte Fouqué, one of the most popular of the female writers of Germany: she expired in the arms of her husband, Baron Frederik de La Motte Fouqué, at her paternal estate near Rathenow. Several of her novels, *e. g.* *Roderick, die Frau des Falkenstein, Fiedora, her Tales*, and her *Letters on female education*, do

great credit to the talents of their accomplished author. In her later writings she seems to have taken Sir W. Scott for her model; but, like the recent works of the baron, they have not been favourably received by the public.

Coronation Cards.—Among other coronation productions, Messrs. Reynolds, whose former performances in the way of beautiful card-making we have noticed with praise, have sent out cards, (though they are playing cards,) very fancifully and tastefully executed in gold and coloured devices by Messrs. Howlett and Brimmer. The back: are like fine porcelain, with the letters W. A., surrounded with foliage, and crowns, flags, and other ornaments, printed in gold upon them. They are curiosities, if too handsome for shuffling, cutting, and dealing.

Coronation Medal.—The scramble for the coronation medals flung about in Westminster Abbey was certainly rather *infra dig.* To see gallant officers, dashing gold sticks, pretty pages, the élite of the royal household, venerable judges, sagacious aldermen, &c. fighting and jostling, like rude school-boys for halfpence, threw, while it lasted, an air of burlesque both upon them and the ceremony. The medals themselves are ably executed, with the head of the King on one side, and the Queen's head on the other. The likeness of his Majesty is altogether good; and her Majesty's countenance in profile is excellently adapted to display the art of the medallist: it is marked, and shows to great advantage on a coin.

Coronation Anecdotes.—Earl Grey, by accident, in performing part of the coronation ceremony which fell to his lot, let the sword of Justice fall from his hand. What will the augurs from omens say to this? Apropos: at the coronation of George IV. the Marquess of Anglesea slipped, in consequence of his lameness, and almost threw the imperial crown from its cushion: it was only preserved by great activity.

A Bull Advantage!—In a jeweller's window in the Strand, there is an advertisement which would pass for a bull in Dublin: it announces that all the goods in the shop are "selling off, under prime cost, for the benefit of the creditors!"

Very Like a Whale! Hamlet.—There is a whale shewing in a large shed at the Mews, Charing Cross, which we see our contemporaries shy at, in consequence of the charge for admittance being 2*s.*, and John Bull accustomed to pay only one for any monster. A wag the other day, who had parted with his money, wrote the following impromptu in the whale's album:—

"Jonah and I are alike,
We've both been inside of a whale;
Only Jonah went in at the head,
And I went in at the tail!"

But, joking apart, this skeleton is one of the most wonderful specimens of natural history that we ever saw. It is well worth a visit; and if people cannot stomach the price, they need not go into the belly unless they like. The mighty leviathan ought to be seen by the curious.

Selected from American Periodicals.

Watering Milk.—A Dutchman in Albany, some time back, went out to his milkman in the street with a dish in each hand, instead of one as usual. The dispenser of attenuated milk asked if he wished him to fill both vessels? The Dutchman replied, suiting the action to the word, "Dis is for de *milluk*, and dis for de *water*, and I will mix dem so as to shute mine self."

Great Age.—In noticing a celebration of the

fourth instant, near Raleigh, North Carolina, the *Register* states, that "Mr. Arthur Wall, now in his one hundred and ninth year, was particularly invited; he excused himself on account of being 'busy with his crop;' but said he would send one of his boys, a lad of eighty-two, with his toast."

Epitaph on a tombstone in a churchyard in Ireland:

"Here lies Pat Steel, that's very true:—
Who was he? what was he?—What's that to you?"

Contradictions of Proverbs.—"The more the merrier." Not so; one hand is enough in a purse.—"He that runs fastest gets most ground." Not so; for then footmen would get more than their masters.—"He runs far who never turns." Not so; he may break his neck in a short course.—"No man can call again yesterday." Yes; he may call till his heart ache, though it never come.—"He that goes softly goes safely." Not among thieves.—"Nothing hurts the stomach more than surfeiting." Yes; lack of meat.—"Nothing is hard to a willing mind." Yes; to get money.—"None so blind as they that will not see." Yes; they that cannot see.—"Nothing but what is good for something." Not so; nothing is not good for any thing.—"Every thing hath an end." Not so; a ring hath none, for it is round.—"Money is a great comfort." Not when it brings a thief to the gallows.—"The world is a long journey." Not so; the sun goes over it every day.—"It is a great way to the bottom of the sea." Not so; it is but a stone's cast.—"A friend is best found in adversity." Not so; for then there's none to be found.—"The pride of the rich makes the labour of the poor." Not so; the labours of the poor make the pride of the rich.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertiser*, No. XXXVII. Sept. 10.]

The *Forget Me Not*, the parent of the British Annals, announces this year increased claims to public favour; among which are engravings by W. and E. Finden, Graves, Carter, C. Rolle, Englehart, Devonport, &c. from drawings or paintings by Lawrence, Martin, Frost, Ritchey, &c.

An Advertiser's Juvenile *Forget Me Not* the publisher and editor have also studied graphic and literary excellence suitable to improve the tastes and minds of the young.

Mrs F. Kemble has announced Francis the First, as historical dramas, for publication.

A second series of Dr. Southey's *Colloquia on the Progress and Prospects of Society*, is in the press; and the concluding volume of his *Feminine War* is expected early in the ensuing season.

The novel announced from the pen of L. E. L. is called *Romance and Reality*. It is ready for publication, and will probably appear in a few weeks. The question will therefore soon be tried, whether or not her prose will equal her poetical popularity.

LIST OF NEW BOOKS.

Heurteloup's *Lithotripsy*, 8vo. 1*l.* 6*s.*—Valpy's *Saltstet with English notes*, 18mo. 4*s.* 6*d.*—James Bennett's, *History and Prospects of the Church*, 18mo. 4*s.* 6*d.*—Severn's *First Lines of Midwifery*, with plates, 8vo. 7*s.* 6*d.*—Atkinson on *Stone in the Bladder*, 8vo. 5*s.* 6*d.*—Pezard on the *Teeth*, 8vo. 3*s.* 6*d.*—Crayson's *Plan of the Common*, crown 8vo. 3*s.* 6*d.*—*Metropolitan Magazine*, Vol. I. 8vo. 1*l.* 4*s.* 6*d.*—Wright's *Improved Name-Book*, for one year, 4*s.* 6*d.*; for two years, 1*l.* 4*s.* 6*d.*; for three years, 1*l.* 8*s.* 6*d.*—Millman's *Tales of the Stanley Family*, 18mo. 5*s.* 6*d.* cloth.—Hambrook's *Sermons*, 8vo. 10*s.* 6*d.* 6*d.*

TO CORRESPONDENTS.

The publishing world, for the last ten days, might have made a return *Nil* to any order for a list of works of the slightest importance or interest. This kindness affords us an opportunity of bringing up some of our *hæc-very*, of which we gladly avail ourselves. So, God save *rus* *Kino*!

β most acknowledge that "bosom" and "ocean" are bad rhymes.

Vernon is also declined.

ERRATUM.—In our last, p. 573, col. 3, line 8 from bottom, for "Q. C. Davis," read "C. J. Davis."

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

New Volcanic Island of Sicily.

Just published by R. Ackermann, 96, Strand.

A PRINT OF THE NEW VOLCANIC ISLAND, elevated by Submarine Eruption, from a Sketch by an Officer of H. M. Flag-Ship St. Vincent, sent to His Royal Highness the Duke of Sussex, K.G. President of the Royal Society, to whom the Plate is, with permission, humbly dedicated. Price, coloured, 8s. 6d.; India, 5s.; plain, 3s. 6d.

FRAUDS IN PATENT PENCILS.

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Losses for writing the same. To guard the Public against impositions, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case:—Sd. S. Mordan and Co. Patentees and Makers, on the body of the case.

2d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

3d. Cedar Pencils.—These pencils contain the same quality of pure Cumberbund lead as their silver patent pencils.

Warranted Protection.—The Lock with seven guards is the most secure and the most delicate in use. The article, when copied, nor can an impression be taken from it: neither can a skeleton or other substitute be made with success. The key admits of infinite variety, so that duplicates are entirely precluded, and dishonesty and curiosity equally guarded against.

4th. R. Mordan and Co. makers, London, is stamped on each Lock.

5th. Scientific gentlemen and others are invited to inspect the Manufactory, 24, Castle Street, Finsbury.

BOOKS PUBLISHED THIS DAY.

Peter Nicholson's Algebra for Schools.

In 18mo. price 6s. bound.

THE SECOND EDITION OF A PRACTICAL SYSTEM OF ALGEBRA, for the Use of Schools and Private Students.

By P. NICHOLSON and J. ROWBOTHAM, F.R.S.

In this edition the Authors have made many material improvements, not only in the Demonstrations of some of the most important Rules, but also in the Illustrations of the Principles, and of the principles upon which Simple Equations may be solved without Transposition. Under the highest Order of Equations, which have been materially improved, see New Rules for extracting the Cube Root.

From the copiousness with which this volume is written, and the numerous examples and well-chosen examples it contains, it may be regarded as a valuable acquisition to scientific libraries.

The examples are very numerous and well chosen. We cannot but think that this treatise deserves commendation for its gradual and systematic development of the difficulties of this subject. *—Edinburgh Review.*

A Key to the above Work, containing the Solutions of more than 900 Problems, by means of which, and the Algebra, a person may acquire a Knowledge of this valuable Science without the Assistance of a Master. 18mo. price 3s. bound.

London: Printed for Baldwin and Cradock, Paternoster Row; Whittaker and Co.; J. Duncan; and J. Rowbotham.

Miss Manning's Stories from the History of Italy, during the Romantic Age. 18mo. fine Embellishments, price 7s. 6d. half-bound.

Dedicated to the Duke of Devonshire.

The Third Number of

THE BEAUTIES OF THE COURT OF KING CHARLES the SECOND.

Edited by Mr. JAMESON,

Author of "Memoirs of the Lives of the Poets," the "Diary of an Ennuyé," &c.

A Series of Portraits of the beautiful and celebrated Women of the court and reign of Charles the Second, forming a splendid illustration of the Memoirs of De Grammont, the Diaries of Evelyn and Pepys, and the connected with that gay and interesting Period, with Biographical and Critical Notices, which the editor has prepared for many years, from the most authentic sources.

Lord Orford observed, fifty years ago, that "the Beauties at Windsor ought to be engraved to illustrate the Memoirs of their charming biographer, Count Harcourt." It is singular that since that time no attempt has been made to produce these lovely portraits in a style worthy of the beauty and interest of the subjects. Of the fourteen pictures at Windsor, six only have hitherto been engraved; it is therefore hoped that the present work will supply what has long been a desideratum in the fine arts.

The size of the plates is six inches by four and a half; engraved by the most distinguished artist from the original pictures in the Royal Gallery at Windsor, and elsewhere. Royal 4to. 14. 1s. 10d. Imp. 4to. 20s. each No.

The First No. contains the Portraits of the Queen, Lady Castlemaine, the Countess de Grammont (La Belle Hamilton), and the Countess of Ousey; all after Sir Peter Lely.

The Second No. contains the Portraits of the Duchesse of Richmond (La Belle Stuart), the Duchesse of Somerset, Nell Gwyn, and Mrs. Lowen.

The Third Number contains the Portraits of the Countess of Chesterfield, Lady Denham, the Countess of Rochester, and Lady Southesk.

The whole Work will be shortly completed in Five Numbers. Henry Colburn and Richard Bentley, New Burlington Street.

WAVERLEY NOVELS. New Edition.

Vol. XXVIII. of this work, which commences *Peveril of the Peak*, is now in the press. The illustrations by the late R. P. Beilinson and Webster.

The Twenty-Eight Volumes which have appeared, contain sixteen New Introductions by the Author, besides copious Notes to each Volume.

Volume Ninth of the New Issue, which commences the Tale of my Landlord, is also just published. London: Whittaker and Co. Ave Maria Lane.

Who have just published,

1. Hall's Fragments of Voyages and Travels, 3 vols. 12s.

2. Dostoy. By the Author of "Marriage," and the "Inheritance." 3 vols. 12. 11s. 6d.

In 4 vols. folio, price 8s. or in 4 vols. 18mo. price 14s. forming Vols. 68, 69, 70, and 71 of Constable's Miscellany.

AMERICAN ORNITHOLOGY; or, the

Natural History of the Birds of the United States.

By ALEXANDER WILSON and CHAS. LEITCH BURNES, M.D.

Edited by ROBERT JAMESON, F.R.S.E. and L. F.R.S. &c. London: Murray, Chance, and Co.; and Constable and Co. Edinburgh.

Mr. Buckingham's New Travels.

8vo. edition, in 2 vols. with Map and Engravings, 12. 12s. 6d.

TRAVELS IN PERSIA; including a

Journey from Bagdad by Mount Zagros to Hamadan, the Ancient Seleucia—Researches in Ispahan during a stay in that City—A Visit to the Ruins of Persepolis—A Voyage down the Persian Gulf—and a Passage by the Arabian Sea to Bombay.

By J. S. BUCKINGHAM, Esq.

Author of "Travels in Palestine," in "Mesopotamia," &c. &c. &c. Buckingham's former travels, as they chiefly consist of personal narratives. *—Monthly Review.*

"The volume contains a good deal of information respecting the towns in the Persian Gulf, which we have little doubt merchants will find interesting and useful." *—Edinburgh Literary Gazette.*

Also, by the same Author,

II. Travels in Palestine, through the Countries of Beisan and Gilad, east of the River Jordan; including a Visit to the Cities of Gaza and Jerusalem, in the Decapolis. 2d edition. 3 vols. 8vo. with numerous Engravings, 8s. 6d.

III. Travels in Mesopotamia; including a Journey to the Ur of the Chaldees, and the Ruins of Nineveh and Babylon. 2d edition, in 5 vols. 8vo. with 20 Engravings, price 31s. 6d.

"One of the most valuable contributions that have been made in modern times to our knowledge of the ancient and modern state of Asia." *—Globe.*

Henry Colburn and Richard Bentley, New Burlington Street.

In 18mo. 6th edition, enlarged, with 21 Engravings, 7s. 6d. plain or 12s. coloured.

CONVERSATIONS ON BOTANY.

The object of this work is to enable Young Persons to acquire a knowledge of the vegetable productions of their native country. For this purpose the arrangement of Linnaeus is explained, and a native plant of each class (with a few exceptions) is examined and illustrated by an engraving.

Printed for Longman, Rees, Orme, Brown, and Green.

Health.

Just published, price 8s. 6d.

CHANGE OF AIR; or, the Pursuit of Health, illustrating the beneficial Influence of Corporal Exercise, Change of Scene, pure Air, and mental Relaxation, in various Disorders and in Health; to which is prefixed, *Wear and Tear of Modern Life, or Education, and of a Vocation.*

Letters to the Editor.—XII. Miscellaneous, &c. M. Arnold, T. Agnew, Sons, Gower Street; J. Smith and Co. London; Oliver and Boyd, Edinburgh.

DR. LARDNER'S CABINET CYCLOPEDIA.

PEDIA, now in course of publication, in monthly

Volumes, price 8s. each in cloth.

It is not intended that the Cabinet Cyclopaedia shall form an interminable series, in which any work of investiture which may present itself from time to time can claim a place. Its subjects are classified according to the usual divisions of literature, science, and art. Each division is distinctly traced out, and will consist of a determinate number of volumes. Although the precise extent of the work cannot be fixed with certainty, yet there is a limit which will not be exceeded; and the subscribers may look forward to the possession, within a reasonable time, of a complete library of instruction, and of general reference, in the regular form of a popular Cyclopaedia.

The several Classes of the work are—1. Natural Philosophy.—2. The Useful and Fine Arts.—3. Natural History.—4. Geography.—5. Politics and Morals.—6. General Literature and Criticism.—7. History.—8. A General Dictionary of Reference.

In the more abstruse and technical departments of knowledge, an attempt has been made to convey to the reader a general acquaintance with these subjects, by the use of plain and familiar language, appropriate and well-executed engravings, and copious examples and illustrations, taken from objects had events with which every one is acquainted.

Among the volumes already published in the literary department, no less than four have been the production of men who stand in the first rank of literary talent.—Sir James Mackintosh and Sir Walter Scott. In the scientific department, a work has been issued from the pen of Michael Faraday, which has been pronounced by the highest living authority on subjects of general philosophy, to contain "the noblest observations on the value of knowledge which have been made since Bacon, and to be the 'Sine qua non' of philosophical genius which this age has seen."

The following is a selection of the most interesting Contributions.

Authors of Volumes actually published are marked (*).

Those whose Productions are in immediate preparation are marked (†).

Contributors.

Printed for Longman and Co.; and John Taylor.

The Garrick Papers.—In 1 vol.

THE PRIVATE CORRESPONDENCE

OF DAVID GARRICK with the most celebrated Persons of his Time, now first published from the Originals.

This highly interesting and important work, consisting of Two Thousand Letters, from Persons of the greatest eminence in the Political, Literary, and Dramatic World. Among other Names may be mentioned, besides those of the leading Nobility, Warburton, Burke, Johnson, Mungo-Gilpin, Sir Joshua Reynolds, Goldsmith, and Robertson, Junius, Beattie, Chalmers, Mason, Cumberland, Beattie, Colman, T. and J. Warton, Dr. Burney, Sheridan, Marryat, Dr. Hoody, Mrs. Montagu, Mrs. Cowley, &c.

"When we consider the vast space that the first actor of ancient or modern times occupied in the busy career in the world's eye, when we remember that from the first of his appearance in London, in 1741, down to the moment of his retirement from the stage, in the year 1776, he was constantly before the public; that during this protracted period he was on terms of more or less intimacy with all the wise, the illustrious, the patriotic, the great Britain; that he was the friend, the confidant, the friend and companion of the celebrated Lord Camden, the associate of Quin and Foote, and Barry and Henderson, the favourite of Pope, the correspondent of Bishop Warburton, the protector of the early genius of Sheridan and Siddons,—when we remember all this, we can readily comprehend the interest that even at this comparatively distant period must be attached to the biography of such a man: the present volume, we repeat, will not disappoint such expectation. It is introduced by a well-written memoir of Garrick, and contains his voluminous correspondence, and the history of his life, and the characters of his contemporaries. The letters of Bishop Warburton, in particular, are uncommonly entertaining, and clear up many points in the great actor's life, hitherto obscure and unexplained." *—Sun.*

Henry Colburn and Richard Bentley, New Burlington Street.

Episcopal Church in India.

In 3 vols. 8vo. price 12s. 6d. boards, with a Portrait by Dean, and a Map.

THE LIFE of the Right Rev. T.

FANSHAW MIDDLETON, D.D. late Lord Bishop of Calcutta.

By the Rev. CHARLES WEBB LE BAS, M.A.

Professor in the East India College, Hertfordshire, and late Fellow of Trinity College, Cambridge.

Printed by C. J. & Co., 9, St. Andrew's, St. Paul's Churchyard and Waterloo Place, Pall Mall.

Lately published, by Henry Colburn and Richard Bentley, New Burlington Street.

MAJOR CARTWRIGHT'S LIFE AND CORRESPONDENCE.

Edited by his Niece.

Comprising Letters from Fox and Burke, the Duke of Portland and Lord Shelburne, the late eccentric Earl Stanhope, Mr. Whitbread, Sir Philip Francis, Horne Tooke, Dr. Parr, &c. 8 vols. 8vo. with Portrait, 18s.

He was one of those enlightened mind and profound constitutional knowledge placed him in the highest rank of public characters, and whose purity of principle and consistency of conduct through life commanded the most respectful attention to his opinions.—*Fox.*

II.

The Empress Josephine's Private Correspondence. Forming the Third and concluding Volume of her Memoirs.

"A curious and entertaining piece of domestic biography of a most extraordinary person, under circumstances almost unprecedented."—*New Monthly Magazine.*

Purchasers of the first two volumes are advised to complete their Sets forthwith.

III.

Memoirs of Mrs. Siddons. By James Boaden, Esq. Interspersed with Anecdotes of Authors and Actors, and intended as a Companion to the Author's Life of her Brother, Mr. Kemble. IV.

Conversations of James Northcote, Esq. R.A. with William Hazlitt. In 1 vol. post 8vo. with Portrait, 10s. 6d.

V.

The Political Primer; or, Road to Public Honours. Small 8vo. 6s.

"This is a book of very considerable talent, and well worthy the attention of readers, both for the information which it contains, and the style in which it is written."—*Times.*

"We have been a little gratified by the 'Political Primer; or, Road to Public Honours.' The author displays no slight knowledge of human nature, and of the arts by which public men in this country make the people subservient to their views."—*Morning Chronicle.*

Also, nearly ready, in 2 vols. 8vo. 21s.

VI.

Memoirs of the Peninsular Campaigns; comprising the History of the Campaign in Portugal, by the Earl of Munster—the Personal Narrative of Captain Cooke, 48th Regiment—and a Narrative of the Campaign of 1814 in Holland.

In royal 4to. with 37 Plates, price 31. 2s.; or with Proofs of the Plates, in small 8vo. India paper, 31. 6s.

EXEMPLARS OF TUDOR ARCHITECTURE, adapted to Modern Habitations, with Illustrative Details, selected from Ancient Edifices; and Observations on the Furniture of the Tudor Period.

By T. F. HUNT, Architect.

"That which in ordinary hands would have been a dry description, has been adorned with very interesting local, literary, scientific, and general information."—*Literary Gazette.*

By the same Author.

Edinburgh Gazetteer, corrected.

In 1 large vol. 8vo. with Maps, the 2d edition, brought down to the present time, 12s. boards.

THE EDINBURGH GAZETTEER; or, Compendious Geographical Dictionary: being a complete Body of Geography, Physical, Political, Statistical, and Commercial. Abridged from the larger Work in 6 vols. Printed for Longman, Rees, Orme, Brown, and Green, London; and Adam Black, Edinburgh.

Of whom may be had.

The Edinburgh Gazetteer; or, Geographical Dictionary. 6 vols. 8vo. 51s. 6s. boards.

Also, as an Accompaniment to the above Works.

A New General Atlas, constructed by A. Arrowsmith, from the latest Authorities; comprehended in 14 Maps. Royal 4to. 36s. half-bound; or coloured, 51. 12s. 6d.

BOOKS IN THE PRESS.

On the 1st of November next will be published, handsomely bound in rose-coloured Morocco, price One Guinea.

HEATH'S PICTURESQUE ANNUAL for 1833. Containing Twenty-six beautifully finished Plates, executed by the first engravers, under the exclusive direction of Mr. Charles Heath; from Drawings by Clarkson Stanfield, Esq. With Letter-press Descriptions, embodied in the Narrative of a Tour through the most interesting portions of the North of Italy, the Tyrol, and the Countries bordering the Rhine.

By LEITCH RITCHIE, Esq.

Five Hundred Copies will be printed on royal 8vo. elegantly bound in rose-coloured Morocco, the Plates on India paper, 31. 16s. Early application will be necessary to secure these Copies. A very limited number of Proofs of the Plates will be taken, the prices of which will be as follow:—India, before Letters, 41. 4s.; India, with Letters, 21. 2s.; Plain Proofs, 11. 2s.

On the same day will be published.

The Keepsake for 1832. Price One Guinea, bound in crimson silk; large paper, 31. 12s. 6d.

London: Printed for Longman, Rees, Orme, Brown, and Green.

Interesting New Works.

Just ready for publication, by Messrs. Colburn and Bentley, New Burlington Street.

In 2 vols. 8vo.

THE SMUGGLER.

By the Author of "Tales by the O'Hara Family," the "Denounced," &c.

II.

Wild Sports of the West, by an Experienced Sportsman, Part I. To be continued monthly, and to be completed in Six Monthly Parts, price 3s. 6d. each, with numerous beautiful Plates.

Also, just published.

III.

Memoirs of Count Lavallette. Written by Himself.

"A work of great entertainment."—*Times.*

"The apprehension and imprisonment of the author, his trial and sentence for conspiracy, and his escape through his wife's agency, aided by the exertions of Sir Robert Wilson, and Messrs. Bruce and Hutchinson, invest this work with all the deep interest of a romance."—*Courier.*

IV.

The Dutchman's Fire-side. In 2 vols. post 8vo.

"This work stamps the author as second to few living novelists."—*Morning Post.*

V.

Captain Beechey's Voyage to the Pacific; forming the Completion of the Polar Voyages, with numerous Plates, engraved by Finden. 3 vols. 8vo.

"This Expedition will be for ever memorable, as one which has added immensely to our knowledge of this earth that we inhabit."—*Blackwood's Magazine.*

In the press, small 8vo.

THE LEGENDARY HISTORY of MAHOMET.

By WASHINGTON IRVING.

John Murray, Albemarle Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, in Wellington Street, near Waterloo Bridge, Strand, and 15, South Molton Street, Oxford Street; sold also by J. Chappell, 26, Royal Exchange; S. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, D. Robertson, and Albion and Co. Glasgow; and J. Cunningham, Dublin.—Agents for America, O. Rich, 15, Red Lion Square, London.

J. MOYER, 26, Castle Street, Lancaster Square.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 765.

SATURDAY, SEPTEMBER 17, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

On the alleged Decline of Science in England.
By a Foreigner. 8vo. pp. 33. London, 1831. Boosey.

The distinguished foreigner to whom England is indebted for this most satisfactory and gratifying pamphlet is a German professor, whose name (which we do not know we are at liberty to mention) is sufficient to stamp authority upon his sentiments throughout the literary and scientific world. The MS. was transmitted to Mr. Faraday by the writer (with whom, as with most of the enlightened men in Europe, our distinguished countryman maintains a friendly correspondence on subjects interesting to science), and he has with great judgment laid it before the public, in a very accessible form.

When feuds arise among philosophers, they are like family quarrels, infinitely more bitter than the disputes of common or unconnected parties; and we could desire no better light upon the various animosities and squabbles so rife with our men of letters (literally such as F.R.S.'s, F.S.A.'s, F.A.S.'s, &c. &c. &c.) than that which is thrown upon them by an able and disinterested foreigner. We do not say that all foreigners are competent to the task, for we find that some of them are apt enough to imitate the partialities of the combatants, and take a side accordingly. Thus we find a French critic upon Mr. Babbage's "Reflections on the Decline of Science in England, and on some of its Causes," following instinctively in the wake of the author.

"While in France (says he) the sciences have produced so many ingenious theories, so many important discoveries, which, in consequence of the inertness of our working classes, have long remained unsupplied, they have become, as it were, quite practical in Great Britain, where the knowledge of the practitioners is so much more extensive in proportion than that of the scientific, or those who pretend to that title. Hence it results, that in the latter country the mechanical sciences have made a great progress; and that all those sciences which depend upon observation, and which require long and abstract study, have become stationary. This is the state of things which has struck Mr. Babbage. He attributes it to the absence of a rational plan of scientific education, to the want of national encouragements to distinguished men, and to the injurious influence of a society founded for the purpose of promoting the growth of knowledge. In fact, the sciences are very little, if at all, taught in the English universities. There are no competitions, no examinations to stimulate the scholars, and compel them to shew their advancement. Instruction, when there is any, is confined to vague and general notions, communicated by a professor, without demonstrations or experiments. In order to be able to devote himself to scientific researches in England, a man must have an independent fortune; for no lucrative employments, no honourable posts, are attached

to studies of that description. Students who enter with ardour on the career of knowledge are soon obliged to deviate from it, by the necessity of forming an establishment and providing for the future. There remains a class of rich amateurs, desirous of connecting their names with some establishment of public utility; but it is money that creates for them the reputation of scientific men. Our readers will learn with surprise that it costs fifty pounds sterling to be appointed a member of the Royal Society! Men of the greatest merit are not exempted from the payment of that sum; while the facility with which those are admitted who have no qualification but wealth, unreasonably increases the number of members, and for that reason diminishes the importance of the distinction."

Very different is the estimate, and quite opposite are the conclusions, of the learned German, the title of whose pamphlet is prefixed to this notice. "There is," he remarks, "a principle in human nature which prompts almost every individual to consider his own nation as evidently equal, if not superior, to any other. No people, however insignificant, but what has its heroes and its sages, who, in the opinion of their own countrymen, far surpass the boast and pride of other nations. * * * The vanity, pride, and self-love, inherent in our species, are the causes of this propensity of extolling to the skies what little good we may discover amongst our nearest neighbours, whilst we evince in general an equal disposition to undervalue and treat with contempt whatever is the product of science in a country separated perhaps from our own by a range of mountains or a branch of the sea. These mutual and very absurd pretensions very often form protracted animosity between neighbouring nations; and these quarrels, for being unattended with bloodshed, are nevertheless carried on with the same acrimony and bitterness as those great international quarrels in which kings are parties, and cannon supply the arguments. A striking instance of such a literary warfare was exhibited in the protracted and bitter contest between England and Germany, about the honour of the invention of the fluxionary calculus. But many other instances of similar litigations about the scientific *point d'honneur* might be adduced: and very lately we had the example of a French philosopher denying to the English nation, to the countrymen of Watt and Maudsley, almost every share in the invention of the steam-engine. At present, however, a disposition entirely different is observable amongst some of the most scientific men of England. They appear bent upon undervaluing their own country, and seem to take a secret, and certainly a strange delight in extolling to the skies the scientific excellence of foreigners of every description."

There is too much truth in this. Is it that, every thing being mercantile in this country, the sordid spirit of trade infects with its mercenary meanness the higher and nobler spheres of competition in the arts, in literature, and in

science? We fear, from our own observation, that this is one of the master-keys to the disreputable problem; and that the rest of its solution may be found in angry passions, irritated vanities, and over-weening self-exaltation. Let us glance at a few of the publications scattered over our table—publications which have lain about for many months, in consequence of our not wishing to take a part in the contentions to which they severally refer.

Here we find the restoration of York Minster a subject of furious controversy. A Report to the subscribers gives Mr. Smirke's view of the needful reparations; but other opinions are stated in opposition; and like most disputes which turn upon mere taste, there was no chance of reconciling the adverse advocates: the one side insisting on the screen's being replaced exactly where it formerly stood, and the other contending that its removal to another position would be a great and manifest improvement upon the original design. This last proposition emanated from Mr. Smirke, and had the assent of a vast majority of the subscribers; but the dissentients were also a numerous body: and having the sanction of Etty the painter, and other distinguished artists, they objected strenuously to the alteration, not only as a blemish, but as being inconsistent with the terms of the subscription, which were to restore, and not to innovate. Newspapers, lithographic prints, and pamphlets, were poured out, to the annoyance of the public; and the matter ended somewhere as it began.

Then came the warfare about the presidency of the Royal Society; and such canvassing, backbiting, and abusing!—it would have shamed a noisy vestry, by no means select. One writer, and a very clever one, placed England low in the scale—not so much on the ground that science had declined, but on that of its being "without a head;" and shewed, that the successful application of science to industry had made the English a nation of calculators and economists; and hence the criterion of value of every thing scientific in England was its marketable price. Sir James South's Charges against the President and Councils of the Royal Society, was a perfect anathema; and Heaven knows how all hands survived to see a new and royal president elected, and apparently to go on together now as if nothing had been wrong, but all right from the beginning. Have we just discovered that sympathy is the only chain that binds philosophers of different nations? It is the duty of the two secretaries of the Parisian Academy to analyse the labours of countrymen and foreigners; and even at Stockholm a careful analytical report is made of the progress of science. A few years back, when Oersted of Copenhagen made his celebrated discovery in electro-magnetism, Arago, Ampère, Savart, and a host of others, supplied to this discovery, in a few weeks, a development which gave an entirely new face to the sciences

* Science without a Head; or, the Royal Society Dissected. pp. 122. Ridgway. Dr. Granville was the author.

of electricity and magnetism. These are the advantages that spring from intercourse, and these the triumphs in which congenial spirits glory!

In recalling the hostile accusations and defenses which at the period we are describing vexed the minds of every well-wisher to our literature, we cannot omit Mr. N. H. Nicolas's fierce attack upon the State Paper Office, and the commissioners engaged in arranging our historical documents, &c. &c. These charges, with Mr. Palgrave's vindications, we will not, however, farther rescue from the obscurity into which a rapid succession of important political events has thrown them; and we simply mention them here, to shew that we so justly merit the reproach contained in the concluding paragraph of our last quotation, as to have had (independently of lesser squabbles) at least three regular sets-to within a few months. But we return to our author, who says:—

"An English mathematician of the first order, one of those on whom his country might look with confidence as a strong supporter of her scientific fame, a professor in an English university, informs the public that England has been foiled in the general struggle for scientific renown; that whilst science is in a prosperous state in foreign countries, it is actually declining in England. Satisfied with this assertion, at which many are startled, he does not seem over-anxious for the proof of his proposition, but shews a great inclination to take it for granted, that England is actually far behind her more fortunate rivals. A person, certainly of the highest scientific authority, came to the sad conclusion, 'that there cannot be apprehended much doubt as to the fact of the decline of science in England;' and Mr. Babbage never seems to question for a moment the correctness of an assertion, made perhaps in an hour of spleen and dissatisfaction, but unsupported by proof. Rather than compare the relative state of science in England and other countries, and thus to examine the truth of the general proposition, Mr. Babbage prefers to point out the causes of this disgraceful event, and to suggest the remedies likely, in his opinion, to effect its cure. But before we can follow Mr. Babbage in his long list of complaints, we must pause a moment in the consideration of the assertion, that 'science is declining in England.' This harsh sentence, however, admits of several interpretations,—and Mr. Babbage has not informed us which is that which he adopts. Is it his opinion that science is stationary in England, whilst it is making rapid strides on the continent?—or does he wish to give to understand, that really a retrograde motion takes place in England; and that, although, upon the whole, science is more widely diffused at present in England than formerly, there is a lack of scientific men of the first eminence able to be put upon a par with the most renowned foreigners? Mr. Babbage must excuse me for believing that it is not sufficient thus confidently to assert the inferiority of his own country; he ought, in my opinion at least, to have pointed out distinctly where that inferiority exists. Are only some branches of science affected, or does it spread widely over all the departments of human knowledge? It may be, that England should be found deficient in some particular instance; whilst in others, perhaps, it far surpasses other nations. The scale of merit ought to be carefully handled, to determine with accuracy to which side the balance is leaning. But if the real meaning of Mr. Babbage on a question in which the national honour

is so deeply involved, is labouring under an obscurity which we have no means to dispel, we may attempt at least to canvass the authority by which he supports his opinion. The names of Sir Humphry Davy and of Mr. Herschel are of course of the highest authority; but it would appear rather strange that any one should attempt to couple those names with a complaint of a decay of science. This sounds pretty much as if, when speaking of Wellington and Nelson, one would argue on the inferiority of the British army and navy."

Again, upon another interesting point:—

"The praise given by Mr. Herschel to the *Annales de Chimie et de Physique*, is undoubtedly well deserved; and many of the reports on scientific matters coming before the French Institute, are certainly master-pieces in their kind. Still, it may be justly doubted, whether even-handed justice always presides at the redaction of French journals. It has long been a favourite maxim with French savans—

Nul n'aure de l'esprit, hors nous et nos amis.

Those who resided long in Paris, and know how scientific matters are managed there, cannot doubt for a second, that if persons like Sir James South and Mr. Herschel were to arise from the seats of the French Institute, but that matters would be brought to light scarcely less unpleasant than those which now so unfortunately divide the Royal Society of London. Mr. Herschel deals harshly with the scientific publications of his own country. It must not be forgotten that France, with her thirty-two millions of inhabitants, has but readers for one single philosophic journal, which of course has the choice of all the papers which are offered. The twenty-three millions of inhabitants of England furnish a sufficient quantity of readers for a far greater number of philosophic quarterly and monthly publications; and I will venture to affirm, against Mr. Herschel, that many of the numbers of the Quarterly and Edinburgh Journals, the Philosophical Magazine, and Professor Jameson's Journal, contain articles as well written and as interesting as those which fill the pages of Messrs. Arago's and Gay Lussac's publication. If Mr. Herschel and some of his friends have such a poor opinion of the English scientific journals, a different judgment is entertained abroad, as is well proved by the eagerness with which the German journalists seize upon every article issuing from the presses of their British colleagues. The value which is set in Germany upon the scientific pursuits of the English, the rapidity with which translations are made in Germany of whatever English philosophers of some reputation publish, shews abundantly that in that country at least, in *docta Germania*, a far greater value is set upon the productions of English science than is done by Mr. Herschel and his friends."

The following reasons why the knowledge of foreign science and discoveries finds its way so slowly to England are very true, but they are not creditable to our zeal nor to our financial liberality.

"We have no reason to doubt Mr. Herschel's assertion, that in England 'whole branches of continental discoveries are unstudied, and, indeed, almost unknown even by name,' if he means that continental scientific researches are not so rapidly known in England, as English discoveries are in Germany and some other countries; but the same may be affirmed of France, where whatever is done in Germany and elsewhere is slowly penetrating, and even sometimes excluded. This ignorance, however, of foreign science cannot be attributed to want

of zeal, but to a defect in English education, which it was, perhaps, the business of the London University to amend,—I mean the ignorance of foreign languages, which prevails both in England and in France. Since the Latin has ceased, very happily in many respects, to be the common medium of intercourse of the learned in every country, the scientific intercourse between different nations has become cramped by the necessity of learning many foreign languages; at least three or four are indispensably necessary. In this respect the natives of England labour under great difficulties. The difference of pronunciation of the English language from all those spoken on the continent, renders the task of learning a foreign tongue particularly troublesome to an Englishman; nor does he generally find in the public schools and academies of his own country many opportunities of receiving, in this respect, regular and solid instruction. The consequence is, that few Englishmen learn enough of a foreign language to enable them to converse freely with the natives, and to read, without great exertion, the writings of continental authors. There are countries in Europe where no young men could think of studying medicine, mathematics, or natural science, with the help of Latin only, and without being prepared, before entering the university, with a sufficient knowledge of German, English, and French. Many, indeed, are masters enough of Italian to read with ease and pleasure any scientific book in that language, whilst I have known others attain a tolerable degree of proficiency in the Danish, Swedish, or Spanish; but in England, the number of those who acquire a smattering of French is very small, and still smaller is the number of those who know enough of German to read a book in that language without considerable trouble. Another cause of the ignorance of foreign scientific labours, is the high price in England of foreign books, in consequence of an importation duty. This real and intolerable impediment to the diffusion of knowledge exists, though not in the same degree, in other countries; despotic Russia, however, is said to be free from it. England may, perhaps, expect from its present chancellor, who likes to 'see the schoolmaster abroad,' the radical reform of so glaring an abuse."

The annexed contrast with one of the most enlightened nations in Europe is favourable to England:

"In France it seemed a constant rule, that no one could usefully and practically apply mathematical science, unless he ascended first, not from 'Euclid's Elements,' for these were long forgotten, but from some modern elementary book on geometry and algebra, to the summit of analytical science. Once arrived there, he might, if he pleased, descend, and take by the way such applications of science as he thought fit; but, accustomed to the pure air and bright sky of these higher regions, it was scarcely to be expected that he would come down to what was considered of infinitely low value. The consequence of this state of things has been, that the calculus has been applied to the solutions of problems for which the Elements of Euclid would have been quite sufficient. No question of optics, astronomy, or mechanics, could be treated without calling in the intervention of the integral calculus; a bridge was built without its assistance; and even sometimes no two thermometers were compared without some pages of analysis. Mechanics, in particular, do not seem accessible according to the tenets of the French school, to

any man not well versed in sublime analysis; and when French authors condescend to give some elementary notions on that subject, it is generally done in so unsatisfactory a manner, that it would appear that it was only intended to shew the utmost contempt for the illiterate readers for whom such explanations could be useful. Thus many branches of applied mathematics became inaccessible, and were left unstudied by many who most stood in need of them; and I humbly submit that this method has had a most pernicious effect in France. Hence it arises that many have acquired a profound knowledge of the higher branches of mathematics—that a greater number became more or less versed in the fluxionary calculus—whilst the more elementary part of mathematics, which serves for every day's use, which leads to the most useful applications, is far less diffused in France than in England. In the former country, elementary geometry, algebra, trigonometry, are not considered as important in themselves, and as things fit for immediate application, but only as the necessary steps by which we may arrive at the higher departments of analytical science. In England no one has rendered himself master of the common rules of arithmetic but he thinks of turning his knowledge to some account; and, aided by that ingenuity, of which Englishmen seem to possess a greater share than other nations, his scanty stock of information will often help him to some useful discovery, or some ingenious mechanical contrivance, at which the Frenchman, encumbered with the artillery of his mathematical learning, could never arrive."

Our limits do not permit us to follow the intelligent author through his other arguments:—in some he clearly confutes assertions too hastily hazarded by our English writers—but grumbling is an English constitutional privilege;—and in others he contends very successfully against the principles put forward. On the subject of encouragement by means of rewards and distinctions, he is particularly adverse to the idea of science or literature being promoted by pensions or honours: upon this we differ from him,—and we think that his conclusions, drawn from individual cases, have no weight upon the bearings of the question as applied to the general mass. Although ten of the most eminent scholars and men of science might rather reflect upon, than derive lustre from, a ribbon or a star; the ambition to earn either would be a stimulus to thousands.

But we must now conclude, by referring our readers to the pamphlet itself: it is enough for us to deprecate unseemly jealousies and quarrels among our distinguished contemporaries, and suggest how much more honourable it is, to elevate than to depreciate the genius of our country and countrymen.

Original Songs. By Robert Gilfillan. 12mo. pp. 152. Edinburgh, 1831, Anderson, jun.; London, Whittaker and Co.; Leith, Burnet.

To publish a volume of songs is the least auspicious way in which a poet can appeal to the public. Wanting the auxiliary and potent aid of music, the lyrist has not only to fight single-handed, but the very effect of his numbers (we mean the number of his compositions) is against him. A hundred of the best songs ever written would tire if read in succession; and Mr. Gilfillan, the gifted Gilfillan of Leith, has exposed himself to this unfavourable ordeal.

In spite of it, however, we are free to say, that, though to speak of Burns in the same breath is very injudicious, he has acquitted himself with much talent. We will be bound

for him, he has not his peer in Leith; and we question if even the Modern Athens could produce as good a songster.

We will quote the first, at a venture.

"Mary's Bower."

The mavis sings on Mary's bower,
The lav'rock in the sky;
An' a' is fair round Mary's bower,
An' a' about is joy!
But sad's the gloom in Mary's bower,
Though a' without be gay;
Nae music comes to greet the morn,
Nae smile to glad the day.
Her lover left young Mary's bower,
His ship has cross'd the main;
There's wae fu' news in Mary's bower—
He ne'er returns again.
A breaking heart's in Mary's bower,
A wasting form is there;
The glance has left that e'e sae blue,
The rose that cheek sae fair.
The mavis flees frae Mary's bower,
The lav'rock quits the sky,
An' simmer sighs o'er Mary's bower,
For coming winter's night.
The snaw fa's white on Mary's bower,
The tempests loudly rave—
The flowers that bloom'd round Mary's bower
Now wither on her grave!"

This is pretty, and song-like: a few verses of another have more of poetry.

"I loved as none have ever loved,
Whatever their love might be,
Else would not parting with her wrong
Such bitter pangs from me.
Yet, musing on what might have been,
I dream my time away;
'Tis idle as my early dreams,
But, ah! 'tis not so gay.
If aught of pleasure yet is mine—
A pleasure mixed with pain—
'Tis panging on the days gone by,
Which ne'er can come again!
When she, all lovely as she's still,
Blushed when I call'd her fair,
And, if she never bade me hope,
She ne'er bade me despair.
For thee, dear maid, I fondly sigh'd,
For thee I now repine,
Since Fate has sworn in its solemn words,
'Thou never canst be mine!
Yet fondly do I love thee still,
Though hope ne'er mingles there;
A wilder passion sways me now—
'Tis love join'd to despair.
Farewell, a world whose gayest scenes
No pleasure bring to me;
I'd hate its smile, did I not think
It may give joy to thee.
But, if thou ever lov'dst like me,
No joy will light thine eye,
Save transient gleams, like wintry suns,
Short glancing in the sky."

"The first Rose of Summer" is, we observe, in this collection; but as it is well known, we shall conclude with another example.

"O, my Love, Night is come."

O, my love, night is come, the soft night is come,
And fled is the glory and splendour of day;
The bright flaming sun, with the daylight, hath gone
To his palace of ocean, love, far, far away.
O, night, my love! night, to a lover is dear,
When the wind is all hushed and the moon in the sky;
Then, haste to thy lattice, love, quickly appear
With the smile on thy cheek and the glance in thine eye.
O, my love, ever gay is the clear noon of day,
With the bird's happy song and the bloom of the rose;
But, at night, roses weep, and the little birds sleep
All still as the green leaves on which they repose.
Yet night, my love, night! O! 'tis dearer to me,
Though the flowers are in tears, that the sun does not
shine;

For thou art the flow'ret I ever would see,
And the music I'd hear is that sweet voice of thine!"

From these quotations it will be seen that, though neither very powerful, very original, nor very touching, Mr. Gilfillan has made a pleasant use of the familiar elements of Scottish song, and produced a volume much to the credit of his muse.

The Smuggler; a Tale. By the Author of "Tales by the O'Hara Family," "The De-nounced," &c. 3 vols. 12mo. London, 1831. Colburn and Bentley.

In the volumes before us, Mr. Banim has entered a new field, and drawn the English pe-

santry, as he drew the Irish; evidently from life, but imbued deeply with the bitterness and gloom of his own mind: vigorous paintings, such as we might imagine Hogarth outlined, and Rembrandt coloured; wanting, it is true, the humour of the one, and the grandeur of the other, but with much of the nature and the force. In his Irish stories he was fortunate; the ground was untrodden, and the imagination of his readers sufficiently excited by well-authenticated facts of misery and outrage to allow of considerable exaggeration—especially when great talent, which no one can deny him, threw over all the interest of romance. It is in these delineations (even admitting much of occasional coarseness) that Mr. Banim's great and peculiar merits lie. For intense and horrible interest, the story of the Nowlans, and for natural pathos, that of John Doe, are quite unequalled in their line. When he gets into middle or higher life, his genius deserts him; his "gentlemen and ladies" are equally unnatural and absurd; and his hero is just a vulgar profligate. The present work, *the Smuggler*, has both the merits and the faults of the author of the *O'Hara Tales*: the story is incoherent and improbable—the higher range of characters, caricatures—while crime and misery are carried to their utmost of atrocity. The use of horrors to a writer is like that of rouge to a woman—"the custom grows upon us;" the rose-pink is gradually deepened into carmine, and the horror which first made you shudder, at last makes you sick. While on the subject of faults, we cannot but protest against the revolting colours in which the English peasantry are depicted; such a set of thieves and prostitutes were never before collected together. We must also protest against the kind of covert cloak of interest thrown by Mr. Banim around smuggling; both his heroes make brief trips in the "Miss Molly," and the smuggler is as respectable a middle-aged shopkeeper as could be found from Hyde Park Corner to Temple Bar. Vitiating the mind by constant deception and frequent excess, confusing that sense of right whose very instinct is a virtue, the contraband trade has the most powerfully demoralising influence. We do not marvel, we can only excuse the poor and the ignorant yielding at once to want and temptation; but we do wonder at those in a class above them, for whose very benefit these laws are made, ever giving the worse than sanction, the delusion of their example—people who, for some paltry gratification of lace, silk, or gloves, encourage courses, the danger of which is their least evil, and equivocate with their conscience by making it a question of personal injury, and saying, "Oh, the king will never miss it!" True enough the king will never miss it; but the industrious and honest tradesman, perhaps in the very next street, will; for it is that very tradesman you are defrauding of his just sale and his fair profit. We ought to apologise for this digression; but as many of our moral defalcations originate in carelessness rather than premeditated wrong, and as we have known the contraband trade encouraged by purchases, made in some instances we hope from thoughtlessness, it may be as well to remind the heedless buyer of the absolute and selfish dishonesty of such conduct.

But to return to the story. We have to make our third and last objection to Mr. Banim's style of narration: he takes some extreme case of hardship, and most unlucky concurrence of misfortune, and sets forth that case as the sample brick of the whole. The principal incidents (for we must use the plural) of

this tale turn on the fact that the parochial laws oblige

"The maid whose folly could confide
In him who made her not his bride,"

to identify the father of the child. On this Mr. Banim has erected a superstructure of oppression, misery, and cruelty, that would rather astonish any country magistrate. We must, even in a fiction, protest against the treatment his heroine meets with at his hands,—and she would have met with it at the hands of no other human being; for the picture is as exaggerated as it is coarse. But certainly Mr. Banim is the first writer who ever thought of sending a heroine in such a situation from parish to parish for a settlement.

And now to the merits of the tale, which has all its author's old power of graphic delineation. The reality with which he invests some of his scenes is that of life; his peasants and smugglers are all identical individuals, and brought out into stronger relief by such nonentities as the Lady Ellens, Mr. Snows, or the raving fool, his hero. His sketch of Martha Huggett is worth them all: we shall endeavour to extract the outline of her history, as the most creditable person we can introduce to our readers: we own it is, however, difficult to give an idea in our limits of the mingled activity, propriety, and shrewdness, which, in an evident connexion with the smugglers, has attracted towards her the hero's attention. The conversation is alluding to a secret passage from the smuggler's house.

"It is not confided to a great many, Mr. Mutford; along with my wife and daughters, and my brothers, there is but one friend of t'other trade could find out that flower-bed in the garden for you." "Martha Huggett?" "You have a guess, sir." "She must be paid well for her fidelity and general good services." "Why, yes; but as much out of liking as to bribe her, and the little girl would be true if she gained less—'tis in her; I call her a downright good un, Mr. Mutford; besides, she has her own reasons for doing her best for t'other trade: she loves none that don't love it." "Pray tell me her reasons." "With all my heart; but take a chair, sir; and as I keep you from supper below—" He did not end the sentence in words, contenting himself with extracting a bottle of champagne from a cupboard, laying glasses, untwisting the wire, nicking the cord, touching the cork, and helping me to a glass; and when he had pledged me in another, Mr. Linnock continued, "Little Martha, you see, sir, kept company, ever since she was a girl of fourteen, with a young man of the village, an honest respectable lad, and one I liked; and I will say for him, as clever a hand on the shingles of a dark night, and plenty of work to do, as ever I had in pay. Well, sir, the Miss Molly was seen too near shore one evening, and though she got off clear,—as has always been her fortune, I thank Providence,—there was a bit of a row between some men-o'-war's men and a few of our lads, and Fred fetched one of the blue-jackets what I call rather a nasty knuckle somewhere between the eyes; and they had him up for it, and the judge said he ought to be hanged, because, d'you see, sir, another man-o'-war's man happened to have been shot at." "And as the judge is generally a good opinion in these cases," I said, "hanged Master Fred was, I presume?" "Why no, sir, not out-an-out. Interest was made, and an excellent character—not better than he deserved—given of Fred; and the Irishman—these rough-an'-ready chaps on the coast be almost all Paddies, Mr. Mutford—he re-

covered from the shot, which was a mere nothing to talk about, and none of Fred's business into the bargain; and so they forgave him the swinging, and sent him to Van's land for fourteen years; and that's why Martha Huggett has no demur to lend a hand, now and then, to t'other trade, sir." "And I don't wonder, if she loved poor Fred." "Loved him better than her own eyes, and he her the same; they were to have been married the very day he sailed, sir; and 'tis for love to him that Martha has refused many a good offer since, and never goes for a walk with our boys, like other girls of her age; and I'm mistaken if she don't be off after him some day, and soon; only waiting to grow richer, I fancy." "Very disinterested of her not to weigh the odium of marrying him against her preference for him." "Odium? as how, Mr. Mutford?" "Why, he is a transported convict." "To be sure, as they call it, so he is; but, bless you, sir, we see no odium in that, here on the coast, when it comes only of our lawful business." "Had Fred robbed or cheated, or committed any one crime, why then 'twould be another thing, you know; but it isn't his fault, is it, if people will punish him, just as if he had."

We add the finale: our old acquaintance, the smuggler, is still speaking.

"And now, Mr. Mutford, tired as you are, you'll excuse me telling Martha two words that she ought to hear; I may have no better opportunity, 'tis such a busy night, in doors, sir, and not expected so soon." "A run-in, to-night, again, Mr. Linnock?" asked the attentive and business-like Martha. "I be blessed, ay, old girl, and, as you know, we didn't reckon on it for a night or two." "And all safe, sir?" "All in the very house, Martha; and so, Mr. Mutford, we be as busy and as merry within as folk can well be—just what I told you; with other matters too to keep us alive; but we shall speak of them presently; and, Martha, 'tisn't that news, alone, I have for you, old girl; but, hark— and never mind Mr. Mutford; he and I have chatted about you, afore now—hark, Martha, there's news from beyond there, too." "Another letter, Mr. Linnock?" "No, Martha; guess again." "I ha'nt got no other guess to make, sir," answered Martha, her voice faltering. "Did nobody never write you word, Martha, when you wrote to him of going to see him, that, if he could, he would hinder you; and that, in spite of all the great 'uns and all the sharp 'uns, where there's a will, there's a way, my maid?" "Bless my heart, Mr. Linnock! what is it as you do mean?" questioned Martha, sitting unconsciously, sinking, indeed, upon a large stone which was behind her, and taking off her little bonnet, and holding it on her knees, in the same absent manner, while her hands shook, and her lips trembled, and her eyes were fixed on her patron. "Don't you go for to make any great things of a bit of a fuss, now, Martha, for your own sake, and for another body's sake, and you shall soon know what I mean," continued Mr. Linnock: "hollaring out in this place, and this night, in particular, or swounding, or such like, wouldn't be the way to keep him safe from the knowledge of one body I don't much like as should be able to tell any thing about him; and that one body I mean is Sam Geeson, who is not turning out a fore-right good 'un, as you shall hear of, too; and so, my maiden—" "Mr. Linnock," interrupted Martha, "hollaring out, or swounding, be not my way, when to have one's mind about one would be a better way; but won't you tell me, sir, in one word, is it of—" she

looked round her, stooped her head forward to Mr. Linnock, and ended in a whisper—"of Fred you be talking?" "Of Fred, and no other, my old girl: he was seen at t'other side of the briny, this morning." "In France, sir?" continued Martha, clasping her hands. "In France, at Boulogne—and master-mate had a word with him; and Fred only asks you, now, to cross a short sea to him—you and old mother together; and there you three can live as safe, and grow as rich, as archbishops, every one doing a hand's turn, now and then, for an old friend—the Miss Molly. I shouldn't be down-right glad to lose you for good, at both sides o' the water, Martha, my maiden." The sagacity and laudable attention to his own interests, of Mr. Linnock, were slightly discernible through the good-feeling and philanthropy of this little speech. "Poor Fred, poor lad!" said Martha; "and so, you be in France, so near me; and what a many precious troubles you must have had the heart to face and overcome, to get there. In France to-night!" she repeated, turning her head in the direction of the sea. "I didn't say that," rejoined Mr. Linnock. She turned her head round again, quickly, and asking, in a long-drawn manner—"No?"—her eyes, glittering in the moonlight, again were fixed on Linnock. "No, Martha; not down-right: he may have stolen over to-night, for what I know." "But don't you know, sir?" "Why, I be blessed, Martha, but if you do promise—" "Oh, nons'as, now, sir, nons'as," she stood up and leaned on him; for she trembled more than ever, "you know you've no call to be afraid of me, in regard of all that; and so, do, Mr. Linnock, pray, pray do, sir." "Stop a bit, then—" Mr. Linnock whistled. Young Fred jumped over a fence, near to them, and came on slowly enough, to Martha, his head falling down, and his left hand in his trousers' pocket. Martha, after a little start, parted from Mr. Linnock, and, in her turn, advanced in a regulated pace, though not quite so deliberately, to meet him half-way. It did seem, indeed, that Mr. Linnock's fears and remonstrances were thrown away: notwithstanding her evidently strong and sincere attachment, and the unexpected joy she must have experienced, Mutford only observed that her eyes suddenly filled with tears, and that a spasmodic smile worked her features. They came close to one another, each holding out the right hand, and Fred, looking ashamed of his, although his face denoted deep-felt pleasure. Their hands joined, and Martha said, "Be it you, Fred?" And Fred answered, "Ay, old girl, it be." And such was the scene of a re-meeting, under the known circumstances, between two real English lovers of humble degree. Martha, indeed, improved it a little, upon second thought. While they still held each other's right-hand, she put up her left to her eyes, and, with the knuckles of it, scooped out the tears that, to her great shame, would make way through her closed lids; and in the midst of this occupation, she, all of a sudden, flung down her left hand, opened her eyes wide, stretched forward her neck to Fred, pouted out her lips, and kissed his lips so snatchingly and energetically, that he staggered back a pace, quite taken off his guard. "There," said Mr. Linnock, "there, that will do; and now, my maiden—" "Mr. Linnock!" interrupted Martha, "his life be in danger in England to-night!" "Not if you go by what I tell you," replied Mr. Linnock: "take him, you know where, for a few hours, and be you ready, then, to run across to France, old mother and you, as I said before, with him, and

the thing is done, just as you heard me say it would be, Martha, my maid."

Never did any person look so resolutely to the darkest side of every thing as Mr. Banim. The following little passage will do as well for an example of spleen as any of its numerous companions.

"And what an unjoyous, solid, rude, suffocating, deafening, head-ache giving thing a fair in the country is:—(let me just except Greenwich fair, if Greenwich be in the country—or rather the accidental adjunct of the noble old park, and the freaks it irresistibly inspires). The street of the little village stuffed with people who will walk over you if you do not push them about as they do you; girls scrambling on by themselves, and men and lads by themselves; and no one laughing, nor yet smiling, but on the contrary, the greater number either half-scowling at one another, or else looking nervously shy of having it appear that they are such fools as to allow themselves to be pleased. Peep into one of the inns, of which all the lower rooms are flung open to genteelish company, among the rows of happy creatures sitting on forms by the walls, drinking porter, or ale, or brandy and hot water, and nearly all look discontented still;—peep into a dancing booth, as you pass by, and you will see, perhaps, a dozen girls, exerting themselves to the utmost in a work-and-labour way, for the edification of three or four bumpkins, who walk from side to side among them with very disdainful faces, and now and then lift up their legs, and let them down again, one after another, as if they were plodding over a stubble-field, or at best turning the tread-mill at slow time. And how I abhor that smock frock into the bargain! the most unpicturesque, unmanly, unlovely, sheep-faced piece of costume in the world. Ay, and the close-laced bumpkin buskins, too, which, from constant pressure, impoverish the most considerable muscles of the leg, and leave an English peasant the worst-limbed peasant I have yet seen."

Some old poet says,

"'Tis our own eyes
That cast their colour on all things they see;"

and Mr. Banim's must be like night—

"Flinging a shadowy darkness over all."

But, we are bound to add, if there be something of exaggeration, there is also much of truth; and, to say nothing of the life and interest thrown into scenes, which are attractive as mere amusement, there is what may well call for serious attention in these pages. Though assuming a fictitious shape, the materials of this work are taken from actual existence; and let those who have the power of amelioration look to it. The poet was, indeed, wrong when he talked of

"The short and simple annals of the poor."

Such relations are equally intricate and important; and those who are placed above the class

"Where hunger swallows all in one low want,"

can never be too often reminded of the heavy responsibility which rests upon them—they owe to their God an account of their fellow-men.

Celsus, in Latin and English; with the Order of Construction. By Alex. Lee, A.M. Surgeon. Vol. I. 8vo. pp. 317. London, 1831. Cox.

THIS is a translation from Targa's edition of *Celsus*, well intended for the benefit of medical students, but we cannot justly say either well rendered into English, or judiciously edited. To furnish the *ordo verborum* of an author who

ought to be read without any such help by every well-educated medical man, is a questionable service. If persons belonging to the learned professions will not labour to acquire the knowledge necessary to them, we fear that facilities will only tend to make empirics; and that those who take *Celsus* as it were at second hand, will be very much disposed to take every thing else in the same fashion. The consequence must be, very superficial instead of very solid attainments.

The preface says, inelegantly enough: "The great responsibility accruing on undertaking a work of so much labour rendered it a duty incumbent on me to be in possession of every edition that I could possibly procure, particularly those *cum notis variorum*. My principal object in this was to present the reader with the most approved text of the various editors, from Cæsarius in the year 1528, to that of Targa's in 1769, since which no one has attempted any alterations in the text of *Celsus*; and I believe for the best of all reasons, since the unwearied perseverance of Targa, united to the most profound learning and great critical acumen, left nothing to be done by future editors. For this reason I have strictly adhered to the text of Targa."

Mr. Lee continues: "There are three things of the utmost importance in translating from one language to another; the first is to comprehend the original; the second is to convey those sentiments [query, what sentiments?] intelligibly to others; and the third is, to write them with precision, fidelity, and elegance, if possible. This is the order of Nature, whose minister and interpreter is man."

Our author is sorely puzzled about the "elegance" if possible, and truly it seems as if a terror had haunted him, and he had felt that elegance was impossible to him. "I have endeavoured (he repeats) to render a close interpretation of the author, and have used my best efforts to infuse the genius and spirit of his style, with as much fidelity as the sententious brevity of this elegant classic would allow. Therefore, under such conditions, I did not even dare to use a freedom of language, far less elegance of style. . . . *Celsus* is always quoted by the most eminent physicians as a model of propriety, ease, and elegance." *Celsus* also wrote a *Treatise on Military Tactics*, another on *Agriculture*; but commentators are unanimous in their opinions that his medical writings are the most perfect."

Celsus was thus an elegant writer, even though his being Doctor *Celsus* is doubtful; as Mr. Lee is certainly a surgeon, without there being the least question that he is not an elegant writer. He is, however, an industrious one, and this book is a striking proof of his possessing that quality. A few passages which we have pitched upon in the first dozen pages will shew that industry alone will not constitute a good translator.

"*Volaterranus* etiam meminit in *Anthropologia*, lib. xiv. *Celsi* cujusdam, qui philosophiæ Stoicæ sectator, Origenis erat adversarius, magis scientia notus, cui *Lucianus* Pseudo-Mantem inscripsit."

Thus rendered:—"Volaterranus likewise takes notice of a *Celsus* in his *Anthropologia*, lib. xiv., who was a follower of the Stoic philosopher, and an adversary of Origen, a noted magician, to whom *Lucianus* gave the name of the *Lying-Prophet*."

"Major tamen eruditorum pars sub Tiberio vixisse, vel forte ipso imperante natum usque ad Trajani tempora vitam produxisse censet."

"Yet the greater number of the learned

think that he lived in the reign of Tiberius, or perhaps, being born in his reign, he might have prolonged his life to the time of Trajan."

"*Quemadmodum notante Cornario in dedicat. Marcelli, in perlesique Hippocratem expressit, ut integras sententiarum periodos ex ipso descriptas subinde in eo videas; imo tota capita nihil aliud quam Hippocratis sententias ad verbum reddunt.*"

"In the same manner Cornarius remarked in his dedication to Marcellus, that he imitated Hippocrates for the most part so close, that sometimes you may see whole periods of sentences described by the one, transcribed by the other; nay, whole chapters which relate nothing else than the opinions of Hippocrates verbatim."

"Subjungit *Polyhistor Italus*: 'Ad nos tantum ejus medicina pervenit oratorio more conscripta.'"

"A work entitled *Polyhistor Italus* subjoins this notice of him: 'His work on medicine, written in an oratorical style, has only reached us.'"

"*Maximèque medicum ejus chirurgica probant, quæ Gesneri in Catalogo Chirurgorum sententia, veterum solus Latine scripsit, ut verè ipsum inter chirurgos reponat doctissimus Septalius. Tanta verò id fide peregit.*" &c.

"His surgical works certainly prove him to have been a physician, which, in the opinion of Gesner in his *Catalogue of Surgeons*, he alone of the ancients wrote in Latin. The very learned Septalius also places him among surgeons; which art he practised with so much skill," &c.

"*Quam elegantissimis verbis Cælius Rhodiginus Antig. Lect. lib. xxvi. cap. 3, insinuat: 'A Cornelio Celso versuram faciunt multæ. Verum citra illius sententiam nihil fermè promunt; perinde ac verba sint veterum sacrorum, quæ demutasse piaculare flagitium planè censi debet, quodque hostiis majoribus procuræ.'*"

"*Cælius Rhodiginus* has exclaimed, in the most forcible language, that many depredations have been committed on the fame of Cornelius *Celsus*; but, with the exception of promulgating his opinions to the world, they have elicited nothing of their own: they have mangled or sophisticated those sacred records, which crime ought to be deemed a sacrilege, and should be expiated by retributive atonement proportioned to the deed."

"Verum, ne nimis laudibus veriùs is oneretur, quàm ornatur, quem mortalium nemo rectè vituperavit."

"But lest we should overrate his excellencies, in our zeal to display his genius, which no one has blamed with propriety."

And lest we should exceed our readers' patience, we here close our ungracious office.

Six Sketches of Mademoiselle Tagliani, in the Characters in which she has appeared during the present Season. Drawn from the Life by A. E. Chalon, R.A. Drawn on stone by R. J. Lane, A.R.A. London. Dickinson.

WE have here the sylph-like form of this popular dancer, as Flore, la Tyrolienne, la Napolitaine, la Bayadere, la Nayade, and simply as Marie Tagliani dropping one of her most gracious and graceful curtsies to an applauding theatre. The figures are perfectly characteristic, and Mr. Chalon has evinced his usual spirit in their execution (the right arm of the Bayadere being, however, an exception); nor has the charming touch of Mr. Lane, in transferring the originals to the stone, failed to impart another beauty to these performances. It

puzzles us, critically, to say in which of her shapes we like the fair lady best. She is very pretty as Flora; but then the wings are ominous of a short and flying attachment. The Tyrol girl, with her ribbed stockings, is not amiss, only a little cross. Naples does not quite please us as to position: the arms are playful, the limbs rather stiff. The head of the Bayadere is fine and striking (though *Buy-a-dear* is not so taking); the *Nayade* very well: but, after all, the demure French curtsy is perhaps the most graphic appeal to the heart of an admirer.

But we have all this while, in our personal attentions, forgotten the literary portion of this publication, namely, a poem to each of the plates by Mr. F. W. N. Bayley. These illustrations are very apt and suitable. We select "*La Napolitaine*" as a fair specimen:

"Oh, Napolitaine!—does the gondola glide
In thy bright sunny land, o'er the blue summer-tide?
Does it fling the white foam in defiance around,
Does it break the stream's slumber, and wake the low
 sound,
That will rise from the waters, and float like a tune
'Neath the stars of thy heaven, and the light of thy
 moon?
O'er thy river of gold, doth it bound in its pride,
Fit home for a lover—fit bark for a bride?
Till the oars play no longer—the anchor is cast
In the bed where it seeketh its true rest at last!
Some say it resembles a young flying dove,
Or a white summer-cloud that is floating above—
Or a bird on the wing—or a swan on the stream—
Or the light fairy forms of a beautiful dream—
Or the dolphin that glideth along the calm sea—
But, Napolitaine! I compare it to thee!
They say it is musical—surely the fall
Of thy foot 'mid the stillness that hushes the hall,
And the echo it wakes, is more musical still
Than the dash of the oar or the tune of the rill!
They say, little fairy! they say it is light,
But have we not gazed on thy dancing to-night!
The rose on thy young cheek, the laugh on thy face,
Thy figure, that moves like a spirit of grace!
And do they not tell us, no bark of the sea
Boundeth on to its haven more lightly than thee?
And, lastly, they say, that its anchor is cast
Where the gondola seeketh its true rest at last.
And hast thou no anchor of joy too, sweet maid!
To cling to when brighter and fairer things fade?
Have they smooth'd thee no pillow, as soft or as dear,
When thy dancing is past, and thou leavest us here?
Oh, yes! thou shalt lie on the wings of a dove,
And find in thy bright home a haven of love;
And thy pillow of beauty—thy harbour of rest—
Shall be what thou seekest—a young lover's breast!"

We must find some fault: what is a "larkling," a bird mentioned in the *Flore*? Our ornithology refuses to acknowledge it.

The work, by the by, is very handsomely printed.

The Coronation Service; or, Consecration of the Anglo-Saxon Kings, as it illustrates the Origin of the Constitution. By the Rev. Thomas Silver, D. C. L., St. John's College, Oxford. 8vo. pp. 188. Oxford, 1831, Parker; London, Murray.

THIS is an able, and, for its research, a very interesting publication, though so diametrically opposed to the liberal ideas of government prevalent in our time, that it is not likely to be a very popular one. Dr. Silver adheres, with something like old opinion, to the divine right of kings; and if he does not carry the doctrine the whole length of some of the writers on his side in politics, he goes a great way in maintaining that all power and authority do not emanate from the people, but from God, and the conjunction of religion with the polity of the state.

One of his chief arguments rests on the ceremony of the coronation, in which he contends that the church founded by the Almighty consecrates the monarch to certain duties, and that the people, from time immemorial, were in fact no parties to the contract. Yet St. Dunstan, in his famous sermon, says, "It is the duty of a consecrated king, that he misjudge no man;

that he defend and protect widows, orphans, and strangers; that he forbid robbery, and unrighteous marriages, and those within improper degrees, and entirely prevent them; that he shall remove witches and sorcerers, and drive from off the earth murderers and false swearers; that he nourish the poor with alms; that he call the ancient, the wise, and the good, to his councils, and set righteous men as his ministers: because, whatsoever things these do wickedly through his fault, he shall be punished for it all on his own account at doomsday."

The author tells us elsewhere: "If any person would give himself the trouble to peruse this most ancient book of law, he would perceive the Sacred Writ forms the very basis of the British constitution, and that the spirit, and the very arrangement and forms of our law, frequently originate either in the Bible, or the constitutions of the Holy Land."

"The nature of the power of government does not seem to be fully understood; neither is its origin, nor the objects it has in view, clearly ascertained. Both with respect to the principles upon which it should be conducted, and the persons who should administer it, there are few unerring rules. In the discussions which have arisen, none have been attended with more important consequences than those which treat of the origin of power. It is a maxim assumed by a class of writers of considerable reputation, that all power springs from the people; and this dogma is gradually sinking deep into the public mind, and obtaining the force of an incontrovertible truth. The writings of Locke in this country contributed much to the introduction of this opinion. But if all power springs from the people, it must follow as a consequence that all power must return to them; where it begins there it must end, and all laws must be subject to their caprice. The effects of this belief are already felt in the unsettled state of even the most powerful governments of Europe. Perpetual mistrust and contention seem to have arisen between the governors and the governed; society appears on the point of dividing itself into parties, each considering its interests as different and irreconcilable; it is also left exposed to the risks attendant on constant changes, or even to the chance of possessing no government, in case the people, the supposed source of supreme power, should choose to withdraw its support. By the people also, in the sense in which the term is generally used, mankind are considered in a mass simply with regard to numbers, and abstracted from those relations and classes, into which social order requires that men in some degree or other should be divided. The maxim, that all power originates with the people, in its most unrestricted sense, shuts out the Deity from his own creation, and leaves man to the regulation of his own conduct, except in matters in which he should be pleased to check himself. But in its more limited signification it means, that there are no powers exercised by men in governing their fellow-men which do not originate amongst themselves. But this position cannot be proved, neither is it a truth considered historically. Certain portions of power may be said in most governments to begin and end with the people; but there are also certain powers which issue from an authority superior to man. These are fixed in their principles and nature, and the people cannot annihilate them without a violation of the laws of duty and good sense, and of good and evil; and the breaking them would, as is usual on similar occasions, bring with it its own punishment. The persons exercising

these powers may be responsible to the people for their proper use, and the joint consent of the people may be necessary to their right action. But neither the power, the right, nor the privileges, nor the purposes for which they were instituted, originated with man, and therefore they cannot properly be set aside by man. These maxims are not agreeable to the political philosophy prevalent in the present century, but traces of them may be found in every age, and in many nations, but chiefly in our own, blended with other ancient and present usages."

Our last quotation pretty clearly expounds the position taken up by the learned author; and, it will be conceded, most skillfully maintained on Christian, historical, and philosophical principles. When he proceeds to argue for the British constitution (no matter how impaired by time or abuses) on account of its being built on the Mosaic laws and the practice of the Jews, we hardly think his reasoning worth notice. The following is more curious:

"It is a most important mistake to suppose, that because our Saviour has said his kingdom is not of this world, that it is not of this earth; yet this mistaken interpretation has of late led many authors to quote this expression as authority for decrying the union of the church and state. In the earlier and happier ages of mankind, these powers were one; they have a natural attraction, and there are many prophecies which point to their final reunion."

Again:

"There is," he says, "the despotism of one and the despotism of the many; and though apparently different and opposite, yet they move in the same circle, generating each other in their movements. To these, on either side, the privileged orders present an immovable barrier; and if they are not removed, they will, in the present age, perform their duty in rescuing the people themselves from the danger that will surround them, should they act upon the maxim that all power springs from them. The people are free to choose and to recognise, but there are some powers they can neither create nor extinguish; and these are the guardians of substantial liberty; between these our historians recount perpetual struggles; but these only shew and prove the efficacy of these privileged orders in securing the state, by the powers balanced between them. The rights vested in the crown are marked out, in a great measure, by the titles which the early law-writers give the king. He is not in law a part of either the estate of the realm, or of parliament, but is recognised as an antecedent pre-existent authority. He has a prerogative, or a presupposed power. This state maxim may be traced in the patriarchal institutions of the *Cymri*; as the father of the nation, all the land was held of him. In the Saxon writings, he is called *Christus Gospels*, or *Messenger of Christ*; and in the Latin, the *Vicarius Christi*; the *caput et principium et finis* of the different estates; and his public and private rights and property are mixed together and almost inseparable, and held exactly as the rights of any freeholder; liable, like them, to forfeiture on misconduct, but as secure and immovable where the duty is done.

"As the present House of Lords are the chiefs of that estate of the realm who held regalities of the crown, it will sufficiently account for their being the supreme court of justice: they always presided in their own courts, they made collectively the supreme court of judicature for the empire; but the power still remained with the privilege of primogeniture, or those who represented it. In no period of our

history have the Commons ever pretended to act as a court of judicature, except during Cromwell's usurpation; and should they ever attempt to seize this power, this act alone would enslave the country. At the consecration, the peers of parliament still take the oath of fealty and homage; but no lord of a manor, unless a lord of parliament, probably even knows that there is such an oath, but remains in total ignorance of the principles upon which the manorial rights were granted, and the duties connected with them. But the general position of the peers in the constitution make them the most valuable part of it, and the natural trustees of its most ancient and important privileges and laws. So long as a nation shall have dignity and virtue to consider the preservation of the principles upon which the religion, the laws, and the customs of their country have been founded of more importance than mere money-matters; so long will the House of Peers be considered as superior in importance as it is in rank and age. The Commons, as an estate of the realm, are as old as the Lords temporal or spiritual. But the House of Commons, as an estate of parliament, is of much later date. The rise and progress of the Commons demonstrate some important truths, not very favourable to the popular theories of the day.

"The troubles at the Reformation have shown how clearly religious and political opinions are allied; and that one cannot be disturbed without endangering the other. The British constitution is the work of the privileged orders, and those orders are inseparably connected with the Christian religion, and, in our history, this union has given them their power; without this assistance it is vain to support them: the form may remain, but the spirit that animated them, and made them effective, will be fled, and they will soon be swept away.

"It is the disposition of the present generation not to submit to any power that checks the will of the people, the supposed sovereign. It is not probable, that any useless or unfounded distinctions will be long suffered to exist; and those who claim the benefit of these privileged orders cannot expect to enjoy them, and, at the same time, trifle with or deny the religion that supports them; both have moved so long united in the course of time, that there is no reason to mistrust their energy to carry the country through the untried difficulties and dangers that may await the remainder of their course. But the foundations of the state and church were laid at the same time in these islands; and it is matter of doubt whether the one could exist at all, and the other exist in security, without this junction. It is one of the many advantages attending the Christian religion, that it makes men sensible of the corruption of their own nature, and consequently of the necessity of government. There is a natural affinity, and a moral attraction, between certain principles of government and the truths of revelation; as there is, on the contrary part, between modern political philosophy and infidelity. The perfectibility of man, the sovereignty of the people, and tenets similar to these, are generally found leagued with religious scepticism. But it may be reasonably doubted, whether a modern philosopher, as he recedes from revelation, does not in that proportion become incapable of legislating for man. He cannot form any correct notions of the being for whom he has to provide laws. He will not allow, and consequently he cannot guard against, the evils with which human

nature is surrounded. He is ignorant of the elements of which man is composed, of his real position as a creature in the scale of being, and of the peculiar circumstances in which he is placed. Amongst other blunders, writers of this description are continually imputing the miseries of mankind to the errors of government, when, in truth, the faults are mutual, and a corrupt people necessarily produce a corrupt government. This view of life drawn by philosophy excites an intercourse of perpetual agitation and jealousy, in which its business is conducted, as if one class was necessarily in a state of natural hostility with another, and that they were ordained to hate and prey on each other: but these angry feelings are of modern date, and they are the result of the false view of their own circumstances, which the writers of the present day hold out to the people; but the subordination of former times was ready, cheerful, and even affectionate. In all classes a dignified submission was found, to use the language of Burke, which was produced by the nature of the feelings from whence it arose: but it may prove, that society having been ruled by these feelings so long, cannot be governed without them."

We have quoted somewhat largely from this work, as the production of a learned man, and once professor of Anglo-Saxon at Oxford, and also as treating of a subject much discussed at this period; but we desire it to be understood that we have done so, simply to do justice to the publication, without adopting its opinions.

Constable's Miscellany, Vol. LXVII. Switzerland, France, and the Pyrenees, in 1830, Vol. II. By Derwent Conway. Edinburgh, 1831. Constable and Co.; London, Hurst, Chance, and Co.

THOUGH this volume has been out some time, we could only now find space to render the justice due to it.

Mr. Conway is one of our very pleasantest tourists; he travels for the benefit of others as well as his own. Lively and accurate, we know few pages that so exactly picture what they describe. One cause perhaps is, that our traveller has really seen what he writes about: his notes are taken on the spot, hence they have the animation of life, and the interest of truth. We shall collect a few of the most miscellaneous varieties.

"The Place Bellecour of Lyons is a much finer square than the only square in Paris, the Place Vendôme; and the greater part of it has been erected since the Revolution of 1793. At that period it was the scene of dreadful outrage. The destruction of this square was made a republican fête. The infamous barbarian Couthon, who was too infirm to walk, was carried round the Place on a palanquin, and gave the signal of destruction by striking the condemned house with a small hammer, saying, at the same time, '*Maison, je te frappe de mort!*'"

There is much truth in the ensuing remarks:

"It is not at all uncommon to find, in the page of the traveller, some such observation as this—'The city presents a magnificent and almost magical effect when viewed at a distance. As you approach, it seems a city of palaces; but, no sooner do you enter it, than the delusion is at an end; the streets are narrow and gloomy; you are at once shut in among high walls, and shut out from the light of day.' So talks many an intelligent traveller; and indeed, I scarcely know any book of travels in southern countries, in which narrow streets are not spoken of as a blot upon many a fine

city. Now, so far from agreeing with these travellers, I bless narrow streets, and almost feel inclined to doubt, whether those who speak so much in disparagement of them, have in reality visited the places where their blessings are felt. The peculiarities of every country are chiefly referable to their climate; and there is equal wisdom in the brick floors, dark apartments, and narrow streets of the southern cities, as in the thickly matted rooms and heated stoves of the north. Peculiarities in the usages of the people, also, arise from the climate in which they live; and customs that would justly excite astonishment in one country, ought not to create even a smile in another. Without a due consideration of the influences and results of climate upon the habits of the people in different countries, a traveller is apt to draw many false conclusions. He might conclude, that in Naples, or in Seville, there is more distress among the lower orders than in London, because, in these cities, he sees hundreds lying asleep during the night in the streets; but the same persons who are houseless in Seville, would not be houseless in London. Some miserable hovel would receive them. It is merely that the climate measures the scale of necessities."

The French do not appear to be very great favourites with our author.

"With the recollection of these *tables d'hôte* fresh in my memory, I cannot resist the opportunity that seems to be open to me in this volume, of calling in question the correctness of two very common, but very erroneous opinions. One of these is, that the French are the most polite people in the world. Now, I think precisely the reverse; and that the middle classes of Frenchmen have the smallest share of true politeness of any people in the world. A very selfish man cannot be polite; and a very self-conceited man cannot be polite; and I think no one who understands much of French character will hesitate to admit, that it is not untinctured by selfishness or vanity. No place is better suited than a *table d'hôte* for discovering these weaknesses, especially the former; and I think it impossible that one can rise from a *table d'hôte* in any part of France, without an unfavourable impression of French character, particularly of French politeness. Happy is the man who, at a French *table d'hôte*, is seated near the president or general carver; or who has the courage to be independent of etiquette, by drawing towards him whatever dish he fancies, and helping himself, without regarding his neighbours. I have a hundred times been surprised at the cool effrontery with which a Frenchman will sweep the eatable morsels from a dish of *volaille*, and pass the bare bones to his neighbour with the prettiest bow of invitation, and perhaps even, '*Mon-sieur, veut-il prendre un morceau de volaille?*' when all the *volaille* has been transferred to his own plate. But another failing besides selfishness contributes towards the incivility of a Frenchman at a *table d'hôte*—I mean his love of eating. Here I come to the other erroneous opinion entertained of the French—that they are small eaters. The French are enormous eaters; and I do not really think there are in the character of the French any more prominent features than their love of eating what is good, and their love of eating much. The French endeavour to get over the charge by saying, that if they eat of many things, they take little of each. This is far from the truth. A Frenchman will take of soup and *bouilli* alone, as much as would suffice for the dinner of an Englishman of moderate appetite. But

this is only the commencement of his dinner: his *côtelette* is to come, his *poisson* is to come, his *volaille*, his *rôti*, his *gibier*, his *légumes*, his *crème*, his dessert; and along with this he devours—for eat would not half express the eagerness of the action—he devours as much bread as would serve the household of an English family for a day; and while he thus gormandises, he will turn round to you, and say, ‘*Vous autres mangent beaucoup plus que nous.*’ And let it be recollected, that it is not once a day, but twice or three times, that a Frenchman makes the tour of soup and beef, and cutlet and fowl, and roast, and vegetables, and dessert. His *déjeûné à la fourchette* scarcely differs from his dinner; and his supper is only a third edition of the same; and yet people are so absurd as to say that the French eat little. I lay it down as a general position, that every Frenchman is an epicure; and that epicurism is not unfrequently allied with gluttony. I have never seen the people of any country lay so great a stress upon their dinner as the French. *Bon dîner* is scarcely ever out of their mouths; and not French men only, but French women also, married women at least, are entitled to be classed among the epicures. I ought not to be entirely ignorant of French propensities and habits, for I have spent altogether five years in France; and I wish I possessed as much the power, as I have the inclination, to draw a true portrait of French character.”

Again:—“One of the days I spent at Montpellier chanced to be some *grand jour de fête*. In the evening the promenade was illuminated, and all the inhabitants of Montpellier assembled there. Griefs, cares, regrets, anxieties, seemed all to have been left at home. There were holiday faces there by thousands, as well as holiday dresses; and I believe the hearts and minds had their holiday too. One grand distinction between French and English character lies in this,—that when the English determine to be happy, they never succeed; while, on the other hand, when the morning of a holiday arrives, when a *jour de fête* invites a Frenchman to join in its gaieties, he resolves to enjoy himself, and his resolution is carried into effect; he is always ready to say,

To-night, at least to-night be gay,
Whatever to-morrow bring.

How extraordinary a riddle is French character! Made up of contradictions, it defies the philosopher, and staggers the phrenologist, with all his skill in balances and neutralisations; though, I confess, I think these seeming contradictions may be explained more satisfactorily by the disciple of the school of many organs, than by the believer in the mind one and indivisible. An enthusiast in war, an enthusiast in science, an enthusiast in trifling, and yet no real enthusiast after all—for how can there be enthusiasm in a people destitute of poetry and sentiment? A Frenchman seems to be an inexplicable being. But all the apparent contradictions in his character have their origin, I suspect, in one passion—national vanity. It is not the love of fighting that leads a French army from Paris to Moscow, but *le gloire*. The philosopher who sits at his midnight lamp, cannot contemplate his triumph and discoveries, without mixing them up with *la gloire* of another kind—the scientific reputation of *la grande nation*. And when a Frenchman hurries to the *Théâtre Français*, to witness the representation of a comedy of Molière, or a tragedy of Racine or Voltaire, a view to his own gratification is not the sole impelling motive; he fancies—nay, he is sure—that *la*

comédie Française is the most perfect in the world; that there never was but one Racine, or one Voltaire; and that it is a duty to uphold and patronise that which so nearly concerns the glory of his country. The national vanity of the French is boundless and incurable. It embraces the whole range of the arts and sciences—all that in which men contend for pre-eminence, or pride themselves in. It is this that carries a Frenchman to the *Académie de Musique*, to listen to the worst music in the world—this that crowds the gallery of the French school of painting, and leaves the Italian school neglected—this that produces a thousand copies of David, and not one of Raphael, or Titian, or Murillo—this that endured the despotism of Louis XIV., because he was the vainest of kings, and loved *la gloire*—this that tore down the bastille, murdered a king, and abjured God, because such things were a spectacle for the world to gaze at—this that received the yoke of Napoleon, because the spectacle of revolution was no longer new, and because his ambition and *la gloire Française* went hand in hand—this that encouraged industry, commerce, and manufactures, during fifteen years, because France could not be great without them—and, finally, this that now threatens to desolate Europe with the scourge of war, because *la grande nation* is beginning to be forgotten. Much good and much evil has arisen from the predominance of a passion like this; but it is evidently impossible to calculate upon the actions of a people who are so governed.”

Anecdotes.

“I was amused at a small town between Montpellier and Beziers, at which I stopped to dine, with the conversation of a French gentleman at the *table d’hôte*, who entertained the company with an explanation of the reason why the English travel so much. He said this was owing to a disease brought on by the fogs; that it was called in France *la maladie noir*; that its symptoms were low spirits, and a desire to move from one place to another; and that the only cure was foreign travel. He appealed to me, whether or not he spoke the truth; and, as I really thought he had described the disease fairly, I admitted that he was right; and that, before I left England, I was grievously afflicted with it.”

“The soldier who accompanied me round the citadel complained bitterly of inaction, and the long continuance of peace. I asked him, what country he and his comrades would like to make war upon—*l’Espagne*? At the mention of so unworthy an enemy as Spain, he only smiled. I next mentioned Russia;—he shrugged his shoulders, as if he would have said, that fighting against frost and snow was no fighting at all. I then mentioned England; he said the English and French were best in friendship;—‘*dependant*,’ added he, significantly. I knew the force of the word, and saw that the idea was not disagreeable; but it is upon Prussia that the French desire to take vengeance. The mention of Prussia called forth a ‘*sacre*.’ He said he was ready, and all Frenchmen were ready, to march against Prussia. I have never found any variation in this statement in France. The French hate the Prussians even more than they hate the English; and I think it may be safely predicted, that, should a French army ever set foot on Prussian soil, it will be a war of extermination.”

“In the vault of the Cordeliers there was formerly a number of dead bodies, so well preserved as almost to emulate life. I mention this only, because, about forty years ago, a tra-

gical event was connected with this vault. The son and heir of one of the first families in Thoulouse engaged, for a wager, to spend an hour at midnight among the dead bodies. He went; but not returning, his companions sought him, and found him in the inside of the open door, dead. The key of the vault was found in the door, and a part of his clothes entangled with it. He had no doubt opened the door, and, upon endeavouring to go forward, had found himself held—and fear had done the rest.” This is also an old English story, only in our version the *finale* is not so tragic.

“The summit of one of the towers is called *Pierre de l’Aigle*, from the following tradition:—Charlemagne laid siege to the castle, and, not being able to take it by assault, resolved to force it to a capitulation by starvation. But Mirat, the lord of the castle, chanced to be an especial favourite of Notre Dame du Puy (St. Pé), and she sent an eagle to the summit of the castle, carrying in its beak a large fish alive. Mirat, taking advantage of this miracle, sent the fish to Charlemagne, as a proof that the garrison was not without food; and Charlemagne, knowing that a live fish could not be had on the top of the hill, perceived that it was a miracle; and, finding that Mirat was under the protection of the Lady of Puy, proposed less hard conditions, and that, in place of surrendering the castle to him, it should be surrendered to Notre Dame du Puy. It is strange, that the Lady of St. Pé should have taken so great a fancy to Mirat, who was not a Christian; but the tradition adds, that he was afterwards baptised.”

Specimen of difference in taste.

“The expense of accommodation at St. Sauveur differs, not according to its excellence, but almost solely according to its situation. The place consists of one very small street; the front-rooms look into the street, and the back-rooms over the Gave, and towards the delightful scenery I have attempted to describe; for one side of the street is built upon the precipice above the river. The expense of those rooms which are in the back part of the house, is therefore double the expense of those which look towards the street. I was beginning to despair of finding a room to my mind, when a French gentleman, who occupied an apartment towards the river, politely offered to cede his apartment; but he was candid enough not to disguise the motive of his apparently civil offer; he said he was tired of his room, and that it was *ennuyeux* to look always at mountains and rivers.”

Predilection of the French for every thing Parisian.

“Leaving Paris in the diligence for Aix-la-Chapelle, I chanced to observe, in conversation with a French gentleman, that I was tired of plains, and that a country without mountains could not be interesting; and, observing that a lady opposite seemed to listen to the conversation, I turned to her, and said, ‘You have no mountains, madam, in Paris.’ ‘*Je vous demande pardon, Monsieur,*’ said she with the utmost seriousness; and, with something of an offended air, ‘*nous avons les Montagnes Russes.*’ ‘Ah! *c’est vrai,*’ I replied; ‘*mais pardons!*’”

We reserve a few more pleasant anecdotes for our next No.

Ode to Wellington. By a Labouring Cottager. 8vo. pp. 16. London, 1831. Watson.

THOMAS POYNTER, jun. of North End, Fulham, is the individual who furnishes us with this bright example of the “March of Intel-

lect," and startling illustration of the advantages to be derived from the "spread of knowledge!" He, it seems, carried on a controversy with Major Cartwright, in 1818, respecting the sex of Liberty. The Major, he tells us, "insisted that it was a *masculine virtue*, while I had arrayed her in the garb of the female sex." But the most important part of this dispute, at the present time, is, that Mr. Poynter, jun. declares, "I shall not now alter my opinion. *The fighting girls of Paris* have convinced me that it is not entirely a *masculine virtue*."

This momentous affair, however, is only settled in a note; the gist of the publication is in rhyme, or Fulham North End poetry. Mr. Poynter, jun., at the very outset, points to the source of his inspiration, which is nothing else than "blue eyes;" for, apostrophising England, he sings:

"Yon joy upon her rocky shore
Shall echo to the waves;
Her blue-eyed girls condemned no more
To basely suckle slaves.
Oppression's darkest night has past
Our blue-eyed girls shall sing."

And at the close—

"But Liberty, triumphant now
In England's glorious isle,
Shall speed the shuttle and the plough—
Her blue-eyed girls shall smile."

Far be it from us to follow the bard whither all the infatuation of these blue eyes leads him; he is the most exclusive of writers, annihilating time and space with wonderful facility and rapidity. Here we have Rodney and Digby fighting.

"Near to the Came-isles* shore;"

and next line the burst—

"Spirit of Ney, inspire my lay."

And so, by leaps, we are carried from one subject to another, and not only from one end of the world to another, but to new worlds, Tartarus, fairies, visions, ghosts, &c. &c. &c., and all, as the showmen with their boxes say, in the wonderful small size of sixteen pages. These pages, however, are quite enough to "spill the proud renown" of the Duke of Wellington, of whom it is finely, though not very intelligibly, said:

"Russia's barbaric chief might hail,
And clasp thee to his breast;
On every other land thou'dst fall
To have thy footsteps prest."

How different was Cincinnatus!

"No pension-seeking slave was he!"

He was simply the Roman Dictator, invested with absolute power; and yet

"What must have felt Attilla's heart,
When, with the wreath of victory
Returned, he'd to his plough depart,
Leaving his laurels on her knee!"

which beautiful stanza we the rather quote, for the sake of the affecting appeal attached to it in a note. "I leave," says Thomas Poynter, jun. "the loving wives of Englishmen to answer this question. Married ladies, help me—do, my dears!"

Oh! the ingratiating tiff o' the work!—we must leave him alone with his "dears" in his glory.

Mulman's Tales, adapted for the higher Classes of Youth. 12mo. pp. 310. London, 1831. Souter.

The writer supposes the family of a Colonel Stanley, for whose edification certain tales are

* Have looked Guthrie's Geography and Maite Brun, but cannot find out these islands: perhaps it is an anallie shore, the (anallie being mentioned in the French dictionary.—*Printer's Devil.* A happy conjectural emendation.—*Ed. psalm.*

† Quere, Nay? Marshal Ney is called "the premier grenadier of France," and no one ever invoked the spirit of a premier grenadier to inspire poetry.—*Printer's Devil.*

recited; and circumstances are imagined to prove the importance of correcting erroneous feelings and dispositions, and of implanting, instead, sound principles and a just mode of thinking. Without laying claim either to elegance of style, or to much ingenuity in the way of invention, there is sufficient ability displayed in this volume to recommend it to the class for which it has been composed. It is likely to excite an interest in the young; its precepts are good, and its whole tendency morally beneficial. We do not know how the authoress reconciles the ages of the Stanley family with the usual periods between children of one mother; for according to her statement (pp. 2, 3), it would appear that John was 15 years of age, Masilda 14, William (not a twin) also 14, Henry 12, and Julia 12. In books of instruction it is desirable to be very accurate, even in family matters.

A Trip to Paris, in Verse. By T. S. Allen, author of "Original Rhymes." Pp. 113. Dudley. London, 1831. Hurst and Co.

They say poetry is a drug now, and does not sell. We hope it does, for surely else All Bedlam or Parnassus is broke loose.

It is melancholy to see such things in print; and the only consolation is, that the folly is innocuous, except to persons in our situation, who must have a portion of time wasted by such absurdities.

ORIGINAL CORRESPONDENCE.

Religious Customs, &c. of the Natives on the Gold Coast of Africa. By Major Ricketts.

In every town of consequence, pytnins (a kind of magistrate) are chosen by the inhabitants—generally from among the elder males—for the purpose of hearing and determining upon all complaints. The pytnins are also the council of the caboccer, or chief of the place; with whom they sit in court or council on any important question of public interest. They wear, when employed in their official duty, a peculiarly constructed hat of straw, round the crown of which is tied a vine, emblematic of wisdom. Some of the natives possess great eloquence, and shew much animation and cleverness when pleading a cause in which they feel interested.

The fetishmen, so called from being supposed to possess supernatural powers, are exceedingly artful and full of deceit; they infuse into the minds of the people the seeds of superstition, with the view of being consulted on every occasion of trouble. An individual who has been robbed, or has experienced some other calamity, immediately consults a fetishman to discover the thief, or cause of the evil; who, after making use of some pretended magic art, and having obtained answers to questions put by him to the applicant, unhesitatingly denounces some unfortunate being as the robber or witch; and nothing can exonerate the accused, if he be poor, from the charge thus imputed to him, although circumstances might tend to prove him innocent of the crime. The fetishmen, or priests, are without difficulty bribed, which they accept under the cloak of having first consulted the deity, who had agreed to receive a certain sum. They will also afterwards demand more money in the name of the fetish, whom they will state as not being satisfied. So great is the dread of the natives to offend the fetish, that they even pawn their own children to raise the means of appeasing his wrath; as if implicit obedience should not be paid, horrid expedients are re-

sorted to; and should forgiveness be implored, the avenging fetish expects a handsome present before he is reconciled.

When a person is afflicted with any alarming disease, application for relief is made to the fetishman, who, perhaps, will order an egg near hatching, or a chicken, to be laid on a certain spot in some highway, in order to transfer the complaint to the person who might unthinkingly tread upon it. Passengers noticing any of these charms lying in their way, avoid them with the greatest caution, and no one will dare to remove them out of the path.

At Cape Coast, the women, who are generally employed on this great occasion, called the yam customs, (celebration of the yam harvest,) make public offerings in a body to the great fetish; which is a large rock lying close to the walls of the castle. It breaks the great waves of the sea that incessantly dash against it, and thus preserves the fortification from injury by the surge. The waves come with such fury at times, that the spray is sent completely over the ramparts. Another great fetish which they have is a salt-pond, about a mile from, and to the westward of the castle; in which, at certain periods of the year, large and delicious mullets are taken. Previous to the offering, consisting generally of yams, eggs, palm-oil, and the blood of some animal, being made, the women, with their faces and limbs chalked, parade the town in a body, each carrying her own portion in a calabash, or an earthen vessel. They then visit the rock, on which they deposit their oblations; and no sooner do they depart, than the turkey-buzzards, apparently aware of what is going on, approach and devour the offerings. These birds are so very tame that they will hardly get out of a person's way; and it is considered a great offence to the fetish to destroy any of them. Every family of consequence have also their own private fetish, which they keep concealed in their houses, but denote its presence there by signs hung outside on the doors. This has a great effect in deterring thieves from the premises.

They bury the dead in their houses. The death of a member of a family is promulgated by discharges of musketry; and the females with their friends publicly lament the event. On the day appointed for interring the deceased, the different branches of the family, with their bodies, faces, and limbs chalked, and dressed out in all their finery, parade the streets separately, following a chest containing bottles filled with ardent spirits, with a piece of cloth laid on the top of the chest, which is carried by a young female. In this manner each branch of the family, singing as they proceed, arrive at the place of burial. If any of the relations refuse to contribute to the expenses of the funeral, they are for ever after scouted—hence this parade of spirits and cloth. The scene which takes place, from the profuse use of the former both by men and women, and their lamentations, added to the stunning noise of the drums—the discharges of musketry, generally over-loaded—and the piercing voices of the singing-men, who come at times from great distances to partake of the libations, and for hire—can better be imagined than described. These scenes of revelry, if the deceased was of consequence, last frequently for a week; and repetition of it commonly takes place every seven years after, which, if possible, is still more expensive; and families, on such occasions, have been obliged to pawn some part of themselves in order to bear the expense. Cattle, sheep, pigs, and poultry, are purchased,

and with the assistance afforded by friends, the scene of riot is kept up for many days.

The birth of a child is announced by discharges of musketry. The women are not confined after the event, but proceed in their occupations, as if nothing had taken place.

When a young female becomes marriageable, she is dressed out in the gayest manner her friends can afford, with a profusion of gold ornaments; and a number of small silver keys, hung on a silver ring, is suspended by a string round her waist, and hang down low in front of her. She is then paraded round the town, to give notice that she is marriageable. The young lady pays visits to all her friends and acquaintances, who congratulate her on the happy event, and make her presents.

At a certain period when a female is pregnant with her first child, she is taken to the sea-side, or to some other place where the water is dedicated to the fetish, and ducked. On her way she is pelted by her friends with dirt and filth, which she calmly bears, conceiving it an honour done her. The ceremony being ended, she is clothed in new drapery, and returns home amidst shouts of congratulation.

ARTS AND SCIENCES.

CHOLERA MORBUS.

To the Editor of the *Literary Gazette*.

In the *Gazette* of August 13th, 1831, I find the following article under the head of Paris, July 22d:—

"The cholera morbus appeared for the first time in 1817, in the Delta of the Ganges. Jessore is the native country of the cholera morbus. It is well to know this, considering how little we are acquainted with this disorder."

Notwithstanding this positive assertion, I must be allowed to say, that I think it very difficult to assign exactly the native country of the cholera morbus, or to mark the exact date of its origin. If but little is known respecting the disorder, in this case the blame must fall on those who might have known more had they taken the trouble to inquire.

If the cholera morbus appeared for the first time in 1817 in the Delta of the Ganges, be it so; but the cholera morbus was much older in India, and was known at least 249 years before that date; for in 1568 there was published, by Dr. Garcia da Horta, a native of Elvas (a very able, learned, and diligent Portuguese physician), a treatise in the Portuguese language, in which he states very clearly what the cholera morbus is, under different names, its principal causes, its symptoms, and the mode of curing it. The title of this treatise is "*Colloquios*, or the simples and medicaments of India, and of some medicinal plants found there; treating of some things pertaining to practical medicine, and other useful information. Goa, pro Joannes de Edem a 10 de Abril 1568." So we read in Barbosa, *Bibliotheca Lusitana*, tom. ii. p. 325.

This invaluable work is not to be met with either in Portuguese or Latin: it is not in the public library at Lisbon, nor in some others where I inquired for it. However, in the library of our Convent of Nossa Senhora de Jesus at Lisbon, there are two Latin editions of Dr. Garcia da Horta's work, which are of the number of those mentioned by Barbosa as published in Antwerp. I have before me the fourth edition, which bears the following title: "Aromatum, et simpliciorum aliquot Medicamentorum apud Indos nascentium Historia, primum quidem Lusitanica lingua... conscripta,

a D. Garcia ab Horta, pro Regis Indiarum Medico: deinde Latino sermone in epitomen contracta et iconibus ad vivum expressis, ocellisq. illustrata a Carolo Clasio Atrebat. Quarta editio, castigata, et aliquot locis auctior. Antverpiæ, ex officina Plantiniana, apud Viduam, et Joannem Moretum, 1593. Cum gratia et privilegio."

In chap. xxiii. p. 207, after speaking of *our* *our*, he thus writes:—

"Sed quoniam in cholerice passionis mentionem incidimus, ejus causas, signa, et curandi rationem hic subjiciamus.

"*Cholera* Græcis, cholera Latinis (vulgo medicorum cholericam passionem nominat), Indis Morxi, id est, malum ob nimiam cibi ingurgitationem contractum, Lusitanis vocabulum corruptum Morderi, Arabibus Hacheiza, tametsi corrupte legatur apud Rhazen Saïda, morbus est acutissimus, his præsertim regionibus, presentibusque eget remediis. Nam plerumque intra viginti quatuor, interdum vero decem horarum spatium hominem necat; et quando tardissime, quarto die.

"*Causa*.—Solet accidere ob multam crudelitatem, aut alimentorum pravitatem, interdum etiam ob immodicum veneris usum, idque magna ex parte Junio et Julio, qui sunt Indis menses hiberni.

"*Signa*.—Pulsus languidus est et concisus, difficilis respiratio; sequitur frigidus sudor foris, intus vero incanditum et aitis, oculi convulsi, vertigines torquent, frequens vomitus, et per inferna excretio, ut tandem virtus expultrix plane coincidat, et subsequatur musculorum contractio et tensio.

"*Cavatio*.—Danda est opera, ut confestim et sine mora succurratur; ventriculus vitiosis humoribus primario evacuetur medicamento vomitum elente, quale est quod hordei et cumini decocto (quod in hoc morbo efficax remedium esse comperi constat): alvus vero clystere ex hordei et furfuris decocto, oleo rosaceo, inquam, oleo rosarum, et melle rosaceo colato eluatur: corpus universum panis asperis et calefactis fricetur, collum, dorsum, et crura calidis oleis inungantur, quale est castorinum et rutaceum. Ubi exacta apparuerit concoctio, datur egro stillitius liquor perdicis, aut gallinæ pinguis, e qua pinguedo exempta sit; deinde cum pauxilla aqua canellæ et rosacæ, momentoque corallii et auri, injecta eydonia frustulatum concisa; quæ si recentia non inveniuntur, muria condita, prius tamen albo vino diluta. Aqua nulla propinetur, aut, si omnino opus est, pauxillum datur, in qua aurum ignitum extinctum sit: interdum vinum cum canella, tametsi in victus ratione hujusmodi calida raro præscribitur, sed foris dumtaxat admoveatur (roborando videlicet ventriculo) inunctione ex oleo mastichino et nardine, deinde canellæ facta.

"*Peculiariora vero sunt remedia theriaca vino aut aqua rosacæ, aut stillitico canellæ liore macerata, pro necessitatibus ratione, unicornis, lignum colubrinum, radix Malacensis, de quibus libro primo. Presentius vero remedium non inveni tribus granis lapis bezar (male vulgo scribitur lapis bezar), cujus supra memini; mirum enim in modum cordis vires reficit.*

"Porro eum morbum Indici medici hæc ratione curant. Propinant agris aquam decoctionis orizæ cum pipere et cumini; pedibus cauteria admovent, piper longum in oculos injiciunt: adversus autem musculorum contractiones et tensiones, validis ligaturis brachia, cruraque ad genua, deinde ad pedes usque constringunt, et suum pætre edensum (?) exhibent."

As some may doubt whether *pætre* cholericus

be the disorder in question, it may be proper to observe, that this name, as well as *diarrhæa cholericæ*, means the same as cholera morbus. *Dictionnaire des Sciences Médicales*, Paris, 1813, tom. v. And I repeat the above remark—"it is well to know this, considering how little we are acquainted with this disorder."

The other edition, which, as I said, is in the library of this convent, is also, "Antverpiæ: ex officina Christophori Plantini, Architypographi Regii cto. 10. LXIII." It is not stated what edition it is; but page 216 has exactly the same Latin text that I have copied above.

Whoever desires any information respecting Garcia da Horta, or Orta, as Barbosa writes—how eminent he was for his literary acquirements, and how much celebrity his treatise obtained him in Europe—may consult the *Bibliotheca Lusitana* of Barbosa, in the place above quoted.

FR. MAHOEL REBELLO DA SILVA.

20th August, 1831.

STEAM BISCUITS.

OUR readers will recollect that we some time ago gave an account of the new process of making biscuits by steam, which was then introduced at the victualling-yard, Portsmouth. Since that period the manufactory has been continued and improved, and we have now on our table a specimen-biscuit of last week's batch. It presents us with the latest improvement, which though very obvious and simple, is one of much utility, consisting merely in the form of the biscuit, which is hexagonal instead of the usual round shape. It will immediately appear how much more suitable this is for stowage than the round biscuit, how much better it will pack for keeping, and how much less room it will occupy. Thousands of hexagons, cut by the machine with mathematical precision, can be placed both laterally and in perpendicular layers without losing an inch; while in the round, there was almost as much of waste space as of solid package. The importance of the change on ship-board is of great advantage, and "as round as a biscuit" will soon be an antiquarian saying.

FINE ARTS.

NEW PUBLICATIONS.

New Volcanic Island, &c. From a Sketch by an Officer of H.M.S. St. Vincent. On stone by Haghe. R. Ackermann.

A SINGULAR, and, we dare say, very accurate representation of this remarkable phenomenon. The dash of smoke, water, lava, clouds, is tremendously beautiful. By one of our varieties it will be seen, that this picture is probably all that is left of the New Island; and, consequently, it may be known to future geographers as *Ackermann's Isle*, and not *Graham's*, as attempted by seamen, out of compliment to the First Lord of the Admiralty.

The Cathedral Antiquities of England. No. L. Hereford Cathedral, No. III. Longman and Co.

THIS concluding portion of the "History and Illustration of Hereford Cathedral" is worthy of the work of which it forms a part; and we cannot give it higher praise. We know no man whose talents and perseverance, and whose fidelity to the engagements which he makes with the public, better entitle him to encouragement and reward than Mr. Britton. It is with pain, therefore, that we read the following passage in his address:

"Authorship has rarely produced fortune to its professors; but it brings enjoyments above the common pursuits of life; and hence it has induced many men of sensibility and studious habits to embroil themselves in its countless anxieties and cares. The writer of the *Cathedral Antiquities* has had an ample share of these, but he is still impelled onward,—he is buoyed up by hope; and although 'the enlightened and liberal public,' as it is flatteringly called, has not yet remunerated him, he is not inclined to despair or retire. If encouraged by no other reward, he has had a fair portion of amusement and excitement, as well as the applauding comments of many critical journals, and of distinguished antiquaries, who feel an interest in and can duly appreciate such publications. In prosecuting the *Cathedral Antiquities*, he has devoted nearly twenty years of an active, anxious life, zealously devoted to the subject; and had public encouragement kept up rather than damped his energies, he would, ere now, have completed the illustration and historical display of all the English cathedrals. Age, however, creeps on, and imperceptibly undermines his bodily fabric and faculties, as it does the stability of churches; and all must yield to the tyranny of time. Feeling, as is natural at the age of sixty, some cuts and scratches from his sithe, and the impossibility of guarding against others which he daily aims at legs, arms, eyes, and heart, it becomes necessary to prepare for a final settlement with him, conscious that he will make out a balance in his favour."

We trust that this "balance" will not be struck for many years; and in the meanwhile, we strongly recommend the world of taste and elegant literature, not to delay discharging its arrears to one to whom it is so deeply indebted.

Villa Rustica. Selected from Buildings and Scenes in the Vicinity of Rome and Florence, and arranged for Lodges and Domestic Dwellings; with Plans and Details. By Charles Parker, Architect. Part I. Carpenter and Son.

THIS promises to be a very pleasing and useful publication; as it will no doubt furnish a number of picturesque hints for the domestic architecture of this country. It is to be completed in ten or twelve Parts; each containing two designs, with ground-plans, &c. The designs in the present Part are, "Raphael's Villa, in the Borghese Gardens, near Rome," and "A Cottage on the High-road between Florence and Sienna."

The Right Hon. Lady Dover. Drawn by Sir T. Lawrence; engraved by F. C. Lewis. Colnaghi, Son, and Co.

A PERFECT model to the young student in portrait-painting for the exquisite marking of features.

Henry, Marquess of Lansdowne, Lord President of the Council, 1831. Sir T. Lawrence pinx. John Bromley sculp. Colnaghi, Son, and Co.

A STRONG likeness of the noble Marquess. The figure is disposed and drawn with great grace. We scarcely know what to make of the back-ground; the effect of which is very singular.

Illustrations of the Bible. By John Martin. Part II.

OUR first parents, hearing the voice of God after their transgression, and their subsequent expulsion from Paradise, are the subjects of the second number of Mr. Martin's bold under-

taking. They are replete with the romantic landscape beauty, and with the rich accumulation of mountain scenery, for which that able artist is so justly celebrated.

Countess Grey and her Daughters, Lady Louisa Grey (now Lady Durham), and Lady Elisabeth Grey (now Lady Elisabeth Bulleef). Engraved by Samuel Cousins, from the original Picture by the late Sir Thomas Lawrence. Colnaghi, Son, and Co.

A CHARMING group, composed with the utmost elegance, and full of delightful expression. May we venture to say, that we think a little less violence of opposition in the masses would have improved the effect?

Her late Royal Highness the Princess Charlotte, when a Child. Engraved by F. C. Lewis, from an original Drawing by Sir T. Lawrence. Colnaghi, Son, and Co.

If the child is "father of the man," it is no doubt equally "mother of the woman." We certainly fancy that we can trace in the strongly-marked features of this slumbering infant much of the character which animated the late lamented princess in her maturer years.

The Earl of Aberdeen, K. T. His Majesty's Principal Secretary of State for Foreign Affairs, 1830. Painted by the late Sir T. Lawrence, P.R.A.; engraved by Samuel Cousins. Colnaghi, Son, and Co.

WHEN we saw the original half-length in the Exhibition at Somerset House, it struck us to be one of Sir Thomas's happiest works; and Mr. Cousins has done it ample justice in his noble engraving. In addition to the higher qualities of resemblance and character, he has imparted to the whole, and to the drapery in particular, a breadth and a solidity which have rarely been equalled.

ORIGINAL POETRY.

Translation and Paraphrase of Goethe's Lines in last Gazette.

FROM day to day, while Heaven is pleased my being to prolong,
I'll tune my lyre to gratitude, and weave it with my song.

Oh! let us prize the present time—the present, ours alone,— [own.]

Futurity no earthly born may dare to call his

Though scanty locks and withering bloom
Proclaim my lengthened age,
And bending o'er the silent tomb,
I wait my closing pilgrimage,
Yet this is mine—the present hour.
Nor infancy, in warm caress,
Its mother's hope and happiness;
Nor ruddy youth, or manhood's prime,
Can boast beyond the present time.
Dependants on Almighty power,
Succeeding moments, ere they fly,
May claim us for eternity. D. L. J.

BIOGRAPHY.

PATRICK GIBSON.

SOME doubts having been expressed respecting the great age of this individual, of whom we related a few interesting anecdotes in our Numbers announcing his death and noticing the publication of his portrait, we are requested to quote the following testimony in corroboration of our own statements, derived as they were from the mouth of Gibson himself—addressed by the Bishop of Landaff to Mr. Macartan, the painter of the portrait.

"Having taken considerable pains to ascertain the fact of his great age, I am convinced of the truth of his own statement; confirmed as it was by his recollections of persons and events connected with his earlier years. One of these recollections was his being placed, when a boy, on a table in his father's house, in the parish of Knockgraffon, county Tipperary, to read to the neighbours, from the Dublin newspaper, an account of the coronation of George the Second. In that parish he was born, July 13th, 1720, O. S. There is no register of that period extant in the parish; and it is supposed by the present clergyman, that no register was then kept.

"His father, James Gibson, of Scotch extraction, was a land-surveyor, and author of a treatise on that subject. He was brought up in the same business, and lived with his father till the year 1757, when, in consequence of some family disputes; which he related with expressions of regret at his misconduct, he left home, taking with him some seeds, by which he hoped to make out a claim to lands of a deceased uncle in the United States. At Waterford, where he went to take his passage for America, he was pressed on board the *Alcide*, a sixty-four gun ship, commanded by Sir James Douglas.* The first lieutenant of his ship, named Palliser, recognised him, having often hunted in his neighbourhood, and persuaded him to enter the service, as he could not fail, with his education, of getting forward. He is accordingly borne on that ship's books, as I have ascertained at the Navy Office, ordinary seaman, June 21st, 1757; able seaman, October 1st, 1759; and on the 25th of March, 1761, steward to the purser. Unfortunately, the practice did not prevail then of noting the age of seamen at the time they entered. He was paid off from the *Alcide*, September the 7th, 1763, and in the same year was made acting purser of the *Negro*—the real purser did not go to sea (such were the abuses of these times), but employed him for many years as a deputy, at £100 a year. In 1778 he was made purser of the *Lowestoffe*, and continued in the navy, employed in that capacity, till the year 1810, when he was pensioned on the superannuated list, being then ninety years of age. From that time he lived in a cottage of his own at Chelsea, enjoying uninterrupted health till the latter end of June 1831, when a shivering fit came on in bed; and after a few days' illness, he died on the 1st of July, 1831, within twenty-three days of completing his 111th year.

"Among the most remarkable of those confirmations which my casual interviews with him produced, is the following, which you are at liberty to use, as well as the preceding statements, for the purpose of verifying the case. He had been describing, with great animation, a dinner which he gave on board the *Princess Royal*, of 98 guns, on his return from Gibraltar, in 1784, in celebration of his own birth-day. The tables, he said, were laid in the ward-room; and to accommodate so large a number of guests, which equalled the years of his own age, 64, they were set from corner to corner each way, so as to form an X. In answer to the question, whether any of those guests were now alive, he named three or four—

* In the scuffle which took place when he was pressed, he received a cutlass wound from one of the gang, the scar of which he was wont to shew upon his muscular breast, saying, at the same time, in his rich and genuine Tipperary brogue, "By my soul! this was the only wound I ever got to be proud of, and that from a countryman, too. I got but one knock from an enemy, and that was at Quebec, where a cowardly rascal came behind me, and gave me a c—d clout on the side of the head with the butt-end of his musket."—Ed. L. G.

among them Captain Browell, Lieut.-Governor of Greenwich Hospital. To him, therefore, I soon after applied, through my friend Mr. Locker, one of the commissioners of the hospital, who presently enclosed to me the following answer from the lieut.-governor to himself:—

My dear Sir,—When I called on old Mr. Gibson last year, he informed me of the Bishop of Llandaff's kind visit to him, and sending some person to paint his portrait. I perfectly recollect the dinner he gave to a large party on the 24th of July, 1784—(but certainly not sixty-four in number, as we dined at the ward-room table); I also recollect his then stating he was sixty-four; I said—"Old boy, you certainly must be more;" when he assured me he was sixty-four, and no more, being born in 1720, and that he had two aunts then living in Ireland—the youngest was 107, and that he intended to exceed her. This I was reminded of by the late General Foley, of the Marines, who was then marine officer of the Princess Royal, and died about six years ago. Capt. Motley, R.N., was then junior lieutenant of the ship; and I firmly believe he is the age he states.—I am, my dear sir, yours most truly,
W. BROWELL.

R. H. Greenitch, 13th May, 1831.

"The slight discrepancy as to the number of guests cannot affect the credit of the main story—it rather tends to establish it: I will only add, that in all my conversations with him I was struck with the clearness of his ideas, and the correct and firm expression he gave them. He seemed to have a strong sense of religion: it was his practice to have a portion of the Bible read to him every day. His life had been uniformly temperate. His manner was rather harsh and commanding to those of his own house, but respectful and courteous to his visitors, and thankful for their conversation, which he always said gave him great satisfaction.

"Having the highest opinion of the merit of your picture,* and of the engraving, I sincerely hope these particulars may be of some service in recommending them to public notice; and I am, sir, your very obedient servant,

"E. LLANDAFF.

"Deanery, St. Paul's, Sept. 10th, 1831."

SKETCHES OF SOCIETY.

EXTEMPORANEOUS SPEAKING.

A NUMBER of the *Revue Encyclopédique* some time ago contained an able and amusing article on extemporaneous speaking; especially on those principles of it which ought to be studied by princes. We subjoin a few of the illustrative anecdotes.

The friends of Louis XVI. lamented his inaptitude to speak with ease to those who were presented to him. Scarcely had an officer, a man of letters, or an artist, withdrawn, when this prince found something kind to say of him; the effect of which, however, was lost, as he was no longer there to hear it. In this respect Louis XVI. was admirably prompt. One day the Dauphiness seeing an officer enter with a deep scar on his countenance, exclaimed, "Mon Dieu, how ugly he is!" "You are mistaken, madam," instantly replied the great monarch; "he is one of the handsomest men in my kingdom, for he is one of the bravest."†

Military eloquence is a language by itself. It must be studied; not to render it artificial—the soldier is no rhetorician—but to take the proper tone. At the first review of the troops by Charles X. an old soldier stepped

from the ranks with shouldered arms, and said to him, "Sire, twenty-one years of service, thirty campaigns, and ten wounds, deserve the cross; and I have it not!" "You shall have it," said the king.

The French soldiers love to see in their leaders a vivacity correspondent to their own. The speech of Henry IV. before the battle of Ivry, may be cited as the model of an address to them: "My children," said he to his soldiers, "if in the heat of action you should stray from your colours, rally round my white plume; you will always find it on the path to honour and victory!"

In addressing a large body of troops, a leader should be very attentive to one thing; namely, to employ only such expressions as call forth the affirmative of his hearers. Buonaparte neglected this rule on the important 18th Brumaire. He was haranguing the troops at Saint Cloud, and instead of saying, "Is it not true that it is I whom you wish for your chief; I, who have so often conducted you to victory?" and thereby to have called forth a "Yes," which would have propagated itself throughout the whole line; he said to them, "Is it not true that you do not wish to have any more of the Directory, that feeble and contemptible government?" "No! no!" exclaimed the nearest soldiers. "Is it not true that you do not wish for anarchy?" "No! no!" they replied, in a still louder tone. But this "No," when it arrived at the last files, occasioned some hesitation among the most distant troops; who, not having heard the questions, thought that their comrades differed in opinion from the general, and did not wish for him as their chief. Added to this, it ought to be remembered that "yes" in an assembly of men always excites more enthusiasm than "no."

MUSIC.

NEW PUBLICATIONS.

WE have this week before us several compositions by the Chevalier Sigismund Neukomm, and the poetry by Barry Cornwall; to which we think it but right to direct the particular attention of the musical world,—supposing that others will reap as much delight from the performance of these pieces as we ourselves have done. They are thus entitled—

"Sleep on, sleep on," (sung by Mad. Stockhausen.)
"David's Lament for Absalom," (Braham, at the Derby Festival.)

"Wine!" (Braham.)
"The Sea," (Phillips, Derby Festival.)
"King Death," (Phillips, *ibid.*)

Of these various works it is difficult to say which is the most captivating. They are replete with originality and feeling; and never did music more truly accompany the words and sentiments of the poet. "King Death," for example, is exceedingly striking and peculiar. It is minor throughout, and certainly one of the most sweet and solemn productions we ever heard. The symphonies are new, and strangely adapted to the song, which we can well imagine coming with powerful effect from the noble voice of Phillips. We quote the words, which have also an unearthly strangeness about them:—

"King Death."
"King Death was a rare old fellow,
He sat where no sun could shine;
And he lifted his hand so yellow,
And pout'd out his coal-black wine.
Hurrah! for the coal-black wine."

There came to him many a maiden,
Whose eyes had forgot to shine,
And widows with grief o'erladen,
For a draught of his sleepy wine.
Hurrah! for the coal-black wine."

* Cramer, Addison, Beale, and Co. publishers.

The scholar left all his learning,
The poet his fancied woes,
And the beauty her bloom returning,
Like life to the fading rose.
Hurrah! for the coal-black wine."

All came to the rare old fellow,
Who laugh'd till his eyes dropp'd brine,
As he gave them his hand so yellow,
And pledg'd them in Death's black wine.
Hurrah! for the coal-black wine."

"The Sea" is another delicious composition, though entirely in a different style. We can only say, that it is equally beautiful and melodious. The part of the air to the words

"And a mother she was, and is to me,
For I was born on the open sea."

is, to our ear, perfect harmony; and yet the whole is very simple, and easy for room singing. Perhaps we might observe the symphonies seem sometimes rather to interrupt the words. We quote also the verses (which, with the sort of bull in the last stanza, where one who had been ever changing, tells us he seeks no change) are finely written for music.

"The sea, the sea, the open sea!
The blue, the fresh, the ever free,
Without a mark, without a bound,
It runneth the earth's wide regions round:
It plays with the clouds, it mocks the skies,
Or like a cradled creature lies.
I'm on the sea! I'm on the sea!
I am where I would ever be,
With the blue above, and the blue below,
And silence where'er I go:
If a storm should come, and awake the deep,
What matter? I shall ride and sleep.
I love, O how I love to ride
On the fierce, foaming, bursting tide,
When e'ry mad wave drowns the moon,
Or whistles aloft his tempest tune,
And tells how goeth the world below,
And why the south-west blast doth blow?
I never was on the dull tarmie shore,
But I lov'd the great sea more and more,
And backwards flew to her billowy breast,
Like a bird that seeketh its mother's nest,
And a mother she was, and is to me,
For I was born on the open sea."

The waves were white, and red the moon,
In the noisy hour when I was born:
And the whale it whistled, the porpoise roared,
And the dolphins bared their backs of gold,
And never was heard such an outcry wild
As welcom'd to life the rosy child.
I have lived since then in calm and strife,
Full fifty summers a rover's life,
With wealth to spend, and a power to range,
But never have sought or sigh'd for change!
And Death, whenever he comes to me,
Shall come on the wild, unbounded sea."

"Wine," sung by Braham, must be indeed intoxicating. "Sleep on, sleep on," is a charming air; and "David's Lament" is worthy of its companions.

Cathedral Voluntaries, from the Works of Orlando Gibbons, Dr. Blow, Pelham Humphreys, Purcell, Walden, Craft, Greene, Boyce, Cooke, Battishill, and other sterling Composers of the English School. Selected and arranged for the Organ. By Vincent Novello. No. I. London, J. A. Novello.

WE are infinitely indebted to Mr. Novello for commencing a publication which must be so welcome to the lovers of our old and best English music. These recollections of the masters of our school who have passed away, promise to be as beautiful as they are interesting. The name of Vincent Novello is a sufficient guarantee for taste and judgment in the selection, and for skill in the arrangement.

She's on my Heart. Cavatina, sung by Mr. Wilson: the Poetry by Miss Jewsbury; Music by J. Macdonald Harris. Paine and Hopkins.

WE do not like this quite so well as some of Mr. Harris's former compositions. The repetition of the word "morn" in the second line is bad: still the air has enough of simplicity to make it pleasant.

DRAMA.

HAYMARKET.

Two successes enlivened the business of this theatre on Thursday. The *début* of a Mr. Plumer as *Harry Bertram*, in *Guy Mannering*, and the first performance of a new interlude, entitled *John Jones*, were equally approved by the audience. Mr. Plumer possesses a very pleasing and sufficiently powerful voice, and sang with considerable taste and feeling. We can scarcely blame him for the introduction of the "Mountain Maid" and "Let Fame sound the Trumpet," as it has been so long the custom of our first vocalists to introduce catch-penny and misappropiate songs, to the exclusion of the original music; and his selection of Boieldieu's "*Ah, quel plaisir!*" for his third introduction, proves that he is capable of appreciating good music, though on a first appearance, and at the Haymarket, he thought it necessary to make some sacrifice to the *Lares* and *Penates*. The opera was followed by the new piece, for which we are indebted to Mr. Buckstone. A gentleman, a self-tormentor, who imagines he is fated to be unfortunate, and consequently is, in a great measure, the cause of his own misfortunes, is haunted by an invisible *John Jones*, who anticipates him in every project he forms, and ultimately inherits the fortune he expected, and marries the lady to whom he is engaged. The persecuted Mr. Goodluck is one of the richest portraits in all Mr. Farren's admirable gallery; and the persecutor, Mr. *John Jones*, alias Mr. Henry Smith, was played with his usual life and good humour by Mr. F. Vining. Mrs. Humby had too little to do, but of course got all the laughs possible in the part; and the curtain fell amidst bravos.

Mr. Kean has been acting his principal parts here for some weeks past, and, we are told, to respectable houses; but, whatever our admiration of Mr. Kean, tragedy at the Haymarket is but a melancholy farce dressed from Rag Fair, and acted, in too many instances, as if it were at Bartholomew. It is unaccountable, the predilection that exists at this theatre for doing every thing that is most out of its character and capability. Tragedy and opera upon the slightest provocation! And the doors are still kept open till past midnight! It requires a *John Jones* to keep us in decent temper when we are compelled to notice such absurd obstinacy. It carries, however, its punishment along with it.

ENGLISH OPERA, ADELPHI.

HERE the season draws to a close, and, what may seem extraordinary, flourishes to the very end, under the *Evil Eye*. But the *Bottle Imp*, with the irresistible Keeley, has been added to the attractions, and there is no wonder that the boxes and benches are full.

QUEEN'S THEATRE.

My Friend from Town, a very laughable piece, has been produced at this theatre with complete success. Green and Wilkinson support it with admirable comic humour, — the latter as a retired shoemaker of 3000*l.* per annum, aiming at literature and science, and the former as his *cicerone*. Their plans to accomplish Mr. Pump's wishes are highly amusing; and the lovers of drillery need not ask a greater treat than to see them, though defeated. That most clever creature Miss Convey has been indisposed; but Miss Dix has supplied her place with much talent.

VARIETIES.

Ancient Coins. — A Spanish peasant, in the environs of Lugo, in Galicia, tilling his field lately, found two earthen jars, containing several pounds weight of gold coin, of the Emperors Nero, Vespasian, Adrian, and Trajan. Though they have been buried for so many centuries, they are as fresh and perfect as if they had just been issued from the mint. Each coin weighs about two drachms and a half, and the gold is of the finest quality. — *Madrid, August 20.*

Charing Cross Hospital. — On Thursday the foundation-stone of this new, humane, and charitable building was laid by H. R. H. the Duke of Sussex, with full masonic ceremonies and honours. The spectacle was very fine. The Duke of Leinster, grand master of Ireland, Marquess of Ormond, Earl of Caledon, Lord Henley, Lord Dover, and other noble and distinguished patrons of the undertaking, being present and assisting.

Volcanic Isle. — Ackermann has just published a picture of the New Island on the coast of Sicily; and to shew the value of promptitude and expedition, we have to state, on the authority of a letter from Gibraltar, that the volcano itself has disappeared. As our news, however, rests on the report which had reached Gibraltar, we will not vouch for its certainty.

Coronation Anecdotes. — One would fancy that the little anecdote we related in our last, relative to the sword dropping from Lord Grey's hand during the Coronation, must have been calculated to overthrow the ministry, seeing that the *Courier* has made a long leading article upon it, on Tuesday. We really had no political design; and merely stated that sportively, with regard to what omen-mongers might say, which our saturnine contemporary has taken up with all the gravity of importance. In one point, however, we were wrong; and as we like to be right, even in trifles, we may mention, that it was not the sword of justice, but what is called the kingly sword, which the premier allowed to slip from its velvet scabbard on this occasion. This is the sword delivered after the sword of state; and as we are determined to amaze the *Courier* with an omen of some kind or other, we will ask the "wiseacre" of that journal, what he thinks of the Prime Minister's unsheathing the kingly sword thus? Does it not bode of war? *Bella, horrida bella.*

Male and Female Births. — M. Poisson, "on the relative proportions of male and female births in France, and on the singular circumstances which cause their variation," states that until within the last few years, the proportion of male births to females was considered as twenty-two to twenty-one; but in the year 1822 it was found, by an official report for the whole of France, to be as sixteen to fifteen; yet it was noticed, as a remarkable circumstance, that the births of natural children differed materially from this calculation. From 1817 to 1822 these births were for the whole of France 198,995 males, and 189,282 females, which are about 20 $\frac{1}{4}$ to 19 $\frac{1}{4}$. Since the year 1825 the official returns have been for legitimate children as sixteen to fifteen; but up to that time, for a preceding period of ten years, during which there had been 700,000 natural births, the proportion among them was as twenty-one to twenty. Various speculations have been offered as to the causes of this extraordinary difference; none of them, however, appear to account for it sufficiently: it is conjectured, that as the number of illegiti-

mate male births in large cities exceeds the proportion which legitimate male births in the same places bear to those of the country, the dissipation of large towns has a strong influence upon the constitution of the parents, and consequently causes much of the variation here noticed. — At the same sitting, a communication was read from M. Fontenelle, stating that he had discovered, some time ago, in the environs of Narbonne, at a distance of two leagues from the cave where M. Fournal found some fossil human bones, fossil *humérans*, which he has every reason to consider human.

The Cholera. — It is worthy of remark, that the word Cholera occurs in two passages of the Bible, both in Ecclesiasticus, and in both places in connexion with directions and exhortations to a sober and temperate mode of living, which is still recommended as the best preservative against this disorder. The two passages are in the Vulgate as follow: "Noli avidus esse in omni epulatione, et non te effundas super omnem escam; in multis enim escis erit infirmitas, et aviditas approximabit usque ad choleram." Propter crapulam multi obierunt; qui autem abstinens est, adjiciet vitam." xxxvii. 32-34. The other passage runs thus: "Quam sufficiens est homini erudito vinum exiguum, et in dormiendo laborabis ab illo, et non senties dolorem. Vigilia, cholera, et tortura viro infructuosa," xxxi. 22-23. In these two passages the English translation has *cholera*. Owing to a different division of the chapter the verses differ. In the English translation the passages are chap. xxxvii. 29-31. and xxxi. 19-20.

Imperial Encouragement of Science. — The Emperor of Russia has presented to Mr. Harvey, F.R.S.L. and E., a magnificent diamond ring, as a mark of his approbation of that gentleman's researches on ship-building. A very flattering letter accompanied the splendid gift. It is pleasant to record such tributes of regard, where science is concerned, paid by foreign monarchs to English talent.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXXVIII. Sept. 17.]

A splendid edition of Childe Harold, in two volumes, illustrated topographically, is about to appear. Each volume is to contain about forty engravings, from drawings by Turner, Stanfield, &c. The first, we are informed, is to be brought out at the same time as the *Annals*, and in a somewhat similar dress. A few copies are to be in quarto. The plates are engraved by W. and E. Finden in their most finished style; and we can have no higher pledge of excellence.

The *Literary Souvenir* for 1832, edited by Alaric A. Watts, will contain as usual twelve highly-finished line engravings.

The *New Year's Gift* and *Juvenile Souvenir* for 1832, containing a variety of highly-finished line engravings.

Heath's *Pictureque Annual* for 1832; containing 26 beautifully finished plates, executed by the first engravers, under the exclusive direction of Mr. Charles Heath, from drawings by Clarkson Stanfield, Esq. With letter-press descriptions, embodied in the *Narrative of a Tour through the most interesting portions of the North of Italy, the Tyrol, and the Countries bordering the Rhine*: by Leitch Ritchie, Esq.

The *Humourist* for 1832, by W. H. Harrison, is announced to appear, together with Ackermann's other *Annals*, about November. It is embellished by eighty engravings, designed and executed by W. H. Brooke.

Mr. Bernard, the author of several successful dramas, is engaged on a series of pieces founded on American subjects.

Cruikshank's *Comic Album*; a collection of Humorous Tales: with numerous illustrations on wood.

An *Almanac*, and a *Universal Mirror*.

A *Manual of the Land and Fresh-water Shells of Great Britain*, according to the System of Draparnaud, Brand, De Lamarck, &c.; the Characters and Descriptions drawn up from specimens in the cabinet of the author, W. Turton.

A Dictionary, Practical, Theoretical, and Historical, of Commerce and Commercial Navigation, by J. R. McCulloch, Esq.

Memoirs and Correspondence of the late Sir James Edward Smith, M.D. F.R.S., President of the Linnean Society, &c.

LIST OF NEW BOOKS.

Burgess's *Antiquities of Rome*, 2 vols. 8vo. 3s. 3d. bds.—*Statutes*, 1 William IV. 4s. bds.—Dr. Henderson's *Plain Rules for Improving the Health*, 12mo. 6s. bds.—*Common Law Rhymes*, 12mo. 4s. bds.—*Curtis's History of Leicester*, demy 8vo. 12s. bds.: royal, 16s. bds.—*Mary's Journey*, a German Tale, 12mo. 3s. hf.-bd.

METEOROLOGICAL JOURNAL, 1831.

September.	Thermometer.	Barometer.
Thursday... 1	From 43. to 56.	29.90 to 29.75
Friday... 2	43. — 56.	29.75 — 29.66
Saturday... 3	42. — 56.	29.65 Stationary
Sunday... 4	45. — 70.	29.61 to 29.78
Monday... 5	50. — 71.	29.64 — 29.68
Tuesday... 6	53. — 65.	29.66 — 29.67
Wednesday... 7	52. — 65.	29.66 — 29.71

Wind N.W. and S.W., the latter prevailing.
Except the 3d, generally cloudy, with frequent rain; incessant rain during the last.

Rain fallen, 1 inch and $\frac{1}{2}$ of an inch.
Second crops of hay have, previous to the 31st ult., been secured; but the continued rain of the 1st inst., and the frequent showers during the week, have delayed the "getting up" of that grass which has been more recently cut.

September.	Thermometer.	Barometer.
Thursday... 8	From 43. to 52.	29.75 to 29.60
Friday... 9	40. — 56.	29.60 — 29.56
Saturday... 10	47. — 63.	29.73 — 29.64

Wednesday... 14	51. — 65.	30.09 — 30.07

Wind variable, N.W. prevailing.
Except the 14th, generally cloudy, with rain at times on the four first days.

Rain fallen, $\frac{1}{2}$ of an inch.
Edmonton. CHARLES H. ADAMS.
Latitude... 51° 37' 32" N.
Longitude... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. August 1831.

Thermometer—Highest.....	75.00°.....4th.
Lowest.....	43.25°.....25th.
Mean.....	60.50806
Barometer—Highest.....	30.09°.....23d.
Lowest.....	29.39°.....20th.
Mean.....	29.70548

Number of days of rain, 13.
Quantity of rain, in inches and decimals, 2.13125.
Winds—1 East—5 West—3 North—3 South—3 North-east—1 South-east—3 South-west—3 North-west.

General Observations.—The month was very fine, and the thermometer higher not only as to the mean, but both the extremes, than in any year in August since 1690: the barometer was remarkably steady, the range being less than in the last eight years, and the mean was above those in the last three years. So small a quantity of rain has not fallen in the same month since 1836. "Thunder was heard about 8 p.m. on the 3d; and the next evening, at 8 o'clock, there was a very heavy thunder-storm, with much vivid lightning, and upwards of eight-tenths of an inch of rain fell during the storm: the same night a slight aurora borealis was observed in the N.W., of a faint yellow tint. The evaporation 9.5375 of an inch.

TO CORRESPONDENTS.

We are well disposed to adopt Vindex's advice on the subject of cruelty to animals, and never admit any fair opportunity of enforcing the claims of humanity; but at the same time we must say, that we are equally opposed to maudlin sensibility and cant, which we consider to be injurious to the good cause.

To the Editor of the Literary Gazette.

Sir,—I have been for several years a constant reader of the *Literary Gazette*; I therefore waited patiently till you reviewed No. VII. the *Standard Novels*, trusting you would notice the point which appears to me, to say the least of it, calculated to disappoint many. The advertisement says:—"In vol. price only 6s. *Standard Novels*, No. VII.; containing Miss J. Porter's romance of the *Scottish Chiefs*." It further adds—"Each No. price only 6s. complete in itself, and containing the whole three or four vols. of the original edition, may be had separate." After reading the above, I sent for the *Scottish Chiefs*; when, to my surprise, I received Vol. I., price six shillings, and was told the remainder of the fiction was not published; so the *Scottish Chiefs* will cost twelve shillings, instead of six: but this is a trifle compared to the delay; for who ever purchased *half's* romance? It is inconvenient even in historical works. If the editor found the four volumes could not be compressed into one volume, in common justice he ought not in his advertisement to tell the public that the work is complete in one volume. I wish also to know whether the *Cabinet Library*, by Dr. Lardner, is discontinued; there are many works incomplete: the third volume of the *Life and Reign of George the Fourth* was to make its appearance on the 1st of September; the *Military Life of Wellington* also is wanting a volume.—I am, sir, &c. M. E. D.
September 13th, 1831.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALM MALL.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools of Painting, is open daily, from Ten in the Morning until Six in the Evening, and will be closed on Saturday the 24th instant.

Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

FRAUDS IN PATENT PENCILS.

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Leads for refilling the same. To guard the Public against impositions, the Patentees are induced to make the following remarks:—

1st. Look for the London Mail mark on each silver pencil-case.
2d. S. Mordan and Co. Patentees and Makers, on the body of the case.
3d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

Cedar Pencils.—These pencils contain the same quality of pure Cumberland lead as their silver patent pencils.
Warranted Protection.—The Lead with seven guards is the most secure and the most durable one in use. The key cannot be copied, nor can an impression be taken from it: neither can a skeleton or other substitute key be made with success. The key admits of infinite variety, so that duplicates are entirely precluded, and dishonesty is thus easily kept out against.

"S. Mordan and Co. Makers, London," is stamped on each Lead.

Scientific gentlemen and others are invited to inspect the Manufactory, 23, Castle Street, Finsbury.

COPYRIGHT OF WORKS by SIR WALTER SCOTT.

To be Sold by Public Bids, in the Royal Exchange Coffee-House, Edinburgh, on Thursday, the 3d of September, at Two o'clock, p.m., the entire Copyright of the following Works, written by Sir Walter Scott, Bart. viz. the *Life of Dryden*—The *Life of Swift*—Biographical Memoirs, consisting of Lives of Charlotte Smith, Sir Ralph Sadler, John Leyden, Miss Seward, Daniel Defoe, the late Duke of Buccleugh and Queensberry, Lord Somers, George III., Lord Byron, the Duke of York, Samuel Richardson, Henry Fielding, Tobias Smollett, Richard Cumberland, Oliver Goldsmith, Samuel Johnson, Laurence Sterne, Henry Mackenzie, Horace Walpole, Clara Reeve, Mrs. Ann Radcliffe, Le Sage, Charles Johnstone, and Robert Bage—Abstract of the *English Literature*; all as included in the Collection entitled Sir Walter Scott's Miscellaneous Prose Works, in 6 vols. 8vo. of which the Works above specified comprise about four volumes.

A MEMOIR OF SEBASTIAN CABOT.

With a Review of the History of Maritime Discovery, illustrated by Documents now first published.

Of those who are curious in our investigations, we can confidently recommend it for its integrity; but we can also recommend it to a more enlarged circle for its popular and entertaining qualities.—*Atlas*.

"We recommend the work as one of great value and interest."—*Literary Gazette*.

"Every sincere inquirer after historical accuracy ought to purchase the book as a curiosity."—*Speyerian*.

"We cannot part with this able and interesting volume without again recommending it to the attention of the public."—*Times*.

"One of the most laborious, and, at the same time, one of the most chivalrous enterprises on behalf of the great cause of historical truth, that it has been for some years our fortune to encounter."—*Monthly Review*.

"Nothing can exceed the abstruseness into which historians have run for want of a little research."—*Monthly Magazine*.

"The work is extremely interesting."—*Atlantic Journal*.

"The memoir will receive a welcome addition into every collection of thoroughly British books."—*Englishman's Magazine*.

Great perseverance, laborious research, and an enthusiasm not to be shaken by accumulated difficulties, were qualifications necessary for the satisfactory completion of such a task as this; and they have very seldom been employed with more effect, or more advantage to our store of maritime knowledge, than in the present work.—*New Monthly Magazine*.

"We will not be weary of saying, that all who are interested in the progress of geographical discovery."—*Metropolitan*.

English Synonyms explained, with copious Illustrations. In a thick vol. 8vo. the 4th edition, revised and corrected, and an Index of Words added, price 11. 1s. boards.

An amazing English Grammar.

In royal 12mo. finely printed by Davison, price 2s. neatly half-bound and lettered,

A CLASSICAL GRAMMAR of the ENGLISH LANGUAGE, with a Short History of its Origin and Formation.

By CHARLES BUCKE.

Author of the Beauties, Harmonies, and Sublimities of Nature. London: Printed for Baldwin and Cradock.

•• This Grammar has been written with a view of saving trouble on the part of the Tutor; of engaging the attention and exercising the reasoning faculties of the pupil; of furnishing a key to the best English poems, (for nearly all the illustrations are given in the most admired poetry of our language); and of rendering that study attractive and amusing, which has, hitherto, been considered dry and repulsive.

THE POLYTECHNIC LIBRARY.—The

design of the Publishers of the Polytechnic Library is to produce a Series of highly instructive Works, which the Public may be tempted to buy, because they will be cheap; be induced to read, because they will be brief; be competent to understand, because they will be clearly written; and be able to profit by, because they will be Works of practical utility. Every volume, therefore, will contain a complete Treatise relating to one of the useful Arts or Sciences, or the Chemical or Mechanical Trades.

This day is published, Vol. I. of

The Polytechnic Library, neatly printed in 12mo. and illustrated by numerous Engravings, price Half-a-Crown, bound in Cloth, containing the Art of Glass Blowing, or Plain Instructions for making the Chemical and Philosophical Instruments which are formed of Glass, such as Barometers, Thermometers, Hydrometers, Tube Vessels and Toys for Chemical Experiments and Recreative Philosophy. By a French Artist. Printed for Bumpus and Griffin, St. Martin's Lane; and Richard Griffin and Co. Glasgow; and Stillies, (Brothers), Edinburgh.

By whom will shortly be published, Vol. II. of

The Polytechnic Library, containing the Domestic Chemist, or Instructions for the Detection of Adulterations in Food. And

Vol. III. containing the Perfumer's Oracle, or Art of preparing Perfumes and Cosmetics.

ENCYCLOPÆDIA METROPOLITANA.—The

Subscribers to this Work are respectfully informed that the Fifth Edition has been published. London: Printed for Baldwin and Cradock; C., J., G., and F. Rivington; J. Nunn; J. B. Fellows; Settable, Fox, and Settable; E. Hodgson; J. Dowling; H. T. Hodgson; G. Lawford; J. Laycock; J. Fraser; W. Mason; P. C. Westley; James Richardson; J. Bohn; T. Allman; J. Bain; H. Dixon; and J. Bryant; and for J. Parker, Oxford; and J. and J. Deighton, Cambridge.

•• Considerably more than three-fifths of this important Work are now before the Public, and arrangements are made for bringing out the future Parts with increased activity. There have also been published in parts, volumes—One of Pure Sciences, Two of Mixed and Applied Sciences, Two of History and Biography, and Six of the Miscellaneous and Encyclopaedical Division.

A re-publication has also commenced in Monthly Numbers, at 6s. each, beginning with the First Volume of the Work, or Pure Sciences.

Dr. Olshausen Gregory's Letters on Christianity.

A new and greatly improved edition, in 8 vols. small 8vo. price 15s. boards.

LETTERS to a FRIEND, on the Evidences, Doctrines, and Duties of the Christian Religion. By OLINTHUS GREGORY, LL.D.

The 4th edition. London: Printed for Baldwin and Cradock, Paternoster Row. •• Copies done up for presents in a rich-grained silk binding and gilt edges, price 17s.

Sturm's Devotional Meditations.

Handsome printed in 2 vols. price 15s. boards, the 3d edition; thoroughly revised and corrected, of

MORNING COMMUNINGS with GOD; or, Devotional Meditations for every Day of the Year. Translated from the original German of Christian Christopher Sturm, Author of "Reflections," &c.

By WILLIAM JOHNSTONE, A.M.

These Devotional Meditations are every way worthy of the Author, and deserve a place near the beautiful Reflections of Fenelon.

Printed for Baldwin and Cradock, Paternoster Row.

Of whom may be had, new first translated from the German, Contemplations on the Sufferings of Jesus Christ, in a Series of Devotional Exercises, with an Explanatory Paraphrase of the Gospel of Matthew. By the same. Printed in conformity with the preceding, with a Memoir and a Portrait of Sturm. Price 2s. boards.

•• These volumes may be had uniformly done up in 2 vols. bound in grained silk and gilt edges, suitable for presents, price 15s. 6s. 6d.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 766.

SATURDAY, SEPTEMBER 24, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Irish Minstrelsy; or, the Bardic Remains of Ireland: with English Poetical Translations. Collected and edited, with Notes and Illustrations, by James Hardiman, M.R.I.A. 2 vols. 8vo. London, 1831. Robins.

It is refreshing to us—as the *Edinburgh Review* was wont to say in the days of its freshness—it is indeed most refreshing to us to meet with an original publication.

This is a work for which the ingenious historian of Galway deserves well of his country; and which we hail with cordiality, notwithstanding the violent party-feeling of the editor peeps out here and there most impertinently in the notes—and who will have it, and from the well-known documents in the *State Paper Office*, too! that the Gunpowder Plot was the contrivance of Cecil (vol. ii. p. 168), and that Father Garnett was, of course, an innocent and much-injured person;—that, in short, all Jesuits and Catholics were simple-hearted, pious, and poetical people; while all Orangemen and Protestants were tyrants, murderers, monsters, and a disgrace to human nature. With the exception of this blot, which is the more to be regretted as Mr. Hardiman's subject called not for the introduction of angry politics, these volumes, full of new and interesting matter, to the English reader in particular, must be most favourably received by all classes.

The truth is, we are yet woefully deficient in our knowledge of the best parts of Irish literature and history: the former has been much neglected, the latter miserably deformed. Of late, instances of a finer taste and a juster spirit have not been rare; and we look forward to a brighter day from the dawning we have seen. These volumes are with great propriety dedicated to Mr. Spring Rice; a man of accomplished mind, and a true friend to Ireland, without that Irish violence of love which is too often fatal to the objects of affection.

An Introduction casts a glance over the most remote traditions of Irish Pagan poetry, and deduces the annals of the harp and song to the present day, referring a good deal to Dr. O'Connor's learned work, printed at Stowe, which we have never had the good fortune to see. From these stores the present selection has been made, and translations given by the late Thomas Furlong, Mr. H. G. Curran, Dr. Hamilton Drummond, Mr. D'Alton, Mr. E. Lawson, and others; of which translations we may truly state that they are generally excellent, some of them surprisingly faithful, few in which the sense has been missed, and a considerable number where it is expressed more periphrastically than literally. The genius of Mr. Furlong, one of the principal contributors, we do not estimate so extravagantly as Mr. Hardiman; though we did think so highly of it as to rescue his memory from inattention by inserting a biographical sketch of him in the *Literary Gazette*, where it will be found at page 540, No. 552, in the year 1827. There

are, however, many beautiful compositions from his pen in these volumes; to which our future pages shall do justice. Pass we, in the mean time, to the second division of Mr. Hardiman's delightful labours, "The Remains of Carolan," who was born about 1670, in the county of Meath, and died in 1738. The author's account of the latter event, and his note on Goldsmith, (one of the brightest stars of Ireland), will afford a taste of his qualities.

"The time," he says, "was now drawing nigh when Carolan was himself to become a subject for the elegiac muse. In the year 1737, his health, which had been long declining, gave evident symptoms of approaching dissolution. At Tempo, finding himself growing weak, he resolved to proceed to Alderford, the house of his old and never-failing friend and patroness, Mrs. M'Dermott, who, though then nearly in her eightieth year, enjoyed excellent health and spirits. By her, in his youth, nearly fifty years before, he was supplied with his first harp and his first horse; and to her, in the decline of life and health, he turned for a sure asylum, and a kind and affectionate reception. Having composed his 'Farewell,' to Maguire, he proceeded on horseback to his friend Counsellor Brady's, near Balinamore, in Leitrim, where he rested for a few days. He then continued his journey, accompanied by several of the neighbouring gentry, and a concourse of the country people, among whom he was always held in the highest veneration, towards Lahire, the seat of Mr. Peyton. Here he stopped for a few moments, and, with tears, took leave of his friends. During the remainder of his journey, it is not improbable that his mind was occupied by thoughts somewhat similar to those afterwards expressed by his countryman, Goldsmith:—

'In all my wand'rings round this world of care,
In all my grief (and God has given my share),
I still had hopes, my long vexations past,
Here to return, and die at home at last.'

At Alderford he was received with the warmth and welcome which have ever characterised Irish friendship. After he had rested a little, he called for his harp. His relaxed fingers for a while wandered feebly over the strings, but soon acquiring a momentary impulse, he played his well-known 'Farewell to Music,' in a strain of tenderness and feeling, which drew tears from the eyes of his auditory. This was his last effort. Nature was subdued; and the dying bard was carried in a state of exhaustion to his room. He lingered for some time. The woman who attended him, and who lived until about the year 1787, used to relate, that to revive or

"Oliver Goldsmith was born, and until his fifteenth year resided, not far from where Carolan spent the greatest part of his life. Although but ten years old at the death of the bard, it is evident that he was well acquainted with his genius and character. This may be deduced even from the trifling Essay on 'Carolan the blind,' which appears in his works; and which, if really written by Goldsmith, confers no great credit on his memory. This ingenious man was descended from one of our 'clerical families,' who were generally a prejudiced class; and his historical works, at least, prove that he never entirely laid aside the prejudices of early education." Oh dear, for prejudice!!!

stimulate decaying nature, he was occasionally indulged with a taste of his favourite beverage, Uaquebaugh. His natural vivacity and good humour never forsook him. A few hours before his death, while in the act of stretching forth his hand for the cup, as he humorously said, to give it his farewell kiss, he rolled out of bed on the floor. The female attendant alluded to, stated that after she had replaced him, he observed, with a smile, 'Maudy, I often heard of a person falling when going to the field, but never knew one to fall while lying but myself.' His last moments were spent in prayer, until he calmly breathed his last. When his death was known, it is related that upwards of sixty clergymen of different denominations, a number of gentlemen from the surrounding counties, and a vast concourse of country people, assembled to pay the last mark of respect to their favourite bard. All the houses in Ballyfarnon were occupied by the former, and the people erected tents in the fields round Alderford House. The harp was heard in every direction. The wake lasted four days. On each side of the hall was placed a keg of whisky, which was replenished as often as emptied. Old Mrs. M'Dermott herself joined the female mourners who attended to weep, as she expressed herself, 'over her poor gentleman, the head of all Irish music.' On the fifth day his remains were brought forth, and the funeral was one of the greatest that for many years had taken place in Connaught. He was interred in the M'Dermott Roe's vault, in their chapel, at the east end of the old church of Killoonan. On opening the grave in 1750, to receive the remains of a Catholic clergyman, whose dying request was to be interred with the bard, the scull of the latter was taken up. The Hon. Thomas Dillon, brother to John, Earl of Roscommon, caused it to be perforated a little in the forehead, and a small piece of riband to be inserted, in order to distinguish it from similar disinterred remnants of mortality. It was placed in a niche over the grave, where it long remained an object of veneration, several persons having visited the church for the sole purpose of seeing this relic of a man so universally admired for his musical talents. At length, in the year, 1796, it disappeared. A person on horseback, and in the garb of a gentleman, but supposed to have been a northern Orangeman, came to the church, and desired to see it. It was brought from the niche, and, watching his opportunity, he discharged a loaded pistol at it, by which it was shattered to pieces.* Then,

"Notwithstanding this act, and although the people of Killoonan shew some fragments which they assert to be those of the scull, yet it is confidently stated that it may be seen, perfect and entire, in the museum at Castle Caldwell, county Fermanagh, having been presented to Sir John Caldwell by the late George Nugent Reynolds, Esq., who took it privately from Killoonan for the purpose. This, however, may be doubted. Mrs. M'Namara, the sister of Mr. Reynolds, does not believe it, never having heard it mentioned in her family until lately; and thinks it must be some other pericranium, which her brother, who was a fastidious gentleman, imposed on the connoisseur, by way of joke, for that of Carolan. A cast of the Castle Caldwell relic is about being sent to the phrenologists of Edinburgh; but, probably, the portrait prefixed to this volume would prove more satisfactory to those gentlemen."

damning all Irish papists, he rode away. Some neighbouring gentlemen pursued him as far as Cashcargin, in the county of Leitrim; and from their excited feelings at the moment, it was perhaps fortunate that he escaped. This brutal act could be perpetrated only through the demoniac spirit of party rage which then disgraced this unhappy country."

Of the portrait alluded to in the preceding note, and an engraving from which is an appropriate frontispiece to this work, we find the following history:—

"Dean Massey (the dean of Limerick, whom Carolan visited in 1721,) wishing to retain some memorial of a man whose genius and amiable manners excited at once his admiration and esteem, caused this portrait to be painted by a Dutch artist, who was then in the neighbourhood. It continued in possession of the family until the death of the late General Massey, who prized it so highly, that he carried it with him wherever he went. Upon his death, in Paris, in 1780, the picture was brought back to Ireland; and, in 1809, was sold to the celebrated Walter Cox, editor and publisher of the *Irish Magazine*. Mr. Cox having afterwards presented it to Thomas Finn, Esq. of Carlow, that excellent and patriotic gentleman kindly communicated it to the writer, who expressed a desire to have it engraved and preserved as a national relic. With that view, he caused an accurate copy to be taken, which he presented to an ingenious Dublin artist, Mr. Martyn, on the sole condition that it should be well engraved. Mr. Martyn published his engraving in 1822, (of the same size as the original, which is painted on copper, about 8 inches by 6,) and dedicated it to the Marquess Wellesley, then Lord Lieutenant of Ireland. George Petrie, Esq. of Dublin, whose acquaintance with the history and antiquities of this country is, perhaps, only surpassed by his knowledge of the arts of painting and sculpture, in which he so eminently excels, thinks it probable that the original portrait was painted by Vander Hagen, a distinguished Dutch artist, who was at that time in Ireland."

Of Carolan we shall only add Ritson's testimony, that he was a true representative of the Irish bards; and though this memoir of him is pleasant enough, notwithstanding its party perversions, we could well wish to see another, which should not forget, for example, the poet's celebrated distich on a gentleman's butler, who had displeased him by want of the genuine Irish virtue, hospitality:—

What a pity Hell's gates are not kept by O'Flinn!
For so surly a dog would let nobody in!

The poems are printed in the Irish language and type on one page, and the translation opposite. The following (by Furlong, from Carolan,) will remind our readers of the living lyrist of Ireland:—

"The Cup of O'Hara.

"Oh! were I at rest
Amidst Arran's green isles,
Or in climes where the summer
Unchangingly smiles;
Though treasures and dainties
Might come at a call,
Still, O'Hara's full cup
I would prize more than all.

But why would I say
That my choice it must be,
When the prize of our fathers
Hath lov'd it like me:
Then come, jolly Turlough,
Where friends may be found;
And our Kian we'll pledge,
As that cup goes around."

Bridget O'Malley (by the same) is another favourite with us.

"Dear maid, thou hast left me in anguish to smart,
And pangs, worse than death, pierce my love-stricken heart;
Thou flower of Tirerell, still, still must I pine,
Oh! where, my O'Malley, blooms beauty like thine?
On a mild dewy morn in the autumn I rovd,
I stray'd o'er the pathway where stray'd my beloved.
Oh! why should I dwell on the bliss that is past?
But the kiss I had there I must prize to the last.

The sunbeams are beautiful when on flower-beds they play,
And sweet seem young roses as they bloom on the spray;
The white-bosom'd lilies thrice lovely we call;
But my true love is brighter, far brighter than all.

I'm young, and a bridegroom soon destin'd to be,
But short is my course, love! if bless'd not with thee:
On Sunday, at dusk, by Rath-leave shall I stray,
May I meet thee, my sweetest, by chance on the way?

In gloom and in sorrow my days must go by,
At night on my pillow in anguish I sigh;
Hope springs not—peace comes not—sleep flees from me
Oh! when comes my lov'd one, that pillow to share?"

In a note upon a song of no great worth, though descriptive of a drinking bout, and entitled "Maggy Laidir," the author gets patriotically indignant against the Scots for stealing, purloining, plundering, and riving Irish music.

"The air (he asserts) as well as the words of Maggy Laidir, though long naturalised in North Britain, is Irish. When our Scottish kinsmen were detected appropriating the ancient saints of Ireland, (would that they rid us of some modern ones!) they took a fancy to its music. Not satisfied with borrowing the art, they despoiled us of some of our sweetest airs, and amongst others that of *Maggy Laidir*. This name signifies in the original, strong or powerful Maggy, and by it was meant Ireland, also designated by our bards under the names of *Sheela na Guira*, *Grauna Weale*, *Roisin Dubh*, &c. By an easy change, the adjective *laidir*, strong, was converted into *Lauder*, the patronymic of a Scotch family; and the air was employed to celebrate a famous courtesan of Crail. Although Ireland was always famous for sanctity and music, and could spare liberally of both, yet our countrymen ever felt indignant at the unacknowledged appropriation of many of their favourite saints and airs by their northern relatives. * * * Of these, two, from their celebrity, deserve particular notice, viz. 'Planxty Davis,' since well known as the 'Battle of Killycranky,' and a prelude to the 'breach' of Aughrim, universally admired, under the name of 'Farewell to Lochaber.'"

But let us leave literary, and what are worse, musical disputes; and return, for a short space, to Carolan. Mr. H. says: "that Carolan was a man of irreproachable morals, and even of a religious turn, we have been already assured by the best authority. The following little prayer, or rather pious stanza, has been attributed to him; how truly I know not. It has, however, been considered worth preserving.

"Oh, King of wounds! oh, Son of heaven! who died
Upon the cross, to save the things of clay—
Oh, thou whose veins pour'd forth the crimson tide,
To wash the stains of fallen man away;
Oh, thou whose heart did feel the blind one's spear,
While down to earth the atoning current flow'd!
Deign, gracious Lord, thy creature's cry to hear!
Shield me, and snatch me to thy bright abode."

In spite of this, however, we see sufficient proof in the biography, that if Carolan was a saint, he was, at any rate, a wet one.

Our next quotation is a remarkably curious eclogue: it is entitled, "Elegy on the Death of Denis Mac Carthy."

"The sigh and wail of Inisfall! her hero is no more,
In the cold clay the good, the great, lies weltering in his gore!
Ah fatal shot! each noble stem with him is now laid low,
The lord of vast and rich domains—unutterable woe!

Wo wide and wild through Muskry's vales! beneath the
moss-gray stone,
The prince of Cashel's regal branch lies powerless and
His keen-edged blade in battle's front flashed withering
lightnings round;
His matchless might and hardihood be evermore re-
Renowned, conspicuous in the van, while trumpets pealed
to arms,
Waved his bright crest, till death's sad hour invincible he
Yet mercy stayed his conquering hand, still generous and
just,—

Alas! our stately pine lies stretched in ruin on the dust.
Dust hides the comeliest of mankind, munificent and
brave,
Who never failed his friends from foss and dungeons
The great and learned he entertained, and all their worth
combined;
'Neath yon gray stone that marks his grave each virtue
Enshrined with this illustrious branch of Carthy's vigor-
ous tree,
Our prop, our spear, and shield, from wrong and want
A foaming torrent when aroused, he swept the embattled
plains;
The country's desolate!—not one of all his race remains.

Remains? Ah yes! Immured for life in solitude they pine.
The last of Munster's genuine stock, Mac Carthy's royal
line:
Disimulation and deceit were odious in his sight,
Oh! with his funeral torch is quenched our clergy's holy
light.

Light, vigorous, and erect his form, of symmetry the
mould;
Created to command and charm the beautiful and the
The berries' glow through new-fallen snow was bleached
in his cheek,
His gracious smile proclaimed his soul benevolent and
Meek but majestic in his mien—oh death! thou, only
thou,
Durst unabashed, unawed, confront that calm command-
Grin spoiler, hence! who Erin plunged in deep and cure-
less anguish—
The last of our Iberian line, alas! in bondage languish.
Languish! oh melancholy tale! defeated, in diagram,
In dens and chains the last remains of lordly lion race;
And, worst of woes, our spear and shield, prime leader of
the Gael,
Mac Carthy More is lost, and long we're doomed to sigh.

The peculiarity of this composition is, that it "is written in a species of verse anciently called *Conaclach*; but in more modern times *Dan-rlabhna*, *linked verse*, because every stanza must begin with the same word that ends the preceding one; and the poem itself must conclude with the same word with which it begins. This was invented to prevent interpolation; but it also shews whether the composition be perfect or not." The linking of the verses is preserved with felicitous fidelity in the translation; and we will place by it another admirable specimen, in overcoming a difficulty of a somewhat similar kind.

"Carroll O'Daly and Echo.

Carroll. Speak, playful echo, speak me well—
For thou know'st all our care;
Thou sweet responding shelt, tell,
Who works this strange affair?
Echo. A—fair!

A fair—no, no, I've felt the pain
That but from love can flow;
And never can my heart again
That magic thralldom know.
Echo. No.

Ah! then, if envy's eye has ceased
To mar my earthly bliss—
Speak consolation to my breast,
If remedy there is.
Echo. There is.

Gay, witty spirit of the air,
If such relief be nigh
At once the secret spell disclose,
To lull my wasted eye.
Echo. To die.

To die! and if it be my lot,
It comes in hour of need;
Death wears no terror but in thought—
'Tis innocent in deed.

Echo (surprised). Indeed!

Indeed, 'tis welcome to my woes,
Thou airy voice of fate;
But, ah! to none on earth disclose
What you prognosticate.

Echo (playfully). To Kate.

To Kate?—the devil's on your tongue,
To scare me with such thoughts;
To her, oh! I could I hazard wrong,
Who never knew her faults?
Echo. You are false.

If thy Narcissus could awake
Such doubts, he were an ass
If he did not prefer the lake,
To humouring such a lass.
Echo. Alas!

A thousand sighs and rites of woe
Attend thee in the air;
What mighty grief can feed thee so
In weariless despair?

Echo. Despair.

Despair—not for Narcissus' lot,
Whose once was thy delight;
Another in his place you've got,
If our report is right.

Echo. 'Tis right.

Dear little sorceress, farewell—
I feel thou told'st me true;
But as thou'st marry a tale to tell,
I bid thee now adieu.

Echo. Adieu!"

The following is very natural:—

"Mary A Room.

My sweet apple-blossom, dear Mary, beware,
Lest the Munster man's flattery your heart should en-
snare;

His tongue is so oily, so roguish his eyes,
In one hour they would tell you whole hundreds of lies.

Much rather I'd see you for ever a maid,
A pale rose of the wilderness, languish and fade,
Than espoused to a rover, whose profligate arts
Seduce simple virgins and break their poor hearts.

How fondly I fancied that blooming in youth,
You'd be led by my voice, and inspired by my truth;
Each fair sunny morn, when all nature look'd gay,
You shone the clear gem that illumined my way.

With you the wild nut-groves delighted I'd range,
Immersed in soft raptures, and fearless of change;
Oh! treasure of treasures, were you my reward,
With the soft hand of love your fair bosom I'd guard.

Lest feast of Saint Bridget, ah! can you forget,
When on Mullamore's summit transported we met;
But now you have plunged me in sorrowful gloom,
And hopeless of healing I sink to the tomb.

Sore, sore is my heart, it is rent to the core,
Beside Murneen Bawn I must never lean more;
Thou star of mild lustre, my prayer do not slight,
By day all my thoughts, all my visions by night.

Admiring, adoring, imploring thy ray,
My heart's blood grows congealed, and I wither away;
But, alas! you disdain me!—then break, oh my heart!
My treasure of treasures for ever be part."

But we have quoted this song as much for
the note upon it:—

"Let not the Munster man deceive thee,
my love!" The persuasive powers of some of
our southern countrymen have long been pro-
verbial. My worthy friend, Mr. Brewer, in
his *Beauties of Ireland*, informs us, that in the
highest part of the castle of Blarney, in the
county of Cork, is a stone which is said to have
the power of imparting to the person who
kisses it, the unenviable privilege of hazarding,
without a blush, that species of romantic asser-
tion which may be termed falsehood. This
statement is not, however, altogether correct.
To the well-known 'Blarney stone' there is,
no doubt, attributed the virtue of imparting to
whoever, at the hazard of his neck, shall ven-
ture to kiss it, not the privilege of uttering
falsehood, as stated, but an indomitable propen-
sity towards practising the gentle, yet all
effective, art of flattery—to praise 'in season,
and out of season'; and against this dangerous
quality, our fair female is cautioned in the
words of the song. I cannot avoid observing
here, that vulgar stories of this kind, which
reflect on the morals or character of a people,
should ever be treated with the contempt they
deserve. In the despicable pages of the de-
ceived and deceiving 'travellers' who libel our
country, and the fry of conceited English or
cockney 'tourists,' *et hoc genus omne*, which
annually visits our shores, I should not be sur-
prised to meet with such trash; but to find it
gravely detailed in the work of so learned and
enlightened a writer as Brewer, is certainly
matter of just regret."

Really, Mr. Hardiman, we cannot stand this.
Why disturb our faith in Blarney? By our
faith, we will not have it disturbed! Did not

the bare tradition take Sir Walter Scott on a
pilgrimage, to pray in the groves and to kiss
the stone?

Being on antiquarian points, we here insert
a notice respecting Irish hermitages and their
remaining vestiges.

"A small plate of copper in my possession,
lately dug up at Ayle, in the county of Clare,
(the seat of James Mac Namara, Esquire, by
whom it has been obligingly communicated,) bears
the following inscription, engraven in
Irish characters, under the date 1041, all dis-
tinctly legible.

Worlding, away! the frugal dish—the book
Of holy truths—the beads—the hermit's cloak,
Can tempt thee not—the locks that shade his brow,
The power that whitened guards—profane not thou.

This curious piece of antiquity is supposed to
have been affixed to the entrance of one of these
penitential retreats. Milton's sonnet, 'When
the assault was intended on the city,' may
here occur to the recollection of the reader."

We have a great deal yet to say to these
valuable volumes; but as the last quotation in
which we shall indulge this week is of great
and immediate political importance, we beg
especially to supplicate attention to it from the
King, Lords, and Commons, the people of
England and the people of Ireland. It relates
to the coming coronation of Dan. O'Connell.

"According to the bard, Keneth O'Hartigan,
anno 950, Inisfail, one of the early names of
this Island, was derived from the *Lia Fail*, or
'Stone of Destiny,' brought from the East, and
once so celebrated in Ireland and Scotland.
See Keating, for the wonderful virtues of the
Lia fail, which, for many ages was as much
venerated in Ireland, as was Jacob's stone in
the temple at Jerusalem, by Christian and
Moslem; or the famous black stone at Mecca,
for centuries before the time of Mahomet. This
Irish relic is, at present, to be seen in the co-
ronation chair at Westminster Abbey, where it
is shewn as Jacob's pillow or pillar; for the
learned antiquaries of Westminster do not allow
that it has any connexion with Ireland. In
this they may be right as to the stone now in
their possession, for it is confidently asserted by
a worthy friend of mine, who has obliged the
world with many well-intended publications,
that the real *Lia fail* has been abstracted from
the coronation chair by some zealous Gaelic
patriots, who have replaced it with the stone at
present exhibited. It is further surmised that
it may, by due diligence, be traced, strange
turn of destiny! to the buildings of the Catho-
lic Association; and, stranger still, that it is
there religiously preserved, by those Irish da-
magogues, to crown their great leader on it,
who by facetious anticipation is already known
by the name of King O'Connell.—*Diu vital
Rex!*"

And all the people answered, **LONG LIVE
KING DAN THE FIRST!!!**

*The Topography and Antiquities of Rome; in-
cluding the recent Discoveries made about the
Forum and the Via Sacra.* By the Rev.
Richard Burgess. 2 vols. 8vo. London,
1831. Longman and Co.

To the classical student this is a valuable book
—to the classical traveller an invaluable one.
Many years of life have passed away from us,
with their hours of pain and moments of en-
joyment, since we last looked upon the "mo-
ther of dead nations," Rome. Our memory is,
however, still pleasantly charged with the
sensations of that period, when, with the highly
tempered enthusiasm of emerging boyhood, and
an unsatisfied thirst for a deeper acquaintance

with the artful Greek and glorious Roman than
a classical education in this country was wont
to afford, we proceeded, under the guidance of
the worthy and well-known Antonio Nibbi, to
explore the relics of "almighty Rome." It is
impossible to deny but that this our course of
proceeding was replete with interest and in-
struction, and amply repaid the labour and
expense. Signor Nibbi's acute reasoning and
extensive reading, when applied in illustrating
or identifying the various monuments or their
sites, was in itself a high gratification; but
still the dogmatism of a Jonathan Oldbuck
would not unfrequently display itself, and con-
demn us to a waste of time in listening to
tedious dissertations and learned triflings upon
points of no passing interest, and merely
dragged forward because Carlo Fea, or some
other antiquary, had arrived at a different
conclusion.

We sighed for a written oracle subservient
to history and useful information, which should
be above the dry minutiae of the antiquary,
or the littleness of the vagrant tourist, with
which we might sally forth alone into the
chaos of ruin, and indulge, if thus inclined,
in the noblest of man's recreations—reflection!
We might look in vain for a fitter field. Sub-
sequent years have made no alteration in our
opinions as to the advantage of such a work;
and although we are not exactly prepared to
pronounce that the extent of our wishes has
been fulfilled, yet these volumes accomplish
more, infinitely more, than their predecessors.
In the words of their reverend author, "they
investigate the site of ancient Rome; they give
a fair and impartial account of the ruins; they
connect as much as possible the monuments
with the history of Rome; and they direct the
learned reader to the proper sources for ex-
tending his knowledge on the subject."

With regard to authorities, we are inclined
to think the author is too much disposed to
rely on Dionysius, whose testimony Niebuhr
has so reasonably shaken in his great history,
and which we think, in some instances, might
have been referred to with advantage. The
most defective part of the work is the disserta-
tion on the periods of the decay and destruc-
tion of the monuments, which might, in our
opinion, from its great interest and hitherto
partial development, have been carried much
farther: to this should have been appended, a
succinct account of the excavations and dis-
coveries from Raphael, who first conceived the
great idea of recovering and securing from
destroying barbarism and time all that remained
of ancient Rome to the present period. Many
of the monuments known to have existed in
the sixteenth century, have again disappeared;
some entirely lost, while others have since be-
come the objects of a new discovery. When
the tomb of the Scipios was laid open in the
year 1780, it became indisputable that it had
been visible and accessible at the former period,
as one of the inscriptions found therein had
been published by Doni, a century previously,
in his collection. The tombs on the Aurelian
way were likewise known to the learned of the
sixteenth century, as the Greek and Latin in-
scription taken from them is to be found in
Muratori. They were discovered a second time
in the villa Pamfili so late as 1819.

This is sufficient to shew the strange vicissi-
tudes which befall even inanimate things, and
with what interest the subject might be pur-
sued. With respect to what has latterly taken
place in the shape of excavation at Rome, as
little has been done, more is required to be
said. Papal poverty, or papal policy, forbids

the prompt execution of designs, which, if carried into effect, would, in a brief space of time, bring to light all the buried majesty of Rome; while private undertakings, which appear to have proceeded from no nobler motives than vanity or avarice, have been long the laughter of the many, but the gain of the few. How much more efficacious would it be, could a spirit of nationality be infused into such an enterprise as the entire excavation of the Forum Romanum and its vicinity! Suppose a subscription, opened in the name of the different kingdoms, whose subjects chiefly visit the eternal city, and let separate portions of the great work be assigned to each, we trust that England would not be the rearmost. But, returning to our critical task, we cannot refrain from noticing how greatly our author is indebted to Signor Giuseppe Pardini, architect of Lucca, for the talent and ingenuity displayed by him in a restored plan of the temple of Venus and Rome: the site of which has been recently cleared. As regards a specimen of the work before us, we find ourselves beset with difficulty: however, nothing new can be expected by the most eager novelty hunters from volumes which profess only to treat of what is old; so we select as follows:—

“There remains not the shadow of a doubt that the ancient direction of the Via Appia is preserved in the road which leads to the ruins called Roma Vecchia, distant about five miles from Rome: it is indicated by the remains of sepulchral monuments continually occurring on each side of the way. It must ever have been confined in the valley through which we now pass. It is bestrode by an ornamented, if not a triumphal arch; and, for the last and surest proof of all, we shall find many vestiges of its original pavement. This road was first constructed by Appius Claudius the censor, 310 years before the Christian era: it was, indeed, repaired by the Emperor Trajan; but, about nine hundred years after its foundation, the secretary of Belisarius saw it in all its pristine solidity. So durable is ‘the queen of roads,’ that between Rome and Capua may often be seen the very foundations and materials of which it was built: it will be so seen near the tomb of Cecilia Metella. The substructions in the valley of Aricia are still the wonder of posterity: it traversed the Pontine marshes by the well-known places of the Three Taverns and Appii Forum; and the first town in the Neapolitan territory is built amongst its everlasting silex stones. The description given of this road by Procopius, in the sixth century of the Christian era, may here be seasonably inserted:—‘To traverse the Appian way,’ says that historian, ‘is a distance of five days’ journey for an active traveller; and it leads from Rome to Capua. Its breadth is such, that two chariots may meet upon it, and pass each other without interruption; and its magnificence surpasses that of all other roads. For the construction of this great work, Appius caused the materials to be fetched from a great distance, so as to have all the stones hard and of the nature of millstones, such as are not to be found in this part of the country. Having ordered this material to be smoothed and polished, the stones were cut in corresponding angles, so as to fit together in jointures without the intervention of copper or any other material to bind them; and in this manner they were so firmly united, that in looking at them, one would say they had not been put together by art, but had grown so upon the spot. And after the wearing of so many ages, being traversed daily by a multitude of vehicles and all

sorts of cattle, they still remain unmoved; nor can the least trace of ruin or waste be observed upon these stones; neither do they appear to have lost any of their beautiful polish;—and such is the Appian way.’ Twelve centuries since the time it was so, have not entirely defaced it; and perhaps the children of ages yet to come may tread the pavement of the Via Appia. Still, no more shall the conqueror be seen moving along this road to enter the city in triumph; nor will the steps of the temple ever again be crowded to welcome the return of a Cicero from exile: the solemn stillness which now pervades the precincts of the Appian way is more appalling than the thunder of Pompey’s triumphant chariot, which once shook its pavement; and the solitude withal, which seems to increase at every step, effectually proclaims the more durable conquest of time. But, the cypress-tree announces the sepulchre in which were entombed the ashes of the Scipios. In the year 1616 was discovered the first indication of this interesting monument; viz. an inscription, written upon peperine stone in reddish characters, and which is now preserved in the Barberini library. It was generally believed by the antiquaries of that day to be spurious, which might be the reason why no further search was made, until a second inscription was turned up in the year 1780. Encouraged by this new discovery, the excavators relinquished not their labour until they had restored to light the illustrious ashes concealed for so many generations. The intimations of Livy and Cicero, as to the situation of the Scipios’ tomb, were then understood; and the Porta Capena brought within the present walls of Rome. The illustration of this sepulchre fell to the lot of Piranesi: he attempted to make a ground plan of it; but his creative genius could do no more than give a representation of several recesses, cut at irregular intervals out of the natural tuff. He found six ‘sarcophagi,’ more or less perfect, in their original places; and several recesses hollowed out of the rock, appropriated for containing more bodies. Only one place was found seemingly adapted for a cinerary urn; which circumstance confirms the remarks of Cicero and Pliny, that the Scipios were not accustomed to burn the bodies of their deceased relations. The modern entrance into the sepulchral cave is nearly opposite to the ancient one: and in descending we may observe on our right a specimen of the natural rock, which has either originally prevented regularity in the ground-work, or prevents us now from ascertaining it. Most of the recesses above alluded to lay also on the right in thus descending; and after passing several of them we shall arrive at some walls of brick, which have been recently built for the purpose of sustaining the tuff above. The inscriptions now to be read over the respective depositories are faithful copies of the originals, which have been all transferred to the Vatican; and are to be seen, along with the perfect sarcophagus of Scipio Barbatus and the small laurelled bust, in the Sala del Torso. At the end of our subterranean descent is the ancient entrance into the sepulchre, which is turned towards the Via Latina, and probably communicated with that road by a narrow footway or ‘diverticulum.’ The ingress was by a vault, which led to a solid-built arch, composed of eleven blocks of peperine stone: upon this rests a plain cornice, on which was discovered the Doric base of a column, indicating a second story; but nothing of the upper part remains. At the distance of about forty Roman palms, on the same side of the tomb,

was found a second entrance, which seems to have been cut afterwards for some local purpose: not improbably might it be made when this sepulchre passed into the possession of others. In retracing our steps to the light, we shall find an additional building of brick. The vestiges of a stair-case lead to three chambers, two of which may be entered with safety. The construction of these rooms is not of a very inferior kind; but the remains of the stucco betray an advanced period of the empire. The various inscriptions, bearing the names of unknown persons, doubtless belonged to this more recent building; and perhaps necessity, rather than ambition, might prompt the intruders thus to mingle their ashes with those of the Scipios.”

“The Mausoleum of Hadrian has been the citadel of Rome ever since the fall of the Western Empire; and is therefore so connected with the sieges and vicissitudes of the city, that it would form a history of itself. Very little, however, is known of this remarkable monument until it ceased to bear its original character. We are simply informed by the biographer of Hadrian, that he made a sepulchre near the Tyber. Dion Cassius, more explicit, says, the emperor was interred close by the river, near the Ælian bridge, for there he had built himself a tomb. That of Augustus, he adds, was full, and no one was buried in it after Trajan’s time. It is generally supposed this mausoleum was built in the gardens of Domitia, Nero’s aunt, because Antoninus Pius is said to have transferred the mortal remains of Hadrian from Bais, and placed them with respect and reverence in those gardens; but the real account is this: Hadrian’s body was first buried in a temporary sepulchre at Puteoli in Cicero’s villa; it was afterwards transported to Rome, and laid in state in the gardens of Domitia, and finally interred in his mausoleum; but it is nowhere said it was in those gardens: they, more probably, were on the Monte Pincio, where we have shewn Nero was buried; and which the emperor Aurelian, alternately with the Sallustian gardens, preferred for his residence to the Palatine hill. After Hadrian, the mausoleum received the ashes of all the Antonines, as appears from inscriptions; and by the order of Pertinax, the body of Commodus, after being dragged through the Tyber, was buried in it. Hadrian, it seems, left it unfinished; for it is enumerated among the works of his successor. It probably continued to be the imperial sepulchre until the time of Septimius Severus. Procopius is the first writer who gives any description of it: and, speaking of an assault made by the Goths on the Aurelian gate, he writes thus:—‘The tomb of the emperor Hadrian is situated outside the Porta Aurelia, about a stone’s cast distant from the bulwarks of the city. It is an object worthy of our consideration. It is built of Parian marble, and the blocks fit close to one another, without any thing between to bind them. It has four equal sides, about a stone’s throw in length; its altitude rises above the city walls: on the top are statues of the same kind of marble,—admirable figures of men and horses. The men of old time (because it appeared advantageous for the defence of the city) joined it with the bulwarks by walls, thus making it a part of the fortifications; so that it had the appearance of a lofty tower covering the gate.’ But we have to add from the same writer, that those beautiful statues were torn from their pedestals and hurled against the besiegers below. To the account of Belisarius’s secretary scarcely any

thing since has been added. The anonymous of the thirteenth century says it was faced with marble; and he speaks of gilded peacocks and a bull, of bronze doors and horses, which he perhaps never saw. But what says John of Antioch? The statue of Hadrian in a car drawn by four horses stood on the top, so large that a full grown man might pass through one of the horses' eyes! On the bronze doors of St. Peter's there is a representation of the Mole, made in the days of Pope Eugenius by Antonio Pollajo, that is about 1431. In Camucci's sketch, made a century after, some of the cornice is indicated, which he says was embellished with ox-heads and festoons; and on the frieze two inscriptions were read belonging to Commodus and Lucius Verus. There has been a constant tradition, that the beautiful columns which so lately stood in St. Paul's basilica, were placed round the different belts or stories.* We have the designs of artists in modern times, and especially those of the never-failing Piranesi: but all these things fetch back but little of what has now disappeared that we cannot equally supply from our own observations. The Fort S. Angelo stands upon an immense square basement, one side of which was excavated in the year 1825, and discovered to be of peperine stone and of brick. At the same time was laid open a regularly-constructed shore or passage of communication, about five feet high, running nearly parallel with the base for a length at least of 300 feet. We recollect penetrating to the end of this passage, where there were several rude chambers; and descending by a few steps were some others of a like construction. From the breaches made in the walling, and subsequently filled up, it was clear these places had been opened at a late period. They did not seem to have any connexion with the tomb of Hadrian, but rather to have existed previous to it. The vaults and sides were covered with rude plaster, so that they were evidently more than mere grottos; for what purpose, except they were sepulchres, it was impossible to declare. Upon this large square basement rises the round tower, the wonder and strength of papal Rome. Long since deprived of all its original ornament, it exhibits outwardly only the solid construction of peperine stone; and that is almost concealed by the additional works that have been found necessary to constitute a fortress and a state prison. The upper part is all modern, and perhaps ascends as high as the mausoleum originally was, of which it gives no bad representation. It is crowned by the celebrated angel ready to sheathe his sword, and the entrance is guarded by drawbridges and sentinels. Within the last ten years the corridor or passage up to the sepulchral chamber has been entirely excavated; and, with the aid of torches, we may descend from the present staircase, beginning about the level of the sepulchral chamber, to the original entrance into the tomb, which is just opposite to the bridge. This corridor is about eleven feet wide and thirty in height, built of the finest brickwork, and has been faced with precious marbles, of which continual fragments have been found, and the traces are still left on the walls. The flooring has been mosaic: some specimens still exist in the original places. The passage was lighted

from above by those openings, called in Italian 'abbaini,' which are cut through the mass of the tomb in pyramidal forms; the light is of course now excluded by the modern building, which covers them up. Where those 'abbaini' occur, we may observe the immense thickness of the walls; and over the arches the length of the bricks (not less than six feet) is distinguished in one place where a breach has been made for some temporary purpose. It will be seen that the internal material is not a heterogeneous mixture, 'ad emptionem,' like most other large sepulchres, but the same regular-built brickwork is carried through the whole mass; so that as a monument of labour it must have excelled all others of the kind we are acquainted with. After having nearly made the circuit of the tomb by descending this spiral corridor, we arrive at the original entrance, which, as has been said, faces the Ponte S. Angelo. A lofty arch of travertine stone forms the ingress; this leads into a more spacious vestibule. Opposite to where the door has been is a large niche, which doubtless contained the statue of the emperor: a colossal head, now in the Vatican, and a hand, discovered in the more recent excavations, perhaps belonged to the said statue. The white mark on the sides of the entrance arch will shew from what height the excavations began. Notwithstanding the admirable masonry of which Procopius speaks, (and, indeed, so closely united are those blocks of stone, that it would be difficult to insert the point of a knife between them,) it appears from the many holes visible in the walls, that they have had a covering of marble; and many fragments of cornices and other decorations are now lying as they were found by the excavators. On the left of the entrance are some square openings leading to other apartments; but without digging farther, it cannot be pronounced what these might be: the one, however, on the left hand of the niche is accessible; it seems to have been a small dependence, probably for depositing instruments of sacrifice, or machines used in the interments: there is also lying a fragment of a cinerary vase of marble with some letters upon it. In re-ascending this passage to the place where we entered, it will be borne in mind that we are advancing towards the sepulchral chamber by the original way; where the modern staircase now meets the corridor it ceases to be circular, and we shall observe the arch continues horizontally. Supposing the whole fabric of the modern steps to be away, we should at once proceed along the same level to the sepulchral chamber; but as it is, we ascend until we find ourselves near the top of its vault; it occupies a space of about twenty-five feet square: it has been, and is still, lighted by a window on each side, which exhibits at the same time the thickness of the walls. By descending into the cells beneath the steps, we shall see the lateral niches, and in one of them the ancient level has been come at. In the cell on the left of the staircase, and which is more habitable, the French consuls were imprisoned in the revolution. Any thing higher than the sepulchral chamber is not ancient. We shall only observe, that, in leaving it, we pass through the original square door, which, like the rest, is of solid stone. And such is the Mole of Hadrian: our imagination, aided by the little description left on record, can alone tell us what it was. We may, however, add the valuable objects which are either known or believed to have belonged to it; such as the large sarcophagus of black and white granite

in the Museo Pio-Clementino, with the busts of Hadrian and Pallas; the beautiful Barberini faun, and the dancing faun, in the Florentine gallery; the large basin of porphyry which forms the baptismal font in St. Peter's; the urn of the same materials, which was taken away for the tomb of Pope Innocent II.; and whatever else may be dispersed abroad with a doubtful title to its origin."

We now take our leave of Mr. Burgess's work, recommending it most strongly to the classical scholar's attention, be he at home or abroad.

The Eventful History of the Mutiny of the Bounty. Family Library, Vol. XXV
London, 1831. J. Murray.

THIS is a volume altogether of intense interest, though most of the particulars of the piratical seizure of the *Bounty* are familiar to the public. Yet, Mr. Barrow, for it is to that able writer we are indebted for this narrative, has imparted so much of force and feeling to the account, and made several additions of so attractive a character, that we have found ourselves impelled to read the whole to the end, with the same degree of curiosity and emotion as if the story had been entirely new.

With this high and general praise, however, we shall be guided in our illustrations by the appearance of the greatest novelty; and in this light we could select nothing more striking than the letters relative to Mr. Heywood,* the midshipman, when he was brought home in irons from Otaheite for trial. "The letters of his sister, Nessy Heywood, (says Mr. Barrow), of which a few will be inserted in the course of this narrative, exhibit so lively and ardent an affection for her beloved brother, are couched in so high a tone of feeling for his honour, and confidence in his innocence, and are so nobly answered by the suffering youth, that no apology seems to be required for their introduction, more especially as their contents are strictly connected with the story of the ill-fated crew of the *Bounty*. After a state of long suspense, this amiable and accomplished young lady thus addresses her brother:—

* Isle of Man, 2d June, 1792.

"In a situation of mind only rendered supportable by the long and painful state of misery and suspense we have suffered on his account, how shall I address my dear, my fondly beloved brother!—how describe the anguish we have felt at the idea of this long and painful separation, rendered still more distressing by the terrible circumstances attending it! Oh! my ever dearest boy, when I look back to that dreadful moment which brought us the fatal intelligence that you had remained in the *Bounty* after Mr. Bligh had quitted her, and were looked upon by him as a *mutineer*!—when I contrast that day of horror with my present hopes of again beholding you, such as my most sanguine wishes could expect, I know not which is the most predominant sensation,—pity, compassion, and terror for your sufferings, or joy and satisfaction at the prospect of their being near a termination, and of once more embracing the dearest object of our affections. I will not ask you, my beloved brother, whether you are innocent of the dreadful crime of mutiny; if the transactions of that day were as Mr. Bligh has represented them, such is my conviction of your worth and honour, that I will, without hesitation, stake my life on

* "Pope Clement VII. and his architect Labacco seem to have given currency to this tradition, but without producing any proofs except their own dictum. Such columns, however striking in the interior of an edifice, must have appeared puny around such a pile of building as the Mole of Hadrian, and quite at variance with the 'grandiosity' of that emperor's taste."

* Captain Heywood died only a few months ago, a highly-respected officer in His Majesty's navy.

your innocence. If, on the contrary, you were concerned in such a conspiracy against your commander, I shall be as firmly persuaded his conduct was the occasion of it; but, alas! I could any occasion justify so atrocious an attempt to destroy a number of our fellow-creatures? No, my ever dearest brother, nothing but conviction from your own mouth can possibly persuade me that you would commit an action in the smallest degree inconsistent with honour and duty; and the circumstance of your having swam off to the Pandora on her arrival at Otaheite (which filled us with joy to which no words can do justice), is sufficient to convince all who know you, that you certainly staid behind either by force or from views of preservation. How strange does it seem to me that I am now engaged in the delightful task of writing to you! Alas! my beloved brother, two years ago I never expected again to enjoy such a felicity, and even yet I am in the most painful uncertainty whether you are alive. Gracious God, grant that we may be at length blessed by your return! but, alas! the Pandora's people have been long expected, and are not even yet arrived. Should any accident have happened, after all the miseries you have already suffered, the poor gleam of hope with which we have been lately indulged, will render our situation ten thousand times more insupportable than if time had inured us to your loss. I send this to the care of Mr. Hayward, of Hackney, father to the young gentleman you so often mention in your letters while you were on board the Bounty, and who went out as third lieutenant of the Pandora—a circumstance which gave us infinite satisfaction, as you would, on entering the Pandora, meet your old friend. On discovering old Mr. Hayward's residence, I wrote to him, as I hoped he could give me some information respecting the time of your arrival; and in return he sent me a most friendly letter, and has promised this shall be given to you when you reach England, as I well know how great must be your anxiety to hear of us, and how much satisfaction it will give you to have a letter immediately on your return. Let me conjure you, my dearest Peter, to write to us the very first moment—do not lose a post—'tis of no consequence how short your letter may be, if it only informs us you are well. I need not tell you that you are the first and dearest object of our affections. Think, then, my adored boy, of the anxiety we must feel on your account; for my own part, I can know no real joy or happiness independent of you; and if any misfortune should now deprive us of you, my hopes of felicity are fled for ever. We are at present making all possible interest with every friend and connexion we have, to insure you a sufficient support and protection at your approaching trial; for a trial you must unavoidably undergo, in order to convince the world of that innocence, which those who know you will not for a moment doubt; but, alas! while circumstances are against you, the generality of mankind will judge severely. Bligh's representations to the Admiralty are, I am told, very unfavourable, and hitherto the tide of public opinion has been greatly in his favour. My mamma is at present well, considering the distress she has suffered since you left us; for, my dearest brother, we have experienced a complicated scene of misery from a variety of causes, which, however, when compared with the sorrow we felt on your account, was trifling and insignificant; that misfortune made all others light, and to see you once more returned, and safely restored to us, will be the summit of all earthly happiness.

Farewell, my most beloved brother! God grant this may soon be put into your hands! Perhaps at this moment you are arrived in England, and I may soon have the dear delight of again beholding you. My mamma, brothers, and sisters, join with me in every sentiment of love and tenderness. Write to us immediately, my ever-loved Peter, and may the Almighty preserve you until you bless with your presence your fondly affectionate family, and particularly your unalterably faithful friend and sister,

(Signed) 'NESSY HEYWOOD.'

We do not remember to have read a more affecting letter than this; so touching, indeed, that we almost regret to see a poetical effusion on the same subject, from the pen of the writer.

"Among the many anxious friends and family connexions of the Heywoods, was Commodore Pasley, to whom this affectionate young lady addressed herself on the melancholy occasion; and the following is the reply she received from this officer:—

Sheerness, June 8th, 1792.

'Would to God, my dearest Nessy, that I could rejoice with you on the early prospect of your brother's arrival in England. One division of the Pandora's people has arrived, and now on board the Vengeance (my ship). Captain Edwards, with the remainder, and all the prisoners late of the Bounty, in number ten (four having been drowned on the loss of that ship), are daily expected. They have been most rigorously and closely confined since taken, and will continue so, no doubt, till Bligh's arrival. You have no chance of seeing him, for no bail can be offered. Your intelligence of his swimming off on the Pandora's arrival, is not founded; a man of the name of Coleman swam off ere she anchored—your brother and Mr. Stewart the next day; this last youth, when the Pandora was lost, refused to allow his irons to be taken off to save his life. I cannot conceal it from you, my dearest Nessy, neither is it proper I should—your brother appears, by all accounts, to be the greatest culprit of all, Christian alone excepted. Every exertion, you may rest assured, I shall use to save his life; but on trial I have no hope of his not being condemned. Three of the ten who are expected are mentioned in Bligh's narrative as men detained against their inclination. Would to God your brother had been one of that number! I will not distress you more by enlarging on this subject: as intelligence arises on their arrival, you shall be made acquainted. Adieu! my dearest Nessy: present my affectionate remembrances to your mother and sisters, and believe me always, with the warmest affection, your uncle,

THOS. PASLEY.'

"How unlike is this from the letter of Bligh!" While it frankly apprises this amiable lady of the real truth of the case, without disguise, as it was then understood to be, from Mr. Bligh's representations, it assures her of his best exertions to save her brother's life."

All the correspondence at this afflicting period has the air of a romance—a romance of the deepest human interest. The result of the trial will be remembered; but we give the summary.

"The number of persons who remained in the Bounty after her piratical seizure, and of course charged with the crime of mutiny, was twenty-five; that these subsequently separated into two parties—sixteen having landed at Otaheite, and afterwards taken from thence in the Pandora, as prisoners, and nine having

* Bligh was very inveterate against Heywood, as appears from his letters quoted here.

gone with the Bounty to Pitcairn's Island Of the sixteen taken in the Pandora—

1. Mr. Peter Heywood, midshipman, was sentenced to death, but pardoned.
2. James Morrison, boatswain's mate, ditto do.
3. William Muspratt, commander's steward, ditto do.
4. Thomas Burkitt, seaman, } condemned and executed.
5. John Millward, ditto, }
6. Thomas Ellison, ditto, }
7. Joseph Coleman, armourer, }
8. Charles Norman, carpenter's mate, } tried and acquitted.
9. Thos. McIntosh, carpenter's crew, }
10. Michael Byrne, seaman, }
11. Mr. George Stewart, midshipman, } drowned in iron when the Pandora was wrecked.
12. John Sumner, seaman, }
13. Richard Skinner, seaman, }
14. Henry Hillbrant, cooper, }
15. Charles Churchill, master-at-arms, murdered by Matthew Thompson.
16. Matthew Thompson, seaman, murdered by Churchill's friends in Otaheite.

Of the nine who landed on Pitcairn's Island:

1. Mr. Fletcher Christian, acting-lieut., } were murdered by the Otaheites.
2. John Williams, seaman, }
3. Isaac Martin, ditto, }
4. John Mills, gunner's mate, }
5. William Brown, botanist's assistant, }
6. Matthew Quintal, seaman, put to death by Young and Adams in self-defence.
7. William McKoy, seaman, became insane, and killed by throwing himself from a rock.
8. Mr. Edward Vasey, midshipman, died of asthma.
9. Alex. Smith, alias John Adams, seaman, died in 1823.

Poor Nessy, whose character is so affectingly displayed in this narrative, died the year after her brother's trial. The details of the bringing home of the prisoners are equal to Byron's *Island*.

"The Pandora called at numerous islands without success; but on Lieutenant Corner having landed on one of the Palmerston's group, he found a yard and some spars, with the broad arrow upon them, and marked 'Bounty.' This induced the captain to cause a very minute search to be made in all these islands, in the course of which the Pandora, being driven out to sea by blowing weather, and very thick and hazy, lost sight of the little tender and a jolly boat, the latter of which was never more heard of. This gives occasion to a little spleenetic effusion from a writer in a periodical journal, which was hardly called for. 'When this boat,' says the writer, 'with a midshipman and several men (four), had been inhumanly ordered from alongside, it was known that there was nothing in her but one piece of salt-beef, compassionately thrown in by a seaman; and horrid as must have been their fate, the flippant surgeon, after detailing the disgraceful fact, adds, 'that this is the way the world was peopled!' or words to that effect, for we quote only from memory.' The following is quoted from the book: 'It may be difficult to surmise,' says the surgeon, 'what has been the fate of those unfortunate men. They had a piece of salt-beef thrown into the boat to them on leaving the ship; and it rained a good deal that night and the following day, which might satiate their thirst. It is by these accidents the Divine Ruler of the universe has peopled the southern hemisphere.' This is no more than asserting an acknowledged fact, that can hardly admit of a dispute; and there appears nothing in the paragraph which at all affects the character of Captain Edwards, against whom it is levelled. After a fruitless search of three months, the Pandora arrived, on the 29th August, on the coast of New Holland, and close to that extraordinary reef of coral rocks called the 'Barrier Reef,' which runs along the greater part of the eastern coast, but at a considerable distance from it. The boat had been sent out to look for an opening, which was soon discovered; but in the course of the night the ship had drifted past it. 'On getting soundings,' says Captain Edwards, in his narrative laid before the court-martial, 'the

topsails were filled; but before the tacks were hauled on board and other sail made and trimmed, the ship struck upon a reef; we had a quarter less two fathoms on the larboard side, and three fathoms on the starboard side; the sails were braced about different ways, to endeavour to get her off, but to no purpose; they were then clewed up, and afterwards furled, the top-gallant yards got down, and the top-gallant masts struck. Boats were hoisted out, with a view to carry out an anchor; but before that could be effected, the ship struck so violently on the reef, that the carpenter reported she made eighteen inches of water in five minutes; and in five minutes after this, that there were four feet of water in the hold. Finding the leak increasing so fast, it was thought necessary to turn the hands to the pumps, and to bail at the different hatchways; but she still continued to gain upon us so fast, that in little more than an hour and a half after she struck, there were eight feet and a half of water in the hold. About ten, we perceived that the ship had beaten over the reef, and was in ten fathoms water; we therefore let go the small bower anchor, cleared away a cable, and let go the best bower anchor in fifteen and a half fathoms water under foot, to steady the ship. Some of her guns were thrown overboard, and the water gained upon us only in a small degree, and we flattered ourselves that by the assistance of a thrummed topsail, which we were preparing to haul under the ship's bottom, we might be able to lessen the leak, and to free her of water: but these flattering hopes did not continue long; for, as she settled in the water, the leak increased again, and in so great a degree, that there was reason to apprehend she would sink before daylight. During the night two of the pumps were unfortunately for some time rendered useless; one of them, however, was repaired, and we continued baling and pumping the remainder of the night; and every effort that was thought of was made to keep afloat and preserve the ship. Daylight fortunately appeared, and gave us the opportunity of seeing our situation and the surrounding danger; and it was evident the ship had been carried to the northward by a tide or current. The officers, whom I had consulted on the subject of our situation, gave it as their opinion, that nothing more could be done for the preservation of the ship: it then became necessary to endeavour to provide and to find means for the preservation of the people. Our four boats, which consisted of one launch, one eight-oared pinnace, and two six-oared yawls, with careful hands in them, were kept astern of the ship; a small quantity of bread, water, and other necessary articles, were put into them; two canoes, which we had on board, were lashed together, and put into the water; rafts were made, and all floating things upon deck were unlashed. About half-past six in the morning of the 29th the hold was full, and the water was between decks, and it also washed in at the upper-deck ports, and there were strong indications that the ship was on the very point of sinking; and we began to leap overboard and take to the boats; and before every body could get out of her, she actually sunk. The boats continued astern of the ship, in the direction of the drift of the tide from her, and took up the people that had hold of rafts and other floating things that had been cast loose, for the purpose of supporting them on the water. The double canoe, that was able to support a considerable number of men, broke adrift with only one man, and was bulged upon a reef, and afforded us no assistance when she

was so much wanted on this trying and melancholy occasion. Two of the boats were laden with men, and sent to a small sandy island (or key) about four miles from the wreck; and I remained near the ship for some time with the other two boats, and picked up all the people that could be seen, and then followed the two first boats to the key; and having landed the men and cleared the boats, they were immediately despatched again, to look about the wreck and the adjoining reef for any that might be missing; but they returned without having found a single person. On mustering the people that were saved, it appeared that eighty-nine of the ship's company, and ten of the mutineers that had been prisoners on board, answered to their names; but thirty-one of the ship's company, and four mutineers, were lost with the ship.—It is remarkable enough that so little notice is taken of the mutineers in this narrative of the captain; and as the following statement is supposed to come from the late Lieutenant Corner, who was second lieutenant of the Pandora, it is entitled to be considered as authentic; and if so, Captain Edwards must have deserved the character ascribed to him, of being altogether destitute of the common feelings of humanity. 'Three of the Bounty's people, Coleman, Norman, and M'Intosh, were now let out of irons, and sent to work at the pumps. The others offered their assistance, and begged to be allowed a chance of saving their lives; instead of which, two additional sentinels were placed over them, with orders to shoot any who should attempt to get rid of their fetters. Seeing no prospect of escape, they betook themselves to prayer, and prepared to meet their fate, every one expecting that the ship would soon go to pieces, her rudder and part of the stern-post being already beat away.' When the ship was actually sinking, and every effort making for the preservation of the crew, it is asserted that 'no notice was taken of the prisoners, as is falsely stated by the author of the *'Pandora's Voyage,'* although Captain Edwards was entreated by Mr. Heywood to have mercy upon them, when he passed over their prison, to make his own escape, the ship then lying on her broadside, with the larboard bow completely under water. Fortunately, the master-at-arms, either by accident or design, when slipping from the roof of 'Pandora's box' into the sea, let the keys of the irons fall through the scuttle or entrance, which he had just before opened; and thus enabled them to commence their own liberation, in which they were generously assisted, at the imminent risk of his own life, by William Moulter, a boatswain's mate, who clung to the coamings, and pulled the long bars through the shackles, saying he would set them free, or go to the bottom with them. Scarcely was this effected when the ship went down, leaving nothing visible but the top-mast cross-trees. The master-at-arms and all the sentinels sunk to rise no more. The cries of them and the other drowning men were awful in the extreme; and more than half an hour had elapsed before the survivors could be taken up by the boats. Among the former were Mr. Stewart, John Summer, Richard Skinner, and Henry Hillbrant, the whole of whom perished with their hands still in manacles. On this melancholy occasion, Mr. Heywood was the last person but three who escaped from the prison, into which the water had already found its way through the bulk-head scuttles. Jumping overboard, he seized a plank, and was swimming towards a small sandy quay (key) about three miles

distant, when a boat picked him up, and conveyed him thither in a state of nudity. It is worthy of remark, that James Morrison endeavoured to follow his young companion's example, and, although handcuffed, managed to keep afloat until a boat came to his assistance.' This account would appear almost incredible. It is true, men are sometimes found to act the part of inhuman monsters; but then they are generally actuated by some motive or extraordinary excitement: here, however, there was neither; but, on the contrary, the condition of the poor prisoners appealed most forcibly to the mercy and humanity of their jailor. The surgeon of the ship states, in his account of her loss, that as soon as the spars, booms, hencoops, and other buoyant articles, were cut loose, 'the prisoners were ordered to be let out of irons.' One would imagine, indeed, that the officers on this dreadful emergency would not be witness to such inhumanity, without remonstrating effectually against keeping these unfortunate men confined a moment beyond the period when it became evident that the ship must sink. It will be seen, however, presently, from Mr. Heywood's own statement, that they were so kept, and that the brutal and unfeeling conduct which has been imputed to Captain Edwards is but too true. It is an awful moment when a ship takes her last heel, just before going down. When the Pandora sunk, the surgeon says, 'the crew had just time to leap overboard, accompanying it with a most dreadful yell. The cries of the men drowning in the water was at first awful in the extreme; but as they sunk and became faint, they died away by degrees.' "

Mr. Barrow is tolerably severe upon Bligh, but much more so upon Captain Edwards, of the Pandora, whose treatment of the prisoners was, indeed, most severe and cruel. He is also pretty sharp upon the missionaries, siding with Kotzebue much more than with Mr. Ellis (see our recent *Gazettes*). He tells us: "'With regard to their worship,' Captain Cook does the Otaheitan but justice in saying, 'they reproach many who bear the name of Christians. You see no instances of an Otaheitan drawing near the Eatooa with carelessness and inattention; he is all devotion; he approaches the place of worship with reverential awe; uncovers when he treads on sacred ground; and prays with a fervour that would do honour to a better profession. He firmly credits the traditions of his ancestors. None dares dispute the existence of the Deity.' Thieving may also be reckoned as one of their vices; this, however, is common to all uncivilised nations, and it may be added, civilised too. But to judge them fairly in this respect, we should compare their situation with that of a more civilised people. A native of Otaheite goes on board a ship and finds himself in the midst of iron bolts, nails, knives, scattered about, and is tempted to carry off a few of them. If we could suppose a ship from El Dorado to arrive in the Thames, and that the custom-house officers, on boarding her, found themselves in the midst of bolts, hatchets, chisels, all of solid gold, scattered about the deck, one need scarcely say what would be likely to happen. If the former found the temptation irresistible to supply himself with what was essentially useful—the latter would be as little able to resist the which would contribute to the indulgence of his avarice or the gratification of his pleasure or of both. Such was the state of this beautiful island and its interesting and fascinating natives at the time when Captain Wallis first discovered and Lieutenant Cook shortly afterwards visited

it. What they now are, as described by Captain Beechey, it is lamentable to reflect. All their usual and innocent amusements have been denounced by the missionaries, and, in lieu of them, these poor people have been driven to seek for resources in habits of indolence and apathy: that simplicity of character, which atoned for many of their faults, has been converted into cunning and hypocrisy; and drunkenness, poverty, and disease, have thinned the island of its former population to a frightful degree. By a survey of the first missionaries, and a census of the inhabitants, taken in 1797, the population was estimated at 16,050 souls; Captain Waldegrave, in 1830, states it, on the authority of a census also taken by the missionaries, to amount only to 5000—and there is but too much reason to ascribe this diminution to praying, psalm-singing, and drinking. The island of Otaheite is in shape two circles united by a low and narrow isthmus. The larger circle is named Otaheite Mooé, and is about thirty miles in diameter; the lesser, named Tiaraboo, about ten miles in diameter. A belt of low land, terminating in numerous valleys, ascending by gentle slopes to the central mountain, which is about seven thousand feet high, surrounds the larger circle, and the same is the case with the smaller circle, on a proportionate scale. Down these valleys flow streams and rivulets of clear water, and the most luxuriant and verdant foliage fills their sides and the hilly ridges that separate them, among which were once scattered the smiling cottages and little plantations of the natives. All these are now destroyed, and the remnant of the population has crept down to the flats and swampy ground on the sea-shore, completely subservient to the seven establishments of missionaries, who have taken from them what little trade they used to carry on, to possess themselves of it; who have their warehouses, act as agents, and monopolise all the cattle on the island—but, in return, they have given them a new religion and a parliament, (*risum teneatis?*) and reduced them to a state of complete pauperism; and all, as they say, and probably have so persuaded themselves, for the honour of God, and the salvation of their souls! How much is such a change brought about by such conduct to be deprecated! How lamentable is it to reflect, that an island on which Nature has lavished so many of her bounteous gifts, with which neither Cyprus nor Cythera, nor the fanciful island of Calypso, can compete in splendid and luxuriant beauties, should be doomed to such a fate, in an enlightened age, and by a people that call themselves civilised!

And again of Nobbs, who had found his way to Pitcairn's Island.

"Buffet and Evans support themselves by their industry; but this Nobbs not only claims exemption from labour, as being their pastor—but also as being entitled to a maintenance at the expense of the community. He has married a daughter of Charles, and grand-daughter to the late Fletcher Christian, whose descendants, as captain of the gang, might be induced to claim superiority, and which, probably, might be allowed by general consent, had they but possessed a moderate share of talent; but it is stated, that Thursday October and Charles Christian, the sons of the chief mutineer, are ignorant, uneducated men. The only chance for the continuance of peace is the general dislike in which this Nobbs is held, and the gradual intellectual improvement of the rising generation." It seems that Adams on his

"This Nobbs is probably one of those half-witted

death-bed called all the heads of families together, and urged them to appoint a chief;—this, however, they have not done, which makes it the more to be apprehended that Nobbs, by his superior talent or cunning, will force himself upon them into that situation." And there is this "P.S. Just as this last sheet came from the press, the editor has noticed, with a feeling of deep and sincere regret, a paragraph in the newspapers, said to be extracted from an American paper, stating that a vessel sent to Pitcairn's Island by the missionaries of Otaheite has carried off the whole of the settlers to the latter island. If this be true—and the mention of the name of Nott gives a colour to the narration—the 'cheerubim' must have slept, the 'flaming sword' have been sheathed, and another Eden has been lost; and, what is worse than all, that native simplicity of manners, that purity of morals, and that singleness of heart, which so peculiarly distinguished this little interesting society, are all lost. They will now be dispersed among the missionary stations as humble dependants, where Kitty Quintal and the rest of them may get 'food for their souls,' such as it is, in exchange for the substantial blessings they enjoyed on Pitcairn's Island."

We shall now conclude with a curious statement respecting the ancient laws against piracy. Mr. Barrow is making the best apology that suggests itself for the harsh conduct of Captain Edwards; and he says: "He might have considered that, in all ages and among all nations, with the exception of some of the Greek states, piracy has been held in the utmost abhorrence, and these guilty of it treated with singular and barbarous severity; and that the most sanguinary laws were established for the protection of person and property in maritime adventure. The laws of Oleron, which were composed under the immediate direction of our Richard I., and became the common usage among maritime states whose vessels passed through British seas, are conceived in a spirit of the most barbarous cruelty. Thus, if a poor pilot, through ignorance, lost the vessel, he was either required to make full satisfaction to the merchant for damages sustained, or to lose his head. In the case of wrecks, where the lord of the coast (something like our present vice-admiral) should be found to be in league with the pilots, and run the ships on rocks, in order to get salvage, the said lord, the salvors, and all concerned, are declared to be accursed and excommunicated, and punished as thieves and robbers; and the pilot condemned to be hanged upon a high gibbet, which is to abide and remain to succeeding ages, on the place where erected, as a visible caution to other ships sailing thereby. Nor was the fate of the lord of the coast less severe: his property was to be confiscated, and himself fastened to a post in the midst of his own mansion, which being fired at the four corners, were all to be burned together; the walls thereof demolished; and the spot on which it stood to be converted into a market-place, for the sale only of hogs and swine, to all posterity. These and many other barbarous usages were transferred into the institutions of Wisbuy, which formed the *jus mercatorum* for a long period, and in which great care was

persons who fancy they have received a call to preach nonsense—some cobbler escaped from his stall, or tailor from his shopboard. Kitty Quintal's cant phrase, 'we want food for our souls,' and praying at meals for 'spiritual nourishment,' smack not a little of the jargon of the inferior caste of evangelicals. Whoever this pastoral drone may be, it is but too evident that the preservation of the innocence, simplicity, and happiness, of these amiable people, is intimately connected with his speedy removal from the island."

taken for the security of ships against their crews. Among other articles, are the following:—whoever draws a sword upon the master of a vessel, or wilfully falsifies the compass, shall have his right hand nailed to the mast; whoever behaves riotously, shall be punished by being keel-hauled; whoever is guilty of rebellion (or mutiny), shall be thrown overboard. For the suppression of piracy, the Portuguese, in their early intercourse with India, had a summary punishment, and accompanied it with a terrible example, to deter others from the commission of the crime. Whenever they took a pirate ship, they instantly hanged every man, carried away the sails, rudder, and every thing that was valuable in the ship, and left her to be buffeted about by the winds and the waves, with the carcasses of the criminals dangling from the yards, a horrid object of terror to all who might chance to fall in with her. Even to this day, a spice of the laws of Oleron still remains in the maritime code of European nations, as far as regards mutiny and piracy; and a feeling of this kind may have operated on the mind of Captain Edwards, especially as a tendency even to mutiny, or mutinous expressions, are considered, by the usage of the service, as justifying the commander of a ship of war to put the offenders in irons. Besides, the treatment of Bligh, whose admirable conduct under the unparalleled sufferings of himself and all who accompanied him in the open boat, had roused the people of England to the highest pitch of indignation against Christian and his associates, in which Edwards no doubt participated."

There are some engravings; the subjects interesting, the execution not remarkable.

A Flora of Berwick-upon-Tweed. By George Johnston, M.D., &c. Vol. I. *Phanerogamous Plants*; Vol. II. *Cryptogamous Plants*. 12mo. Edinburgh, Carfrae and Son; London, Longman and Co.

WHAT beauties does Flora disclose—
How sweet are her smiles upon Tweed!

says the song; and here we have the botanical proof in detail, class, and sub-division, with all the barbarous and mutable nomenclature of the science—though it is but justice to Dr. Johnston to say, that, in these respects, he has followed the best of guides and authorities. Fifty short definitions of terms, occupying, perhaps, two or three pages, would have been a great advantage to this publication, especially as its author has most judiciously interspersed it with pleasant varieties, to relieve the dryness of scientific definition, and recommend it to popular favour. It is true that every tolerable botanist will understand him, but many very clever persons may be at a loss to know what is meant by familiar appellations; and when we write for the general reader, we ought not to suppose that every one possesses a knowledge of Latin and Greek combinations.

With this slight remonstrance for an omission (an omission justified by the precedent of nearly all other works of the same kind), we have to bestow our entire commendation upon this able production, which merits much more than a local fame. As the *Flora* of an interesting and prolific country, it is simple and correct; and two brief papers add much to its value, by presenting a geological view of Berwickshire, and a botanical sketch of that county and part of Durham, from early times.

With this praise, we might consider our duty done, but that the preface says—

"To relieve, however, the dryness of mere descriptive detail, and to point out the manner

in which this study may be made most conducive to our amusement, if not to our instruction, various particulars have been added relative to the uses of our plants in agriculture, in the arts, and in medicine. And, in the Flora of a river so celebrated as the Tweed in pastoral poetry, and 'where flowers of fairy blow,' it seemed allowable to notice, at greater length than is usual in works of science, the purposes to which superstition has applied them in former times, and the illustrations which they have afforded to the poets of our own day. A few facts relative to the physiology of vegetable life have been also given; but of what I had collected, by far the greater portion has been cancelled, lest our work should have exceeded its proper limits."

We could wish that the author had exceeded them; for there is not a flower that blows on the lovely Tweed which might not have revived a sweet remembrance—little connected, indeed, with its petals, or calyx, or corolla, or other minute description, but redolent of poetry, and legend, and belief. "We are told that the

"Bonny, bonny broom; the broom of Cowdenknowes," has given place to turnips and common husbandry; but the theme once indulged, we should have liked to hear what blossoms now particularly adorn the bloody field of Flodden, what wisdom-giving plants grow where Dan Scotus flourished, and what spear-grass rears its head where the Kere, and Hays, and Homes, and Douglasses, erewhile bristled in the armed field. But Dr. Johnston will answer us, Mine is a work of natural science, and not of legendary lore, and too much of illustration would have spoilt its character. He is right: but, having said that, as a botanical performance, his two little volumes are excellent; we trust he will excuse us for selecting our extracts from their merely accessory reliefs.

Fraxinus excelsior the common ash.—"No tree is so often met with in ruins and upon ancient walls, probably on account of the readiness with which its winged seeds (the *culebrakes* of our pastoral poets) are borne by the wind. It insinuates its roots far into the crevices of these old buildings, and thereby becomes an instrument of the destruction of what affords it support." In like manner it fastens upon loose slaty rocks, and decorates them with its verdure. It is one of the latest trees in coming into leaf, and loses its leaves early in autumn. These are greedily eaten by cattle; and is ought not to be planted in parks or lawns intended for the pasture of milch cows, for they communicate a disagreeable taste to the butter. The wood is tough and valuable, being applicable to a great variety of purposes; and it possesses the very singular property of being in perfection even in infancy—a pole three inches in diameter being as valuable and durable, for any purpose to which it can be applied, as the timber of the largest tree."

Of the yellow iris the following particulars are curious:—

"The roots, in Arran, are used to dye black; in Jura, boiled with copperas to make ink. They are strongly purgative, and said to be particularly useful in dropsical complaints—formerly recommended as a cure for toothache. 'But above all,' says Ettmüller, 'which I have hitherto known, the juice of the root of the *Iris huda* rubbed upon the tooth that is painful, or the root itself chewed in the mouth, in an instant, as if by a charm, drives away the pain of the teeth, arising from what cause soever. He that communicated it to me, affirms that he had tried it forty times at least, with like success: I myself also have various times

tried it, and a great many others have done the same by my persuasion, and I hardly ever knew it fail.' The seeds roasted make excellent coffee, superior to any other substitute."

Now, we will venture to say that, though these assertions are put forth respecting this plant, nobody will try whether it is a cure for the toothache, or a substitute for coffee. We live, in intellect, from hand to mouth; the veriest slaves of custom; but now and then some clever speculator hits upon one or other of these old and exploded stories, invents a fine new name, and makes a fine large fortune. Then, like a thousand other excellent pieces of knowledge, it sinks into oblivion, to be rediscovered, or re-invented, when our grandchildren are papas and mammas!

Lolium temulentum: bearded darnel.—"The seeds of this species possess deleterious properties when mixed with bread, corn, or malt; and malignant epidemic fevers have been attributed to their operation. In this country it is so rare, that it can seldom be productive of any mischief; but it is asserted to have been cultivated in the vicinity of London for the use of the brewer, who communicates to the beer an intoxicating quality by its means. It is the 'infelix lolium' of Virgil."

Infelix lolium et steriles dominique avenae!

This piece of information may be useful to the new beer-house, about which such a fuss is now made. We confess that, being as politicians, it is a question we do not understand. As far as we can gather from parliamentary reports, and essays in the newspapers, the bishops and magistrates prefer the lower orders getting drunk with gin, while others prefer intoxication and setting by means of beer. To us it is indifferent: gin is the speediest, but the least social. In London its indulgence is a mere selfish gulp, and away; whereas, even a coal-heaver must draw his breath upon a pot of beer, which leads to politics and polite conversation, to the manifest enlightening of the parties concerned. But this is a digression from *infelix lolium*:—come we to the *scabiosa rusica*, alias the Devil's-bit scabiosa.

"At one time the root (which is as it were bitten off) is supposed to have possessed an almost specific virtue against every kind of scaly eruptions, whence the generic name; but as 'the superstitious people hold opinion,' afraid of being deprived by its means of this method of tormenting poor mortal man, 'the devil did bite it for envie, because it is an herbe that hath so many good vertues, and is so beneficial to mankind.' And in very verity the malice of the devil, as Smith observes, 'has unhappily been so successful, that no virtues can now be found in the remainder of the root or herb.'"

The fact is, that the age of imagination, as well as of chivalry, is past. Not so in olden times: witness the *Saxifraga granulata*, or meadow saxifrage.

"In conformity to the doctrine of Signatures, which attributes to any substance having a resemblance to any organ of the body, sovereign virtues in removing the diseases of that organ, this plant was pronounced very useful in calculous complaints, because the roots somewhat resemble small gravel-stones. And because it is 'governed by the moon,' its credit remained undiminished with the astrologers, or those herbalists who imagined that the stars

shed down
Their stellar virtue on all plants that grow
On earth, made hereby apter to receive
Perfection from the sun's more potent ray."

From the fanciful we pass again to the use-

ful—the *Oxalis acetosella*, common wood-sorrel. "The leaves of this pretty unobtrusive flower droop at night, and close against rain. They are powerfully and most agreeably acid, making a refreshing and wholesome conserve with fine sugar, its flavour resembling green tea. Boiled with milk they make an agreeable whey, which may be used in inflammatory diseases, in which vegetable acids are beneficial. They also afford the 'essential salt of lemon,' used to take iron-moulds out of linen."

Mentha hirsuta, hairy mint.—"Mr. Macdonald, of Scalpa, in the Hebrides, having some years ago suffered considerably by mice, put at the bottom, near the centre, and the top of each stack, as it was raised, three or four stalks of wild mint, with the leaves on, gathered near a brook in a neighbouring field, and never after had any of his grain consumed. He then tried the same experiment with his cheese, and other articles kept in store, and often injured by mice, and with equal effect, by laying a few leaves, green or dry, on the articles to be preserved."

Among the Cryptogamia—fungi—there are some valuable remarks upon those minute vegetable productions which, as "blight," "smut," &c. &c., are so often supposed to be insects, and do so much injury to our most important crops. Of these, the *Sclerotium clavus* is "dull black, elongate, cylindrical, generally a little curved; internally white. Decand. Fl. Franc. vi. 115. Hab. Between the glumes of grasses, occupying the place of the grain. Great doubts have been entertained relative to the nature of this production; but I think, with Decandolle, that if the two preceding are allowed a place in the vegetable kingdom, this cannot with propriety be excluded. It has been detected in this neighbourhood on the sweet vernal-grass, the sweet floating-grass, and on the forin. When it attacks rye, which is peculiarly subject to the disease, the corn is said to be spurred; and this diseased grain is an active poison of a very peculiar kind. If gradually introduced into the system, as when mixed with the flour of rye-bread, it occasions a severe disease, which has often prevailed epidemically in different territories on the continent. The affection produced differs much in different epidemics, and even in different cases of the same epidemic. Two distinct sets of symptoms have been noticed; the one constituting a nervous disease, characterised by violent spasmodic convulsions; the other being a depraved state of the constitution, which ends in that remarkable disorder known by the name of dry gangrene. The poison possesses other singular properties; and the physician availing himself of it, can produce effects in the human constitution such as he can produce by no other medicine yet discovered;—a fact of which my own experience has afforded sufficient evidence. For an interesting history of what is known relative to the spurred rye, the medical reader is referred to Dr. Christison's learned and useful work on poisons."

The fungi in the vegetable world, like the fungi in society—and both are numerous classes—are generally odious or noxious, or useless; a few only being fit for any purpose of taste or convenience. The *Agaricus muscarius* is "the most beautiful of the agarics; but let no one be tempted by its appearance to apply it to domestic use—for a poison lurks beneath its brilliant colours. Linnaeus informs us that in Finland they cut it into small pieces, mix them with milk, and place it at their windows for the purpose of poisoning flies, to which it proves as fatal as arsenic. In corroboration of this fact,

I have observed that the flies which sip of the dirty yellow liquor into which this fungus dissolves, die almost immediately. Haller relates that six persons of Lithuania in Poland perished at one time by eating it. The Ostiaks in Siberia, and the Kamtschadales and Koriaks, however, use it for the purpose of producing intoxication. They 'sometimes eat it dry, sometimes immersed in a fermented liquor made with the *Epiobolus*, which they drink, notwithstanding the dreadful effects. They are at first seized with convulsions in all their limbs, then with a raving, such as attends a burning fever; a thousand phantoms, gay or gloomy according to their constitutions, present themselves to their imaginations; some dance, others are seized with unspeakable horrors. They personify this mushroom; and if its effects urge them to suicide or any dreadful crime, they say they obey its commands. To fit themselves for premeditated assassinations, they take the *Mousho-mere*, the Russian name of this agaric. Such is the fascination of drunkenness in this country, that nothing can induce the natives to forbear this dreadful potion."

Of the *A. campestris*, our common mushroom, the author states, "it long has been esteemed an article of epicurean delicacy, and is extensively used in making catsup. When it has proved deleterious to those who eat it, the injury ought rather to be attributed to some peculiar idiosyncrasy of the individual, than to any poisonous quality in the mushrooms. We, indeed, almost annually read of people being poisoned by them; but other agarics have been in these cases gathered in place of the *A. campestris*. 'I have seen,' says Dr. Christison, 'those who gather mushrooms near Edinburgh for the purpose of making catsup, picking up every fungus that came in their way.' 'As there is no critical mark to determine at once between poisonous and salutary mushrooms, we may lay it down as a general rule, that those should be suspected and avoided that grow in moist and marshy grounds, and especially in the shade; that have a dirty-looking surface, and whose gills are soft, moist, and porous.'—Dr. Good. 'It appears that most fungi which have a warty cap, more especially fragments of membrane adhering to their upper surface, are poisonous. Heavy fungi, which have an unpleasant odour, especially if they emerge from a *culva* or bag, are also generally hurtful. Of those which grow in woods and shady places, a few are esculent, but most are unwholesome; and if they are moist on the surface, they should be avoided. All those which grow in tufts or clusters from the trunks or stumps of trees, ought likewise to be shunned. A sure test of a poisonous fungus is an astringent, styptic taste, and perhaps also a disagreeable, but certainly a pungent odour. Some fungi possessing these properties have indeed found their way to the epicure's table; but they are of very questionable quality. Those whose substance becomes blue soon after being cut, are invariably poisonous. Agarics of an orange or rose-red colour, and boleti which are coriaceous or corky in texture, or which have a membranaceous collar round the stem, are also unsafe; but these rules are not universally applicable in other genera. Even the esculent mushrooms, if they are partially devoured by insects, and have been abandoned, should be avoided, as they have in all probability acquired injurious qualities which they do not usually possess. These rules for knowing deleterious fungi seem to rest on fact and experience; but they will not enable the collector

to recognise every poisonous species.'—Dr. Christison.

'The meadow mushrooms are in kind the best—it is ill trusting any of the rest.'

"Accidents arising from the deadly fungi being mistaken for eatable mushrooms, are common on the continent, and especially in France. They are by no means unfrequent, too, in Britain; but they are much less frequent than abroad, because the epicure's catalogue of mushrooms in this country contains only three species, whose characters are too distinct to be mistaken by a person of ordinary skill; while abroad a great variety of them have found their way to the table, many of which are not only liable to be confounded with poisonous species, but are even also themselves of doubtful quality."

Our Review seems to have grown up like a mushroom, and we must hasten to give it as rapid an end. It shall be for the information of the tabbies—we mean no insinuation—*Nepeta cataria*, cat-mint, which "the later herbarists call *herba callaria*, and *herba catti*, because the cats are very much delighted herewith; for the smell of it is so pleasant to them, that they rub themselves upon it, and wallow or tumble in it, and also feed on the branches and leaves very greedily."—Gerarde. On this account it can only be preserved in gardens by sowing the seed; for by the handling in the process of transplanting, or in the languid state subsequent to it, the peculiar scent is exhaled, and the cats are attracted to the plant, which otherwise they are unable to discover. 'If you set it, the cats will eat it; if you sow it, the cats will not know it.'

Having shewn how to cheat a cat of its vegetable enjoyments, we shall bid adieu to these volumes, again recommending them to the public as most deserving of favour. As Berwick belongs to no country, no national prejudices need interfere in undervaluing its science, and proclaiming its "decline."

Constable's Miscellany, Vol. LXVII. Switzerland, France, &c.

[Second notice.]

In concluding our selections from this pleasant volume, it may be as well, in order to prevent confusion, to notice, as it has lain some time on our shelf, that it was published before the author's *Spain* in 1830. It accordingly bore his *sobriquet* of Derwent Conway, which he has since abandoned for his real name of Henry D. Inglis. Under both appellations we have been much gratified with his productions; and now finish what we proposed from his *Switzerland, France, &c.*

Deaf and dumb hunter of the Pyrenees.

"For some distance after leaving St. Sauveur, the valley is a deep and dreary ravine, the river flowing far below, in a narrow bed between perpendicular rocks, in some parts covered with trees, which have taken root in the crevices. There is not a hut, nor any cultivation; and the only person I met was an izard-hunter, who, although he was deaf and dumb, recounted to me, by signs, the history of his day's sport. He was a tall, athletic man, about fifty years of age. He carried the izard on his back, and walked at the rate of nearly six miles an hour, notwithstanding this burden, and the additional one of a gun slung across his shoulders; and I afterwards learnt, that this man is one of the most successful and one of the most fearless hunters of the Pyrenees. The gestures by which he described the events of the day were quite as intelligible as if he had possessed the gift of speech. Both his own

actions and those of the izard were imitated exactly. He shewed that he had fired twice, and wounded the izard—that it tumbled down a precipice—that he looked over, and succeeded in scrambling down—and that he pursued, overtook it, and knocked it on the head with the butt-end of his gun. He also made me understand that he killed about three izards in the week, and sometimes four, and that he sold them at six francs a piece, exclusive of the skin, which was worth another franc. What an enormous profit must be realised by the *traileurs* at the baths! They purchase a whole izard for six francs, and divide it into at least twenty dinner portions, at four francs each! Yet the successful izard-hunter is richer than the majority of Pyrenean peasants; and although his profession be both laborious and dangerous, the excitement is proportioned to the danger and difficulty, and the pleasure proportioned to the excitement. When this deaf and dumb man was reciting, in his own way, the fortunes of the day, the eagerness of his gestures, and the changing expression of his countenance, shewed his enthusiasm in his trade, and the delight he took in its chances and issues; and there can be little doubt that when the fatigue and dangers of the day terminate in the possession of the izard, he considers these far overpaid. The mind of a man who spends his days a hunter in the mountains must be strangely complexioned. Dwelling always among mountain solitudes—always alone with Nature, and amid her grandest works—companion of the storm, and the mists and the shadows—the great rocks—the rushing torrents, and the black lake—we might conclude that the mind of such a man could not be without the elements of moral and intellectual grandeur; but so, perhaps, might we argue of the sailor who traverses the mighty deep, and paces the deck of the lone vessel beneath the wide starry sky. But it is probable that these men look not beyond their individual calling. The rudder that guides the vessel through the ocean is, to the mariner, an object of deeper interest than the illimitable and trackless waters; and to the hunter of the Alps or the Pyrenees, the only object of interest among the mountain solitudes is the little animal that he pursues."

Tradition.—"It was a deep valley, not half a mile across, bounded by rocks; and upon the summit of the rocks, opposite to each other, stood the ruins of two castles. These were the castles of Espeche and Lomine; and the guide narrated a tradition of these places as we went along. The lords of these two castles were enemies, and constantly disputed with one another the possession of the valley that lay between their castles; but, along with this enmity, each was enamoured of the wife of the other, though the ladies themselves loved their own lords, and gave no encouragement to the enemies of their husbands. At this time the crusades were published; and both of these nobles resolved to forget private animosities for a time, and join the standard of the Cross. It so happened, however, that after travelling—the tradition does not say whether in company or not—during several days, the devil entered into both their hearts, and they both reasoned after this manner:—"My enemy has gone to the holy wars, and has left both his lands and his wife unprotected. I hate him, but I love his wife. What hinders me from returning, and making the most of his absence?" And so both the Lord of Espeche and the Lord of Lomine returned, and took the road, not to their own castles, but to the castles of each other. But it so happened, that on the very

night upon which these two nobles left their own castles, their ladies had a vision. Each was warned, in a dream, of the intention of her husband to return, and go to the castle of his enemy, that he might find his enemy's wife; and this vision being often repeated, these noble dames resolved—instigated, no doubt, by the same kind power that had sent the vision—to seek each other, and communicate what had happened. Accordingly, these ladies left their own castles to cross the valley, and met each other by the way; and having communicated the mutual vision, they resolved upon a method of avoiding the danger, and of at the same time proving to their lords their own affection, and the Divine interposition by which they had been warned of the future. They determined to change castles; and that very day they put their resolution into effect. Meanwhile, their lords arrived under cover of night, each at the castle of his enemy, and were greatly surprised to find that no wonder was excited by their return, for the ladies had forewarned their household of what was to be expected; but still greater was their surprise, when, upon being ushered into the castle hall, each beheld his own spouse. The explanation that followed wrought a miraculous change. Touched with the affection of their own wives, they were convinced that this reconciliation was the will of God, since its means had been miraculously revealed in a vision. They abjured their mutual enmity—swore unalterable fidelity to their own wives—and set out in company for the Holy Land."

A good Reason.—"Tours is scarcely at all a place of commerce; but the environs of the city furnish the most agreeable walks, and these, too, are the most frequented. Innumerable little paths lead in every direction through the fields, and among the knolls and copees. These walks are, however, very unsociable, for they are only wide enough for one. But this was explained to me, by a French *demoiselle*, to be better; 'because,' said she, 'if *monsieur* who is behind says a gallant thing, we may either hear or not as we please; and in case we blush, nobody sees it.' I confessed that the reasoning was irresistible."

One thing at least a traveller acquires—a good appetite. Our tourist dwells most touchingly on divers gastronomic reminiscences: he mentions the fragrant raspberries and cream at one place, and a most delicious sucking pig at another; he is eloquent in praise of the fried fish and the bread pudding of his Jewish hostess at Bieretz; and as to the omelets, we give what he says of them in his own words:—

"It is a great misfortune if a traveller in France, especially a foot-traveller, whose day's journey often conducts him to the smaller inns, should happen to dislike omelet. It may be difficult to believe that any such person exists; but I have seen and travelled with persons so unfortunate: and when I have been enjoying an excellent meal, they have been obliged to content themselves with the purer pleasure of sympathising in my good fortune. Every where in France, even in the poorest auberge, an omelet is to be obtained; either *omelette sucrée*, *omelette grasse*, or *omelette aux fines herbes*. What a choice is there! One might very well begin with an *omelette grasse*, make a remove of the *omelette aux fines herbes*, and finish with an *omelette sucrée* by way of dessert."

A pretty view of Vaudouse, which Mr. Conway visits and describes, ushers in this very amusing volume.

The French phrases, &c. which are, perhaps

almost unavoidably, very frequent in these pages, are sadly incorrect: hardly any noun and adjective agree in gender; verbs are put in the singular instead of the plural, and *vice versa*, &c. We have, of course, corrected the errors we noticed in our extracts: but such carelessness greatly detracts from the value of the work.

The Familiar Law Adviser. No. 1, Landlords and Tenants; No. 2, Masters and Servants; No. 3, Bills of Exchange and Promissory Notes; No. 4, Benefit Societies and Saving Banks.

WE take some blame to ourselves for not having earlier noticed these little productions, which, to use the legal phrase, "we have perused and approved of." They are very well adapted for that which they profess to teach, namely, a general summary of the several laws relating to the above subjects, written so as to be understood by, and be useful to, the world at large. This, we take it, was the great end which the authors had in view; and the task appears to have been executed with care and fidelity. There may be some dicta in the first No. of this work, to which we should hesitate to pin our faith, such as "taking the law a little into one's own hands," "taking out window-sashes," "unhinging doors," &c. to get rid of refractory tenants: but, with these few drawbacks, the law seems sound and well authenticated; and we think they will be found very useful appendages to the desk of the trader and the counting-house of the merchant: indeed, there are few stations of life in which one or other of these works may not be advantageously referred to.

ARTS AND SCIENCES.

To the Editor, &c.

SIR,—A German paper contains a very long letter, addressed to the editor by a M. Antony Bernhard, and dated Munich, 3d July this year, in which he gives an account of an invention, which he has ultimately matured, for raising water or other fluids to any height that can be required for any useful purposes. From this long letter, which would fill about four of your pages, I extract a few passages, which will suffice to give some idea of the nature of the invention, and the pretensions of the inventor. The theory of his invention had long been floating in his mind; but many years were spent in experiments to reduce it to practice. His first apparatus was at length brought to a trial in 1829, at the Grand Surrey Canal, near London. This first public trial produced a result which, *à priori*, had been declared by every body to be impossible; the water being raised to the height of seventy feet in a pipe nine inches in diameter. Owing to defects and imperfections in the first apparatus, the water did not rise in a continuous column but in a few cases, and began again after some minutes' interval; these intervals occurring five or six times in an hour. The mass of water raised each time might be about fifty cubic feet. M. Bernhard declares that he had seen such an apparatus complete by M. Ertel, an eminent mechanician of Munich, by which quicksilver was raised to the height of 13 feet, which, considering the relative specific gravity of water and mercury, is equal to raising water to the height of 175 feet. He is now engaged in erecting an apparatus on a large scale for raising water, which he says will be ready in the next month (i. e. August this year); and that it will

raise 4000 cubic feet of water in an hour to the height of 60 feet.

The problem to be solved was—"To raise water, quicksilver, or any other fluid, without pumps or other mechanical contrivance, to any height required for useful purposes." This problem he has solved as follows:—"By the application of the pressure of the atmosphere, as an acting power, to the fluid to be raised; by the application of heat to produce the expansion, or rarefaction, and thereby a diminution of the specific gravity of the fluid, as the body to be raised; and, lastly, by the production of a vacuum within the apparatus and above the rising column of fluid, to take away the counter pressure."

This invention M. Bernhard says will entirely supersede the steam-engine, which he says he shall be able to prove, as soon as he can make models of the different kinds of apparatus which will be necessary to perform the several functions of steam-engines. M. B. goes into great detail to show that his invention will be attended with a vast saving of expense, time, and labour. He complains that though he has taken great pains to prove by experiments the correctness of his theory to many professors and amateurs of science, and to learned societies in Prussia, England, France, and Bavaria, none of them, or at least very few, have acknowledged its accuracy, and no society has given him any encouragement. He gives, however, the names of several men of rank and learning in Bavaria who attended his experiments, and refers for particulars (among other persons) to F. P. Hooper, Esq. Saville Place, London. H. E. L.

FINE ARTS.

NEW PUBLICATIONS.

Select Views of the Lakes of Scotland. From original Paintings by John Fleming; engraved by Joseph Swan. Parts III. and IV. Moon, Boys, and Graves.

Two pleasing Parts of this pleasing publication. The lakes illustrated are "Loch Katrine," "Loch Achray," "Loch Vennachair," "Loch Ard," "Loch of Monteath," and "Loch Lubnaig." We think Mr. Swan peculiarly happy in communicating lucidity and fluency to his water; of which the view of "Loch Ard" is a fine proof.

Etchings. By C. Read. Close, Salisbury. WE have lying before us the last two productions of Mr. Read's etching-point. They fully confirm the high opinion which we expressed in a recent No. of the *Literary Gazette*, of that gentleman's taste and feeling.

Embellishments of the Landscape Annual for 1832. Jennings and Chaplin.

WE hail this as the first annual splendour that we have seen of the present season; and to the admirers of picturesque and classic beauty it will, we are persuaded, prove one of the most interesting. We believe, however, that it will not be ready for the public before the month of November. The first and second volumes of this elegant work were devoted to the illustration of Switzerland and Italy; and to Mr. Prout's masterly pencil, exclusively, the publishers resorted for their subjects. With the judicious purpose of imparting variety to their undertaking, they have in the present instance put in requisition the talents of another admirable landscape painter, Mr. Harding, from whose charming drawings the whole of the beautiful prints under our notice have been engraved. They "comprehend," to use the

guage of the address to the public, "views of the richly variegated and picturesque scenery of southern Italy;—Florence, and the banks of the Arno;—the dear but classic ruins around Roman and Tuscan cities;—the romantic lakes and their enchanting vicinity;—Naples, with its majestic Bay, its wild and picturesque coasts; the deep retreats which Salvatore loved to haunt, and where Sannazaro sang his country's strains:—

* La bella contrada
Ch' Appennin parte e 'l mar circonda e l' Alpe. "

The plates which embellish the volume, and which are finely executed by Messrs. Allen, Brandard, Fisher, Goodall, Higham, Henshall, Jeavons, Jorden, Miller, Radcliffe, Redaway, W. R. Smith, J. Smith, Varrall, and Willmore, are twenty-six in number, viz.—Milan Cathedral, Interior; Lago Maggiore; Florence, from the Cascine; Ponte Santa Trinita, Florence; Pelago, near Florence; Temple of the Clitumnus; Spoleto; Nepi; Lake of Nemi; Gensano; the Ghigi Palace at L'Arricia; Tivoli, Vignette; Santa Lucia, Naples; Naples, from the Sea; Naples, from the Strada Nuova; Puzzuoli; Puzzuoli, with the Mole of Caligula; Castle and Bay of Baia, Temple of Minerva; Bay of Baia; Castell-a-Mare; Persano; Bridge of Vico; Sorrento, Entrance to; Bay and Plain of Sorrento; Vietri; Cetara.

Where there is so much general excellence, we feel that we are almost guilty of injustice in bestowing particular commendation; but, if we were compelled to say which of these exquisite plates seem to us best calculated to awaken delightful recollection in the minds of those who have visited the original scenes, or to excite an ardent longing to visit them on the part of those who have not been so fortunate, we think we should specify,—“the Bay and Plain of Sorrento,” engraved by E. Goodall; “the Lake and Town of Nemi,” engraved by J. C. Varrall; “the Interior of Milan Cathedral,” engraved by T. Higham; “Santa Lucia, Naples,” engraved by J. E. Allen; “Entrance to Sorrento,” engraved by S. Fisher; “Puzzuoli, with the Mole of Caligula,” engraved by R. Brandard; “Persano,” engraved by W. R. Smith; “the Ghigi Palace at L'Arricia,” engraved by T. Jeavons; “Ponte Santa Trinita, Florence,” engraved by J. Redaway; “Isola Bella, Lago Maggiore,” engraved by W. Miller; “Temple of the Clitumnus,” engraved by H. Jorden; “Gensano,” engraved by J. Smith; “Naples, from the Strada Nuova,” engraved by W. Radcliffe; “Castle and Bay of Baia,” engraved by J. T. Willmore, &c. &c.

ORIGINAL POETRY.

THE HERMIT'S GRAVE.

THE days are gone when pilgrims knelt
By sacred spot or shrine;
The cells where saints have lived or died
No more are held divine.

The bough of palm, the scallop-shell,
Are signs of faith no more;
The common grave is holy held
As that on Salem's shore.

Yet, when I knew that human knees
Had worn the rock away,
And that here, even at my feet,
Earth hid the righteous clay;

I felt this was no common spot
For any common thought—
The place's own calm sanctity
Within my spirit wrought.

The cave was dark and damp—it spoke
Of penance and of prayer;

Remorse that scarcely dared to hope,
And heavy grief, were there.

But at the entrance was a scene,
Which seemed expressly given
To bring the heart again to earth,
And win it thence to heaven.

For so benign an influence
Was falling from the sky,
And like a blessing on the land
The sunshine seemed to lie.

The long green grass was full of life,
And so was every tree;
On every bough there was a bud,
In every bud a bee.

And life hath such a gladdening power,
Thus in its joy arrayed—
The God who made the world so fair
Must love what he has made.

Fed by the silver rains, a brook
Went murmuring along,
And to its music, from the leaves,
The birds replied in song;

And, white as ever hly grew,
A wilding broom essayed
To fling upon the sunny wave
A transitory shade.

Misty and gray as morning skies,
Mid which their summits stood,
The ancient cliffs encompassed round
The lovely solitude.

It was a scene where faith would take
Lessons from all it saw,
And feel amid its depths that hope
Was God's and Nature's law.

The past might here be wept away—
The future might renew
Its early confidence on high,
When years and sins were few.

Till, in the strength of penitence
To the worst sinner given,
The grave would seem a resting-place
Between this world and heaven.

'Tis but a pious memory
That lingers in this dell,
That human tears, and human prayers,
Have sanctified the cell.

Save for that memory, all we see
Were only some fair scene,
Not linked unto our present time
By aught that e'er had been.

But now a moral influence
Is on that small gray stone;
For who e'er watched another's grave
And thought not of his own,

And felt that all his trust in life
Was leaning on a reed?
And who can hear of prayer and faith
And not confess their need?

If he who lies beneath thought years
Of prayer might scarce suffice
To reconcile his God, and win
A birthright in the skies,

What may we hope who hurry on
Through life's tumultuous day,
And scarcely give one little hour
To heaven upon our way?

Thou blessed grave! ah, not in vain
Has been thy presence here,
If it hath wrought in any heart
One higher hope or fear.

L. E. L.

SKETCHES OF SOCIETY.

THE LEX TALIONIS.

THE recent unhappy occurrence in Scotland, which places a peer of the realm upon trial for a capital offence, reminds us of a circumstance that occurred some years ago in one of the English counties, and which we believe has never appeared in print. One of the officers of a marching regiment, Capt. B., who was quartered in the neighbourhood, was amusing himself by shooting upon the lands of Lord M.; and as it was then a privilege extended without ceremony to all officers, he had not asked permission of the noble lord. His lordship, however, saw the intruder from his drawing-room window, summoned his gamekeeper, and directed him to go instantly and shoot the stranger's two dogs. The man knew the character of his master, and, from his tone and manner, saw that the command must be obeyed. He rode off to the spot, addressed the sportsman, apologised, but said he dared not go back to his lordship with his orders disobeyed. Capt. B. expostulated; but at length, pointing to one of his dogs, requested, as a favour, that the gamekeeper would kill that one first. The shot was fired, and the poor dog fell. Capt. B., who carried a double-barrel gun, instantly advanced, and coolly discharged his piece through the head of the gamekeeper's horse. "Now," said he, addressing the fellow, who was all astonishment and terror, "that is horse for dog; fire again, and it shall be man for dog." The invitation was, of course, declined. "And now," he continued, "go back to your rascally master, describe what you have seen, give him this card, and tell him, that wherever I can find him, in country or in town, I will horsewhip him from that spot to the threshold of his own door." The noble lord was, early the next morning, on his way to London, and did not return to his country residence until Capt. B.'s regiment had been ordered to a distant part of the kingdom.—*Correspondent.*

DRAMA.

THERE has been nothing worthy of remark in the dramatic world this week. The English Opera is very near its close, and the Haymarket hastening after, about a fortnight later. *John Jones, i. e. Mathews*, played by Farren, is infinitely good, and obtains the general applause so perfect a personation justly merits. At Drury Lane, Mr. Martin's brutes from Paris have arrived; and *Hyder Ali* is forthwith to be produced, for their bestial performances. We hear that there is much growling among the three lions, the bear, and the tiger. The actors who were wont to play beasts, either wholesale or retail, have struck and remonstrated. They sent a letter to the treasurer declaring they would not be Dunn; to which a reply was, after a consultation, written by the Boa Constrictor, in which it was stated, that in the event of any opposition or disturbance, the oldest Lion was instructed to eat A. Dunn. The Kangaroo is expected to fill its pouch, and the Pelican to *peck*; The *Llama* takes the range of tragedy; in the rival of Miss F. Kemble at the other house. The six Monkeys have been studying *Hamlet* activity, &c.; and the six Paroquets have talked all the actresses out of the green-room, so that they may now be had any where.

VARIETIES.

Statuary.—The *Windsor Express* relates that the bronze horse cast for the statue of George III. in Windsor Great Park, has been

broken, beyond the help of repair, by the overturning of the truck in which it was being conveyed to its destination. So much for a want of care and regulation in the truck system.

Titles of Distinction!!—A northern paper (the *Inverness Journal*) calls David Wilkie "the Scotch *Salvator Rosa*." Upon what ground, the deponent sayeth not.

German Teaching:—We hear from our foreign correspondent much eulogium on Professor Baron de Fabek's new method of teaching the German language, as combining both clearness and rapidity. If he is as successful in England as he has been on the continent, the result will be fortunate for the admirers of that most interesting but difficult language.

Anecdotes of the late Mr. Northcote.—One day Sir W. Knighton called upon the veteran, (to whose friendship he had been much indebted before his distinguished connexion with his late Majesty), and asked him: "What do you know of the Prince Regent?" "Nothing," said Northcote; "what should I?" "Why he knows you very well," said Knighton. "Who says so?" "Himself," "Pooh!" said Northcote; "it is only his brag."

Coronation Service.—The greater part of the prayers used in the Queen's coronation are found in the coronation of Judith, daughter of Charles the Bald, who married Æthelwulf, the father of Alfred, king of the West Saxons, A.D. 856. So that 25 years only are wanting to complete 1000 years since they have been appropriated to an English queen.—*Silver on the Anglo-Saxon Coronation Service.*

Decline of Science.—The writer of the pamphlet on the Decline of Science in England, which we reviewed in our last No., is Dr. Moll of Utrecht. We may again thank him, on this personal introduction, for the justice he has done to our national character.

Goethe.—A correspondent tells us, that the lines we have ascribed to Goethe (the last two *Literary Gazette*), are in reality the production of Maucroix, at the age of 80, and only copied by the celebrated German poet. Maucroix was a poet and historian of some note, born at Noyon, 1619.

Sir W. Scott.—Our illustrious countryman we learn, about to take a trip to the Mediterranean, in H. M. S. *Barham*. We have conversed with a friend who dined with him within the last week in Edinburgh, and we rejoice to hear that he was in good health and spirits.

How to save Shoes.—In these days of retrenchment, it is not uncommon or strange that people should bethink themselves of lessening expenses in a domestic way, and discuss the modes as ardently as our congressmen. Not long since, these were the topics of discussion by some half-dozen rubicund-visaged politicians assembled at a country bar-room. Each one told his story of saving, spun out to an inordinate length, and many were the *wonderments* of the assembly, that they met with such good success in their experiments. At length it came to the turn of a quizzical, funny old genius, who had hitherto remained silent, to tell his tale. "Two years since," said he, "I bought me a new pair of cow-hide shoes; put them on, gave them a thorough greasing, placed them away, and let them remain six months. I then put them on again, and have not purchased a pair of shoes since, and they are now nearly as good as new." "Wonderful!" said one of the group; "how did you make them last so long?" "Why I wore boots."—*Americana.*

The Ex-Dey of Algiers.—Hussein dined the other day with the president of the council, at Paris. He was accompanied by a single servant, who did not leave him during the repast. In the morning he sent a message to the president to request that his cook might be admitted into the kitchen to prepare his dinner. The president consented; and Hussein's cook arrived with a couple of live fowls, which he plunged into boiling water, after having cut off their heads and feet. These fowls, thus dressed, and served up with boiled rice, composed the whole of the day's dinner. In the midst of the brilliant set-out of the ministerial table, this modest dish looked like the emblem of fallen power. Hussein affected great disdain for all the succulent culinary compositions under which the table groaned; but it is just to add, that M. Perier's other guests had no appearance of longing for the boiled fowls of this "barbarian, who did not know how to make a good dinner."—*Temps.*

Societies of Fine Arts.—A Society has been formed at Prague, under the auspices of the Emperor of Austria. Its object is, "to purchase the most successful productions of living native artists, and by this means to incite those artists to activity; and to promote a more extended taste for the fine arts among the public at large." The mode proposed for effecting this excellent purpose is simple enough. The Society consists of an unlimited number of members, whose only qualification is the contribution of a yearly subscription of eight shillings. With the fund thus raised, the committee, appointed by the members, is to purchase, as far as their resources permit, a selection of the works exhibited annually by the Royal Academy; preference being given to the efforts of indigent and unpatronised merit. It will also be at the discretion of the committee to direct works so purchased to be engraved or lithographed. A member may pay two or more yearly subscriptions of eight shillings, and for each of them he is entitled to two or more tickets, in the distribution, by lottery, which the committee directs to be made at convenient periods.—We have been informed, that institutions of a corresponding character exist in other continental cities, and that they have proved not only a source of high gratification to the associates, but inestimably useful in bringing forward artists of talent, who, in all human probability, would not, otherwise, have been included among the chosen few through whose penury the genial ray of public patronage would have penetrated. We see no reason why such an institution should not equally prosper under our own sky. It would do honour to the generous feelings and expanding taste of our fellow-countrymen.

Impromptu, ascribed to Mr. Croker, on Lord John Russell's complaining that the attendance on the Reform Bill had hurt his health:

Jack and Bill brought in a bill
To breed a Revolution:
Bill fell down and cracked his Crown,
And Jack his Constitution.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXXI, Sept. 24.*]

Italy's Romantic Annals are to form the subject of the new series of the *Romance of History*, by Charles Macfarlane, Esq.
The ancient Scotch metrical Romance of Sir Gawyn and the Grene Knyzt, from a unique MS. preserved in the British Museum, by Frederic Madden, Esq. F.S.A. &c. The Geographical Annual for 1833 is announced for publication, uniform with the larger Annuals, and to contain engravings of all the states, kingdoms, and empires, throughout the world.
The London Manual of Medical Chymistry; comprising an interlinear verbal translation of the Pharmacopœia,

with extensive Chemical, Botanical, Therapeutical, and Pœsological Notes, &c. by W. Maugham, Surgeon.

A Familiar Compendium of the Law of Husband and Wife, in Two Parts.

The False Step, a Novel, is about to appear; and the Biblical Cabinet Atlas is nearly completed.

A Dictionary of Quotations from various Authors, in Ancient and Modern Languages, with English Translations, &c. by Hugh Moore, Esq.

The History, Topography, and Antiquities, of Framlingham, compiled from the best Authorities, by R. Green.

Wilson's American Ornithology, with the continuation by C. L. Bonaparte; together with an Enumeration and Description of the newly discovered Species not included in the original works, and copious Notes, by Sir William Jardine, Bart.

The story of "Gertrude" will shortly produce her new novel, the *Allanied One*.

The fifth volume of the *Winter's Wreath*, for 1832, with engravings, &c. by celebrated Artists.

The *Sisters' Budget*, a Collection of Original Tales in Prose and Verse, by the Authors of "the Odd Volume," &c. with contributions from distinguished Writers.

Mr. S. Robinson announces a new Annual for 1833; consisting of standard volumes for the library: with embellishments on steel.

The Chameleon, an Album of Original Pieces, by Mr. Atkinson the publisher.

A volume of poetry, *Pictures of the Past*, is announced by Mr. Brydson.

Friendship's Offering for 1832 boasts of an array of highly finished engravings after celebrated paintings by Sir Thomas Lawrence, Stothard, Richter, Wood, Purner, Westall, and other eminent artists, with contributions from popular writers.

The Comic Offering, edited by Miss Sheridan, is to be embellished with upwards of sixty humorous designs by various comic artists, with facetious contributions by several writers.

And another new Annual, illustrated from drawings by Proust, under the title of the *Continental Annual*, is forthcoming, uniform in size with his *Landscape Annual*. The literary department, under the superintendence of Mr. William Kennedy, is to consist of romantic tales.

LIST OF NEW BOOKS.

TO CORRESPONDENTS.

What can we do? We have given our own opinion upon the work mentioned in the following: are we not good-natured critics to give also the opinions of the author and his friends?

Sir,—After the very favourable reception which 'my little work, the *Trip in Paris*, had received from other editors, highly talented, and therefore highly respectable, I was surprised to find that you had taken such an unfavourable notice of it. I am aware it does not rise above mediocrity on the scale of literature; but when it has been highly complimented by men of respectability, not only editors of periodicals, but by the liberal and enlightened sensibility to whom it is dedicated, I repeat that I am surprised to find that you should raise such objections to the work. You complain of your time: had your time been so precious, why devote it to me? I am sorry to have troubled you, and shall be careful not to trouble you again. Do not think I in a bad spirit—I trust I write as a Christian, and feel no resentment towards you, but really forgive you; but must confess you have treated me rather uncourtously. Yours, respectfully,
Passing through Town, T. S. ALLEN.

Sept. 19, 1831.
We can no longer complain of a scarcity of new publications, as the variety and extent of our Review this week will testify. From this, and the multitude of announcements, we trust we may have a revived activity in the book trade.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE EXHIBITION OF THE ETRUSCAN MUSEUM NOW OPEN; being a Collection of Antique Vases, Magnificent Gold Ornaments, and other Curiosities, dug up on the Estate of Lucien Bonaparte, Prince of Canino, from the Ruins of the Ancient Vitulonia, the Capital of the Etruscan Empire, which existed previous to the foundation of Rome. Also a Collection of Fine Pictures by Domenichino, Carracci, Guido, Tintin, Clesi, &c.

To be seen from Ten in the Morning till Dusk in the Evening, at No. 205, Regent Street.

Admission, One Shilling and Sixpence.

ARTISTS' DRAWING SOCIETY, for the STUDY OF THE ANTIQUE, SAVOY, STRAND.—The Rooms of the above Society will be opened for the Autumn Quarter on Monday, 2d October next. Hours of Study, from 7 till 9 o'clock every Evening. Terms, per Quarter, 25s.; per Month, 10s. The Collection comprises the following Cases: viz. the Achilles—Apollo Belvidere—Young Apollo—Boxers—Gladiator—Diana robbing—Anatomical Figure—Venus de Medicis, &c.; together with an important range of Busts and Extremities.

For further information, Persons are requested to apply at the Rooms during the Hours of Study, or at the Residence of the Doorkeeper, J. Graham, 30, Roll's Buildings, Pettor Lane.

TO ARTISTS, ARCHITECTS, and DRAFTSMEN—Since the death of Mr. Langdon, the late surviving Partner of Messrs. Brookman and Langdon, the utmost attention has been given to the Manufacture of Drawing Pencils in Cedar by S. Jordan and Co., who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing those objections and annoyances so frequently complained of in Drawing Pencils. All who wish to be satisfied as to the genuineness of these Pencils, may see them manufactured at No. 25, Castle Street, Finsbury, which establishment now has the honour, exclusively, to supply all the Government Offices.

Sold retail by all respectable Stationers, &c. throughout the United Kingdom. S. Jordan and Co.'s name is on each Pencil.

French Teacher.

A FRENCH GENTLEMAN, who has for some years been accustomed to teach French and Latin at a Military Institution, is desirous of a Situation either in a Private Family, or in a School. He has also some knowledge of the Italian Language.

Address, M. P., Messrs. Longman and Co.'s, Paternoster Row.

BOOKSELLING BUSINESS.—To be disposed of, by Private Contract, a respectable Bookselling Concern, in the City, established upwards of Thirty Years, possessing a regular and highly valuable Wholesale and Retail Connection.

For further particulars, apply to Mr. Hodgson, Auctioneer, 192, Fleet Street. (All letters to be post-paid.)

EDINBURGH REVIEW.—Advertisements for insertion in the Advertising Sheet of No. 107, are requested to be sent to Longman and Co., Paternoster Row, by Saturday, Oct. 1; and Prospectuses, Bills, &c. to be hitched in the Number, within a week from that date. Advertisers will perceive the advantage of sending their Advertisements and Bills early, as they are placed in the order in which they are received by the Publishers.

BOOKS PUBLISHED THIS DAY.

New and Popular Works of Fiction,
Just published, by Henry Colburn and Richard Bentley,
New Burlington Street.
In 3 vols. post 8vo.

THE SMUGGLER.

By the Author of "Tales by the O'Hara Family,"
the "Denounced," &c.

II.
Jacqueline de Holland. By the Author of the "Heres of Brun," &c. 3 vols. post 8vo.
"Jacqueline de Holland is the very being in whom romance delights."—*Literary Gazette.*

III.
The Dutchman's Fire-side. In 2 vols. post 8vo.

IV.
Pin Money, by the Authoress of "Women as they are; or, the Manners of the Day." In 2 vols. post 8vo.
"The authoress has an admirable acquaintance with the habits, the follies, and the vices of the society she has delineated."—*Morning Post.*

V.
Philip Augustus; or, the Brothers in Arms. By the Author of "De L'Orme," &c. In 3 vols. post 8vo.

VI.
Bogle Corbet. By John Galt, Esq. Author of "Lawrie Todd," &c. 3 vols.
"A work of extraordinary merit. As a fictitious autobiographer, Mr. Galt surpasses every writer, certainly of this day, and perhaps of any time."—*Spectator.*

VII.
The Young Duke. By the Author of "Vivian Grey." 3 vols. post 8vo.
"The present production is characterized by the same originality, power, and sparkling liveliness, which made the author's former work so much the rage with the beau monde. The author of Vivian Grey might perhaps be styled the Lord Byron of prose fiction."—*Morning Post.*

VIII.
Mothers and Daughters; a Tale of the Year 1800. 8d edition, 3 vols. post 8vo.
"A faithful, exact, and withal spirited picture of the aristocracy of this country."—*Spectator.*

Interesting New Works.

In 3 vols. 8vo.

COUNT LAVALLETTE'S MEMOIRS.
"We would erect a statue to Madame Lavallette. We have perused this autobiography with much eagerness and delight. The history of his evasion from prison must always be considered as one of the most glorious chapters in the history of woman."—*Spectator.*

II.
8d edition, in 3 vols. 8vo. with numerous Plates, engraved by Flindin.

Captain Beechey's Voyage to the Pacific; forming the Completion of the Polar Voyages undertaken by order of the British Government.
"The most interesting of the whole series of expeditions to the North Pole."—*Quarterly Review.*

III.

Nine Years' Residence in Abyssinia. By Nathaniel Pearce. With an Account of his extraordinary Life and Adventures. Written by Himself. 3 vols. post 8vo.
"An interesting sequel to Bruce's Travels, and peculiarly acceptable, as relating to a country hitherto imperfectly known to Europeans."—*Globe.*

IV.

The Lives of the Players, by John Galt, Esq. Author of "Life of Byron," &c. In 3 vols. post 8vo.
Contents.—Brettton, Wilks, Nel Gwynn, Mrs. Barry, Savage, Mrs. Oldfield, Colley Cibber, Mrs. Centlivre, Farquhar, Quin, Garrick, Foote, Macklin, Henderson, Mrs. Bellamy, Murphy, King, Holcroft, G. P. Cooke, Miss Farren, Tate Wilkinson, Mrs. Baddley, Emery, Mrs. Jordan, J. P. Kemble, Mrs. Siddons, &c.

V.

Sir Thomas Lawrence's Life and Correspondence. In 3 vols. 8vo. with Portraits.
"The work is inestimable, as a record of one who has immortalized by the magic of his pencil, the beauties, the statesmen, and the learned, of the commencement of the 18th century."—*Sun.*

VI.

Sir Thomas Monro's Life. By the Rev. G. R. Gleig, M.A. M.R.S.L. New and cheaper edition, with Additions, complete in 2 vols. 8vo. with fine Portrait, price 25s.
"The most important work relating to our vast possessions in the East, published for many years."

VII.

Dr. Paris's Life of Sir Humphry Davy, Bart. With a beautiful Portrait, 2 vols. 8vo. new edition.
"A durable monument to the memory of Sir Humphry Davy, and to the talents of Dr. Paris."—*Gentleman's Magazine.*
Henry Colburn and Richard Bentley, New Burlington Street.

American New Publications.

Just received by R. J. Kennedy, No. 28, Great Queen Street, Lincoln's Inn Fields; and to be had of all Booksellers.
MARY'S JOURNEY; a German Tale. 18mo. 8s. half-bound.

Newhall's Letters, proving Lord Temple to have been Junius. 18mo. Portrait, 7s. 6d.

Death of Ugolino; a Tragedy. 8vo. 6s.

Baylie's History of New Plymouth. 2 vols. 8vo. 25s.

Upham's Mental Philosophy. In 2 vols. 8vo. 30s.

Hassler's Logarithmic and Trigonometric Tables. 18mo. 14s.

Pitkin's History of the United States. In 3 vols. 8vo. 31s. 6d.

Webster's Speeches and Forensic Arguments. 8vo. Portrait, 14s.

Sermons by the late Rev. Edward Payson. 8vo. Portrait, 14s.

"These works are all that remain as memorials of this faithful and successful minister of the gospel. If we were to judge of the sermons which have been presented to the public as specimens of his manner of addressing mankind, we should think that few men have ever lived who more unshrinkingly advanced what he honestly believed to be in the Bible."—*Biblical Repository*, Vol. 2, No. 2, Philadelphia.

A Catalogue of American Books may be had gratis.

History of the South Sea Islands. In 4 vols. price 6s. each, cloth boards, an enlarged and improved edition of

POLYNESIAN RESEARCHES during a Residence of nearly Eight Years in the Society and Sandwich Islands.

By WILLIAM ELLIS.
"This is the most interesting work, in all its parts, we have ever perused."—*Quarterly Review.*

London: Fisher, Son, and Co.

In 18mo. with Engravings, and coloured Examples of Tints, &c.
THE ELEMENTS OF DRAWING, containing the First Principles of Light and Shade, Colouring and Perspective.

By G. M. MATHER.
Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Also, in 18mo. with Seven Engravings, 3s. 6d.
A Practical Explanation of the Elements of Architecture. For the Use of Drawing Academies, Mechanics' Institutions, &c. By G. Smith.

AN EXPOSURE of the continued MISREPRESENTATIONS by MICHAEL PHILIPS, Esq., one of the Editors of the "Philosophical Magazine and Annals," in his attempt to vindicate himself from Dr. Reid's First Exposure of his Misrepresentations in that Journal.

Bagnall; Sherwood and Co.; Harding and Lepard; J. T. Hetchell; Whittaker and Co.; Simpkin and Marshall; and E. Hodgson.

The First Volume, with a Glossary and Index, may be had complete, price 21s. 18s. in cloth boards.

A Prospectus of the Work may be obtained through any Bookseller.

Geography and Atlas on a New Plan.

3d edition, in royal 18mo. 8s. 6d. neatly bound and lettered, embellished with numerous Engravings, illustrating Manners, Customs, and Curiosities.

RUDIMENTS OF GEOGRAPHY, on a New Plan; designed to assist the Memory by Comparison and Classification.

By W. C. WOODBRIDGE, A.M.

The Geography is accompanied by an Atlas, exhibiting, in connection with the Outlines of Countries, the prevailing Religions, Forms of Government, Degrees of Civilization, the comparative size of Towns, Rivers, and Mountains, and the Climate and Productions on the Earth. In royal 4to. coloured, 8s. half-bound.

This Atlas has been compiled from the best authorities, and contains all the late discoveries of Parry, Weddell, Dezhnev, and Clapperton. But its principal object is attention to be founded on the entire novelty of the plan. Each Map presents, not only the geographical outlines of countries, but a series of numbers affixed to the mountains, rivers, and cities, which indicate their comparative rank, and enables the student, by reference to the Table of Classification, to discover their actual magnitude. The Isothermal Chart exhibits the climate of different regions, as determined by thermometer observation, with their most important productions, and presents a striking illustration of the diversity existing in the same latitudes, according to the situation of countries.

In the Moral and Political Chart the outlines of each country contain a number, showing its population, and several emblems indicating its government, religion, and state of civilisation; and, *infima*, in effect, a moral picture of the world.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Of whom may be had,

A complete School Catalogue.

The 14th edition, in 18mo. with important Additions, Alterations, and Improvements, by the Rev. G. Oliver, Esq.

By the late WILLIAM PRESTON, Esq.

Past Master of the Lodge of Antiquity.

By the same Editor,

The Star in the East. 12mo. 5s. 6d.

The Antiquities of Freemasonry. 8vo. 12s.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 12mo. the 5th edition, newly arranged and much improved, with new Set of Engravings, 6s. 6d.

SYLLABIC SPELLING; or, a Summary Method of Teaching Children to Spell and Read with facility and pleasure.

By Mrs. WILLIAMS.

N.B. This edition contains a variety of testimonials in favour of the system, from some of the most respectable professors of the English language, as well as from several parents, whose children (amused and interested by this novel mode of instruction) have learned, in the course of a very few months, to read correctly, and with perfect ease, the longest and most difficult words.

"The object of the useful little book before us is to reduce the difficulties of learning to read; and the author sets about the task in a way that entitles her to the thanks of all mankind. Her book is a Primer—but the child will want no other book; for when this is properly thumbed, the pupil will be able to read the *Moxydrædia* through and through."

Boards with appropriate Cutters, for the amusement of young beginners, may be had, if required, of the Publishers.

By the same Author,

Conversations on English Grammar. Tenth

edition, 5s. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

The 2d edition, enlarged and illustrated with Twenty-nine Designs, 18s. 1s. red cloth.

VETERINARY SURGERY AND PRACTICE OF MEDICINE; or, Farriery taught on a New Plan; being a Familiar Description of all the Diseases incident to the Horse; the Cause and Symptoms of each, and the most improved Remedies employed for the Cure in every Case.

By JOHN HINDS, V.S.

Author of the "Green's Ointment," &c.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 8vo. 18s.

A MANUAL OF MATERIA MEDICA

AND PHARMACY, comprising a concise Description of the Articles used in Medicine, with Observations on the proper Mode of combining and administering them; also the Formulae for the Official Preparations of the London, Edinburgh, Dublin, Parisian, American, and most of the Continental Pharmacopœias; together with a Table of the principal Medicinal Plants. Translated from the French of H. M. EDWARDS, M.D. and P. V. VASSEUR, M.D. and now corrected and adapted to British Practice.

By JOHN DAVIES, M.R.C.S.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 18mo. 6s. 6d.

PLAIN INSTRUCTIONS for the MANAGEMENT OF INFANTS, with Practical Observations on the Diseases incident to Children. To which is added, an Essay on Spinal and Cerebral Affects.

By JOHN DARWALL, M.D.

Whittaker, Treacher, and Co. Ave Maria Lane.

THE SECRETARY'S ASSISTANT.

In a Pocket Volume, the 5th edition, 8s. in cloth. One of these useful little books, which, having found how serviceable it is for almost daily reference, you wonder that you could ever do without. The Assistant gives you superlatives, list of ambassadors and consuls, forms of petitions and memorials, and other pieces of instruction for intercourse with society."

Whittaker, Treacher, and Co. Ave Maria Lane.

A Dictionary of Quotations from the British Poets.

Vol. I. containing Quotations from Shakespeare, 6s. 6d. Vol. II. ditto, in Blank Verse, 7s. Vol. III. ditto, in Rhyme, 7s. 6d.

"These volumes are what they profess to be, and are honestly and carefully executed. We have in them the essence of Shakespeare and the British poets."—*Monthly Review*.

Health and Longevity.

THE ART OF INVIGORATING and PROLONGING LIFE, by Food, Clothes, Air, Exercise, Wine, Sleep, &c.; or, the Invalid's Oracle; containing Pædic Precepts, pointing out agreeable and effectual Methods to prevent and relieve Indigestion, and to regulate and strengthen the action of the Stomach and Bowels. To which is added, the Pleasures of making a Will.

By WILLIAM KITCHNER, M.D.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

By the same Author, in 18mo. with numerous Cuts, and a Portrait of the Author, 7s.

The Housekeeper's Oracle; or, Art of Domestic Management; containing a complete System of Carving with accuracy and elegance; Hints relative to Dinner Parties; the Art of Managing Servants; and the Economist's and Epicure's Calendar, shewing the Seasons when all kinds of Meat, Fish, Poultry, Game, Vegetables, and Fruits, first arrive in the Market, earliest time for food, when most plentiful, when best and cheapest. To which are added, a variety of useful and original Receipts.

In 2 large vols. 8vo. 50s.

THE HISTORY OF ITALY; from the Fall of the Western Empire to the Commencement of the Wars of the French Revolution.

By GEORGE PERCEVAL, Esq.

"For the elegance of its style, the generous tone of its sentiments, and, above all, for its faithful reference to original authorities, this work is certainly a valuable acquisition to our historical literature."—*Monthly Review*.

"The History of Italy fills up a blank long felt in our literature, in a way highly creditable to its author."—*Literary Gazette*. Whittaker, Treacher, and Co. Ave Maria Lane.

In 2 large vols. 8vo. containing about 3000 pages of close print, royal 8vo. half-bound.

A BIOGRAPHICAL DICTIONARY OF EMINENT PERSONS OF ALL AGES.

By JOHN GORTON.

"It is small praise to say this Dictionary surpasses all the prior compilations of the kind; but we have consulted a multitude of articles, and have been surprised at the accuracy, versatility, and intelligence, which they exhibit. We must not omit to remark an important recommendation, a bulky book of references; its cheapness. Though far more costly, and carried down to a much later period, we believe the work does not exceed the price of the imperfect repertoires of biographies."—*Atlas*. Whittaker, Treacher, and Co. Ave Maria Lane.

In post 8vo. 12s. cloth lettered,

A TOPOGRAPHICAL DICTIONARY OF LONDON and its ENVIRONS.

By J. ELMES,

Surveyor of the Port of London, &c.

"The object of this work is to describe London, in the nineteenth century, in a manner that may at once direct the seeker to any square, street, alley, court, building, &c. It is evidently the result of much labour, and is far more useful, because much simpler, than any directory can ever be. The accounts of charitable institutions, hospitals, and ecclesiastical establishments, &c. are sufficiently copious, and are written with care and attention. We accept the pledge of Mr. Elmes, whose name has been often honourably before the public, as a guarantee for the accuracy of the volume."—*New Monthly Magazine*, April. Whittaker, Treacher, and Co. Ave Maria Lane.

Illustrated with a Map of the County, demy 8vo. 12s.; royal 8vo. 16s. cloth boards.

A TOPOGRAPHICAL HISTORY OF the COUNTY OF LEICESTER, from actual Survey; being the first of a Series of Counties in England and Wales.

By the Rev. J. CURTIS,

Head Master of the Free Grammar School, Ashby-de-la-Zouch, and Perpetual Curate of Smilby.

The Topographical History of Leicestershire, as a specimen of the whole series, (the materials for which are in a state of great forwardness), embraces in one unvaried form, the local particulars of every Town, Village, and Hamlet, in the County, arranged alphabetically.

"The leading principle of the editor seems to have been utility; this is never lost sight of. It must obtain the patronage of the agriculturist and landed proprietor. To the lawyer the legal profession it will be indispensable. The general body of the yeomanry will find it stored with substantial local information and varied amusement. In short, such are its attractions, that no person can peruse it without profit and entertainment."—*Leicester Chronicle*.

Ashby-de-la-Zouch: published by W. Hestall. Sold by Sherwood, Gilbert, and Piper; and Simpkin and Marshall, London; and all Booksellers.

In 3 vols. post 8vo. 31s. 6d.

ARTHUR OF BRITANNY.

By the same Author,

The Templars. In 3 vols. post 8vo. 27s.

"The story is not only invested with interest, but with deep pathos, presenting a brilliant proof of executive powers."—*Monthly Magazine*.

A work which, though essentially unlike in many particulars, and claiming for itself a distinct pretension to originality both in its conception and execution, reminds us more than any book we ever read, of that admirable novel 'the Spy.'—*La Belle Assemblée*.

Whittaker, Treacher, and Co. Ave Maria Lane.

Miss Mitford's Works.

A new edition, in 4 vols. post 8vo. 35s. 6d.

OUR VILLAGE; COUNTRY STORIES; SKETCHES OF RURAL CHARACTER and SCENERY.

By MISS MARY RUSSELL MITFORD.

By the same Author, in post 8vo. 10s. 6d.

Dramatic Scenes. Sonnets and other Poems.

Also, in post 8vo. 8s.

Poeschri, and Julian. Tragedies.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

A New National Banking and Annuity System.

3d edition, price 8s.

CONSIDERATIONS ADDRESSED to all CLASSES, on the Necessity and Equity of a National Banking and Annuity System, shewing the vast Advantages as a Source of Independent pecuniary relief, both immediate and permanent, to the Community, and of immense voluntary Revenue to the State; containing also, some Hints on the Means of improving the Condition of the Irish Peasantry. Published by Smith, Elder, and Co. Cornhill, London; and A. W. Maclean, Register Street, Edinburgh.

In 4 vols. 12mo. price 11s. 2s.

THE EVE OF ST. AGNES, a Novel.

By Mrs. MASON, late CATHERINE WARD,

In post 8vo. with Engravings, 7s. 6d.

4. A Discourse on the Revolutions of the

Surface of the Globe, and the Changes thereby introduced into the Animal Kingdom. Translated from the French. By the Baron Cuvier. With Illustrations, and a Map. 8vo. 10s. 6d. Whittaker, Treacher, and Co. Ave Maria Lane, London.

In 2 vols. Illustrated with several Engravings of Scenery, Costume, Productions, &c.; also a Map, 16s. cloth.

THE PICTURE OF INDIA.

"We must say there is an elegance, if not a splendour of decoration about these volumes, that very properly corresponds with the ideas of magnificence which we usually associate with the name of India. The contents are worthy the beautiful framework in which they are embraced; and, if we mistake not the public taste, the Picture of India will supersede every competitor that has arisen, or that is likely to come into the field."

Monthly Review, June.

By the same Author,

The Picture of Australia. 10s. 6d.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Lately published,

In 8vo. with 50 coloured engravings of Manners, Customs, and Religious Ceremonies, 16s.

Sketches of Portuguese Life, Manners, Cos-

tume, and Character.

"The whole volume is one of extraordinary entertainment, and a very curious picture of national manners."—*Literary Gazette*.

A List of New and Popular Works,
Published by William Kidd, 228, Regent Street; and sold
by James GIBBERT, 51, Paternoster Row.

SATURDAY, OCTOBER 1, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Campaigns and Cruises in Venezuela and New Grenada, and in the Pacific Ocean, from 1817 to 1830. Also, Tales of Venezuela. 3 vols. 12mo. London, 1831. Longman and Co.

A GREAT mass of information, description, military narrative, and anecdote, is here collected, and collected in a very pleasant and intelligent manner. South America is still novel ground to the traveller; and the scenes of which it has been, and is, the theatre, are marked with all the wild and adventurous spirit which characterises those convulsions with which barbarism has ever emerged into civilisation. Thirteen years of experience have afforded our author ample material; and this is just one of those works where extracts give a clearer idea of their contents than any remarks. We shall, therefore at once commence our miscellaneous collection.

A Ball at Guayana.—"After considerable exertion on the part of our host, room was obtained for the dancers, who performed several national fandangos, quite new to us, and apparently peculiar to the country; such as the *Bambuco*, *Zajudina*, and *Marri-marri*. At length, when they began to tire of these, a young Criollo rose and demanded room. After dancing round the room by himself for a minute or two, he figured up to a lady, to whom he made a bow and retired. She immediately rose, performed the same evolutions, and stopped opposite to one of our party, curtsying by way of calling on him to exhibit in turn. This caused a universal burst of delight among the spectators; and our companion, after in vain protesting that he knew nothing of the dance, was fairly pushed into the centre of the floor by the laughing brunettes. He was of course obliged to acquit himself as well as he could, amidst shouts of applause, and '*Vivan los Ingleses!*' We were all of us called upon in turn to shew our paces, with which we complied, to their great amusement; and were warmly complimented on our readiness to join in their dances, contrary to the fastidious custom of the Spanish officers. The music—if it merits the name—consisted of several *viñuelas*, (a small kind of guitars,) and harps, in time to which half a dozen professed singers screamed some unintelligible couplets at the top of their voices. These minstrels and troubadours were accompanied by rattles, made of hollow calabashes, containing some grains of maize, with short handles, by which they were shaken; also by several women who, seated round a table, vied with each other in *tamboreando*, or beating time with their open hands. We were glad to escape from this scene of confusion; the dance and mirth becoming more 'fast and furious,' as the *aguardiente*, a spirit distilled in the country, was handed round liberally, and began to take effect. Besides, we were as yet unused to breathe the atmosphere of tobacco smoke that invariably fills these ball-rooms; every individual having, on these oc-

casions, either a cigar or *churumbela* in his or her mouth, which they do not think of laying aside even while dancing. It is indeed considered a compliment, to be presented by a lady with a cigar that she has half smoked; and it would be an unpardonable affront to refuse it. Supper was at last announced. It consisted chiefly of roast beef, cut into long narrow slices, and plantains; with cheese and honey, which is a very favourite dish in most parts of South America. None of the guests sat down to table, nor were knives produced; as every thing that requires to be cut up is carved in the kitchen. We also found it was not customary for any individual to help himself, but each lady presented a morsel on a fork to a gentleman, who, in return, handed her something delicate, that happened to be placed near him on the table. We were warned to beware of refusing any thing offered us; and, in compliance with the fashion of the place, persevered most politely, in spite of fatigue, heat, and a total disinclination to a hot meat supper in this climate. At last, one of our party, who had been particularly annoyed by the mischievous attentions of the Guayanezas, presented one of the most active of his tormentors with a pod of red pepper. As she, of course, declined eating it, we soon obtained a truce, on threatening that we would all follow his example."

Attempted Assassination of Bolivar.—"Beyond the lagoon are many pleasant rides, among the plantations and quintas. One of these, called el Morichal, from the Morichi palm-trees that grow round it, was the place where Bolivar concealed himself the night previous to his intended assassination by the ladies of Angostura. On the evening before this atrocious attempt was to have been made, Bolivar received private information, (from a quarter on which he could depend,) that the ladies of this place, all of whom were noted royalists, had formed a conspiracy to surround him on his return from early mass, (which he always attended on Sundays with only a single aide-de-camp,) and to stab him with poniards, which they were to carry concealed under their mantillas. It was also hinted to him, that the soldiers, who were on guard at the palace, had been tampered with, and were not to be trusted. He immediately, without acquainting even his secretary, sent for an English officer lately arrived, and inquired if he thought that the British soldiers, a few of whom were in Angostura, waiting for boats to convey them up the river to join the army, might be trusted, in a matter on which much depended. The officer assuring him that he would answer for their fidelity, Bolivar directed him to collect as many as he could immediately; to take them out of the city by an unfrequented path that leads round the lagoon; and leaving them there, to meet him at a small door, almost overgrown with briars, which opens at the back of the palace. The officer, quite ignorant as yet of what was about to occur, collected about a dozen Englishmen, and posted them where he had been directed. He then hastened to the

gate, where he found Bolivar waiting for him, muffled in a cloak. Don Simon led the way, avoiding every place where sentries were usually posted; and, being joined by the party of Englishmen, proceeded to his quinta of Morichal. There he explained to the officer the danger he was in, and his reason for intrusting himself to foreigners rather than to his own countrymen. Bolivar went down to the Orinoco at day-break, and crossed over to the Barcelona side, where he joined a division of the army under the command of General Monagas. He never instituted any inquiry, nor took any further notice of this conspiracy; probably thinking it most prudent to avoid making such a circumstance, as his unpopularity among the Guayanezas, generally known."

Snakes.—"In this part of the Orinoco we repeatedly saw water-snakes swimming from one island to another; and in some instances they passed over the boats, to the great alarm of the passengers, but without attempting to do any mischief. They are of a light green colour, six or eight feet long, and swim with about a third of their body raised out of the water; propelling themselves rapidly along by the undulating motion of their tail. We were informed by the boatmen, that their prey consisted chiefly of water-rats and young birds. The patrons of the launches always endeavour to avoid sailing under the trees that overhang the river, lest the mast might detach some of the snakes from the branches. We frequently saw numbers of them, exhibiting the most brilliant colours, while basking in the sun on the trees."

Singular Ornament among the Indians.—"Their females have a singular method of ornamenting themselves. They bore a hole through the under lip, as low down towards the chin as possible, and stick several long thorns in the aperture, with the points projecting outwards. Observing that several of the tribe had decorated their lips with common pins, I gave one of the squaws a few that I happened to have in my possession. She immediately called to her a girl of about twelve years old, (apparently her daughter,) who had not as yet been distinguished by this ornament; pierced her lip, with equal indifference and dexterity, with a sharp instrument made of an alligator's tooth, and placed the pins in the orifice. The poor girl bore this operation with great patience; and appeared to be perfectly consoled by the possession of her newly acquired ornament, for the pain it must have given her."

The Musician.—"A circumstance happened during the action, that gave Bolivar one of the few hearty laughs we ever saw him indulge in. A tall stout Scots officer, by name P. Grant, who found it very dull to keep in close attendance on Bolivar, strayed into the wood, near the city, to reconnoitre on his own account. Here he saw a Spanish soldier in hasty retreat towards the gates, leading a loaded mule; and instantly gave chase to him. The affrighted royalist threw himself on his knees, and begged for quarter, pleading that

he was a musician; he also, observing that he was not understood, produced a clarinet from his pocket, and gave proof of his abilities, to his captor's satisfaction. Grant knew that such a prize would be most acceptable to Bolívar; but he could not think of losing the mule, which he had ascertained to be loaded with skins of *aguardiente*, and which had trotted off during the parley between its late and present master. He therefore tied the trembling musician to a tree; directing him, with bitter threats, not to cease playing until he returned, that he might be sure his hands were not employed in untying his bonds; and, having overtaken the mule, brought both his prizes in triumph to our side of the field."

Cruelty of Morillo.—"Bolívar, it must be observed, had long been anxious to put an end to the system of cold-blooded slaughter, introduced by the Spaniards under the name of *guerra á la muerte*, and continued for so many years by both parties, under the plea of retaliation. It is unnecessary,—perhaps impossible,—to ascertain whether he was actuated by humanity, or by a wish to remove from his cause a stigma which he was well aware degraded it in the eyes of the English, from whom he had every thing to hope, either as active friends, or influential mediators. One thing is certain, that he had made incessant endeavours to induce Morillo to consent to a *cangé*, or exchange of prisoners; but the haughty Spaniard invariably rejected his overtures as insults; and spurned all attempts at intercourse, on this and every other subject, as if it would have been contamination in a royalist to treat with an insurgent. He fired at all flags of truce. Priests, nay, even women, were shot, if they were made bearers of the white banner. Still Bolívar, though justly incensed, did not give up the cause of humanity. He sent the Spanish general, from this very city of Calabozo, twelve royalist officers and twenty of their soldiers, whom the patriots had just taken, with a letter requesting him, for the last time, to consent to an exchange, in the name of the civilised part of the world to which he belonged. How this appeal was answered, will scarcely be credited. On the evening of the 15th, when we were within a league of Rastro, whither Morillo had retreated, the advanced guard suddenly halted. On Bolívar's riding to the front, to ascertain the cause of their delay, he saw the sad spectacle of twelve officers and twenty soldiers, patriot prisoners, lying ranged in order across the road we had to pass, all cruelly butchered by their merciless captors. Such conduct requires no comment. It is surely a full extenuation of all Bolívar's alleged severity towards his prisoners. His own troops would now have torn him in pieces, had he not consented to retaliate to the utmost extent of his power. He dictated, in the presence of the assembled captains of companies, a peremptory order to Sherwood for the immediate execution of every prisoner in the city we had just left; and ordered a halt, on the spot where we found the bodies, until a report was brought him by his aide-de-camp, young Tovar, that he had been punctually obeyed."

Description of Bolívar.—"I shall confine myself to observing that he was then about thirty-five, but looked upwards of forty; in stature short—perhaps five feet five or six—but well proportioned and remarkably active. His countenance, even then, was thin, and evidently care-worn, with an expression of patient endurance under adversity, which he has before and since given ample evidence of pos-

sing, however his fiery temper may at times have appeared to contradict the supposition. His manners not only appeared elegant, surrounded as he was by men far his inferiors in birth and education, but must have been intrinsically so; for he had the fortune, when a young man at Madrid, and at a time when the prejudices against the Crioles of the turbulent colonies were powerful in Spain, to captivate the affections, and receive the hand of a daughter of the Marquess de Uztaron. The dress which was worn by him and his suite corresponded perfectly with the scanty resources of the patriot army. His helmet was such as was then usually worn by a private light dragoon. It had been sent him as a pattern, by a merchant of Trinidad, who had imported on speculation from London some yeomanry accoutrements, which had been sold off on the commencement of the peace. A plain round jacket of blue cloth, with red cuffs, and three rows of gilt sugar-loaf buttons; coarse blue trousers; and *alpargates*, or sandals (the soles of which are made of the fibres of the aloe plaited), completed his dress. He carried in his hand a light lance, with a small black banner, having embroidered on it a white skull and crossed bones, with the motto, '*Muerte ó Libertad!*'"

Description of his Officers.—"The native officers, by whom he was surrounded, were chiefly men of colour, of lighter or darker shades; except the two generals, Paéz and Urdaneta, who are white. Few of them had any jackets. Their usual dress consisted of a shirt, made of handkerchief-pieces of different colours, and generally of checked patterns, very ample in size, and with wide sleeves, worn outside large white drawers, which reached below the knee; and a hat made of *cogollo*, or split palm leaves, with plumes of variegated feathers. They were almost all barefoot; but every one wore large silver or brass spurs, with rowels of at least four inches in diameter, and some of even more extravagant dimensions. They generally wore, under these hats, coloured silk or cotton handkerchiefs, for the purpose of shading their faces from the sun; although, to all appearance, their spreading *sombreros* might have afforded sufficient shelter for such dark complexions. We afterwards found, however, that dark as they all were (and several were even quite black), they could not endure the severe heat as well as most of the English. One of Paéz's favourite cavalry officers, Colonel Juan Gomez, had a helmet given him by that general, the casque of which was of beaten gold, the work of some rude country artist. Another, who commanded his body guard, Colonel Jose Carbajal, wore a silver helmet; and many officers and distinguished soldiers had silver scabbards to their sabres, besides silver stirrups, and weighty ornaments of the same metal on their bridles."

Escape after a Defeat.—"I followed, of course, as long as I could; but was soon sensible of the impossibility of escaping in a hilly country, encumbered as I was with boots and a sabre, and fatigued with the day's exertions; to say nothing of our having been, for the last two days, rapidly retreating by forced marches, without any provisions being served out. I therefore threw myself, exhausted, into a bush, where I lay expecting every moment to be bayoneted by the pursuers. Finding, however, that several had passed without observing me, I began to entertain some hopes of being able to rejoin our army, and crept farther into the underwood, to the brink of a rock, from whence the whole field could plainly be seen beneath me. It was thickly spotted over with

bodies, especially in the defile leading to Los Morros, where men and horses were lying in heaps. Our army had totally disappeared, except a few stragglers, who were still entangled in the broken ground, and whom the enemy had surrounded, and was firing at, not choosing to encumber themselves with prisoners. A Spanish general, whom I believed to be Morillo, and his staff, were halted on a small eminence, which the patriot army had previously occupied. A few prisoners, apparently officers, were occasionally brought to him, and, after a short pause, while by his gestures he appeared to interrogate and threaten them, were taken aside and shot. Night soon approached; and it was evident, by the number of fires, that the greater part of the Spanish army had encamped on the field. Towards midnight, I left my place of concealment, and reached the small river, which had been the scene of the hottest part of the recent conflict. The banks were strewn with bodies, many of which were lying in the shallow stream; and the vultures and wild dogs had already commenced their banquet. I had but little leisure, however, to look about me. Having drank heartily of the brook, I proceeded cautiously up the bed of the river, being concealed by the bushes on the banks, and secure of not being met by any patrols in that direction. By day-break I had advanced pretty high up the valley; and, hearing the crowing of cocks, ventured, at all hazards, to approach a cottage, which I saw not far off, surrounded by sugar-cane patches and plantain groves. The inhabitants, a venerable old Indian, with his wife and four daughters, came out to receive me with great formality; supposing from my colour and dress that I was a Spaniard. They soon found, from my imperfect manner of speaking the language, that they were mistaken; and readily comprehending that I was one of the English, who they had heard were with Bolívar, assured me that I was in no danger of being betrayed by them, for they also were patriots, as, indeed, most of the Indians in that part of the country were. The old man explained to me, in a few words, the danger there was of my being discovered in the cottage, by stragglers from the Spanish camp, who would, in all probability, come up the valley in search of plantains and other fruit, and to plunder what they could. He therefore sent one of his daughters to show me a place of concealment, in a thick copse behind the sugar-cane patch. She spread for me here a mat of rushes to rest on; and after bringing water for my feet, set before me a wooden tray with a substantial breakfast of broiled fowl, eggs, and roast plantains, besides various fruits. In the evening, one of the youngest children brought me a supply of provisions in a basket, and told me that several Spanish soldiers had come up to the cottage, and were waiting there, while her mother was making them *arrepas*. I remained in this place of concealment for a few days, visited but rarely by the old man, who was fearful of being watched, and detected in concealing an officer of the insurgent army, which would have cost him his life; but I was constantly supplied with provisions by the daughters, whose occasional absence would not be so much remarked. I felt uneasy, however, at exposing this kind family to danger; besides being in constant expectation of discovery, by means of the numerous parties of soldiers, whom I could see from my retreat, during the day, traversing the plantations in search of fugitives from the late action, several of whom they had already found in the neighbourhood, and shot. I therefore deter-

mined on removing into the forest above the valley, and endeavouring to find some companion in distress, with whom I might seek my way to Bolívar's camp. My worthy host endeavoured to dissuade me from this resolution, assuring me that he did not apprehend any danger of discovery. Finding me, however, decided on not endangering them any longer, he and his family bid me farewell, with many embraces and kind wishes. They furnished me with a basket, containing roast plantains and dried meat. The old man gave me at parting a flint and steel, with a cane containing *gesco* (a kind of tinder made of dried fungus) and an Indian *churumbilla*, with tobacco, which I found of real value in the damp woods, where I lay concealed for some time afterwards. The trees in these mountain forests are chiefly the *coabe*, or mahogany, which grows to a majestic size, and affords a delightful shade. There are, besides, many different kinds of wild fruit-trees, which are resorted to by the *araguate* monkey. Panthers inhabit these wilds; but, although I often heard their yells, they never approached near enough to give me any serious apprehensions. When my provisions were expended, I was in the habit of going down, cautiously, to the outskirts of the plantations after dusk, and cutting sugar-cane: this is well known to be nutritious enough to support life for a long time without any other food. I ventured occasionally near enough to cottages where I could hear no watch-dogs, to forage ripe plantains; and was, in one instance, fortunate enough to find some *tasajo* hanging on bambu poles. This lucky windfall I transferred to my basket haversack, without much scruple. I found it difficult to guard against the depredations of the monkeys, which frequently robbed me of my provisions if I lost sight of them for a moment. The mountains here abound with snakes and centipedes, which I used often to discover under the dry leaves that composed my bed. The former were, however, perfectly harmless, when not molested, although it was necessary to use caution on rising, to avoid touching them, as that would, of course, have provoked them to bite. The woods at night were brilliantly illuminated by the *owls*, or lantern flies, which, flitting in myriads from tree to tree, resemble sparks of fire. This insect is a small dark-coloured beetle, similar to that which is found under rotten wood in England. It carries its greenish phosphoric light in the tail; and its lantern remains invisible except when it is flying, as it is covered by the wing-cases when in a state of rest. I soon began to find this solitary way of life too irksome to endure with any degree of patience. I even entertained serious thoughts of surrendering myself to the Spaniards, at all hazards, rather than lead the life of an outlaw any longer among these wild mountains, when I unexpectedly met with a comrade, who soon dissuaded me from this intention, and was eventually the means of enabling me to escape in safety to Bolívar's army. One night, as I was cutting a supply of sugar-cane, as usual, I saw, by the moonlight, a native close to me, busily engaged in the same occupation. We were at first rather cautious of approaching each other; but as he soon discovered me to be an Englishman, he informed me that he was an alferes, belonging to Zaraza's cavalry, and had taken refuge in the woods, after the defeat of La Puerta; adding, that he also was foraging for his support. We were both rejoiced at this accidental meeting, and agreed to continue together, for mutual assistance. This event was

particularly fortunate for me, as my new companion, whose name was Bicente Artaño, knew the country well, and was a stout active young Criole, whose assistance in procuring provisions, and afterwards in crossing rivers, I found extremely serviceable. The days now passed much more agreeably than in my former solitude; for Bicente knew several places of security in the mountains."

With his comrade's assistance, he succeeds in joining Bolívar's army: but we must defer our further illustrations of this very interesting work till another *Gazette* appears to enlighten the world.

Epistles to a Friend in Town; and other Poems.

By Chandoz Leigh, Esq. 12mo. pp. 328. New edition, with Additions. London, 1831. Colburn and Bentley.

WE are glad to see Mr. Leigh again in print, and to find that, as on former occasions, he adds to every fresh edition of his poems some new verses. Mr. Leigh is almost the only one of modern poets whose muse concerns itself with the actual things which lie in our daily path. Instead of plunging into the clouds of mysticism, or indulging in affected sentiment, our author looks about him in his own sphere; and seeing many elements in the society by which he is surrounded which deserve to be noticed either in applause or condemnation, he embodies his opinions in the "Epistles to a Friend," from the last of which we make a few extracts.

The following evidently points at the late Mr. Shelley, and at the manner in which that gentleman abused the intellectual gifts bestowed on him by nature.

"Mystical poetry with wondrous art—
Entwines itself around the enthusiast's heart.
Astor gathers fragrant roses
From human use, as stimulants to thought;
With projects wild his brain distemper'd teems—
His world appears impalpable as dreams;
Vague phantasies take the place of living forms,
And torturing doubt a noble mind deforms.
How can a soul which matter clogs, discern
Abstracted shadowy tribes their nature learn?
Awhile they rush before our mental eye
Enlarged, then far recede, and all is night!
Imagination is to mortals given,
That they might sometimes catch a glimpse of heaven;
But not to be an erring guide, at strife
With all the sober principles of life:
To cheat us, as a Prospero with his wand
Creates and then discovers a fairy land."

The following allusion to Almack's, and to the jealousy subsisting between Lady J.—and the Duchess of —, is depicted with a good-humoured piquancy.

"Beauty attracts us with her smiles, and Love
Is a most busy god while idlers move,
Thronging those gardens gay, of which the flowers
Transcend the choicest that adorn our bowers;
There glow, in summer's lighter garb array'd,
The loveliest forms that ever nature made;
The rosy bloom of youth is on their cheeks:
In their sweet looks mind eloquently speaks.
(Yet taste laments that Tullia's shape is gone;
Among her fair compeers she brightly shone.)
Eyes that with tears were fill'd but yesternight
For a lost Almack's, sparkle with delight,
Metella, fashion's most prevailing star,
Brilliant as Venus rising in her car;
Metella (scorn sits lovely on her lips)
Frowns, can another's radiance hers eclipse?
A purse-proud rival, not in loveliness,
Dares to surpass her, but in wealth's excess.
Shall, then, the day-god's flower, that flaunting shows
Its yellow hue, raise envy in the rose?
Oh, no! Metella's splendour far outshines
Her rival's grandeur, were she queen of mines.
Taste, birth's obedient fairy, waves her wand
Through her saloon; gold cannot taste command."

And here are a few little rapid sketches, which will be easily recognised as portraits:—

"Lacius, paraded with superfluous coin,
Pants the kind shavers in his wealth to join,
Where Crookford's palace glares upon his eyes,
As a proud harlot once of shame defies."

How true the proverb, 'Cobwebs that enfold
The less, on greater reptiles loose their hold,'
Wondering that men can thus their money lose,
Sons of *virtu*, a better part you choose.
Some book, it matters not in prose or rhyme,
You buy—we'll call it 'Pleasure's rare Passe-tyme';
Or drag some dusty picture to the day—
Cheap, if you have five hundred pounds to pay:
The picture, you remove the sacred dust,
Had better in its former station rust;
The book, how vast your agony of grief!
More precious than the sibyl's, wants a leaf!
Tullius, whose well-stored library's a hive
Of sweets the varied flowers of genius give,
Is but a drone: from book to book he flies;
Tastes all, contributes nothing—useless dies.
Where, to support the poor, bazaars are graced
With high-born dames behind the counter placed,
Fair Seraphina studiously displays
Her pretty wares for charity or praise.
Works finish'd by her lovely hands attract
Attention: here a novel, there a tract:
These works her varied inclinations paint;
The fair, as fashion wills, is blue, or saint!"

We must conclude with the following little song, characterised by a most touching repose and simplicity, like some of the ancient Greek inscriptions.

"A Sea View."

A sun-impurpled glow
Is on the waveless sea,
And not a breeze doth blow,
And not a sail I see.
Like heaven's own pavement bright
Is now the placid deep,
On which the farewell light
Of sunset loves to sleep.
Thus beautiful in death
Is youth's departing flush,
And lovely is the wreath
Where latest roses blush."

The Van Diemen's Land Anniversary and Hobart-Town Almanack for the Year 1831.

J. Ross.
HERE is Thirty-one three parts done, and we have just received from Mr. Ross his Almanack, calculated for the meridian of Hobart Town. Well, it is a comfort, when tired of the literature of this side of the world, to go to the other; though an Almanack, after all, is but a meagre production for a reviewer to recreate upon. Yet it does amuse one to read, for example, that last Saturday the sun entered Libra about half-past five, A. M., being the vernal equinox; and that instead of "pleasant shooting begins," as with us, to mark the day for memory, it is "Exped. against the Blacks began 1820;" and that this day three weeks you are advised "to plant cabbage, &c."

Perhaps, however, the preface is the most novel in furnishing information. Respecting favour for his work, the author says:

"When it is considered, that the manuscript has been written, set up in type, imposed and printed, the plates engraved or etched and worked off, and the whole bound together, not only under one roof, but within the confines of the same garret, we think the palm of Grub-street toil will, in these days of intellect, be yielded to the antipodes. The London hack has merely to satisfy the demands of his bookseller; but the Hobart Town editor, printer, and proprietor, (a pluralist in every sense of the word), has not only to regulate the whole machinery, but to be set himself in motion by the very engine to which he has first given the impetus. He must not only keep his compositors and pressmen at work, but must prepare the copy to their hands. Like the convict on the tread-wheel, he impels and is impelled at the same time."

Every country has its similes and comparisons. How natural is the last! Our worthy editor, nevertheless, is by no means, generally speaking, like the convict on the tread-mill, but, on the contrary, a very industrious, persevering, honest, and pains-taking editor, who, amid a hundred difficulties, has produced a very

reputable pocket volume; and, moreover, promises new type, better paper, and further exertion, in time to come, just as we do ourselves in the periodical way in England.

We will do him the justice to quote a passage or two relative to this distant land.

"The diseases to which children are liable in Van Diemen's Land are neither so many, nor, generally speaking, so severe, as in England. Hooping cough was introduced into the island from one of the female prison ships, about three years ago; but though it spread itself nearly throughout the whole population, it invariably appeared in a mild form, and we do not know that it was attended by a single death. Adults, indeed, and aged persons, who had not been affected with it in an early life, felt it more severely. Small-pox and measles are, fortunately, as yet unknown amongst us. Against this favourable estimate of life, arising from the climate and circumstances of the colony, we are compelled reluctantly to set a dreadful make-weight in the other scale. We mean the lamentable waste of life by intoxication. The quantity of spirits, and other strong drink consumed annually in the colony, may, on a moderate computation, be taken at not less than 100,000 gallons; which, according to the population, allows the enormous quantity of about five gallons to each individual, young and old, male and female, in the island. So astounding a fact shews, at a glance, the horrid state into which some of the community must be immersed. Dreadful as it is, however, we are happy to bear testimony to its decrease, compared with former periods. A very large portion of those who first put their foot upon the shores of the Derwent, even belonging to what should be the more respectable and exemplary class of society, were confirmed drunkards, and died in the prime of life. To their ruinous example may fairly be attributed much of the dissipated habits that have so long afflicted the colony."

Again:

"The duty of a clergyman in Hobart Town is, indeed, most arduous. He is placed, as it were, in the very gorge of sin, in the midst of the general receptacle for the worst characters in the world, and of necessity compelled to take the 'bull by the horns,' to grapple at the very gates of hell, if he would rescue a soul from the headlong ruin to which he is hurrying. The duty of a pastor in all parts of the world is the highest and most important that man can undertake; but in these penal colonies it is extreme. He has here to struggle with the enemy in close combat, face to face and foot to foot; and to brace himself up to the utmost point of exertion. If one mode of exhortation does not succeed, he must try another, and his mind must be continually on the rack to discover the best means of accomplishing some part at least of the great work before him. Above all, he must inculcate the great lesson of example; and though his own labours are, necessarily, in a great measure, of such a retired and studious nature as to seclude him from much personal intercourse with his flock, yet his zeal and industry will readily shew themselves by the character and success of his works in the pulpit, and at other times and places, when the influence of his presence comes before the people. The great work of reformation must begin with him. It must not be said in a place like this, that vice has ever prevailed in the world, and will continue to have its sway, and thus supinely to yield to what we would persuade ourselves can never be removed."

Then, with regard to "the spread of knowledge," if the clergyman "take the bull by the horns," there is an enlightened press, &c. &c. to do the rest.

"It," (says the writer), "in the field of religion, where, from the multitude of weeds the labour must be proportionably great, there has yet been but little comparative success, it must still give pleasure to every friend of the colony to see the progress that her handmaid, the press, has already made; and nothing can indicate more strongly the improving character of the people than the great encouragement it has met with. In this respect these colonies are indeed triumphant, not even the overflowings of the great American press being able at all to compete with the extent of our literary taste. In Van Diemen's land we have at this day no less than four printing establishments, namely three in Hobart Town, and one at Launceston, from each of which is produced a regular weekly periodical journal, neither of which, in point of size, would have disgraced a London newspaper-office twenty years ago."

In conclusion, the whole property in the island is estimated at 2,289,845*l.*, of which 300,000*l.* is commercial property, 40,000*l.* metallic currency, 23,000 shipping, the rest lands, houses, &c. The population is 21,125, among whom are,

a rather large proportion, it must be confessed. There are also 900 military, and 400 aborigines.

The Aldine Edition of the British Poets, Vol. XVI. The Poetical Works of Oliver Goldsmith. 12mo. pp. 358. London, 1831. Pickering.

An eminent author of the present day says most truly: "No man's exact reputation is allotted him by his contemporaries." Goldsmith is a striking illustration of this remark. Boswell's wig would have started from his head, had any audacious prophet foretold that Goldsmith's future fame would approximate closely to that of Johnson: and yet surely no one would now deny that position to the writer of one of our best and still acted comedies, one of our most delightful novels, some of the most beautiful poetry in our language, and essays whose acute and happy style of remark is almost inimitable. True it is that a man of great genius is either unappreciated by his associates, or they form a coterie around him, and exaggerate that excellence which, by one of those subtle processes so common to human vanity, they have confounded with their own. "*Je ne suis pas la rose, mais j'ai vécu près d'elle*," is a flattering belief, held by more persons than M. Constant, Napoleon's valet, who thought that the emperor's glorious presence must reflect some of its glory upon him. The volume before us contains an interesting and pleasantly written memoir of Goldsmith, his poems entire, and some editorial cruelties, in the shape of "poems never before collected," and, as usual, not worth collecting. It is curious to observe how very wretched were nearly all the shorter poems of that period. We extract a letter of Goldsmith's, charming both in style and feeling, and interesting also in its details about himself.

"To Daniel Hodson, Esq., at Lishoy, near Ballymahon, Ireland.

Dear Sir,—It may be four years since my last

letters went to Ireland, and from you in particular I received no answer, probably because you never wrote to me. My brother Charles, however, informs me of the fatigue you were at in soliciting a subscription to assist me, not only among my friends and relations, but acquaintance in general. Though my pride might feel some repugnance in being thus relieved, yet my gratitude can suffer no diminution. How much am I obliged to you, to them, for such generosity, or (why should not your virtues have the proper name?) for such charity to me at that juncture. Sure I am born to ill fortune to be so much a debtor, and unable to repay. But to say no more of this; too many professions of gratitude are often considered as indirect petitions for future favours. Let me only add, that my not receiving that supply was the cause of my present establishment in London. You may easily imagine what difficulties I had to encounter, left as I was without friends, recommendations, money, or impudence, and that in a country where being born an Irishman was sufficient to keep me unemployed. Many in such circumstances would have had recourse to the friar's end, or the suicide's halter. But with all my follies, I had principle to resist the one, and resolution to combat the other. I suppose you desire to know my present situation: as there is nothing in it at which I should blush, or which mankind could censure, I see no reason for making it a secret. In short, by a very little practice as a physician, and a very little reputation as a poet, I make a shift to live. Nothing is more apt to introduce us to the gates of the muses than poverty; but it were well for us if they only left us at the door—the mischief is, they sometimes choose to give us their company at the entertainments, and want, instead of being gentlemen when, often, turns master of the ceremonies. (Thus, upon hearing I wrote, no doubt you imagine I starve; and the name of an author naturally reminds you of a secret. In this particular I do not think proper to deceive my friends; but whether I eat or starve, live in a first floor, or four pair of stairs high, still remember them with anxiety; nay, my very codrury comes in, for a share of my affection—unaccountable fondness for country, this *maladie du pays*, as the French call it! Unaccountable that he should still have an affection for a place, who never received, when in it, above common civility; who never brought anything out of it, except his bragg and his blunders. Surely my affection is equally ridiculous with the Scotchman's, who refused to be cured of the itch, because it made him too thoughtful of his wife and bonnie lassie. But now, to be serious, let me ask myself what gives me a wish to see Ireland again? The country is a fine one, perhaps? No. There are good company in Ireland? No; the conversation there is generally made up of a smutty toast, or a bawdy song: the vivacity supported by some humble cousin, who has just fully enough to earn his dinner. Then, perhaps, there is more wit and learning among the Irish? Oh Lord, no! There has been more money spent in the encouragement of the Poetasters more there in one season, than given in rewards to learned men since the time of Usher. All their productions in learning amount to perhaps a translation, or a few scraps in dexterity; and all their productions in wit to just nothing at all. Why the plague, then, so fond of Ireland? Then, all at once, because you, my dear friend, and a few men, who are exceptions to the general practice, have a residence there. This it is that gives me all the pains I

feel in separation. I confess I carry this spirit sometimes to the souring the pleasures I at present possess. If I go to the opera, where Signora Columba pours out all the mazes of melody, I sit and sigh for Lishoy fireside, and Johnny Armstrong's last good night from Peggy Golden. If I climb Flanstead Hill, than where nature never exhibited a more magnificent prospect, I confess it fine; but then I had rather be placed on the Little Mount before Lishoy gate, and then talk in, to me, the most pleasing horizon in nature. Before Charles came hither, my thoughts sometimes found refuge from severe studies among my friends in Ireland. I fancied strange revolutions at home; but I find it was the rapidity of my own motion that gave an imaginary one to objects really at rest. No alterations there. Some friends, he tells me, are still lean, but very rich; others very fat, but still very poor. Nay, all the news I hear of you is, that you and Mrs. Hodson sometimes sally out in visits among the neighbours, and sometimes make a migration from the blue bed to the brown. I could from my heart wish that you, and she, and Lishoy, and Ballynahow, and all of you, would fairly make a migration into Middlesex; though upon second thoughts this might be attended with a few inconveniences. Therefore, as the mountain will not come to Mahomet, why, Mahomet shall go to the mountain; or, to speak plain English, as you cannot conveniently pay me a visit, if next summer I can contrive to be absent six weeks from London, I shall spend three of them among my friends in Ireland; but first, believe me, my design is purely to visit, and neither to sue a figure, nor to levy contributions; neither to excite envy, nor to solicit favour. In fact, my circumstances are adapted to neither. I am too poor to be asked it, and too rich to need assistance. You see, dear Dan, how long I have been talking about myself, but attribute my vanity to my affection; as every man is fond of himself, and I consider you as a second self; imagine you will consequently be pleased with these instances of egotism.

My dear sir, these things give me real uneasiness, and I could wish to redress them. But at present there is hardly anything done in Europe in which I am not a debtor. I have already displayed my most threatening and pressing demands—for we must be just before we can be grateful. For the rest, I need not say (you know I am) your affectionate kinship.

OLIVER GOLDSMITH.

There is also a very pleasant letter while at Leyden in which he abuses Holland unmercifully. By the way, it would be curious to ascertain the cause of Goldsmith's extreme dislike to the Dutch—for a cause, of course it had.

Hardiman's Irish Minstrelsy.

[Second notice.]

HAVING spoken of this as an original work, *retroracts*, it will no doubt be expected of us, in these days of paste-and-scissors abridgements, and the compression of knowledge into the smallest possible compass, that we should deliver at least a second paper: in answer. Will does it deserve the tribute: and we proceed to pay it like a debt of honour.

Upon one of our greatest English poets there is a note which does credit to the nation's

• Mr. Prior, the able biographer of Burke, is engaged on a *Life of Goldsmith*; and, as friends of literature, we would invite the possession of information respecting him to this fact. — *Ed. L. G.*

antiquarian research, and is very new and interesting.

"On the 12th of Aug. 1580, Arthur, Lord Grey, accompanied by Edmund Spenser, as his secretary, arrived in Dublin, and on the 7th of September following was sworn lord deputy of Ireland. On the 22d of March following, Spenser was appointed clerk of the decrees and recognisances of chancery, and his patent was given free from the seal, in respect he is secretary to the Right Hon. the Lord D." In this department he was succeeded on the 22d of June, 1586, by Arland Usher, kinsman of the celebrated archbishop of that name, and Spenser was appointed clerk of the council of Munster, an office afterwards filled by Richard Boyle, first Earl of Cork. On the plantation of that province, Queen Elizabeth, by letters patent, dated 26th of October 1591, granted him the manor and castle of Killycolman, with other lands, containing 3028 acres, in the barony of Fermoy, county Cork, also chief rents forfeited by the late lord of Thetmore, and the late traitor, Sir John of Desmond." Here on the banks of the Awbeg, the poet's "Gentle Mulla," was written the Faery Queen. But Spenser was not so devoted to the muse, as to neglect his newly-acquired possessions; on the contrary, he stands charged with having unjustly attempted to add to them. His encroachments on the Mac Carthys are well known; but he did not confine himself to these alone. In 1593, Maurice, Lord Roche, Viscount Fermoy, petitioned the Lord Chancellor of Ireland, stating, "whereas one Edmond Spenser, gentleman, hath lately exhibited suit against your suppliant, for three plow lands, parcell of Shanballymore, (your suppliant's inheritance,) before the vice-president and council of Munster, which land hath bene heretofore decreed for your suppliant against the said Spenser and others under whom he conveyed; and nevertheless for that the said Spenser being clerk of the council in the said province, and did assyne his office unto one Nicholas Curteys, among other agreements, with covenant that during his life, he should be free in the said office for his causes, by occasion of which impunity he doeth multiply suits against your suppliant, in the said province, upon pretended title of others." — At the same time, Lord Roche presented another petition against Joan Ny Callaghan, whom he states to be his opponent, "by supportation and mayntenance of Edmond Spenser, gentleman, a heavy adversary unto your suppliant." — He again exhibited another plaint, "that Edmond Spenser, of Killycolman, gentleman, hath entered into three plough land, parcell of Ballingerath, and disseised your suppliant thereof, and continueth by countenance and greatness the possession thereof, and maketh great waste of the wood of the said lands, and converteth a great deale of corne growinge thereupon to his proper use, to the damage of the complainant of two hundred pounds sterling. Whereunto the said Edmond Spenser appearene in person had several dayes prefixed unto him preceptorilie to answer, which he neglected to do; therefore after dayes of grace given, on 12th of February 1604, Lord Roche was decreed his possession." — When Spenser — the poetic, the gentle Spenser — was guilty of these oppressive and unjust proceedings, the reader may easily guess at the conduct of his more ignorant and brutal fellow-planters, by whom the country was converted into a desert. For these, and other aggressions on the unfortunate natives, the poet soon afterwards felt the full weight of their vengeance.

Ben Jonson informed Drummond of Hawden, that Spenser's house was burned, and his little child of his consumed in the flames; — George and his wife narrowly escaped, and that afterwards died in King Street, Dublin, of absolute want of bread. His name is still remembered in the vicinity of Killycolman, but the people entertain no sentiments of respect or affection for his memory. That Spenser died in London has been asserted by some of his biographers; but Ben Jonson's information seems corroborated by a record lately found in the Rolls office, Dublin. He left two sons, Sylvanus and Peregrine. In 1603, the former petitioned the Chancellor of Ireland, stating, "where your petitioner's father Edmund Spenser was seised in his demesne, as of fee, of Killycolman and divers other lands and tenements in the county of Corke, which descended to your petitioner by the death of his said father — so it is right honorable, the evidences of the said inheritance did after the decease of petitioner's father cum to the hands of Roger Seckerstone, and petitioner's moulder, which they unjustly detaineth, which evidences for as much as your petitioner can have no action at comon law, he not knowing their dates and certainty, he is dryven to sue in consideration before your honourable lordship, and avereth that the said Roger Seckerstone, his moulder's now husband, unjustly detaineth the said evidences, to your petitioner's damage, of one hundred pounds, wherein he prays remedy." Sylvanus had two sons, Edmund and William. On 18th of February, 1638, Charles I. by letters patent, confirmatory, granted to Edmund the manor, castle, &c. of Killycolman, and other lands in the barony of Fermoy. William survived his brother. The following letter, dated White-hall, 27th of March, 1657, appears in the Irish privy-council book, A. 28, p. 118. preserved in Dublin Castle: — "To our right trustee and right well-beloved our council in Ireland. A petition hath been exhibited unto us by William Spenser, setting forth that being but seven years old, at the beginning of the rebellion in Ireland, he repaired with his mother (his father being then dead) to the city of Corke, and during the rebellion continued in the English quarters. That hee never bore armes or acted against ye comon wealth of England: That his grandfather Edmund Spenser and his father were both protestants, from whose estate of lands in the barony of Fermoy, in the county of Corke, descended on him, which during ye rebellion yielded him little or nothing towards his reliefe. That ye said estate hath bene lately given out to the souldiers in satisfaction of their arrears onely upon the account of his professing the popish religion; which since his coming to years of discretion hee hath, as hee professes, utterly renounced. That his grandfather was that Spenser, who by his writings touching ye reduction of ye Irish to civilitie, brought on him the odium of that nacon, and for those workes and his other good services, Queene Elizabeth conferred on him ye estate which ye said William Spenser now claims. Wee have alsoe been informed that ye gentleman is of civill conversacion, and that ye extremitie his wants have brought him to, have not prevailed over him to put him upon indirect or evil practices for a livelihood. And if upon enquiry you shall finde his case to be such, wee judge it just and reasonable, and doe therefore desire and authorize you that hee be forthwith restored to his estate, and that hee be repaid lauds be given to ye souldiers elsewhere; in ye doing whereof our satisfaction will be greater by ye continu-

628. of that estate to ye issue of his grand-
for whose eminent deserts and services
common wealth that estate was first given
We rest your loving friend. OLIVER, P.
This letter, so creditable to Cromwell, proved
highly serviceable to the object of his consider-
ation. Though Kilcolman and the other lands
were passed under the act of settlement to
Lord Kingston, Sir Peter Courthop, Robert
Foulke, and other adventurers, yet they were
afterwards restored to William Spenser, and
he had moreover a grant, dated 31st of July,
1678, of Caltrahard, and other lands in the
county of Galway, and Ballynasloe, Tullrush,
and others in county Roscommon, containing
nearly two thousand acres. This William, by
his wife Barbara, left a son Nathaniel. The
poet's second son Peregrine died in 1641, seized
of the lands of Rinney, near Kilcolman. Hugolin
his eldest son and heir succeeded to those
lands. Being a Roman catholic, he attached
himself to the cause of James II. and was out-
lawed. By letters patent, dated 14th of June,
1697, the forfeited estate of Hugolin Spenser,
in Rinney, three hundred and thirty-two acres,
&c. were granted to Nathaniel, son of William
Spenser, Esq. the next protestant heir of said
Hugolin. On 24th of November following,
William and Nathaniel Spenser, for 2,100*l.*,
mortgaged all their estates in Cork, Galway,
and Roscommon, to Robert Peppard. On 26th
of February, 1716, they sold the lands of Balli-
nasloe, with the fairs and markets there, to
Frederick Trench, ancestor of the present Earl
of Clancarty. These fairs afterwards became
the most noted in the British empire. On
14th of October, 1718, Nathaniel Spenser made
his will, (proved in 1734, in the court of Pre-
rogative, Dublin,) wherein he names Edmund
his eldest, Nathaniel his second, and John his
third son: he devises to Barbara his daughter
a remainder in his estate, her husband taking
the name of Spenser. He also names his sister
Susannah, and his wife Rosamond. Soon after
this the rest of the property passed away from
the poet's name and family. The latter has
long since become extinct, but his name will
last as long as the language in which he has
left such an imperishable monument of his
genius."

The chief portion of the second volume is
assigned to Jacobite Relics, some of which are
pleasant enough; but there is nothing so strik-
ing as to demand quotation. In the notes
we find, among other things, the following
bitter epigram against the English:—

"May banishment and desolation light on him, may the
plague and pains without remedy seize his veins
and bowes,

Who would wish well to the English race—
They who exiled the offspring of Ir and Hermon."

Being on epigrams, we quote another:—

"Cursed be the laws which deprive me of
such subjects," cried George II., when he heard
of the bravery of the Irish Catholic exiles at
Fontenoy. This, and a few other indications
of humane feeling in that monarch for the political
degradation of the Catholics of Ireland,
induced one of their bards to attempt his praise
in English, as follows—

"Snobh mo chroíche m' own King George;
I'll toss off his health in a bumper at large;
By the cross of St. Patrick, he's so very civil,
That the French and the Spaniards may go to the Devil.

However ludicrous this Irish attempt at En-
glish versification may appear, yet the senti-
ment which it endeavours to convey is one that
deserves the serious attention of our rulers."

A note on the prophecy of Donn Firinneach
is also curious.

"Donn has already been introduced to the

reader. Here he again appears in the charac-
ter of a prophet, with the title of Firinneach,
or the truth-teller, annexed to his name; but
if his claim to that character may be judged of
from the result of his predictions in the present
ode, it rests on very slender foundations. Not
one of them has been fulfilled, although it must
be confessed that they have been conceived in
a lofty and poetic strain, and delivered with a
tone and decision not unworthy of one inspired.
Of a far different nature was the following
prophecy of Breacan, one of our ancient saints,
a venerable body of men, whom in this age of
philosophy and refinement it is unfashionable
to mention, except to deride their virtue and
piety, under the names of weakness and super-
stition. This prediction has been fulfilled in
every point, centuries after it was delivered.

Erin's white-crowned billow shall sleep on the shore,
And its voice shall be mute, while the spoilers glide o'er;
And the stranger shall give a new priest to each shrine,
And the sceptre shall wrest from her own regal line."

Our next selection shall be three verses of
"Patrick Healy's Wishes" (translated by John
Dalton), for the oddness of some of the rhymes.

"Oh! could I acquire my fullest desire,
To mould my own life, were it given;
I would be like the sage, who in happy old age,
Disowns every link—but with heaven.

An acre or two, as my wants would be few,
Could supply quite enough for my welfare;
In that scope I would deem my power supreme,
And acknowledge no king but myself there.

The soil of this spot, the best to be got,
Should furnish me fruit, and a choice store;
Be sheltered and warm from rain and from storm,
And favoured with sunshine and moisture."

After this it falls off a little; and we leave it
for one of Furlong's best examples, which we
quote entire.

"The Mourner's Soliloquy in the Ruined Abbey of
Timoleague.

Ahead one night in loneliness I strolled,
Along the wave-worn beach my footpath lay;
Struggling the while with sorrows yet untold,
Yielding to cares that wore my strength away:
On as I moved, my wayward musings ran
O'er the strange turns that mark the fleeting life of man.

The little stars shone sweetly in the sky;
Not one faint murmur rose from sea or shore;
The wind with silent wing went slowly by,
As though some secret on its path it bore:
All, all was calm—tree, flower, and shrub, stood still,
And the soft moonlight slept on valley and on hill.

Sadly and slowly on my path of pain
I wander'd, idly brooding o'er my woes;
Till full before me on the far-stretch'd plain,
The ruin'd abbey's mouldering walls arose;
Where far from crowds, from courts and courtly crimes,
The sons of virtue dwelt, the hosts of better times.

I paused—I stood beneath the lofty door,
Where once the friendless and the poor were fed;
That hallow'd entrance, that in days of yore
Still open'd wide to shield the wanderer's head;
The saint, the pilgrim, and the book-learn'd sage,
The knight, the travelling one, and the worn man of
age.

I sat me down in melancholy mood,
My sorrow'd cheek was resting on my hand;
I gazed upon that scene of solitude,
The wreck of all that piety had plann'd:
To my aged eyes the tears unbidden came,
Tracing in that sad spot our glory and our shame.

"And oh!" cried I, as from my breast the while,
The struggling sigh of soul-felt anguish broke;
"A time there was, when through this storm-touch'd
pile,

In other tones the voice of echo spoke;
Here other sounds and sights were heard and seen—
How alter'd is the place from what it once hath been!

"Here in soft strains the solemn mass was sung—
Through these long aisles the brethren bent their
way—

Here the deep bell its wonted warning rung,
To prompt the lukewarm loitering one to pray—
Here the full choir sent forth its stream of sound,
And the raised censer flung rich fragrance far around."

How changed the scene! how lonely now appears
The wasted aisle, wide arch, and lofty wall;
The sculptured shape—the pride of other years,
Now darken'd, shaded, sunk and broken all;
The hall, the rain, the sea-blown gales have done
Their worst to crown the wreck by impious man begun.

Through the rent roof the aged ivy creeps—
Stretch'd on the floor the skulking fox is found—

The drowsy owl beneath the altar sleeps,
And the pert daws keep chattering all around—
The hissing vipers lurk apart unseen,
And slimy reptiles crawl where holy heads have been.
In the refectory, now no food remains—
The dormitory boasts not of a bed—
Here rite or sacrifice no longer reigns:
Prior—brethren—priests—and fasts and forms are
dead!

Of each—of all, here rests not now a trace,
Save in these time-black'd bones that whiten o'er the
place.

Oh! that such power to beguise was decreed—
Oh! that mischance such triumph should supply—
That righteous Heaven should let the vile succeed,
And leave the lonely virtuous one to die!
Oh, justice! in the struggle, where wert thou?
Thy fates have left this scene changed as we see it now.

I too have changed—my days of joy are done,
My limbs grow weak, and dimness shades mine eye;
Friends, kindred, children, dearest one by one,
Beneath these walls now mouldering round me lie.
My look is sad, my heart has shrunk in grief,
Oh, death! when wilt thou come and lend a wretch
relief!"

To relieve so long a poem, we shall now take
a prose legendary story."

"In the year 1579 Fergus O'Kelly of
Leix married the daughter of O'Byrne, of
Glenmalur, in the county of Wicklow.

The young lady remained at her father's
until a suitable stone-wall house should be
built by her husband for her reception,
there being but few stone buildings at that
time in the Queen's County. For this purpose
O'Kelly set a number of his tenantry to work.

The building was commenced on a Monday
morning in spring—it was completed the Satur-
day following; and the bride was soon after
brought home with great rejoicings. This
house was then called the week-house, and its
ruins are now known by the name of the old
stone. It happened that on the following

Michaelmas Eve, O'Kelly's lackey, Mac Leod,
was from home. On his return, he found
that none of the geese had been murred for
him. Of this he complained to his master,

who desired him to settle the matter with the
cook; or go to the pond and kill a goose for
himself—but not to trouble him with such
trifles. Mac Leod, disappointed and dissatisfied
with this answer, departed, resolving to seek
revenge. He immediately repaired to the Earl
of Kildare's castle of Kilkenny, where he remained
until Christmas Eve, and then told the Earl
that his master, O'Kelly, had sent to invite
his lordship to spend the Christmas with him.

The invitation was accepted, and the Earl
went with a numerous retinue for O'Kelly's
residence. When they came to the top of
Tullyhill, near the house, Mac Leod gave
three loud calls or signals, as was customary
with lackeys in those times. His master hear-
ing them, said, that wherever Mac Leod had
been since Michaelmas, that was his voice, if
he was alive. He soon after arrived, and an-
nounced the Earl's coming, who was received
with due honour and attention. His lordship
about Twelfth Day began to prepare for his
departure, and expressed the greatest satisfac-
tion at his kind reception and the friendship of
O'Kelly, whose hospitality, and particularly
the profusion of his table, he highly praised.

O'Kelly observed, that it should be more plenti-

ful. This narrative is taken, with very little alteration
in words, and none whatever in substance, from a manu-
script lately found after the death of Garrett Byrne, a
worthy old Kilkenny, who resided at Fallybeg, in the
barony of Ballynash, the scene of the principal transac-
tions which it relates. The paper was bad and stained. A
traditional, tho' certain, account of the transactions which
happened in and about Logacurran and the suit of
O'Kelly's ground in that neighbourhood, beginning in the
29d of Queen Elizabeth's reign, as told by hereditary
Catholics in O'Kelly's house) to old Edmund Cronin, and by
him to me; the rest by people who recollect'd it them-
selves, and I myself remember what happened from the
year 1790 to this year 1790.—GEOFFREY SIGNS."

Here the deep bell its wonted warning rung,
To prompt the lukewarm loitering one to pray—
Here the full choir sent forth its stream of sound,
And the raised censer flung rich fragrance far around."

How changed the scene! how lonely now appears
The wasted aisle, wide arch, and lofty wall;
The sculptured shape—the pride of other years,
Now darken'd, shaded, sunk and broken all;

ful, had he been aware of his lordship's intention to visit him. The earl, surprised, asked if he had not sent to invite him. O'Kelly replied not—but that, notwithstanding, his lordship was welcome; and added, that as he had been pleased to remain until Twelfth Day on his lackey's invitation, he hoped he would honour him by remaining until Candlemas on his own. To this the earl assented; but requested that, as he had so many attendants, he might be at liberty to send occasionally to Kilkea for provisions. O'Kelly answered, that as soon as his lordship should find the supplies beginning to fail, he might do so—but not before. Accordingly, the fare increased, and the banquets became more sumptuous than ever. When Candlemas arrived, his lordship departed with many professions of gratitude, having particularly requested that he might have the honour of standing sponsor for O'Kelly's first child, in order more closely to cement the friendship that subsisted between them. Mrs. O'Kelly was soon after delivered of a son, and his lordship attended the christening, which was celebrated with great pomp and rejoicings. The house was filled with guests, and resounded with music and merriment; but the morning after the earl's arrival, the poor young lady and her infant were both found dead. This melancholy catastrophe was attributed to the boisterous revelry and noise with which they were surrounded. O'Kelly's joy was turned into sorrow; but even this was only a prelude to still greater misfortunes. Kildare remained for some time to console his friend, whom he invited to Kilkea until he should recover from the effects of his grief; offering him, at the same time, his sister in marriage, and proffering his service in any other way which might be most agreeable or acceptable. Unfortunately for O'Kelly, he accepted the invitation, and fell, an unsuspecting victim, into the snare which had been insidiously laid for him. A few days after his arrival at Kilkea, the earl took him to the top of the castle, under pretence of viewing the surrounding scenery; and with the assistance of some ruffians, whom he had placed there for the purpose, he cut off O'Kelly's head. This atrocious and treacherous murder was soon communicated to the queen, as a meritorious proof of Kildare's loyalty in beheading an Irish rebel; and her majesty was so well pleased, that she directed a grant to be forthwith passed to the earl, of all O'Kelly's estates. The earl being of English descent, an Irish bard applied the following verse to this perfidious transaction:—

With one of English race all friendship shun—
For if you don't you'll surely be undone:
He'll lie in wait to ruin thee when he can;
Such is the friendship of an English man."

Upon this the strongly prejudiced writer observes: "And such have been the aggressions which so long contributed to keep the people of these islands in a state of disunion and enmity. In former times, practices similar to that related were but too frequent in Ireland; and dreadful, though just, were the reprisals made by the natives on the English settlers." And here we have again to express our utter reprehension of Mr. Hardiman's poisoning with all the venom of the rankest political and religious party-feeling a work devoted to literature. Cannot there be one green spot in the Emerald Isle kept free from these eternal feuds and wordy and sanguinary wars? If Mr. Hardiman had been content with getting the literal translations of his country's minstrels, and having them turned into as good verse as he could, leaving polemical and factious disputes

to their proper sphere (if any sphere be proper for these pests of society), he would have given us a book more worthy of its name and character. As it is, we trust he will have incited other Irish antiquaries to expatiate upon the subject. But we return to his story.

"The Earl of Kildare soon after demised his ill-acquired possessions in O'Kelly's lands to his illegitimate son, Garrett Fitzgerald, at a nominal rent. This Garrett had a son named Gerald, who was afterwards known by the name Old Gerald, and long remembered for his atrocious cruelties. He possessed the estates for a long time, and was a great improver. He built where the old orchard now stands at Logacurren, and planted many trees, the last of which were cut down in 1740. He also made several roads, one leading to Rahinahowle, another called the Long-lane, to Timogue, and another through Barrowhouse, being part of O'Kelly's estates; and he planted many ornamental trees in each place. When making these roads, he yoked a plough of bullocks, drew a strong chain round some poor widows' cabins which stood in the way, and pulled them down. He surrounded Logacurren with a broad double ditch, and planted quicks on both sides; on these works he employed Ulstermen, whom he paid in cattle, with which they departed for home, and remained the first night at Portnahinch. Gerald pursued them with an armed force, under pretence of robbery; and the unfortunate men, having made some resistance, were slain, and the cattle brought back. Soon after this, he had a dispute respecting some encroachments which he had made on a neighbouring gentleman. It took place on the high road; and, after some altercation, Gerald proposed to leave the matter to the decision of the next passenger, who he knew would be his own cowherd. The poor man was accordingly required to determine the point, and he immediately decided, according to justice, against his master. This so enraged Gerald, that he took the cow-herd and his son, and locked them up in a stable in order to hang them. The cow-herd's wife, hearing the danger in which they were placed, came crying for mercy, offering all she was possessed of for their ransom. Gerald told her if she brought him her twelve cows and her bull, they should be released. The poor woman hastened home, overjoyed, for the purpose; but on her return found her husband and son executed. Gerald, however, kept the cattle for permitting her to take away the dead bodies, over which she mourned in a doleful manner, mixing her wailings with bitter imprecations against Gerald, as follows: 'Oh, Gerald! of stunted growth and laugh of guile, may desolation reach the threshold of thy door—a bramble with its two ends in the earth—a green lake overflow the surface of thy hall—the hawk's nest in the chimney of thy mansion—and the dung of goats in the place of thy bed! because thou didst bereave me of the son and father—thou took'st from me the twelve cows and bull—an inheritance may your heirs never find!' All which, as will appear, were speedily fulfilled. Gerald continued his career with impunity, for a considerable time, until at length he fell foul of the Earl of Kildare's agents, when they came to demand the trifling chief-rent payable out of O'Kelly's lands. After this his lordship declared against Gerald, and had the estate advertised and sold. It was purchased by one Daniel Byrne, well known by the name of 'Daniel the tailor.' Gerald was finally dispossessed, his dwelling laid waste, and the possession of the entire lordship delivered to the

purchaser. Then it was that the imprecations of the cow-herd's wife were fulfilled; for Gerald, losing the inheritance, destitute of friends, and execrated by his neighbours, was obliged to build a little shed in Clopook, and was glad to become keeper of a *sodwall pond*. Here he had no support but the milk of two goats; and these animals frequently lay and dunged in the straw on which he slept, as was prayed for long before by the cow-herd's wife."

The curse, with its peculiarities, is very characteristic and powerful.

Having now, we trust, sufficiently justified both the high praise and the censure we have bestowed on this publication, we shall conclude with a notice of a few of the slight mistakes into which it appears to us the editor has fallen.

At p. 140, vol. ii. John Mac Donnell is stated to be "known by the name of *Claragh*," from the residence of his family;—now, *Claragh* is simply *Minstrel*, and not a family residence. Next page, Ballyslough is, we presume, a misprint for Ballyclough; but at p. 143 there is a more distinct blunder. Here it is said—"In politics Mac Donnell was a 'rank' Jacobite, and on more occasions than one he saved his life by hasty retreats from his enemies, the bard-hunters. He moreover inherited all the hatred of his race for the 'Saxon churls.' The treatment of the brave *Irish* general, Mac Donnell, better known by the name of Mac Allistrum, (whose march is yet remembered in Munster), of our poet's name and family, who was basely murdered in 1647, at Knockrinos, near Mallow, by the troops of the brutal renegade, Inchiquin, helped to embitter the poet's mind against the English. His muse never seemed so delighted as when holding them up to the scorn and derision of his countrymen."

Mr. Hardiman should surely have known that this "*Irish* general" was a *Scotsman*, is the Colquito of the *Legend of Montrose*, and, yet more anciently, the Colquito, "or the Devil" of Milton.

At p. 378 Mr. H. remarks—"It is an irreparable loss to Irish history, that Dr. Keating did not continue his work after the Anglo invasion. Of all men, he was best qualified to give a true domestic picture of this country, from a knowledge of its civil affairs, manners, customs, poetry, music, architecture, &c., seldom equalled, and never surpassed; besides his intimate acquaintance with many ancient MSS. extant in his time, but since dispersed or destroyed." If it be any comfort to the writer, we think we have heard that Dr. Keating's MS. is preserved, and, if we are not mistaken, in the possession of that able genealogist and antiquary, Sir William Betham. Before we finish, we have only one other point to put to Mr. H.: Why, in directing admiration to the efforts made to illustrate the fairy lore and legendary tales of Ireland, he should have named Sir Walter Scott, and omitted any reference to his own countryman, Mr. Crofton Croker? Great as the former is in every branch of literature which he has chosen to cultivate, in this particular branch he has done nothing to be compared with our distinguished friend.

But we must close; and we do so with an anecdote, at once evidence of the editor's industry and prejudice.

"Although colloquially debased, many of the original characteristics of our language remain unimpaired. Its pathetic powers have been particularly celebrated. 'If you plead for your life, plead in Irish,' is a well-known adage. But the revilers of the people have

not spared even their speech. Of the species of abuse usually resorted to, a curious specimen may be found in the prejudiced Stanbury (temp. Elizabeth), who assures, his readers, that the Irish was unfit even for the prince of darkness himself to utter; and to illustrate this, the bigotted Saxon gravely adduced the case of a possessed person in Rome, who 'spoke in every known tongue except Irish; but in that he neither would nor could speak, because of its intolerable harshness.'

The Life of Major-general Sir T. Munro, Bart. &c. &c. &c. By the Rev. G. R. Gleig, M.A. M.R.S.L. &c. New edition. 2 vols. 8vo. London, 1831. Colburn and Bentley.

THIS is an excellent edition of an excellent and standard work, of which we expressed our unqualified approbation upon its original appearance in three volumes;—now, with some interesting additions, comprehended in two. (See *Literary Gazette* for last year, pages 97, 604, 622). Mr. Gleig has, however, rather imposed a heavy task of collation upon us by not intimating where the new matter was to be found. It is true that we could with great pleasure read his delightful Life all over again; but, then, we are critics, and not mere readers for pleasure; and that we have not much time may be granted, when we tell, that even at this dull literary season, our first bag from the office on Thursday alone contained one quarto volume, ten octavos, seven duodecimos, three monthly publications, three French works of science, and several pamphlets.

With this heart-breaking excuse for doing nothing more for this valuable edition of Munro, we shall simply quote two of the new letters, which cannot, we think, be perused without affording gratification. They are charmingly characteristic:—

"To Sir Graham Moore.

"London, 6th June, 1813.

"My dear Graham,—Your letter of the 6th of May was between two and three weeks in finding its way to me. I had no suspicion that you would have been called out again so soon, just as you were beginning to get comfortably settled in the country. Your removal is a great disappointment to me, for I had promised myself many a pleasant walk to the Roman camp, and other places about Brook Farm, and many a long conversation about past times, and the present state of the world; but these hopes, like many others, are banished for the present. As you are employed, however, I like to see you in the Baltic better than any where else, because it is the station where, perhaps, your services can be most useful, and where your mind will be most interested. You are now a principal actor in a campaign which will never be forgotten in the world, for it will decide the fate of Europe; and if the German governments do their duty, will, I am convinced, decide it in favour of liberty from French bondage. I hope you follow the example of your excellent brother John, and keep a journal of every transaction, however minute; for things which at first sight appear of little consequence, often become important from their connexion with other matters, which we do not at the time foresee. When you return to Brook Farm, we shall talk over the campaign, and refer to your notes. I am not acquainted with the nature of your command, but I trust that it is such as to improve your fortune; for though you are as little covetous of wealth as any man, it would be a great comfort to be so easy in your cir-

cumstances as to ensure your being able to live in the country in the way you have hitherto done, which, when I last saw you, you were doubtful whether you could continue. A small addition to your fortune would remove the uncertainty, and enable you to live in the moderate, rational manner to which you have been accustomed. All that I would care for myself in the way of fortune, would be to have in Surry just such a place as yours, and to be able to see my friends without looking too narrowly into my expenses. I wish to God that I were, like you, a married man. I would not remain longer than a month with my wife, and then I would visit the armies both in Germany and Spain. But I see no immediate chance of the change I wish for; for my long absence from my own country has thrown me out of that society in which I might have had an opportunity of becoming acquainted with young women. I had an invitation from your mother to dine with her yesterday, and meet your wife, and James and his wife, but was unluckily engaged. It was one of the family parties which I should have enjoyed very much. It would have reminded me of old times and lang syne. God bless you, my dear Graham. Yours ever,

"THOMAS MUNRO."

"To the Same.

"Ardowan, 5th October, 1813.

"My dear Graham,—You probably remember seeing Colonel Cunningham, an old friend of mine, at my lodgings in London. His brother died suddenly last year, leaving a widow and two sons to be supported by him. One of them is at present a midshipman on board the Orion. This ship, it is said, is to be paid of; in which case you might, perhaps, have a vacancy for him in your own ship, or be able to get him appointed to another, where he would be taught his duty, and be well taken care of. I suppose he is just like other boys; but if you find him no worse, I hope you will not forget him. I have been for the last fortnight paying visits at Greenock and Glasgow. If I had nothing else to think of, I fancy that I could for ever ramble over the scenes of our early days, for the pleasure I feel in doing so is not at all diminished by the frequent visits I have made to them since my return to this country. My favourite excursion is to Woodside, and along the banks of Kelvin, where we used to bathe in former days; but I have also great enjoyment in traversing the streets and closes of Glasgow, and comparing their present and past state. As I saunter along, I imagine that it is now, or at least that it is destined to be, the finest city in the kingdom; that the buildings are handsomer, the merchants more enterprising, and the manufacturers more skilful, and even the common people more honest, contented-looking folks, than one sees any where else. I like to talk Scotch with the country-people and children I meet with in my walks; but am sorry to say that the language is much corrupted by the influx of English words. Many of our old idioms and phrases, however, are still preserved. I heard one the other day, in all its ancient purity, from a young girl. I asked her where her mother was. 'Where is she?' said she:—'She's in her skin, and when she comes out, loup you in.' I had not heard this expression for above thirty years, but on hearing it, I instantly recognised it as one that I had often made use of myself. I wish you were once more at home, to enjoy all these simple pleasures, for which you have so high a relish. If the allies will only persevere, they will get stronger every day, and will be able,

in another campaign or two, to dictate such a peace as would restore the independence of Europe; and then we may expect to have some rest in our own country, and to visit others with safety. Yours most truly,

"THOMAS MUNRO."

Dr. Paris's Life of Sir H. Davy. 2 vols. 8vo. London, 1831. Colburn and Bentley.

THIS is also a new and improved edition of a work upon which we have already delivered our opinion at considerable length. We need not, therefore, enter again upon its merits; but may content ourselves with quoting an anecdote or two,—our former Review being rather directed to the scientific portion of the memoir, some part of which, as we have heard, the learned author says we did not understand. Having confessed to this misfortune, or rather to this charge, we now venture upon the anecdote which we humbly hope we do understand; and the first is very much to the purpose.

"Davy's unassuming appearance and address subjected him to many other mortifications on his first arrival in London. There was a spirit on his countenance, and a pertness in his manner, which, although arising from the perfect simplicity of his mind, were considered as indicating an unbecoming confidence. Johnson, the publisher, as many of my readers will probably remember, was in the custom of giving weekly dinners to the more distinguished authors and literary stars of the day. Davy, soon after his appointment, was invited upon one of these occasions; but the host actually considered it necessary to explain, by way of apology, to his company, the motives which had induced him to introduce into their society a person of such humble pretensions. At this dinner, a circumstance occurred, which must have been very mortifying to the young philosopher. Fuseli was present, and, as usual, in highly energetic upon various passages of beauty in the poets, when Davy, most unfortunately, observed, that there were passages in Milton which he could never understand. 'Very likely,' very likely, sir," replied the artist, in his broad German accent, "but I am sure that is not Milton's fault."

With the following ludicrous adventures of Lady Davy, which happened in 1813, when Davy was allowed by Bonaparte to visit Paris, we once more commend these volumes to their favour they so amply deserve.

"While Davy was at the meetings of the Institute, a curious adventure occurred to Lady Davy, the relation of which, by shewing the state of surveillance in which the citizens of Paris were held at that period, will enable us to appreciate the extent of the obligation conferred upon Sir Humphry by the emperor. Her ladyship, attended by her maid, had walked into the Tuileries garden. She wore a very small hat, of a simple cockle-shell form, such as was fashionable at that time in London; while the Parisian ladies wore bonnets of most voluminous dimensions. It happened to be a saint's day, on which, the shops being closed, the citizens repaired in crowds to the garden. On seeing the diminutive bonnet of Lady Davy, the Parisians felt little less surprised than did the inhabitants of Brobdingnag on beholding the hat of Gulliver; and a crowd of persons soon assembled around the unknown exotic; in consequence of which, one of the inspectors of the garden immediately presented himself, and informed her ladyship that as cause of disturbance could be ascribed, and therefore, requested her to retire. Some officers of the Imperial guard, to whom she ap-

pealed, replied, that however much they might regret the circumstance, they were unable to afford her any redress, as the order was peremptory. She then requested that they would conduct her to her carriage; an officer immediately offered his arm; but the crowd had by this time so greatly increased, that it became necessary to send for a corporal's guard; and the party quitted the garden surrounded by fixed bayonets."

Pompeiana. By Sir William Gell. Part XI. Jeanings and Chaplin.

THE present Part of this curious and interesting work contains double the quantity of plates and letter-press to be found in the preceding Parts, as will also the twelfth and last Part, which will appear in about two months. "This states of matter," the publishers state, "has originated in Sir William's having, since the work has been at press, liberally placed the results of his subsequent investigations on this interesting subject, at the disposal of the publishers, who, while they have great pleasure in thus so materially adding to the value of the publication, have resolved, at a manifestly great pecuniary sacrifice, fully to redeem the pledge originally given, that the work would not exceed twelve or thirteen numbers, by confining it to twelve."

We extract a passage on that frequently-controverted point, the windows of the houses of the ancients. It occurs in a description of the plate entitled "Windows of Ouboulk."

"Much has been said, and more has been doubted, on the subject of the windows of the ancients. It was not probable that houses, and especially ouboulks, could have existed without the means of excluding the cold; yet, at the same time, admitting light. Even in modern times, however, except in the dwellings of the great, the lighting of a house in Italy or Greece, on a rainy or windy day, is very imperfect, in consequence of the scarcity of glass, or its late introduction as an article of common use. The villa of Aristobolus Diomedes is said to have had a window; the panes of which were divided by lead, just as we find them in old houses in England. The thermæ had the same divisions of brass; but these windows of the temple of Pompeii are the only examples at present existing of the manner of opening and shutting. The accounts remaining of the scarcity or abundance of glass among the ancients are very contradictory. Vopiscus accuses Firmus of luxury for having windows of glass in the time of Aurelian. Calligula, when giving audience to Philo, a rich Jew of Alexandria, is stated to have attended to nothing but new-glazing his windows; so that the imperial palace must have been glazed long before, to have required renewing. In this view two of the iron cramps remain, by which wooden frames were fixed to the wall, and in those frames the window, either of glass, linen, or wood, moved backwards and forwards. If the slider was merely a shutter, which it appears to have been, it was probably not without a small hole in the centre, square or circular, glazed or covered with linen, or even open to admit a small portion of light. These windows are six feet six inches above the foot pavement, so as not to admit the gaze of passengers. The foot pavement itself is here one foot seven inches higher than the street or vicus, which is paved with polygons, of which a quarry was found by the Hon. W. Strangways not far from Torre dell' Annunziata. The vicus, without the foot-paths, which are each about three feet nine

inches wide, measures only seven feet six inches in breadth. These alleys could never have been narrower, according to the old Roman law. 'Viai lateitudo endo perfectum octo pedem estod, endo amfractum edefim.' The width of the streets must be eight feet where straight, but sixteen where they turned. The houses on each side of these narrow streets were justly called Vicinales. 'Vicinales qui in vico sunt.' The windows are only one foot eleven inches wide, and not three in height. Within the chambers the opening measured only two feet six inches, and there was perhaps some appearance of an internal casement which opened inwards. The red panels are four feet seven inches in height. On these the children have frequently drawn rude figures with a pin or a nail; and have sometimes written sentences not more delicate than the figures, as boys are apt to do in our own times."

In speaking of the plate from a painting of Achilles and Briseis, Sir William Gell observes,—

"The picture is four feet two inches high by four feet wide. This may be a proper place for stating that the author cannot presume, in attempting to preserve a memorial and record of these paintings, to imagine that any thing more than a faint idea of them can be furnished to the reader. An artist of the first skill would find it a difficult task to preserve in scanty outlines the traces of the force or expression of the original where there is often no outline at all, it being shaded off till the forms become indistinct. Indeed, where it can be done, nothing is so difficult as to trace an outline from the originals, even on the most transparent paper. At an immense expense only, and on a large scale, could any idea be furnished of the touch and style of the painters of antiquity. Many are also incorrect as to drawing, yet the additions of shade and colour diminish the defect which, in outline, becomes glaring. Those, however, who wish to study the grouping and composition of the ancients, will here find great assistance, and history and poetry may be illustrated upon authority instead of from fancy. There is, no doubt, a certain degree of sameness even in the coloured originals—a defect which must be more visible in outline. The Romans only copied themselves and the Greeks; therefore they had not that range over all ages and all situations which is open to modern art. The Greeks, who only depicted themselves, and an occasional Persian or Amazon, were still more confined as to models. The shading of a modern picture is generally artificially contrived by a light let in by a small window, or even a small hole in a shutter purposely closed, and which produces an effect rarely observed in nature. The ancients, on the contrary, seem to have preferred the light of day for their works, and one curious advantage is gained by it. The pictures of the ancients produce a pleasing effect when only surrounded by a simple line of red, while the very best of modern paintings is very much indebted to the carver and glider for its gorgeous and burnished frame, without which its beauties are so much diminished that it almost ceases to be a decoration to an apartment."

"Chimneys," says Sir William Gell, "certainly existed in Greece; for not only does a scholiast speak of tubes, and canals for smoke, but Aristophanes, in *Vespæ*, mentions a person who, being imprisoned in a house, escaped, or tried to escape, by the chimney. Apian says, on one occasion, that some tried to escape

through chimneys. 'In fumaris et sinitis tegulis et abscondisse.' The testimony of Horace and of Ovid, who talk of smoky houses, 'fumosos' and 'lachrymosos non sine fumo,' seems to make it probable that the people suffered from the want of them; and Vitruvius gives no account of such an invention. They not only burned, in the better apartments, a more expensive sort of wood, which, from emitting no smoke, was called *acpna* and *amurea*, according to Martial, but from a carpet found spread on a mosaic pavement, upon which stood a bruciare or foculare, with the charcoal in it, in a room at Pompeii, it is evident that the inhabitants used the same process for heating their chambers as the moderns of the same country, previous to the introduction of chimneys by our countrymen. The modern Greeks, on the contrary, have fires and chimneys in their rooms. It is, however, certain that, in a shop, and in a chamber of the Temple of Isis, chimneys may be found at Pompeii. Chimneys existed, also, at all times in the kitchens of the south of Italy."

A plate of a "Drinking Scene" gives rise to the following remarks:—

"It is curious that, at so late a period, horns seem to have been used instead of drinking-cups, notwithstanding the multiplicity of glasses and cups which abounded in Pompeii, and the inconvenience arising, as may be observed in this plate, from the want of a foot. Horns were used for cups in very ancient times, as may be learned from several of the Greek scholiasts. Bacchus was called Corniger from this circumstance, according to the scholiast on Nicander. The Sileni were the nurses of the horned Bacchus. Horace, says the scholiast on Homer, *Iliad*, *o. v. 189*, were used previously to the invention of cups. Nonnus says, 'He held in his left hand a horn filled with delicious wine.'

It would appear that the ancients, during their feasts and ceremonies, the representations of which have come down to our times, studied and practised what was best suited for show, and conducive to elegance; but that their common usages and every-day customs were not very widely different from those of the moderns in the same country."

Captain Beechey's Narrative of a Voyage to the Pacific and Beering's Straits, &c. A new edition. 2 vols. 8vo. London, 1831. Colburn and Bentley.

REplete with interest and information of every kind, and long since estimated according to its rich desert by a discerning world, we are happy to notice this new and convenient edition of Captain Beechey's work. With the same beautiful and characteristic engravings, the same valuable text, if the larger paper copy occupies a place in every good library of a high order, we are sure this cheaper publication will spread yet more widely the fame of its author.

The German Muse; the Worth of Women; the Song of the Bell, of Frederick Von Schiller. Arranged for the use of his Pupils, by Baron Febeck, Professor of the German Language and Literature. London, 1831. Treutzel, Würtz, and Co.

THESE ballads are literally translated, with various grammatical notes and explanations. To the young scholar a work like the present must be invaluable; and its author observes very justly,—"Although we are convinced

that it is impossible, in many cases, to obtain a correct idea of the original by means of a literal translation, yet the advantage which a learner may derive from such a translation overbalances any occasional inconvenience, and is too obvious to be neglected." We have heard much of Baron Fabock's system of instruction from our foreign correspondents. On the continent it has been eminently successful, and we doubt not will be equally so in England.

A Greek Grammar on a New and Systematic Plan, according to the Analytic Method. By the Rev. T. Flynn, A.M. Dublin, 1831. Curry and Co.; London, Hurst and Chance.

THE "new and systematic plan" of this work is, we fear, too intricate and uninviting, and the style in which it is developed too obscure and ungrammatical, to render it likely that it will be either understood or studied by tyros; though to those who have made some progress in Greek, we are of opinion it may be of considerable use. The errors of printing, both in the Greek and English, would alone be a great hindrance to a beginner; added to which, the want of accents is a serious drawback.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR OCTOBER.

23^d 16^h 3^m—the Sun enters Scorpio.

Lunar Phases and Conjunctions.

	D.	H.	M.
● New Moon in Virgo.....	5	9	44

21^d—Uranus stationary near 21 Capricorni.

Telescopic Objects.—The following telescopic objects will be in favourable positions for observation during the month:

Aries.—In this zodiacal constellation, β , γ , δ , λ , 14, 33, and 41, are double stars. α Arietis is a triple star; the stars of which it is composed are arranged in a line; the largest star is white, the other two are mere points. In Triangulum (an asterism above Aries) α , ϵ , and δ , are double: β Trianguli is larger than α , and is supposed to have changed its magnitude. Near Triangulum is Mucosa, in which the star numbered 39 is double.

Cetus.—In this constellation, γ , δ , ϵ , 26, 61, 68, and 94, are double stars: above ζ is a nebula, and another near δ . Mira is a variable star; period of variation 331^d 10^h 19^m: at its maximum brightness it is of the second magnitude; its light gradually diminishes till it entirely disappears. χ also disappears periodically: at its greatest brilliancy it seems of the fifth magnitude. α Ceti has probably changed its magnitude: it is now less bright than β .

Auriga.—Capella, a star of the first magnitude, in this constellation, is double: also β ; the largest star is of a bluish white: ϵ is double; the large star orange-white, the small star red: 9, α , 13, 14, 26, 41, 56, and 59, are likewise double stars. Near 58, and in a line parallel to β and 9, is a cluster of stars containing two double stars. Near ϕ is a triple star in the centre of a small circular nebula, which surrounds the stars like an atmosphere. λ is a multiple star. Near ϵ is a square mass of small stars.

Deptford.

J. T. B.

LITERARY AND LEARNED.

LITERARY DISCREPANCY.

SIR,—I have made long extracts on a matter by which it will appear, that there is as positive a contradiction between the statement in Dr. Southey's *Life of Nelson* and the advertisement of Messrs. Colburn and Bentley in the *Literary Gazette*, entitled the "Adventures of a Sergeant," &c., as ever was recorded; and I am sure that your regard for literary truth will not deter you from giving your view of the matter, though one part of the statement is in an advertisement in the *Literary Gazette*. Yours, most respectfully,

A READER OF THE LITERARY GAZETTE FOR TEN YEARS.

Southey's Life of Nelson, pp. 344, 345.

"Within a quarter of an hour after Nelson was wounded, above fifty of the Victory's men fell by the enemy's musketry. They, however, on their part, were not idle; and it was not long before there were only two Frenchmen left alive in the mizen-top of the Redoubt."

able. One of them was the man who had given the fatal wound: he did not live to boast of what he had done. An old quarter-master had seen him fire; and easily recognised him, because he wore a glazed cocked hat and a white frock. This quarter-master and two midshipmen, Mr. Collingwood and Mr. Pollard, were the only persons left in the Victory's poop;—the two midshipmen kept firing at the top, and he supplied them with cartridges. One of the Frenchmen, attempting to make his escape down the rigging, was shot by Mr. Pollard, and fell on the poop. But the old quarter-master, as he cried out 'that's he,' and pointed at the other, who was coming forward to fire again, received a shot in his mouth and fell dead. Both the midshipmen then fired at the same time, and the fellow dropped in the poop. When they took possession of the prize, they went into the mizen-top, and found him dead; with one ball through his head, and another through his breast."

Advertisement in Literary Gazette, p. 121.

"Adventures of a Sergeant in the French Army, during his Campaigns in Italy, Spain, Germany, Russia, &c. from 1805 to 1823. Written by himself. 1 vol. post 8vo. price 1s."

"Robert Guillemaud, whose memoirs are here presented to the public, was drawn as a conscript in 1805. He was sent on board Admiral Villeneuve's fleet, and was the man who shot Lord Nelson, at the battle of Trafalgar; subsequently to which he witnessed the assassination of his own admiral, touching whose death he was personally examined by Buonaparte. He then joined the army in Germany, was present at the taking of Stralsund, and marching into Spain, was made prisoner by a guerilla party. Having made his escape, he was sent on the Russian campaign, and at the battle of the Borodino, was taken by the Russians and banished to Siberia, where he remained in captivity till 1814, when he and a few others were suffered to return. At the time of Napoleon's re-appearance from Elba, Guillemaud was serving in the Duke of Angoulême's army in the south, and describes the massacre of the Protestants at Nîmes. Soon afterwards he assisted Joachim Murat (King of Naples) in escaping from Tolbois to Cordes. Guillemaud's final campaign was in Spain in 1823, after which he retired to his native village, whence his memoirs are dated."

FINE ARTS.

NEW PUBLICATIONS FOR THE

Illustrations of the Winter's Wreath, for 1831. Whittaker, London; Smith, Liverpool.

WE have seldom met with a more pleasing and sweetly executed collection of little prints than those which are to grace the *Winter's Wreath* for the approaching season. They do equal credit to the taste of the proprietors of the work, and to the talents of the various artists who have been engaged in their production. We must give them all a brief notice.

The Reply of the Fountain. Painted by E. Liverseege; engraved by E. Smith. A composition full of elegance and sentiment.—*Evening near the Bavarian Alps.* Painted by G. Barrett; engraved by R. Wallis. One of those glowing and delicious sunsets in which Mr. Barrett's pencil luxuriates.—*The Village Soother's Song.* Painted by T. Stothard, R.A.; engraved by E. Smith. An interesting domestic group, well composed, and with a powerful effect.—*Abbeville, France.* Painted by D. Roberts; engraved by A. Frazer. The

breadth, the air, and the skilful manner in which the light and the shade are "focused" (as Mr. Burnet happily calls it, in his clever publication), are all admirable.—*The Highland Fortress of Lessing Cray.* Painted by J. Martin; engraved by R. Brandard. Mr. Martin has here found a subject in nature quite congenial to the creations of his own poetical imagination.—*Lago di Nemi, Roma.* Painted by A. Aglio; engraved by R. Brandard. The tranquillity and refinement of this scene form an excellent contrast to the rude grandeur of that which we last noticed.—*The Visionary.* Painted by H. Liverseege; engraved by T. Engleheart. A young and handsome husband, a town and country house, a carriage and four, a diamond necklace, a box at the opera, are, no doubt, among the images flitting before the "mind's eye" of this fair day-dreamer.—*Naples.* Painted by W. Linton; engraved by E. Goodall. A fine transfer to steel of a picture which has, on a former occasion, received from us the high praise to which it is entitled.—*The Wreck.* Painted by J. Williamson; engraved by W. Miller. Whoever has been so unfortunate as to witness an event like this, will recognise the graphic truth and force of Mr. Williamson's representation of it.—*Allon, the Piper of Mull.* Painted by E. Goodall; engraved by H. Robinson. Replete with character; and a highly picturesque composition.—*Vintage Feast, at a Villa of Rhone Trastevere.* Engraved by H. Robinson. The name of the painter is not mentioned. Whoever he was, he was well acquainted with the principles of his art, and has produced a very charming festive group.

A Series of Historical and Poetical Subjects, from Pictures and Drawings, by J. and F. P. Stephanoff. Drawn on stone by J. Stephanoff, Historical Painter in Water-Colours to his Majesty. No. I. Colnaghi, Son, and Co.

The subjects are—"The Archbishop of Grenada," F. P. Stephanoff; "A Knight preparing for a Tournament," J. Stephanoff; "Shylock, Jessica, and Launcelot," F. P. Stephanoff; and "Portia satirising her Lovers," J. Stephanoff. The designs are such as might be expected from artists of such established reputation. The dismissal of Gil Blas, in the first, is well expressed, and the characters and composition have great originality. The publication promises a pleasing and interesting variety.

Hogarth Moralised. Fourth and concluding Part. Major.

THIS Part is at least equal in execution to its predecessors. Whoever possesses the whole, will have an excellent notion of the general merits of Hogarth; and will be sensible, to a much greater extent than could have been expected from the size of the plates, of the rich and minute touches of humour, pathos, and intelligence, with which his works abound. It is impossible to contemplate the productions of this highly-gifted man, without feeling the justice of Mr. Major's opinion:—"His extraordinary talents would have rendered him second to no one, in whatever way he had happened to apply them; but it is enough for the lovers of art, and of sound morality, that they became devoted to dramatic painting in its highest perfection; that the muses of comedy and tragedy by turns, or in conjunction, claimed and proved him to be their own. 'He used colours instead of language,' and was the Shakespeare of a profession that must ever be proud of his immortal name."

Twelve Select Examples of the Architecture of the Middle Ages in England. Consisting of Plates carefully etched, aquatinted, and coloured, in imitation of the original drawings made on the spot by Charles Wild, Esq. Jennings and Chaplin.

THESE fine plates, having been originally published separately, are now collected into a volume, and a most beautiful and magnificent volume they form. Of the exteriors, "York Minster," and "the Cathedral of Wells," are our favourites; of the interiors, "Henry the Seventh's Chapel, Westminster Abbey," and "the Choir of St. George's Chapel, Windsor." The last mentioned is one of the most gorgeous architectural representations we ever met with. No library of the slightest pretension to elegance ought to be without this splendid work.

Paris and its Environs. Displayed in a series of Two Hundred Picturesque Views, from original drawings taken under the direction of A. Pugin, Esq.; the engravings under the superintendence of Mr. Charles Heath, with Topographical and Historical Descriptions. Two vols. demy 4to. Jennings and Chaplin. THIS is also an assemblage of plates which have been in a course of publication in Nos. during the last four years. They convey a thorough and excellent notion of Paris and its neighbourhood; and much more than topographical interest is given to many of them by the introduction of animated representations of some of the prominent events of the revolution of 1830. The descriptions are in French and English; and, although brief, contain much curious information.

ORIGINAL POETRY.

EPIGRAM ON A MISER.

His heart is like a maggot-eaten nut:
There's nothing in it; but 'tis closely shut.
L. E. L.

SKETCHES OF SOCIETY.

PRINCE TALLEYRAND.

[The Ambassador from France to our government at this period having been rendered, more than usual, an object of public attention, we have reprinted the following anecdotes which are told of him. We have heard many others, all illustrative of his wit and pleasantry; and even at his advanced age he is yet brilliant and sparkling. Prince Talleyrand is fond of whist, and almost nightly sits to a late hour enjoying his favourite game. When told that Lord Londonderry had censured him for this; he remarked that, from constitution, he could not sleep till three or four o'clock in the morning; but if Lord Londonderry would furnish him with a better and more innocent amusement, he would throw up his cards.]

SHORTLY after the affair of Pichegru and Moreau, a banker who had been introduced to Talleyrand, and admitted to the honour of several conferences with him, wrote to his excellency to solicit an audience, which was granted. Talleyrand was at that time minister for foreign affairs. The report of the death of George the Third had just obtained circulation throughout Paris, and was naturally expected to produce a great sensation on the stock exchange. The banker, who, like many of his financial brethren, wished to make a good hit, and thought the present a favourable opportunity, had the indiscretion to reveal to the minister the real object of his visit. Talleyrand listened to him without moving a muscle of his phlegmatic visage; and at length replied in a solemn tone: "Some say that the king of England is dead, others say that he is not dead; but do you wish to know my opinion?" "Most anxiously, Prince!" "Well, then, I believe—neither! I mention

this in confidence to you; but I rely on your discretion: the slightest imprudence on your part would compromise me most seriously."

Madame Hamelin one day reproached M. de Montrou with his attachment to Talleyrand. "Good God! madam," replied M. de Montrou, with naïveté, "who could help liking him? he is so wicked!"

Talleyrand, speaking of the members of the French Academy, observed, "After all, it is possible they may one day or other do something remarkable. A flock of geese once saved the capitol of Rome."

On a certain occasion, a friend was conversing with Talleyrand on the subject of Mademoiselle Duchesnois the French actress, and another lady, neither of them remarkable for beauty. The first happens to have peculiarly bad teeth, the latter none at all. "If Madame S—," said Talleyrand, "only had teeth, she would be as ugly as Mademoiselle Duchesnois."

A distinguished personage once remarked to Talleyrand, "In the Upper Chamber at least are to be found men possessed of consciences." "Consciences!" replied Talleyrand—"to be sure: I know many a peer who has got two."

Madame de Staël, speaking of Talleyrand, illustrates his character in the following happy and familiar manner:—"The good Maurice is not unlike the mannikins with which children play—dolls with heads of cork and legs of lead: throw them up which way you please, they are sure to fall on their feet."

Talleyrand had a confidential servant excessively devoted to his interests, but withal superlatively inquisitive. Having one day intrusted him with a letter, the Prince watched his faithful valet from the window of his apartment, and with some surprise observed him coolly reading the letter *en route*. On the next day a similar commission was confided to the servant, and to the second letter was added a postscript, couched in the following terms:—"You may send a verbal answer by the bearer: he is perfectly acquainted with the whole affair, having taken the precaution to read this previously to its delivery." Such a postscript must have been more effective than the severest reproaches.

MUSIC.

NEW PUBLICATIONS.

O weep not for me! The farewell address of a dying Christian. Written by W. A. Davis. The Music by the Chevalier Sigismund Neukomm. J. Green.

THE present is one of the most touching and beautiful airs of this popular composer. In considering, and even in admiring, the vocal works of Neukomm, we have often had occasion to regret his want of continued melody in the voice part—a deficiency to which even his fine, and elaborate, and effective accompaniments have not altogether reconciled us. But here the theme flows beautifully in one line, and its pathetic character finds instant way to the heart. It is destined, we think, for popularity; and its tender and consolatory strain will be prized by all, especially by those who suffer under the recent loss of a beloved relative. It is truly a Christian's song.

DRAMA.

The Drama gives note of preparation.—Drury Lane opens to-night, notwithstanding the melancholy death which has occurred within its walls. Capt. Pophill, it is true, remains

inconsolable, and M. Martin is not to be comforted; but in the skin of the deceased has been sent, in the most decorous way, to the Zoological, Dick Peake declares that it is all stuff. We had forgotten to say, that we allude to the decease of the kangaroo, for whose appearance an apology, with a medical certificate attached as usual, had been already prepared, and, as it should seem, on a better foundation than ordinary, as the animal was really ill, and died according to medicine. Some consternation has been excited in the theatre by a report, that this fatal event was occasioned by the real cholera aspathodica of India; but we understand that none of the family of the departed ever fell a sacrifice to that disorder; nor is it the opinion of the faculty here, who attended him from the commencement of his indisposition to its lamentable close, that the complaint differed from the common cholera, from which we have all suffered so much this season. We are sorry to remark, however, that this opinion does not seem to be entirely satisfactory; for two of the monkeys have looked very grave ever since the event alluded to took place; and it is supposed they will hardly be in sufficient spirits to go through their parts with the true *vis comica* expected from such performers. The managers have been in treaty with Reeve to undertake the late kangaroo's parts; but it is said he has declined for want of a tail; and not having time to order one from the Highlands of Scotland, the only place in his Majesty's dominions where such articles of adequate length can be procured, and where there have been some fine second-hand ones of chieftains to be disposed of ever since George the Fourth's visit to Edinburgh.

In the *Honeymoon*, with which the house opens, several first appearances and new casts are announced; including Mr. Jones, from Edinburgh, in genteel comedy (*Rolando*); Mrs. Brudenell, from the same city, as *Volante*; and Miss Brudenell, from Dublin, as *Zamora*. We rejoice to see that Macready is again engaged, and that his masterly *Werner* is to follow close upon the *Honeymoon*.

Covent Garden advertises for Monday, and will, we trust, open in strength, though the Chancery suit (upon Peake's clever and far too little appreciated comedy, but the real incubus which has so long depressed and ruined this fine theatre,) has led to some doubts being expressed that the entertainments must be postponed. The chief feature in the bill, and that which will create the most regret, is the appearance of Young, "his last season on the stage." The stage will hardly see a more accomplished actor or a more estimable man. This house seems particularly strong in opera, Braham, (himself a host, and a very good host too), Miss Inverarity, Wilson, the Cawses, a Mr. Reynoldson from Edinburgh, Hodges from the Royal Academy of Music, our old, gentle, and deserved favourite, Duruett, and others filling up the musical band,—to display which, an opera by Auber is forthcoming.

The Olympic, beautifully decorated, under the direction of Mr. Beazley (who, we believe, is also the architect of the beautiful triumphal arch just erected at Drury Lane—an ornament to the metropolis, and an honour to the builder), opens to-night, and had a private exhibition on Thursday, to the great gratification of amateurs of taste. It is embellished in the Pompeii style, with which we have become so well acquainted through the *Pompeiana* of Sir W. Gell (reviewed in many *Gazettes*). The ground is white; the ornaments gold, with flowers of

their natural colours; and Cupids, from designs by the celebrated Bartolozzi, the grandfather of the fair proprietress.* This active and charming little lady has farther rallied a potent association around her; Mrs. Glover and herself, the best in their respective lines; Miss Sydney, who should play more for the stage, however, and less for individuals among the audience; the Vinings; C. Horne; Bland; and, above all, the Liston. An engagement was offered to this inimitable comedian at Drury Lane; but he preferred (and who would not?) the company of Vestris to that of the Llama; and refused to play with either the lions, the tiger, or the bear. He will therefore be, himself, the lion at the Olympic, which is only dropping the *et out* of his name.†

The opening novelty is an adaptation from *Dominique*. This three-act piece, so successful at the Théâtre Français, is, we hear, in preparation at nearly all the other theatres, and has already been done at the Coburg. Competition is generally a public benefit; but we question whether this sort of competition is a benefit to theatres.

On Wednesday the *Evil Eye*, having, as its facetious author, Mr. Peake, stated, "been wide awake and open for thirty-six nights successively," closed the brief season of the English Opera at this small theatre, to which Mathews and Yates return on Monday with their usual attractions. As the New Street Bill has passed, we trust (as Mr. Bartley intimated, in his farewell address, would probably be the case), to see Mr. Arnold, to whom English music and the public are so much indebted for his exertions to improve the one and entertain the other, in a handsome new Lyceum of his own next year. Respected in society, enterprising and able as a theatrical proprietor, and with his interests farther recommended in consequence of the severe loss he sustained by the burning of his theatre, we know no man concerned in the drama, with such strong claims to sympathy and encouragement.

VARIETIES.

Buckingham Palace.—The state and fate of this disgraceful job have again been discussed in parliament. Col. Trench's plan for converting it into a National Gallery, &c., will now, we trust, be fairly considered; but, after all, we believe the probability is, that it will be finished as a Royal Palace for the King.

Young Lambton, the son of Lord Durham, and the subject of one of Lawrence's most beautiful pictures, died this week at Brighton. So melancholy an event will give an additional

* We add a more accurate description of these decorations, which are really beautiful. The ceiling is painted in imitation of an ornamented silk canopy, drawn tight by garlands of flowers held by flying Cupids, the chandelier being suspended from the centre. The proscenium is divided by gilt beading into compartments, each containing a wreath of flowers, and bouquets of flowers run up the pilasters. The stage doors have been removed, and proscenium boxes substituted. A rich arabesque scroll ornament, on a white ground, alternately with lozenge-shaped panels, containing emblematical figures, decorate the fronts of the upper tier of boxes. The lower tier is formed into panels, in which are painted, in a very light and pretty style, subjects selected from the works of that eminent artist Bartolozzi, representing infants engaged in various appropriate diversions. Flowers are very tastefully introduced in both tiers, which are encased by gilt ornamental moulding at top, and a deep gilt fascia, relieved by burnished patterns, at bottom. Miss Beazley, Graham, directed, and Messrs. Erace and Son executed the decorations.

† If we have time, we intend to write either a tragedy, or a comedy, or an opera, or a melo-drama, or a farce, for the benefit ourselves. It is to be entitled *And how I Parliant*; but we have got no farther than the name yet, for which we put in this Caveat.—Ed. L. G.

interest to the fine engraving of this charming boy.

Marmaduke Trottie.—In the newspaper obituaries we observe the death of this gentleman, in London, at the age of eighty. We knew him slightly, and have seen portions of his superb collection of coins, in many respects one of the finest, if not altogether the finest in England. We presume it will now be dispersed.

Anecdote of the Duchesse de Berri.—"By the way, I am horribly of the Duchesse de Berri's mind on one point, and that is cricket. Don't you remember that, at Dieppe, the other day, the English gentlemen visitors of the place paid her the honour of inviting her to witness their national game; and that she came to the ground, and sat in a beautiful pavilion; and that, directly, the play began; and that she took no notice, but kept talking and laughing with her French attendants and eating sweet things; and that our countrymen marvelled thereat, and exerted themselves more and more to fix her attention, but all in vain; and that at last, however, she was seen to look grave and observant, and turn her eyes to the cricketers, upon which, much flattered, they worked so hard as to outdo, in energy and vivacity, all former cricketers; and that the duchesse began to grow fidgety and seem impatient thereupon, and despatched one of the gentlemen of her suite with some message to our fellow-countrymen; and that our fellow-countrymen thought they were going to hear a request, arising out of womanly nervousness and amiability, praying them not to exert themselves so very much, lest some of them might cause injury to the spine; and that, notwithstanding, when the message was delivered, it only contained her royal highness's wish to know how soon the English gentlemen proposed to give over their preliminary arrangements, and begin their game; and that, when they allowed her to understand they had been playing, their game all the while, the Duchesse de Berri left the ground forthwith."—*The Smuggler*.

Royal Impostor.—A work has been published at Paris, under the title of *Le Duc de Normandie*, the son of Louis XVI., written and published by himself. It states, that he escaped from the guillotine with whom he was placed in his youth, by the same means which introduced the Greeks into Troy; namely, by being enclosed in a wooden horse, a beggar-boy having been substituted for him; that after his escape he took refuge with the Prince de Condé, who conducted him to Kleber, by whom he was placed in the hands of Demail. Pursued, however, by the jealousy of Napoleon, he repaired to South America, ascended the Amazon river, and found himself among a set of cannibals. These gentlemen were preparing to devour him, but the duke slew them; which was but fair. He then became the cacique of the Mamabakes, and carried on with them a sanguinary war of hatchets and tomahawks against the Amas, the Hamaraks, and the Galibis; whom he defeated in a pitched battle. His physician Dussart, his confessor Tournel, and the wife of Simon (his late master), all proclaiming that Louis XVII. was not dead, soon disappeared from among the living. Then Kleber was killed near the Pyramids, Pichegru was strangled, Jourdan was repudiated, Fualdes had his throat cut; all for having endeavoured to restore to France this wonderful child!

Effect of Heat and Cold on Enfans.—At a sitting of the Academy of Sciences in Paris, some time ago, a letter was read from M.

Boulah Spa.—Owing to some accident, we did not receive the invitation for the opening of the Boulah Saline Spa, at Norwood, for 31st August, till last week; which being three weeks too late, all we can say is, that we hear very attractive accounts both of the laying out and of the medicinal properties of this Spa. In days of yore the citizens of London used to have several places of this kind for healthful resort, the fame of which, for the cure of diseases, was spread far and near. Perhaps it has not been absolute wisdom which has led us to despise their virtues, and banish them alike from the domains of fashion and of physic. At all events this new Spa will re-open the question. It has been analysed by Mr. Faraday, Mr. Hume, and other chemists, who pronounce it to be principally distinguished for the quantity of magnesian salts contained in it; resembling, but much surpassing, in this respect, the Cheltenham waters.

[Literary Gazette Weekly Advertiser, No. XL, Oct. 1.]

LIST OF NEW BOOKS.

TO CORRESPONDENTS.

P. G. J. is smooth enough, but the thoughts are too trite for publication: the theme is sadly hackneyed.

Connected with Literature and the Arts.

One Thousand Copies were lately printed, of which only about Fifty are remaining on sale.

Published by Baldwin and Cradock, Paternoster Row; and
to be had of all Booksellers in the United Kingdom.

New Burlington Street, Sept. 1831.
BOOKS for TRAVELLERS, published by
 Henry Colburn and Richard Bentley.
The Traveller's Oracle; or, Maxims for
 Locomotion. By William Kitchiner, M.D. New edition, in
 2 pocket vols. 15s.

"Mirth and motion prolong life."
 "We recommend the 'Traveller's Oracle' as a very amusing
 and instructive publication; it is worth buying and reading, and
 will become, we doubt not, a popular book."—*Atlas*.

II.
The Continental Traveller's Oracle; or, New
 Maxims for Locomotion. By Dr. Abraham Kidon. In 2 pocket
 vols. 15s.

"It is long since we have met with so clever a publication.
 There is a fund of sound sense and valuable counsel for travel-
 lers."—*Literary Gazette*.

III.
Portugal; comprising Sketches of the State
 of Society in that Kingdom under Don Miguel. With a Narrative
 of the Author's Residence there. By William Young, Esq. H.P.
 British Service. 8vo. 10s. 6d.

IV.
English Fashionables Abroad. New edition,
 in 2 vols. post 8vo. 15s.

V.
Travels to and from St. Petersburg, through
 Flinders, along the Banks of the Rhine, through Prussia, Russia,
 Poland, Saxony, Silesia, Bavaria, and France. By A. B. Gran-
 ville, M.D. F.R.S. F.L.S. M.R.S. &c. 8d edition, considerably
 improved, in 2 vols. 8vo. with a Map and 70 Plates, &c. neatly
 bound.
 "As a book for tourists to consult, Dr. Granville's is certainly
 a very superior guide; and its ornaments are another great re-
 commendation to it."—*Literary Gazette*.
 "It should find a place in every drawing-room in England."—*Atlas*.

VI.
Italy. By Lady Morgan. Being the Sub-
 stances of a Journal of a Residence in that Country; exhibiting a
 View of the present State of Society and Manners. Arts, Lit-
 erature, and Literary Institutions; interspersed with numerous
 Anecdotes of the most eminent Literary Characters, &c. New
 edition, revised, in 3 vols. 8vo. 9s. 6d.
 "This is not merely a work of opinions, expressed in the orna-
 mental style of the writer. It is a substantial account of Italy, and
 may be consulted for its facts by the historian, the traveller, and
 the topographer."—*Monthly Magazine*.

VII.
Four Years in France; or, Narrative of an
 English Family's Residence there during that Period. By Henry
 Best, Esq. 8vo. 10s. 6d.
 "Having lived between three and four months in Paris, and
 between three and four years in the South of France, with my
 family, I have made observations which I hope may be useful to
 those who have the same plan of foreign residence or travel. The
 care of a household, and of the education of children, brings the
 head of a family to the knowledge of many circumstances and
 combinations which escape the notice of the single traveller."—*Introduction*.

VIII.
Italy as it is; or, Narrative of an English
 Family's Residence for Three Years in that Country. By the
 Author of "Four Years in France." 8vo. 10s. 6d.
 "This is one of the best works on Italy that we have seen; and
 its circulation will tend to the correction of many erroneous ideas
 respecting the Italian character."—*Literary Chronicle*.
 "A very pleasant and entertaining publication; and we know
 of no work that we should prefer as a travelling companion."—*Atlas*.

IX.
The Hermit Abroad. By the celebrated
 Author of "the Hermit in London." 4 vols. 2s.

New Works by the late Major Rennell.
 In 2 vols. 8vo. price 1l. 4s. boards, or with an Atlas of
 Maps, price 2l. 10s.

A TREATISE on the COMPARATIVE
GEOGRAPHY of WESTERN ASIA.
 By the late MAJOR JAMES RENNEL, Esq.
 Fellow of the Royal Society, and of the Imperial Academy
 of St. Petersburg, and Fellow of the Royal Society of Geog-
 raphers. Printed for C. J. G., and P. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author,
 1. **The Geographical System of Herodotus**
 examined and explained by a Comparison with those of other Au-
 thors, and with Modern Geography. A new edition, printed
 from the Author's revised Copy, and containing the original Maps
 and Portrait. In 2 vols. 8vo. price 1l. 4s. boards.

2. **Illustrations (chiefly Geographical) of the**
 History of the Expedition of Cyrus from Sardis to Babylon; and
 the Retreat of the Ten Thousand Greeks from thence to
 Trebizond and Lydia. With an Appendix, and Three Maps,
 &c. 1l. 4s.

3. **Observations on the Topography of the**
 Plain of Troy, and on the principal Objects within and around it,
 described or alluded to in the Iliad. With a Map. 4to. 7s. 6d.

In 18mo. price 8s. boards.
A MANUAL of the RUDIMENTS of
THEOLOGY; containing an Abridgment of Bishop
 Tomline's Elements; an Analysis of Paley's Evidences; a Sum-
 mary of Bishop Pearson on the Creed; and a Brief Exposition of
 the Thirty-nine Articles, chiefly from Bishop Burnet; together
 with other miscellaneous matters connected with Jewish Rites
 and Ceremonies, &c. &c.

By the Rev. J. B. SMITH,
 Of Christ College, Cambridge; Rector of Sothby, Parsonal
 Curate of Bamfirth, and Head Master of Horncastle Grammar
 School. Printed for C. J. G., and P. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

Dr. Croly's Work on the Prophecies.
 In 8vo. price 12s. boards, the 3d edition, revised,
THE APOCALYPSE of ST. JOHN; or,
 Prophecy of the Rise, Progress, and Fall of the Church
 of Rome; the Inquisition, the Revolution of France, the Uni-
 versal War, and the final Triumph of Christianity. Being a new
 Interpretation.
 By the Rev. GEORGE CROLY, D.D.
 Rector of North Farnbridge, Essex.
 Printed for C. J. G., and P. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

New Burlington Street, Sept. 1831.
INTERESTING WORKS COMPLETED.
 Messrs. Colburn and Bentley having lately completed the
 publication of the following Works, Publishers of the earlier
 Volumes are requested to send the orders for the perfecting of
 Sets to their respective Booksellers.

I.
Memoirs of the Empress Josephine. Vol. III.
 comprising her Private Correspondence with Napoleon and other
 celebrated Persons. Editions in French and English.
 "A curious and entertaining piece of domestic biography of a
 most extraordinary person, under circumstances almost unprece-
 dented."—*New Monthly Magazine*.

II.
Memoirs of the Comtesse de Genlis. Written
 by herself. Vols. VII. and VIII. Editions in French and English.
 "This work will be found to abound in anecdotes of the most
 eminent literary and political characters, who figured at the latter
 end of the eighteenth and the commencement of the nineteenth
 centuries."

III.
The Duke of Rothen's Memoirs. Vol. IV.
 comprising the period of the Battle of Waterloo, and the Entry
 of the Allies into Paris. Editions in French and English.
 "These Memoirs are invaluable."—*Literary Gazette*.

IV.
Napoleon's own Memoirs. Dictated at St.
 Helena to the General who shared his Captivity, and published
 from the original Manuscript, corrected by himself. The Fourth
 Edition, making altogether 7 volumes. Editions in French and
 English.
 "On these sheets are traced events that will never be forgotten
 —portraits that will decide the judgment of posterity. It is the
 book of life or death to many whose names are recorded in it."
Opinion of Lord Cochrane in his Journal.

V.
Conversations of the Emperor Napoleon with
 the Count de las Cases. Parts VII. and VIII. Editions in
 French and English.
 "This work is universally acknowledged to form the most per-
 fect epitome of the character and opinions of this extraordinary
 man extant."

For Schools and Young Persons.
 In 18mo. price 5s. 6d. boards, or 6s. bound.
AN ABRIDGMENT of the Rev.
H. BOADER'S HISTORY of the REFORMATION
of the CHURCH of ENGLAND.
 Printed for C. J. G., and P. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

Of whom may be had,
The History complete, in Four Large vols.
 8vo. price 8l. 4s. boards.

In 3 large vols. 8vo. 20s.
THE HISTORY of ITALY; from the Fall
of the Western Empire to the Commencement of the
Wars of the French Revolution.

By GEORGE PERCEVAL, Esq.
 "For the elegance of its style, the generous tone of its senti-
 ments, and, above all, for its faithful reference to original au-
 thorities, this work is certainly a valuable acquisition to our li-
 braries."—*Monthly Review*.
 "The History of Italy fills up a blank long felt in our literature,
 in it is highly creditable to its author."—*Literary Gazette*.
 Whittaker, Treacher, and Co. Ave Maria Lane.

Useful Works by Dr. Kitchiner, &c.
 Newly published by Henry Colburn and Richard Bentley,
 New Burlington Street.

THE HORSE and CARRIAGE ORACLE;
 containing Rules for Purchasing and Keeping, or Jobbing
 Horses and Carriages, in the easiest and most Economical Man-
 ner; with accurate Estimates of every Expense occasioned
 thereby. Also, an easy Plan for ascertaining every Hackney
 Coach Fare.

By JOHN JERVIS, an Old Coachman.
 The whole revised by WILLIAM KITCHINER, M.D.
 Forming a Supplement to the Traveller's Oracle.

Third edition, in 1 vol. small 8vo. 7s. 6d.
 "Mr. Jervis is a man who knows his business well; and his
 part of the work is full of knowledge and instruction on a branch
 of domestic economy, which to the best of our recollection, has
 never been written upon—the expenses connected with the keep-
 ing and hiring of equipages of every description. The estimates,
 as far as we have had the power of checking them, appear to
 be very correct, and will save to millions many people who are
 the prey of their coachmen and livery-stable keepers."—*London Magazine*.

II.
Practical Domestic Economy; a New Sys-
tem, formed from Modern Discoveries and the Private Com-
 munications of Persons of Experience. New edition, much improved
 and enlarged, with a Series of Estimates of Household Expenses,
 on Economical Principles, adapted to Families of every descrip-
 tion. In 1 thick vol. 18mo. price 6s. neatly bound.

The very rapid sale of this Work manifests the high opinion
 entertained of its merits. It will afford important hints and
 much useful information to all who are desirous of properly regu-
 lating their establishments, and of enjoying the greatest possible
 portion of the convenience, comfort, and elegances of life that
 their respective incomes will admit of.
 There is scarcely a single subject connected with house-keeping,
 from the care of the library down to the management of the beer-
 cellar, which is not treated of in the present volume.
 N.B. The Estimates are given in general distribution, and as
 a Companion to the Housekeeper's Book, 1s. 6d.

In 8vo. 7s. 6d.
THE JOURNAL of the ROYAL GEO-
GRAPHICAL SOCIETY of LONDON, for 1830-1831.
 John Murray, Albemarle Street.

In 18mo. with Engravings, and coloured Examples of Tints, &
THE ELEMENTS of DRAWING, con-
 taining the First Principles of Light and Shade, Colouring
 and Perspective.

By J. M. MATHER.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.
 Also, in 18mo. with Seven Engravings, 6s. 6d.
A Practical Explanation of the Elements of
 Architecture. For the Use of Drawing Academies, Mechanic
 Institutions, &c. By G. Smith.

In 1 large vol. 8vo. 16s. cloth.
A TREATISE on ALGEBRAIC
GEOMETRY.

By the Rev. DIONYSIUS LARDNER, LL.D. F.R.S.
 Professor of Natural Philosophy in the University of London.
 Whittaker, Treacher, and Co. Ave Maria Lane.

The 14th edition, in 18mo. with important Additions, Alterations,
 and Improvements, by the Rev. G. Oliver, &c.

ILLUSTRATIONS of MASONRY.
 By the late WILLIAM PRESTON, Esq.
 Past Master of the Lodge of Antiquity.
 By the same Editor.

The Star in the East. 12mo. 5s. 6d.
The Antiquities of Freemasonry. 8vo. 12s.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

The 3rd edition, enlarged and illustrated with Twenty-one
 Designs, 12s. in red cloth.

VETERINARY SURGERY and PRAC-
TICE of MEDICINE; or, Farriery taught on a New
 Plan. Being a familiar Treatise on all the Diseases incident to
 the Horse; the Causes and Symptoms of each, and the most im-
 proved Remedies adapted to the several Cases in every Case.

By JOHN BLENDS, Esq.
 Author of the "Green's Oracle," &c.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 8vo. 12s.
A MANUAL of MATERIA MEDICA
and PHARMACY, comprising a concise Description of
 the Articles used in Medicine, with Observations on the proper
 Mode of combining and administering them; also the Formulae
 for the Official Preparations of the London, Edinburgh, Dub-
 lin, Parisian, American, and most of the Continental Pharmacopoeia;
 together with a Table of the principal Medicinal Plants. Trans-
 lated from the French of H. M. EDWARDS, M.D. and F. VA-
 LASSER, M.D., and now corrected and adapted to British
 Practice. By JOHN DARWALL, M.D. F.R.S.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 18mo. 6s. 6d.
PLAIN INSTRUCTIONS for the MAN-
AGEMENT of INFANTS, with Practical Observations on
 the Disorders incident to Children. To which is added, an
 Essay on Spinal and Cerebral Irritation.

By JOHN DARWALL, M.D.
 Whittaker, Treacher, and Co. Ave Maria Lane.

In a Pocket Volume, the 5th edition, 5s. 6d. cloth.
THE SECRETARY'S ASSISTANT.
 "One of these useful little books, which, having found
 how serviceable it is for almost daily reference, you would not
 you could ever do without. This Assistant gives you a compre-
 hensive list of ambassadors and consuls, forms of petitions and re-
 monstrances, and other pieces of instruction for intercourse with
 society."—*Monthly Review*.
 Whittaker, Treacher, and Co. Ave Maria Lane.

By the same Author, 3 vols. 18mo. 5l. 4s. cloth.
A Dictionary of Quotations from the British
 Poets. Vol. I. containing Quotations from Shakespeare, &c. 6s.
 Vol. II. ditto, in blank Vols. 7s. Vol. III. ditto, in 3d. 7s. 6d.

"These volumes are what they profess to be, and are valuable
 and tastefully executed. We have in them the essence of Shak-
 speare and the British poets."—*Monthly Review*.

Health and Longevity.
 6th edition, considerably augmented and improved, 7s.
THE ART of INVIGORATING and
PROMOTING LIFE, by Food, Clothing, Air, Exercise,
 Wine, Sleep, &c. or, the Invalid's Guide. A Practical Pye-
 Proseptic, pointing out agreeable and effectual Methods to prevent
 and relieve Indigestion, and to regulate and strengthen the
 action of the Stomach and Bowels. To which is added, the
 Pleasures of meeting with Will.

By WILLIAM KITCHINER, M.D.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

By the same Author, in 18mo. with numerous Cuts, and
 a Portrait of the Author, 7s.

The Housekeeper's Oracle; or, Art of Do-
mestic Management; containing a complete System of Caring
 with accuracy and elegance; Hints relative to Dinner Parties;
 the Art of Managing Servants; and the Economical and Agree-
 able Calendar, showing the Seasons when all kinds of Meat,
 Poultry, Game, Vegetables, and Fruits, first arrive in the
 Market, earliest time forced, when most plentiful, when best
 and cheapest. To which are added, a variety of useful and or-
 ginal Receipts.

In 2 vols. with Plates, 10s. 6d. elegantly bound,
AMERICAN STORIES for Little Boys
 and Girls under Ten Years of Age.

Collected by MISS MITFORD,
 Author of "Our Village."

In the press,
A Second Series, for Elder Children. In
 3 uniform vols.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Digitized by Google

In 2 large vols. 8vo. containing about 2000 pages of close print, 20s. half-bound.

A BIOGRAPHICAL DICTIONARY OF EMINENT PERSONS OF ALL AGES.

By JOHN GORTON.

"It is small praise to say this Dictionary surpasses all the prior compilations of the kind—but we have consulted a multitude of articles, and have been surprised at the accuracy, versatility, and intelligence, which they exhibit. We must not omit to remark an important recommendation in a bulky book of reference—its cheapness. Though far more copious, and carried down to a much later period than any other, it has not exceeded the price of the imperfect repositories of biographies."—*Atlas*.
Whittaker, Treacher, and Co. Ave Maria Lane.

In 3 vols. post 8vo. 5s. 6d.

ARTHUR OF BRITTANY.

By the same Author.

The Templars. In 3 vols. post 8vo. 27s.

"The story is not only invested with interest, but with deep pathos, presenting a brilliant proof of executive power."—*Monthly Magazine*.

"A work which, though essentially useless in many particulars, and claiming for itself a distinct pretension to originality both in its conception and execution, remains as more than any book we ever read, of that admirable novel 'the Spy'."—*the Buffs Assembly*.

Whittaker, Treacher, and Co. Ave Maria Lane.

Fruitful, Flower, &c.

Lately published by Henry Colburn and Richard Bentley,

THE FLORIST'S MANUAL; or, Rules

for the construction of a gay Flower Garden; with Directions for preventing the Depredations of Insects. To which are added—1. A Catalogue of Plants, with their colours, as they appear in each Season—2. Observations on the Treatment and Growth of Bulbous Plants; curious Facts respecting their Management; Directions for the Culture of the Gurnsey Lily, &c. By the Authors of "Botanical Dialogues," &c.

New edition, revised and corrected. Small 8vo. with 6 coloured Plates, 6s. 6d.

II.

Phillips's Companion for the Orchard: an Historical and Botanical Account of Fruits known to Great Britain, with Directions for their Culture. By Henry Phillips, F.R.S. New edition, enlarged, with much additional information, as well as Historical, Etymological, and Botanical Anecdotes, and comprising the most approved Methods of Retarding and Ripening of Fruits, so as to insure, in all seasons, the enjoyment of those delicious and nutritious, and curious Particulars of the Fine Apple, &c. 8vo. 7s.

"We knew of no class of readers which is not much obliged to Mr. Phillips for this very useful and very entertaining publication. For extent of information, utility, and most of the other good qualities which can be desired in a production of its kind, it is really deserving of the warmest eulogy."—*Literary Gazette*.

III.

Phillips's Companion for the Kitchen Garden: a History of Vegetables cultivated in Great Britain; comprising their Botanical, Medicinal, Edible, and Chemical Qualities, Natural History, and Relation to Arts, Science, and Commerce. By Henry Phillips, F.R.S. Author of "the Companion for the Orchard." New edition, in 2 vols. 8vo. 12s.

"In this work the object of the author has been to render the knowledge of plants entertaining and useful, not only to botanists, but to those who have hitherto deemed it a difficult and uninteresting science. He has endeavoured to ascertain of what countries the vegetables now cultivated are natives, the earliest accounts of their cultivation, and by what means they have improved by attention, or degenerated by neglect; also the various uses made of them by the sciences, as well as the manners of different countries."—*Introduction*.

IV.

Sylvia; or, a Discourse on Forest Trees and the Propagation of Timber. By John Evelyn, F.R.S.; with Notes by A. Hunter, M.D. F.R.S. &c. The 4th edition, revised, in 2 vols. royal 8vo. with 12 plates, 5s. 6d. Evelyn's "Memoirs," and embellished with 4 Plates, 2s. 6d.

"A diligent perusal of this noble work may animate our nobility and gentry to improve their estates by the never-failing method therein recommended. All persons, indeed, who are owners of land may find infinite delight as well as profit in this book. To the pleasure of the eye, and the variety of the subjects, that at their first coming to their estates they would seriously think of the propagation of woods for I observe there is no part of husbandry which more commonly more fall in, neglect, and have cause to repent of when they did not begin planting betimes."—*Introduction*.

Natural History.

In 10mo. with Seven Plates, 6s. bound and lettered.

FIRST LINES OF ZOOLOGY, by Question and Answer. For the Use of the Young.

By ROBERT MUDIE,

Author of the "British Naturalist."

"A useful and well-arranged catchword, going through the various branches of zoology in a clear and simple manner, well adapted for the instruction of youth."—*Literary Gazette*.

With Twelve Plates, 8s.

2. The Natural History of the Bible; or, a Description of all the Quadrupeds, Birds, Fishes, Reptiles, and Insects; Trees, Plants, Fossils, and Fossils, mentioned in the Sacred Scriptures. By Thaddeus Mason Harris, D.D.

With coloured Plates, 1s.

3. Letters on Entomology, intended for the Amusement and Instruction of Young Persons.

"A very prettily got up book for young persons, and well calculated to facilitate their acquiring a knowledge of the natural history of insects. The plates are naturally coloured, and give an additional zest to this pleasing and instructive volume."—*Literary Gazette*.

In post 8vo. with Engravings, 7s. 6d.

4. A Discourse on the Revolutions of the Surface of the Globe, and the Changes thereby introduced into the Animal Kingdom. Translated from the French. By the Baron Cuvier. With Illustrations, and a Glossary. Whittaker, Treacher, and Co. Ave Maria Lane, London.

A TOPOGRAPHICAL DICTIONARY OF LONDON and its ENVIRONS.

By J. ELMES.

Surveyor of the Port of London, &c.
"The object of this work is to describe London, 'in the nineteenth century,' in a manner that may at once direct the seeker to any square, street, alley, court, building, &c. It is evidently the result of much labour, and is far more useful, because much more simple, than any directory can ever be. The accounts of charitable institutions, commercial and educational establishments, &c. are sufficiently interesting, and are written with care and attention. We accept the pledge of Mr. Elmes, whose name has been often honourably before the public, as a guarantee for the accuracy of the volume."—*New Monthly Magazine*, April.
Whittaker, Treacher, and Co. Ave Maria Lane.

In 9 vols. Illustrated with several Engravings of Scenery, Costume, Productions, &c.; also a Map, 16s. cloth.

THE PICTURE OF INDIA.

"We must say there is an elegance, if not a splendour of diction about these volumes, that very properly corresponds with the ideas of magnificence which we usually associate with the name of India. The contents are worthy the beautiful framework in which they are embraced; and, if we mistake not the public taste, the Pictures of India will supersede every competitor that has been, or that is likely to come into the field."—*Monthly Review*, June.

By the same Author.

The Picture of Australia. 10s. 6d.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Lately published,

In 8vo. with 20 coloured Plates of Manners, Customs, and Religious Ceremonies, 16s.

Sketches of Portuguese Life, Manners; Costume, and Character.

"The whole volume is one of extraordinary entertainment, and a very curious picture of national manners."—*Literary Gazette*.

Army and Navy.

THE UNITED SERVICE JOURNAL and NAVAL and MILITARY MAGAZINE for October,

contains: 1. A Coronation without a Brevet—2. Letter from the Duke of Devonshire to the Duke of Wellington—3. Reply of Colonel Napier to Count Allen on the Passage of his History—4. On the Actions and Merits of the French and English Cavalry—5. On the Loyalty of Military Men—6. Considerations on Gratuitous Military Education, and its Effects upon the Royal Regiment of Artillery, by a Field Officer—7. A Dialogue between the Prussian General Guisard and a British Officer—8. Recollections of a Sea Life, continued—9. A Plan for Providing Seamen for the British Navy without resorting to Impressment—10. Colloquies with Poland, No. V.—11. A Winter's March in Canada in 1813—12. A Report sent to several of the Polynesian Islands, by George Bennett, Esq. &c.—13. An Account of the Mauritius, by a British Officer—14. Nautical Reminiscences of the late Admiral Sir Joseph Yorke—15. Memoir of the Services of the late General Loftus—16. Memoir of General Church—17. General Eglington's Charge of Cavalry at Marston—18. Service Abroad during the late War, being the Personal Narrative of a Naval Officer, continued—19. On the Importance of Steam Navigation—General Orders—Court Martial—Record of the 71st Regiment Highland Light Infantry—Promotions and Appointments—Births, Marriages, Deaths, &c.
Henry Colburn and Richard Bentley, New Burlington Street.

GOLDSMITH—The Poems of Dr. Gold-

smith, with Portraits, original Manuscripts, and Notes,

By the Editor, J. F. PIERCE.

Price 5s. forming the 10th Volume of the Aitken Edition of the Poems.

"Among the various works now appearing at short intervals and at moderate prices, none is more deserving of encouragement than Mr. Pickering's edition of our classical poet's poems. First, it is edited with great care; next, each poem is preceded by a well-compiled biography; and more especially, because a well-selected collection of our national poetry is an essential in the library of a lover of literature. These are other elegant reasons, it is true, which induce the attention of readers who might otherwise throw away their time and money upon publications which do not even themselves pretend to be read twice, or to deserve preservation. It is something, certainly, to have an idle hour amused; but it is scarcely better to amuse it in a profitable manner, and by trying up not only present gratification, but materials for future reflection and application. We praise the judicious conduct of the biographer of Goldsmith in arranging the anecdotes from the various publications that have spoken of him, so as to end of his connected biography. The idea is good, and one to be followed. They make there an interesting collection of one, and would have caused a confusion in the body of the memoir."—*Spectator*, No. 109.

William Pickering, Chancery Lane, London.

The cheapest and most elegant of all the Librarian's Record's Novels, with Illustrations by George Cruikshank, published in monthly volumes, price only 5s. handsomely bound, uniform with the "Waverley Novels."

SMOLLETT'S PEREGRINE PICKLE,

Vol. II. Illustrated by George Cruikshank; being the Fourth Volume of this admired Series of Classical Novels.

Vol. I. contains the whole of Humphry Clinker, with a Biographical Memoir of Smollett, by Thomas Roscoe, Esq. Four Plates by George Cruikshank, and an elegant Portrait, engraved on Steel.

Vol. II. contains the whole of Roderick Random, similarly illustrated.

Vol. III. contains Peregrine Pickle, Vol. I.

with Four Illustrations by George Cruikshank.

"What increases the value of these plates is, the circumstance of their being etched, as well as designed, by George Cruikshank himself, so that every such plate is a work, and seems the design, scope of the spirit of which is lost in the engraving."—*Spectator*.

"One sketch of George Cruikshank's pencil is worth all the criticisms that ever were written in praise of the novels of Tobias Smollett."—*Morning Herald*.

"Orders received by all respectable Booksellers throughout the Kingdom."

London: Printed for James Cochrane and Co. 11, Waterloo Place.

LA BELLE ASSEMBLEE, for October, contains a Portrait of Lady Anne Butler, being the thirty-second of the Series of Portraits of the Female Nobility in course of publication in this highly patronized Periodical. Important New Annual.
On the 1st of November will be published, uniform with the larger Annals, consisting entirely of Steel Engravings, price, neatly bound, only 12s.; 21s. finely coloured; or bound in Morocco, gilt edges, for elegant Presents, 3s. extra.

GEOGRAPHICAL ANNUAL for 1832; containing One Hundred beautiful Engravings.

As there is no branch of knowledge which combines so much useful information with so much delight as Geography, it is presumed that a work designed to illustrate the form, structure, and divisions of the earth, will be received as a highly-valuable addition to the Annuals already in circulation.

The present publication, on account of its enduring interest, may justly lay claim to the title of a "Perennial," rather than an "Annual," and be valued as a lasting Gift of Friendship, rather than a Pastime-Offering. It will, however, be published every year, for the purpose of including the latest Discoveries, and the changes that are continually taking place in various quarters of the Globe.

The Geographical Annual consists of Engravings of all the States, Kingdoms, and Empires, throughout the World; of the comparative height of the principal Mountains, length of Rivers, extent of the Lakes and inland Seas, and other interesting features, which supply all that is important and useful in Geography, while they impart the most enlightened enjoyment.

This work affords three times the information of the generality of Quarto Atlases, and is so beautifully executed, as to unite, in a great degree, the picturesque attractions of the other Annuals with its own more solid and intrinsic character.

Having, after minute care, great exertion, and at a vast expense, brought to completion the "Family Cabinet Atlas," and the number of copies originally proposed to be circulated in the first issue being disposed of, the Proprietors have made extensive arrangements for re-issuing the work in an improved and more elegant form, as now announced, and at a price that can be no obstacle to its admission into every Family in the Kingdom.

Edward Bull, Holles Street, London: sold also by every Bookseller in the United Kingdom.

THE WINTER'S WREATH for 1832; a

Collection of original Pieces, in Prose and Verse. Contributed by some of the most popular Writers of the present day, and illustrated by the following Plates, engraved on Steel, in the first style:—

REVIEW OF NEW BOOKS.

An Account of the British Campaign in 1809, under Sir A. Wellesley, in Portugal and Spain. By the Earl of Munster. Edition for private circulation. 8vo. pp. 118. London, 1831. Colburn and Bentley.

Memoirs of the late War: comprising the Personal Narrative of Captain Cooke, of the 43d Regt. Light Infantry; the History of the Campaign of 1809 in Portugal, by the Earl of Munster; and *a Narrative of the Campaign of 1814 in Holland,* by Lieut. T. W. D. Moodie, H. P. 21st Fusiliers. 2 vols. 12mo. London, 1831. Colburn and Bentley.

WE have placed the volume with which the kindness of the Earl of Munster has honoured us at the head of this notice, though the same Narrative forms a part of the second work, whose title also stands above. It originally appeared anonymously in the *United Service Journal*,* where it attracted so much attention as soon to lead to the discovery of its gallant and distinguished author, who served through the whole of the glorious Peninsular campaigns, with the exception of that of 1812, when he returned to England on promotion. It is indeed a soldier-like, spirited, and faithful "record of the events of which it treats," and, consequently, a valuable addition to the military memoirs of the British army; but as it has already enriched another periodical, we shall satisfy ourselves with a single extract. Lord Munster's observations on the characters of the French and English soldiers shew how able he is to form a judgment and to express it when formed.

"Sir Arthur, surrounded by his staff, slept, wrapped in his cloak, on the open ground, in rear of the second line, about the centre of the British army. A hasty doze was occasionally taken, as more continued rest was disturbed by alarm of different kinds, while the reflections of others kept them waking. The bustle of the day had prevented a review of our situation, but, on being left to our own thoughts, it was impossible not to reflect on the awfully approaching crisis. We could not but feel that here was to be another trial of the ancient military rivalry of England and France; that the cool, constitutional, persevering courage of the former was again to be pitted against the more artificial, however chivalrous, though not less praiseworthy, bravery of the latter. This view of the relative valour of the two nations cannot be questioned, if we consider that the reminding the British of this moral quality is wholly unnecessary, and instead of language of excitement being constantly applied to our soldiery, that of control, obedience, and compulsion, is solely recommended; while our ancient opponents are obliged incessantly to drive into the ears of their men, that they are nationally and individually the bravest of the

human race. Hearing nothing else so flattering to their unbounded vanity, they become so puffed up by this eternal stimulant, as to be fully convinced of its truth, which, in consequence, makes their first attack tremendous. Buonaparte, being aware of this weak point in their character, fed it in every way, and the object of wearing a paltry piece of enamel gained him many battles. But this sort of created courage is not capable of standing a severe test, and the French have always been in their military character more Gauls than Franks; and what Cesar said of the former, eighteen centuries ago, is still applicable to the races now occupying their fine country. If stoutly opposed at first, this kind of courage not only diminishes but evaporates, and has, does, and will, ever fail before that of the British. As soldiers, taking the expression in its widest sense, they are equal, if not superior, to us in many points; but on one, that of individual constitutional courage, we rise far superior to them. It is remarkable how often they evince a knowledge of this, and in nothing more than their subterfuges of all kinds to keep it from resting on their minds. All France, aware of this inferiority, by all species of casuistry attempts to conceal it; and in order not to shock their national vanity, they blame every unsuccessful officer opposed to us, even should his dispositions be ever so good, and such as might, but for the courage of our men, have succeeded. Buonaparte's conduct, after Vittoria, was directed to work on this feeling, and, by sacrificing the officers to the self-vanity of the troops, established for a time the moral of the army, by making those who had fled like sheep at Vittoria, fight us again, though unsuccessfully, with renewed spirit. Besides the bravery of the two nations, no less was the plain of Talavera to try the merit of two systems, and prove the value of different means and education in forming a powerful and efficient military. It was not only to be shewn if a chivalrous enthusiasm, and a confidence founded on vanity, was to overcome natural and patriotic courage, but if a sense of duty, inculcated by a real discipline, was to sink under feelings created by an absence of control and a long train of excess and military license. It was, whether an organised army, worthy of a civilised period and state of warfare, should not overcome a military caste grown up in the heart of Europe, (from the peculiarity of the times and circumstances,) little better than the bandits led by Bourbon to the walls of Rome in the sixteenth century. The system on which the French armies were formed was so demoralising and pernicious in its effects, that the army of Buonaparte ought not to be considered as the national force of France, but that of a conqueror, like Ghenghis Khan, or Tamerlane, of a more civilised age and quarter of the world. Like those scourges, the ruler of the French existed by upholding that soldiery the times had first created, and in perpetuating their attachment to his per-

son by leading them to victory and plunder; in consequence, robbery was not only overlooked, but permitted, and an economist [encomiast?] of the French army has since dared in print to excuse its atrocities. This, it is true, is written by one of the revolutionary school, but it will be, (as long as the work is read,) a perpetual disgrace to the army whose acts he records. All discipline sank under this state of things. Coercion was neither necessary nor prudent, where the views of all were directed to the same lawless objects; and the military code was rather a bond of union and companionship, fostering a spurious glory, or ambition, and a thirst and hope of reward in unshackled military license and execution, than a collection of laws respecting the rights and claims of human nature. The quickness and intelligence of the French soldiery pointed out the necessity of an obedience to their officers, whom they considered as leading them to objects equally desirable to all; and thus actuated, far from having to receive orders, they readily anticipated them. A Bedouin robber does not require the positive commands of his chief to do his utmost to destroy the guards, or to plunder the camels of a caravan; and no more did the French, with gain or impure military fame in view, require farther stimulus or direction. But these various causes so suited the French, that they had the effect, since the Revolution, of raising their armies to the summit of fame, while their successes over the continental troops had made them universally dreaded. They felt this, which increased their confidence; and the army before us, sleeping on the opposite side of the ravine, was strongly imbued with this impression, being formed of the fine remnants of the Italian army, who had so often conquered under Buonaparte, and subsequently marched from one victory to another. Neither the corps of Victor nor Sebastiani, nor the guard or reserve under Desolles, from Madrid, had formed parts of the armies defeated by us at Vimiera or Corunna, nor had any recollections of our prowess to shake that good opinion of themselves, in which the principal strength of the French armies consists. Though no fears could be entertained for the result, dependent on the brave fellows lying around us, we could not but regret that they were not composed of troops as fine as those who accompanied Sir John Moore. We could not hide from ourselves that our ranks were filled with young soldiers, being principally the second battalions of those English regiments which had embarked at Corunna, and consisting of draughts from the militia that had never seen an enemy. With the exception of the guards and a few others, there were more knapsacks with the names of militia regiments upon them, than of numbered regular regiments. Indeed, we felt no contrast could be stronger than that of the two armies. The ideas of England have never run wild on military glory. We more soberly consider our army rather as a necessary ev-

* Having occasion to mention this periodical, we take the opportunity of noticing the many valuable papers it has contained, and the general ability with which it is conducted.—*Ed. L. G.*

than an ornament and boast; and as an appeal to brute force and arms is a proof of barbarism, so ought the general diffusion of the former sentiment in a community to be viewed as conclusive evidence of advance to civilisation and intelligence; and instead of directing the talents, or drawing forth the best blood of a people to be wasted in the field, a well-wisher to his country ought to desire them to be retained at home for the general advantage. But, however secure in ourselves, we recollected that we formed but one-third of the allied army, and that 36,000 men lay in the same line, every action of whom had led us to consider them as more likely to occasion some common reverse than a happy termination to our operations. We were convinced that if attacked, even in their strong and almost impregnable position, it was most likely to be attended by their immediate flight, which would leave the whole of the enemy to direct his efforts upon us single-handed. In addition, a certain degree of coolness had grown up between the two commanders; and Sir Arthur must have felt that the weakness of his ally by his side was not less to be dreaded than the strength of his enemy in his front. The prospect on the eve of the 28th July, 1809, was thus, though far from hopeless, by no means one of encouragement or sanguine expectation."

It is very gratifying to find high rank thus adorned by literary tastes and talents; and it gives us great pleasure to account for the general esteem in which the noble Earl is held, by attributing it, in a considerable degree, to his love of literature, which exalts the peer as well as the peasant.

Of Captain Coake's Memoirs we are not able to speak so favourably. There is in them a good deal to interest the reader; and the tales of hundreds of imminent escapes and dreadful deaths are related, to give point to the account of the marches, battles, and sieges. But we are not sure that many readers will like the recital of bare horrors, which are not managed with that skill so necessary to render such matters tolerable, far less effective. Other parts are puerile, and hardly worthy of being published. The Memoir is called "personal;" and it is so truly personal, that it is not likely to interest generally. We will offer a few of the best quotations we can, to exhibit the material. Previous to the taking of Ciudad Rodrigo—

"The sun blazed forth as usual (for not a drop of rain had fallen since I had put my foot into the country), and biscuit and rum were served out to refresh the exhausted soldiers; a humble refection which no one would think of grudging to those who had been under arms for ten hours, under a burning sun, and crowning the highest hills without a bush to shelter them, or a drop of water to refresh their parched lips. With my rum in one hand, making a shallow appearance at the bottom of a soldier's tin, and my mouldy biscuit in the other, I beheld an officer approach me, in the act of drawing from his bosom an old ragged black silk neck-handkerchief worn out in the service, and now converted into a pocket-handkerchief. He fumbled it over for a whole corner to apply his nose to; and during this operation, his eyes were fixed on my tin. After a variety of hems, coughings, and such-like indications, he took courage to beg that I would permit him to dip his dry biscuit into my shallow allowance of rum, to moisten his lips: his request being granted, and thanks returned for the given relief, he told me that, in the hurry to grasp his share,

he had unfortunately upset it on the ground, and had the additional mortification to see it dry up in an instant. We were spread out rank entire within sight of the garrison, for the governor to suppose our force stronger than it really was, so that he might inform the Duke of Ragusa, and oblige him to bring up and deploy his whole army, for the protection of his intended convoy. Late in the evening we reached our cantonments in good spirits, though well tired, but not so much so as to prevent my making a good meal. Turning into a small recess, and getting into bed for the first time for weeks, after some hours I awoke rather feverish, went to the door in my shirt to cool myself, and found the air so refreshing that I continued stationary for a considerable time, certainly much longer than my prudence ought to have dictated; however, I did not feel any ill effects from it at the time. On the day following, our paymaster was encircled by a group of officers, who were listening to his odd remarks relative to warfare. He declared that he hated *bullets* and *swords*, but with fists he flattered himself he was able to cope with, and would not turn his back on any man. "Oh!" said he, "how I should like to see a fine boiled leg of pork, and a pease pudding, smoking before me; why the very thought makes me ravenous, and I could eat any thing, from a gnat to an elephant; yes, sir, I could eat an elephant stuffed with militia-men!" Then with both hands, pulling his cheeks, his breeches, and his waistcoat, for in quarters he actually wore the identical dress he had joined the regiment in,—"Look at these," said he; "why they fitted me as tight as a drum before I came to this cursed country; and look at them now! Well, only let me get my wife on my knee by my comfortable fire-side once more, and, if ever I leave old England again, may I be —!" and as my poor brother *did die*, I wish he had taken his departure before he ever persuaded me to enter the army!"

Turning over the pages, we only ask how any officer and gentleman could print the trash at p. 110? If tried by a court martial or court literary for it, he must be found guilty, and condemned. At the storming of Ciudad Rodrigo—

"The moment the wooden magazine blew up, all firing nearly ceased; for the enemy literally jumped over the right entrenchment on to the *terre-plein* of the great breach, to save themselves from the bayonets of the light division. A young Italian officer there seized Captain Hopkins, of the 43d, round the neck, and implored his life. At about eleven o'clock in the morning (of the 20th) the great explosion took place a few yards to the right of the *small breach*, blowing up the *terre-plein* of the rampart, four yards in breadth and ten in length. This fatal explosion (which was accidental, owing to some sparks of fire igniting some barrels of gunpowder in a casement,) happened while the French garrison were marching out of the city by the *small breach*, which had become so hard, owing to such numbers of soldiers walking up and down it, as to make the ascent nearly impracticable. The French, as well as the British soldiers, were carried up into the air, or jammed amongst the rubbish, some with heads, arms, or legs sticking out of the earth. I saw one of the unfortunate soldiers in a blanket, with his *face, head, and body*, as black as a coal, and cased in a black substance like a shell; his features were no longer distinguishable, and all the hair was singed from off his head, but still the unfortunate man was alive. How long he lived in

this horrible situation I cannot say. A tall athletic soldier of the 52d lay amongst the dead at the foot of the breach, on his back, his arms and legs being at their full extent. The top of his head, from the forehead to the back part of his skull, was split in twain, and the cavity of the head entirely emptied of the brains, as if a hand-grenade had exploded within, and expanded the skull, till it had forced it into a separation with the parts ragged like a saw, leaving a gaping aperture nine inches in length and four in breadth. For a considerable time I looked on this horrible fracture, to define, if possible, by what missile or instrument so wonderful a wound could have been inflicted, but without being able to come to any conclusion as to the probable cause. From this place I walked to the convent of Saint Francisco to see a wounded friend. The interior was crowded with wounded soldiers lying on the hard pavement. A soldier of the third division was sitting against a pillar, his head bent forward, and his chin resting on his breast, his eyes open, and an agreeable smile on his countenance. For half a minute I stopped with surprise to observe him sitting in so contented a posture, surrounded by the groans of his companions. At length I addressed him, but, no answer being returned, I called a doctor, under the impression that the man was delirious. On the contrary, we found he was quite dead.

"The whole of the dead French soldiers lying in the valley were stripped, and in a perfect state of preservation, blanched like parchment by the alternate rain and sunshine; and their skins had become so hard that the bodies on being touched sounded like a drum. The vultures had picked the bones of the horses perfectly clean, but had left the soldiers untouched; and, although *four months* had elapsed since they had fallen, their features were as perfect as on the day they were killed. Some of these soldiers were gracefully proportioned, and extended in every possible attitude."

At p. 187 the Duke of Ragusa is mentioned among those who fell at Salamanca—evidently a mistake. On the after-march, we are told:

"Early on the morning of the 24th of July we passed Pena-Aranda, from whence the inhabitants sallied out, loaded with bread, wine, and liquors, and rent the air with their acclamations in praise of the glorious victory that we had won over the French; and even the little boys straddled out their legs and bent forward their heads in derision of the enemy's soldiers, to represent to us to what a state of distress and exhaustion they were reduced. As we passed onwards, numerous objects of commiseration, lying by the side of the road, reminded us of the miseries of war in all its horrors: many of the French soldiers lay dead, exposed to the scorching rays of the sun, which had so blistered their faces, and swelled their bodies, that they scarcely represented human forms, and looked more like some huge and horrible monsters, of gigantic dimensions, than any thing else. It is impossible to convey an adequate idea of such spectacles, or of the sensations they must have endured during their last agonies. These, now inanimate, objects had marched over sandy plains, without a tree to shelter them, while suffering from fatigues, sore feet, and want of water; then crowding into the battle, covered with dust, and under a scorching sun, they had received severe wounds, and were finally dragged, or carried on ruddy-constructed bearers, from the scene of action, during excruciating torture, and ultimately left to perish by the side of the roads, or on scabble

land, with their parched tongues cleaving to the roof of their mouths, and, to complete their miseries, before breathing their last sigh, to behold, with glazed and half-closed eyes, the uplifted hand of the Spanish assassin, armed with a knife, to put an end to their existence. These dreadful fates awaited the defeated French soldiers in Spain; it was impossible to gaze on the mutilated bodies of these our enemies without feelings of deep commiseration for our fellow-creatures, who, a day or two previously, had been alive like ourselves, and perhaps the admiration of their comrades."

Such are fair specimens of Captain Cooke's narrative, which is possibly an accurate detail of actual warfare; but to us the particulars are particularly repulsive, and we dislike reading the statements almost as much as we should have abhorred seeing the realities.

Lieut. Moodie's Campaign in Holland is a fair account of that sanguinary struggle.

The Cabinet Cyclopædia, No. XXIII. The History of France, Vol. III. By Evans Eyre Crowe. London, 1831. Longman and Co.; Taylor.

Two most interesting, and yet opposed, periods are embraced in this volume—anarchy and despotism. The crime and weakness inherent in human nature were in both epochs strikingly developed: the first was divided between fear and fury; and man never more truly shewed what he could be, when released from all that softens, awes, or restrains. Life might well be held of little value, when it had lost all that could exalt or redeem it. Cruelties the most ferocious have constantly disgraced the annals of humanity; but it remained for the last century to go back upon civilisation, and make of bloodshed one of those terrible and recurring excitements which harden into habits. The only conclusion to be drawn from such scenes, is, that we cannot be sufficiently thankful for the laws, ties legal and moral, the authorities whether of law or custom, that, heaped about us, thereby keep down the incarnate devil of uncurbed and excited man. The second period was that of power and ostentation. Napoleon at once judiciously appealed to the terrors of the past and the glories of the present: his throne at its first erection had two most powerful supports—vanity and repose. As is usual after all violent popular commotions, people rather ask security than independence, and are well content to exchange their more abstract liberties for those which are daily and personal. One great authority brought with it, for the time, order and rest. Then, the emperor's military successes were a safety-valve for that enthusiasm, which, having exhausted the themes of freedom and a republic, was ready to return to those national stimulants, those most characteristic rhymes of the French tongue—*gloire et victoire*. Such are the subjects that make the present volume the most interesting of Mr. Crowe's history. We shall first allude to its faults, and then try to do justice to its much more numerous merits. Our author has too great a tendency to metaphors, which, unless peculiarly short and clear—which his are not—rather tend to embarrass than enlighten the generality of readers: moreover, he is not usually happy in his imagery; and his similes too often come under Canning's ridicule—they are "similes of dissimilitude." Mr. Crowe's great want as an historian is dramatic power; he brings none of his scenes vividly before the reader; he invests none of his characters with the reality of life; in short, he is deficient in what Hume possessed to such perfection—inte-

rest. Still, it is debatable ground, whether this want is not compensated by the mental analysis, the thought, and the moral developments, in which his pages abound. We shall now proceed to our extracts.

Members of the Convention.—"The members elected by the city of Paris, says Thiers, 'consisting of some tradesmen, a butcher, an actor, an engraver, a painter, a lawyer, two or three journalists, and a fallen prince, did not all represent the confusion and variety of personages that figured in this great capital.'"

We give a scene from the convention itself, at full length, as most characteristic of the time.

"Lasource, a Protestant clergyman, and member of the moderate party, attended the Jacobin meeting, and heard these denunciations, in which the majority of the convention were represented as seeking to excite the departments against the capital, and to check the progress of liberty. He made an instant remark thereon to his neighbour Merlin, observing, that those agitators aspired to establish a dictatorship in their own favour. Merlin of Thionville, having been a *huissier*, or bailiff, of that town, was a bold, uncompromising Jacobin, a very Ajax, as the revolutionists called him in their tongue. He stood up on the following day in the convention, and challenged Lasource to state openly and prove his accusation. Lasource did not shrink from avowing his opinion. He dreaded, he said, the despotism of the capital and its agitators; he feared to see Paris become, what Rome was in the empire, the tyrant of the world, while itself was the slave of sedition. Osselin rose, and treated the fears of Lasource as chimerical—

'The idea is absurd: that any one here should aspire to the dictatorship is impossible.' 'Tis not, 'tis not impossible!' exclaimed Rebecqui, deputy for Marseilles. 'I assert that there does exist a party in this assembly which aspires to establish the dictatorship: and the chief of this party—I will name him—is Robespierre!' Amidst the tumult caused by this denunciation, Danton obtained possession of the tribune, and endeavoured to prevent these dissensions from going further. To avert the attack from Robespierre, he spoke of himself, 'who had served the cause of liberty with all the energy of his temperament;' and of Marat, with whom, indeed, he affected not to be on terms of friendship; but whose violence he represented as excusable, since his long concealment from vexation and arrest, in caverns and subterraneous hiding-places, had soured and corrupted his temper. To counterbalance the accusation brought against the Mountain, Danton insinuated that there was another party in the assembly, whose object was to partition France into as many republics as provinces, and thus to destroy the unity of the country. This was aimed at the Gironde. Danton proposed to decree the pain of death against whosoever should entertain either of these projects, whether the dictatorship or federalism. The accusation, thus adroitly parried by Danton, might have been set at rest, had not Robespierre thought proper to undertake his own defence. He enumerated the acts of his past life with a cold arrogance, and in a speech so tedious and dull, that even his own friends called out to him, in impatience, to have done with his *kyriele*. As Marat was alluded to in the debate, he, too, thought it necessary to enter upon his exculpation. His appearance at the tribune excited such an acclamation of disgust, that to make himself heard was impossible. But the accusations

against him were redoubled. Cambon produced a kind of placard, signed Marat, in which a dictatorship, or despotic triumvirate, is called for as the only means of public safety. It became necessary to hear the monster's defence. Taking a cap from his head, such as is worn by the people, Marat placed it on the tribune, and facing the general outcry, with distorted and nervous smile, he began:—"I have a great many personal enemies in this assembly." 'All of us! all of us!' was the clamorous interruption and reply of the greater part of the members. Marat undauntedly continued—"I have many personal enemies in this assembly; I recall them to a sense of shame; I exhort them to cease their furibund clamours. The members for the city of Paris are accused of aspiring to the triumvirate, or the dictatorship. It is merely because I am one of them that this accusation is made. I owe it to Danton and to Robespierre to declare, that they have always opposed the project of a dictatorship, which I have never ceased to recommend in my writings. I have a lance to break with them on that point. I am myself the first and the only writer in France who has proposed and supported the dictatorship, as the sole means of crushing traitors and conspirators. I am alone to blame or to be condemned for this. But first hear me. Amidst the machinations of a perfidious king, an abominable court, and of false patriots, who sold the cause of liberty in two successive assemblies, can you reproach me with having imagined the only means of public safety, with having invoked the hatchet of popular vengeance on the guilty heads? No, you dare not. The people would disavow you—the people, who, at length, in order to escape from tyrants and traitors, felt the necessity of turning dictator itself. Believe me, I shuddered as much as any of you at these terrible insurrections; and it was to obviate the necessity of their recurrence, that I wished to see the popular force guided by one firm hand. Had this been understood at the taking of the Bastille, five hundred heads would have fallen, and tranquillity would have been secured. But no; events were left to themselves, and vengeance abandoned to the people. And what has been the consequence? A hundred thousand patriots have been slaughtered, and a hundred thousand more are menaced with a similar fate. At any rate, to prove to you that the dictator, or the triumvir, which I recommended, was not to answer to the vulgar idea of a tyrant, my proposal was, that his authority should last but for a few days; that his only office should be to condemn traitors; and that this dread magistrate himself should have always a cannon-ball attached to his leg, in order that he might continue under the hand of the people. Such was the dream of my patriotism; and if your intellects have not elevation enough to comprehend it, so much the worse for you.' Whilst some were disgusted with the arrogance and blood-thirstiness of this speech, and others amused even to laughter by its impertinence, the too flexible majority were struck by the ferocious energy of Marat's character and views. The new deputies of the Plain, who had hitherto looked with abhorrence on the monster, here submitted to listen and learned to tolerate him. Vergniaud, the famous orator of the Gironde, rose immediately, in order to counteract the favour excited towards Marat. His first expressions of abhorrence against the man of blood were interrupted by murmurs. Vergniaud then read the famous circular, in which the massacres of September were avowed, and held up to the imitation of the provinces.

Boileau succeeded him at the tribune, and commenced reading an address to the people, signed Marat, and published that very morning. Its tenour was as follows:—"One reflection oppresses me; it is, that all my efforts to serve the people must fail without a new insurrection. Seeing the temper of the majority of the national convention, I despair of the public safety. Fifty years of anarchy are before us; and the only way of avoiding them is by appointing a dictator, a true patriot and statesman. O babbling people, did you but know how to act!" An indescribable tumult took place on the perusal of this pithy address. "To prison with the wretch; to the guillotine!" was the general cry. The accusation of Marat was proposed. He again demanded to be heard, and once more took possession of the tribune with increased confidence and effrontery. "As to that writing which the member has denounced, I am far from disavowing it. A falsehood has never passed my lips, and fear is a stranger to my heart." Nevertheless Marat proceeded to state, that the address just produced was written a week back, and suppressed, but republished that morning against his knowledge by his printer. This was a manifest falsehood; for a week past the convention did not exist, nor could there then have been a motive or an object of insurrection: but the excuse appeased the placable assembly; and Marat, reading them a more moderate article from a new journal which he had just commenced, was hearkened to in silence, and even not without applause. Having produced this effect, he proceeded, certainly with the perfection of all impudence, to lecture them on the baleful effects of passion: "Had I not written a moderate paragraph this morning, you would have delivered me over to the sword of justice. But no, I had still a mode of escape from persecution. With this," said he, drawing forth a pistol, and putting it to his forehead, "I would have blown out my brains at this tribune. Such was to have been the reward of three years' sufferings, imprisonments, wakings and watchings, fears and labours, privations and dangers. As it is, however, I shall remain amongst you, and brave your fury."

Just remark on the fate of Louis XVI.

"What was to be his ultimate fate? It became urgent to decide. Petitions had been already presented, one especially from Auxerre, demanding not only his trial, but condemnation to death. Many of the French, under the influence of political rabies, deemed the revolution incomplete till it had displayed the scene of a monarch's execution. England had done as much. Should history tell that she had surpassed France in audacity? It was far less the supposed guilt of Louis than the effect to be produced by his death, that urged the fanatic revolutionists to demand it. National vanity sought to astonish Europe and to frighten its kings, overlooking the crime of sacrificing the innocent. Another feeling, stronger than vanity, worked towards the hapless monarch's destruction. This was the necessity all persons and parties felt to rival each other in zeal, and to outbid each other for popularity: that dread of the opinion of one's fellows, that of being thought lukewarm, of being left behind in the course of those sentiments which were the mode—a characteristic peculiarly strong in the French, and still most visible, and most fatally operating amongst them—armed every tongue with an anathema against the king. It was not so much hatred, either personal or political, that urged his guards to vie in insulting him,—the conven-

tionalists to vie in condemning; it was rather a trick to captivate popularity and power—a trial of who should bear off the palm of revolutionary ferocity; the unfortunate Louis being set up as the mark, against which was discharged every blow of malice, every arrow of calumny. Base as was this motive, it grew daily more base, as it became mingled still more and more with fear; and the whole nation, whilst it invoked the goddess of liberty, was in reality prostrating itself before the demon of terror."

We proceed to an accurate observation illustrated by an inaccurate metaphor.

"It is surprising to observe, that in revolutionary struggles fought parliamentary-wise by the tongue and pen, in the proper arena of intellect, genius and noble endowments are found universally to succumb; whilst in those fought with the sword, where physical force seems especially intrusted with the award, intellect infallibly obtains the sway, and talent vindicates its claim to superiority. War gave to France Napoleon for a sovereign. Her representative assemblies placed her at the foot of Robespierre. This paradox, that mediocrity bears away the prize in popular and tumultuous revolutions, is partially explained by observing, that the first and front ranks filled by talent are swept away, whilst those in the rear naturally press on to seize the victory that better men have won. The secret of success is to come late: for political characters are ephemeral in time of revolution, short-lived as the opinions which they represent. The chosen talents of a generation start up into sudden ripeness, like the productions of the field, and, like these enjoying the honours of an autumn, are mown down, and give place to another and another, until the exhausted soil can afford but a stunted and pigmy crop. It is then abandoned as a sterile waste, to pursue the metaphor, and at length rise the forest and its lord, the natural and lofty monarchs of a region where signs of culture are no more visible, nor the broad daylight of freedom allowed to penetrate."

Now, a generation has no sort of analogy with a soil: the fertility of the latter comes from one obvious source, and may be exhausted; the talent of the former has many origins, and though it may be worn out in the individual, cannot in the many. The talents of any one generation do not spring up in a night and perish, but are divided into various portions, from the beginning even to the end; and are also so amalgamated with those of a succeeding age, that it is indeed difficult to say where the one begins or the other finishes.

"Robespierre, though no exception to this rule, was still an extraordinary personage. He was the very perfection, the type of triumphant mediocrity. Talents he had none—nor ideas, although by dint of exertion he acquired the semblance of the one, and purchased the others notoriously from all around him. His speeches were written for him; and the debates of the Jacobin clubs, at first philosophical and given to the discussion of principles, supplied him with a political vocabulary at least. Thus his friends, his future enemies being included in that class, lent to this hawk the feathers that impeded his wing, and taught him at length to soar. He was totally without passion, unless vanity deserve the name; but his vanity was wise, and wore all the loftiness of pride. Then he had honesty and consistency, two qualities that cannot be denied him, however he might have adopted them in calculation. From his first vote in the

constituent assembly he had been the rank democrat that he ever was, professing all those extreme opinions to which others tended. His private morals were irreproachable. He held to his condition, lodged to the last with the same humble carpenter's family that at first housed him. Unlike his colleague Danton, no bribe, no peculation, no expense, no licentiousness, considered as such in that day at least, could be laid to his charge. No petty ambition distracted his views, or blemished his character for disinterestedness. He was never minister, nor even commissary. After the fall of the Giroude, when he was all-powerful, he did not become member of the sovereign committee till it pleased the convention and the Jacobins of their own accord to appoint him. With this there was no affectation in his *semicolitism*. He neither shaved his head, nor wore tattered garments, nor mounted the red night-cap. Robespierre alone wore powder, and preserved the dress and demeanour of respectability. Political courage he certainly did not want, though physically he was, with Marat, the most arrant of cowards. Ruthless as a tiger, at first reckless, then greedy of blood;—such was the tyrant of the day."

We reserve a few extracts for another No.

Liberia; or, the Early History and signal Preservation of the American Colony of Free Negroes on the Coast of Africa. By W. Innes. 12mo. pp. 152. Edinburgh, 1831.

Waugh and Innes.

"*LIBERIA*," says the Preface, "is the name given to a colony of free negroes, who have lately been transported from America to the coast of Africa. This colony seems little known, except by name, in this country; but as it appears destined to hold a distinguished place in promoting the civilisation and improvement of Africa, a short account of its early history cannot, I think, fail to be read with interest."

We are sorry to say, that the first part of the last period is true; but we beg to add, it is our fault that so interesting a colony should be little known to the public. One of the schemes we have projected for its edification it may be remembered by some with regret: it is by us with sorrow, was a *Foreign Literary Gazette*, of which thirteen weekly Numbers appeared in the first three months of last year. It was the object of that publication to supply every kind of foreign intelligence to the extent as this Journal endeavours to fill its office with regard to home literature, and sciences: but it did not succeed to the extent of our hopes; and we have only now the remembrance of an experiment of great value upon which we can look back with complacency as having justly merited a better fate. Indeed, this Quarterly Part of the *F. L. G.* curious for the variety and value of the materials which were contributed to it, even within a short period of its existence, from many quarters, and, among the rest, for a very complete epitome of the history of Liberia. This paper was comparatively little read, shall copy nearly the whole of it, preserve the neat little volume before us, the substance of which it contains.

"The settlement of Monrovia (forming the district of Liberia), on the banks of the river Montserado, and two miles distant from the cape of the same name, was purchased and first colonised in the month of December, 1820, at which time it was so covered with swamps as to be almost impenetrable. In a small space near the mouth of the river, the settlement

several hundred negro slaves, belonging to a man of the same colour, to whom they had been given by an English factor on his departure for Europe. Many of these slaves, not being natives of the coast, were looked upon with a jealous eye by their neighbours, the Dey's, the Queahs, and the Gurrahs.

The American emigrants who were at Sierra Leone were transported to Montserado, and disembarked on another small island, called Perseverance, situate near the mouth of the Montserado, which had been purchased of John S. Mill, the son of an English merchant, but born in Africa. The natives, not being friendly towards Mill, quickly determined to expel the intruders; and their chiefs, under pretence of entering into an arrangement, invited him to a meeting, whither he went, and was made prisoner. In consequence of an arrangement entered into by Dr. Ayres, the agent of the settlers, in which he agreed to take back the goods which had been given the chiefs in exchange for their territory, Mill was set at liberty; but the doctor eluded the order for their quitting the country, under pretence of not having a vessel. Fortunately for the settlers, the King George who resided at the Cape, and who held a kind of jurisdiction over the northern part of the peninsula of Montserado, secretly allowed them to pass the river, and establish themselves in the forest. For this piece of service he received six gallons of rum, and tobacco and cloth to a like amount. In the course of a few weeks, the settlers had cut down the trees, and built twenty-two cabins; but in the midst of their labours an unlooked-for event brought on them the hostility of the natives. An English cruiser, on her way to Sierra Leone, was wrecked near Perseverance Island; and as the natives consider all vessels shipwrecked on the coast to be theirs by right, the King George sent down a party of his people to take possession of her. The crew, however, assisted by the colonists, forced the assailants to retire with loss, but not without themselves experiencing a sad disaster; for in discharging a piece of artillery, a spark communicated to the roof of the store-house—and, with the exception of the powder magazine, every thing was destroyed. The loss was estimated at 3,000 dollars.

By the mediation of Boatswain, King of the Condoes, peace was restored, presents were exchanged, and on the 28th of April the colonists resumed their labour, at the cape; but the houses were not finished—the provisions nearly exhausted—the rainy season had commenced—and sickness began to prevail. Under these disastrous circumstances, many of them returned to Sierra Leone; though part decided upon remaining at Montserado. At this time there were only one and twenty capable of bearing arms, with four Africans and a few women and children. In the month of July the island was abandoned, and the colonists established themselves in the peninsula, where they erected a magazine, and a house for the two agents. The latter returned to the United States, leaving the establishment under the care of one of the emigrants; but their provisions were completely exhausted, and, on account of the renewed hostility of the natives after the departure of Boatswain, they were unable to procure any in the neighbouring country, or to cultivate the soil. On the 8th of August another expedition, under the command of Mr. G. Ashmun, consisting of fifty-three emigrants, and thirty Africans who had been taken from a vessel, arrived at Cape Montserado; but,

owing to the difficulties they had to encounter, a month elapsed ere they were landed.

The first act of the new agent was to endeavour to establish an alliance with the neighbouring chiefs, by proposing to instruct their subjects in the useful arts; but they rejected the offer, and evinced hostile intentions. The agent was therefore obliged to organise the means of defence. There were no more than twenty-seven Americans capable of bearing arms, and their only weapons were forty muskets, the greater part of them out of condition, and six pieces of cannon, four of which were not mounted. These, however, were repaired and placed on the heights, and thirteen young Africans were instructed in the use of fire-arms. The little city was encompassed by trees, and every precaution was taken to prevent surprise: but the unfortunate colonists, obliged to work in continued heavy rains, and to mount guard during the night, were attacked by fever. Only two remained in condition to do duty; the agent himself fell ill; his wife expired on the 15th of September, and shortly afterwards, two of the emigrants. In the beginning of October the neighbouring chiefs assembled to deliberate upon attacking the colony. Two of these chiefs were of opinion that the settlers ought to be treated as friends, and remain unmolested; but the majority, in the hope of finding a rich booty, and aware that the colonists were much reduced by sickness, resolved upon the assault. In the end of October the whole of the hostile tribes assembled under arms in the island of Bushrod, distant about four miles from the establishment; and in the night of the 10th of November they encamped on the peninsula, within half a mile of the settlement, to the number of 900 men. At break of day they commenced their attack with a front of thirty men, and at a distance of forty-five paces threw in their fire, and then rushed on the colonists with their darts—killed several of them—obtained possession of the cannon, and threw the reserve in disorder: but the colonists having rallied, succeeded in bringing a nine-pounder to bear on a mass of about 800, which killed or wounded many of them, and compelled them to retire in their turn, carrying their dead and wounded with them. The force of the colonists was but thirty-five persons, of whom the half only took part in the engagement; and fifteen were either killed or wounded. The enemy carried off five families: one woman, the wife of a settler, had received thirteen wounds; another, who had been wounded in the head by a sabre-blow, lost her two children; and a third, the mother of five children, who had barricaded the door of the house, and armed herself with a hatchet, fled only when she beheld her youngest child stabbed to the heart;—ultimately escaping by a window, she passed between both fires, without being wounded. In order to resist any fresh attack, the lines were surrounded by a palisade, which was finished on the 17th; but there were only provisions for fifteen days—nor could any be procured in the country; and in case of a brisk attack, the ammunition would not hold out more than an hour; and another misfortune was, the captivity of seven children. On the 22d of November a messenger was sent to the assembled chiefs to assure them that the intentions of the Americans were friendly; but, though they were desirous of peace, they were well prepared for war. The chiefs replied, that the Americans having only purchased the lower part of the

island of Bushrod, had unjustly seized on the cape; that their people on visiting the settlement, had been ill used; and that the agents had not kept their promise of giving instruction. Nevertheless, if the colonists would repair these injuries, they would consent to peace; but, at the same time, they endeavoured to collect together the warriors of the coast, as well as of the interior. On the 25th and 29th, two ships having touched at the cape, supplied provisions. The captain of one of them knowing some of the hostile chiefs, endeavoured to make peace, but in vain. The Gurrahs and the Condoes had furnished a reinforcement; and the warriors of the coast thinking to capture the property of the settlers, had determined to renew the war. On the 30th November they began the attack in two opposite directions; but notwithstanding their furious onset, and returning to the charge four different times, they were repulsed on all sides. The enemy was in much greater force than in the action of the 11th, but their loss was less considerable. Their guns, which were of large dimensions, were loaded with pieces of iron and brass. All the chiefs on the coast have cannon; but as it takes them full half an hour to load them, they imagine that it is only by witchcraft that the Americans are able to discharge their guns five or six times a minute. Three of the settlers were wounded—one mortally; and the only instruments they possessed for dressing the wounds, were an old pen-knife, a razor, and a pruning-wire.

The English ship, Prince Regent, being off the coast, learnt from a Krooman the situation of the colony. There were on board this vessel Captain Laing, of the Royal African light-infantry, and the crew of a ship which had been captured by Lieutenant Gordon. The officers visited the agent of the colony; and, by appearing neutral, endeavoured to divine the intentions of the enemy. The humiliated chiefs granted them an interview, and signed a treaty, consenting to a suspension of arms for an indefinite period, and engaging to submit their disputes to the Governor of Sierra Leone.

By this intervention the colony became invincible against the whole combined force of the enemy; but Lieutenant Gordon, and eight of the eleven sailors who had offered themselves as hostages for the treaty, were seized with illness, and fell victims to their generous interference four months after the vessel left the coast. On the 3th of December another vessel arrived, whose crew assisted the colonists in fortifying the settlement. On the 12th of March the captive children were restored to their friends; but they had become so much attached to the old women to whose care they had been confided, that their parents were absolutely obliged to tear them from their arms, amidst the strongest expressions of mutual attachment.

The provisions of the colony were again nearly exhausted, when the Cyane, of the United States navy, arrived at Montserado on the 31st March. This vessel supplied their wants; but 40 of its crew also fell victims to their exertions soon after their return home, in consequence of illness incurred at the cape. Soon after, another vessel arrived, bringing 66 emigrants, a surgeon, and plenty of provisions for the colony.

In June 1827, the American ship Shark, under the command of Lieutenant Norris, arrived to inspect the colony. This officer used every endeavour to repress the slave-trade, and establish a good understanding between the natives and the settlers.

In his report he represents the colony as being in a most flourishing condition; the settlers in good health, satisfied, and living in good harmony with the natives.

On the 11th April, the *Doris*, from Virginia, arrived with 93 emigrants, who were established at Caldwell, on the Saint Paul. In the month of August, the *Norfolk* arrived, bringing 142 negroes, taken from slave-traders, who were dispersed amongst the colonists. At this time the population of the colony, comprising these emigrants, amounted to 1200 individuals, of which number 533 arrived in 1827.

In January 1828, three vessels arrived, having on board 209 passengers and 88 negroes, who had been enfranchised by their masters. During the passage, only one elderly person died; but soon after their arrival, 24 dropped off by disease.*

In later accounts, in addition to the foregoing, we are told, that "the soil and climate have been found well adapted to the production of Indian corn, millet, rice, cotton, sugar, and coffee, and of sustaining a population of many thousands. The commerce of the colony is considerable, and rapidly increasing, as well with the interior as with the United States and foreign countries. The exports are not less than 50,000 dollars per annum; and those engaged in commercial pursuits are enterprising, judicious, and successful in their adventures. Some of the colonists have acquired considerable fortunes by their care and industry. Most of them are independent. All can do well who devote their labour and skill steadily to any regular avocation; while common labourers receive on an average ninety cents per day, and tradesmen two dollars."

And again:—

"The country embraces large tracts of fertile land, capable of yielding all the rich and varied products of the tropics; possessing great commercial advantages, with an extent of seacoast from 150 to 200 miles, and enjoying a climate well adapted to the negro constitution, and not more fatal to that of the whites than many thickly peopled parts of the United States.

"There is at this time a Baptist and a Methodist society, each of which has a preacher. The Missionary Society of Basle, Switzerland, have five missionaries in the colony. The Society for Domestic and Foreign Missions of the Protestant Episcopal Church in the United States are preparing to establish a mission there.

"It appears also that they have a periodical publication, entitled the *Herald of Liberia*, which shews, by the way, the very rapid advances they have made in civilisation. "From the marine list (it is said) in the Nos. of the *Herald*, you will perceive that our port has been visited more frequently during these rains than common; and at one time we had five square-rigged vessels in the harbour—three English, one French, one American."

"The latest information I have received respecting this interesting colony," says Mr. I. quoting some letters, "is contained in an American newspaper, which has been kindly

handed to me since these sheets went to press, by a friend who has recently come from the United States. The article is entitled 'Liberia,' and is as follows:—"By the return of the ship *Carolinian*, the brig *Volador*, and the schooner *Zembuca*, from Liberia, despatches have been received from the colony up to the 1st of February. The colonial agent writes, that on his return to Africa, he found affairs in the colony in a more prosperous condition than he had ventured to anticipate; that more than twenty-five substantial stone or frame buildings had been erected at Monrovia during his absence, and that others were in progress; that the spirit of improvement seems to have pervaded all classes; the agriculture is receiving more attention, and that the settlers generally seem resolved to develop the resources of the country. Two of the colonists, Messrs. Francis Taylor and Frederick James, were about to depart on an exploring expedition into the interior, and would probably be absent six or eight months. Another of the native chiefs had placed himself and his people under the protection of the colony, and two other chiefs were seeking the same benefit, and ready to submit to the laws of the colony: They deem it a great privilege to be allowed to call themselves Americans. Measures have been taken to establish schools in all the settlements, and the colonists appear ready and desirous of contributing to their support. Great harmony and peace appear to prevail among the settlers, and a determination to fulfil, by their industry, enterprise, and public spirit, the hopes and expectation of their friends in this country."

We shall conclude with some general remarks, translated from the Reports of the French Geographical Society, which will bring the whole of this subject at once within the view of our readers.

"The establishment of a colony at Cape Palmas, which is the key of the whole southern coast of Africa, and the surrounding country, which extends eastward to the entrance of Biafra, would, in a few years, become an important depot for foreign produce, by trading with the nations who inhabit it towards the east. From Cape Palmas, or to the north of it, it is easy to return to Cape Verd, and from thence to the United States, in all seasons; but on the south the passage is extremely dangerous. An establishment at this cape would become, as at Monrovia, a market for the neighbouring nations; and merchants would infinitely prefer it to any position more eastward, even with the chance of making greater profits. Besides the commercial advantages of Cape Palmas, its road offers the safest anchorage between Montserado and Voltu. The country about it is hilly, fertile, and intersected with numerous streams, on which mills might be advantageously established. The point at the southern extremity of the south-west coast will form a natural barrier to the empire which we hope to see organised in Africa.

"Another advantageous position is the island of Bulama, seventeen miles long and nine broad. It rises gradually from the shore, forming a considerable height in the centre. Its road is one of the best on the African coast, and the height of the tides offers every facility for the erection of mills. The fogs are less dense than on the low lands, and the rains do not continue so long as at Montserado.

"In 1793 this island was taken possession of by a company of English merchants; but in consequence of the diseases brought on by their own imprudence, they were forced to abandon it; since which period it has remained unoc-

cupied. It is situated at the mouth of the Rio Grande, whose flood, crossing the richest and most fertile part of Africa, waters the country visited and described by Mungo Park. Its source is distant but a few days' journey from that of the Senegal, the Gambia, and the Saint Paul; and it is now ascertained that the source of the mysterious river of Africa is within a short distance of Rio Grande. Vessels coming from America, after having touched at Cape Verd and Cape Roxo, sail for Liberia. The voyage from the United States to the African colonies would become shorter and less dangerous by an establishment at Bulama; and the climate, analogous to that of the United States, would be much more favourable for those who migrate from the country north of the Potomac.

"Between Bulama and Liberia is the colony of Sierra Leone, which the English cannot retain without a great sacrifice of human life, and which will necessarily be united with the establishments when they become more extended. Once settled on the waters of the Rio Grande, the society would be in possession of those of the Senegal and the Gambia; the tribes who dwell near the sources of the Niger would trade with them; and if the course of the river Saint Paul be such as is presumed, an easy communication will be opened between the interior and their capital. Thus their boundary would include the sources of the Gambia, of Rio Grande, Nunes, Pongos, Sierra-Leone, Cape Mount, Liberia, and the Kroo nation."

The Juvenile Forget-Me-Not; a Christmas and New-Year's Gift, or Birthday Present. 1832. Edited by Mrs. S. C. Hall. London, Westley and Davis.

It has frequently been our agreeable task to state our very high estimation of Mrs. Hall's talent as a writer or editor for the young. Far from meaning to depreciate her powers as a most amusing and characteristic delineator of Irish manners, for the entertainment of the general public, we have always been particularly struck by the skill and the right feeling with which her appeals to the juvenile world have been treated. Sound sense, an acquaintance with the habits and ways of thinking of children, and, above all, a good heart, are essential to this difficult species of composition; and all these Mrs. Hall evidently possesses in an eminent degree. Without them, no watchfulness can guard even the experienced author from falling into lapses injurious to the intended moral effect, and probably opposite to the intended instruction. As natural kindness makes the true well-bred gentleman or lady, so does natural goodness make the only true and valuable writer for youth. It depends on feeling, not on tact—on the heart quite as much as, nay more than on the head.

Thus, the *Juvenile Forget-Me-Not* of the present year has all the valuable qualities of its predecessors; and we can unreservedly and warmly recommend it to every parent and teacher.

The contents are various, and such as are well calculated to captivate while they instruct. "The Spider," by Dr. Walsh; "The First Paper-maker," by the Rev. C. Williams; and "Anecdotes of Birds," by Mrs. Hall herself, are charming episodes of natural history. "The 'Not' Family," by the editor, is an original and clever apologue, shewing what the "Will Nots," the "Can Nots," and others of the generation of Nots do, and do not. "Frank Finlay," an American tale, by Miss Leslie, is excellent and characteristic; and

* In the slave-holding states of America, Mr. Innes tells us, "a slave-holder is prevented by law from emancipating a slave, however much he may be disposed to do so, unless he at the same time send him out of the country. The reason is, that in many cases the free negroes are a great annoyance to the community, often living by pilfering the property of their neighbours. This circumstance has proved so far favourable to the Colonisation Society, as it has been found that several persons have been willing to emancipate some of their negroes, if the Society will take upon them the expense of transporting them to Africa."

"Mabel Dacre's First Lessons," by L. E. L., a lesson to charm both old and young. The same delightful writer, as if to prove her power over every department, has illustrated two plates of common subjects, by lines of uncommon sweetness. We pass "the Dead Robin," and quote "the Evening Prayer," (a girl praying), as very touching and poetical.

"Alone, alone!—no other face
Wears kindred smile, or kindred line;
And yet they say my mother's eyes—
They say my father's brow is mine:
And either had rejoiced to see
The other's likeness in my face;
But now it is a stranger's eye
That finds some long-forgotten trace.

I heard them name my father's death,
His home and tomb alike the wave;
And I was early taught to weep
Beside my youthful mother's grave.
I wish I could recall one look—
But only one familiar tone:
If I had loved of memory,
I should not feel so all alone.

My heart is gone beyond the grave,
In search of love I cannot find,
Till I could fancy soothing words
Are whispered by the evening wind.
I gaze upon the watching stars,
So clear, so beautiful above,
Till I could dream they look on me
With something of an answering love.

My mother, does thy gentle eye
Look from those distant stars on me?
Or does the wind at evening bear
A message to thy child from thee?
Dost thou pine for me, as I pine
Again a parent's love to share?
I often kneel beside thy grave,
And pray to be a sleeper there.

The vesper bell!—'tis eventide:
I will not weep, but I will pray—
God of the fatherless, 'tis Thou
Alone canst be the orphan's stay!
Earth's meanest flower, Heaven's mightiest star,
Are equal in their Maker's love,
And I can say, Thy will be done,
With eyes that fix their hope above."

"Boyish Threats," by Miss J. Hill; "the Young Gleaner and his Cousin," by Miss Jewsbury, are clever and appropriate prose tales; while Barry Cornwall, Allan Cunningham, and others, sustain the honours of verse. Of these, Mr. Laman Blanchard furnishes us with an excellent example; it is upon the picture of a boy endeavouring to lay salt upon the tail of a bird.

"Gently, gently yet, young stranger!
Light of heart and light of heel:
Ere the bird perceives its danger,
On it slyly steal.
Silence!—ha! your scheme is failing—
No: pursue your pretty prey;
See, your shadow on the paling
Startles it away.

Hush! your step some note is giving;
Not a whisper—not a breath!
Watchful be as aught that's living,
And be mute as death!
Glide on, ghost-like, still inclining
Downwards o'er it; or, as sure
As the sun is on us shining,
'Twill escape the lure.

Caution! now you're nearer creeping;
Nearer yet—how still it seems!
Sure the winged creature's sleeping,
Wrapt in forest dreams!
Golden sights that bird is seeing,
Nest of green, or mossy bough;
Not a thought it hath of fleeing—
Yes, you'll catch it now!

How your eyes begin to twinkle!
Silence, and you'll scarcely fall;
Now stoop down, and softly sprinkle
Salt upon its tail.
Yes, you have it in your tether,
Never more to skim the skies;
Lodge the salt on this long feather—
Ha! it flies, it flies!

Hear it—hark! among the bushes,
Laughing at our idle lures!
Boy, the self-same feeling gushes
Through my heart and yours.
Baffled sportsman, childish Mentor,
How have I been—hapless fault!
Led like you my hopes to centre
In a grain of salt!

Time, thy feathers turn to arrows;
I for salt have used thy sand,
Wasting it on hopes, like sparrows,
That elude the hand.
On what captures I've been counting,
Stooping here, and creeping there,
All to see my bright hope mounting
High into the air!

Half my life I've been pursuing
Plans I'd often tried before,
Rhapsodies that end in ruin—
I, and thousands more.
This, young sportsman, be your warning—
Though you've lost some hours to-day,
Others spend their life's fair morning
In no wiser way.

What hath been my holiest treasure!
What were ye unto my eyes,
Love, and peace, and hope, and pleasure?
Birds of Paradise!
Spirits that we think to capture
By a false and childish scheme,
Until tears dissolve our rapture—
Darkness ends our dream.

Thus are objects loved the dearest,
Distant as a dazzling star;
And when we appear the nearest,
Farthest off we are.
Thus have children of all ages,
Seeing bliss before them fly,
Found their hearts but empty cages,
And their hopes—on high!"

We shall conclude with a few of Mrs. Hall's anecdotes of birds; for, truth to say, though the young sportsman could not, she has caught them finely, and laid salt on all their tails.

"I had once a favourite black hen—'a great beauty,' she was called by every one, and so I thought her; her feathers were so jetty, and her topping so white and full! She knew my voice as well as any dog, and used to run cackling and bustling to my hand to receive the crumbs that I never failed to collect from the breakfast-table for 'Yarico'—so she was called. Yarico, when about a year old, brought forth a respectable family of chickens—little, covering, timid things at first, but in due time they became fine chubby ones; and old Norna, the hen-wife, said, 'If I could only keep Yarico out of the coope, it would do; but the coope is full of weazels, and, I am sure, of foxes also. I have driven her back twenty times; but she watches till some one goes out of the gate, and then she's off again: it's always the way with young hens, miss—they think they know better than their keepers; and nothing cures them but losing a brood or two of chickens.' I have often thought since, that young people, as well as young hens, buy their experience equally dear. One morning I went with my crumbe to seek out my favourite in the poultry-yard; plenty of hens were there, but no Yarico! The gate was open, and, as I concluded she had sought the forbidden coope, I proceeded there, accompanied by the yard-mastiff, a noble fellow, steady and sagacious as a judge. At the end of a ragged lane, flanked on one side by a quick-set hedge, on the other by a wild common, what was called the coope commenced; but before I arrived near the spot I heard a loud and tremendous cackling, and met two young long-legged pullets running with both wings and feet towards home. Jock pricked up his sharp ears, and would have set off at full gallop to the coope, but I restrained him, hastening onward, however, at the top of my speed, thinking that I had as good a right to see what was the matter as Jock. Poor Yarico! An impertinent fox-cub had attempted to carry off one of her children; but she had managed to get them behind her in the hedge, and venturing boldly forth, had placed herself in front, and positively kept the impudent animal at bay; his desire for plunder had prevented his noticing our approach, and Jock soon made him feel the superiority of an English mastiff over a cub-fox. The most interesting portion

of my tale is to come. Yarico not only never afterwards ventured to the coope, but formed a strong friendship for the dog, who preserved her family. Whenever he appeared in the yard, she would run to meet him, prating and clucking all the time, and impeding his progress by walking between his legs, to his no small annoyance. If any other dog entered the yard, she would fly at him most furiously, thinking, perhaps, that he would injure her chickens; but she evidently considered Jock her especial protector, and treated him accordingly. It was very droll to see the peculiar look with which he regarded his feathered friend; not exactly knowing what to make of her civilities, and doubting how they should be received. When her family were educated and able to do without her care, she was a frequent visitor at Jock's kennel, and would, if permitted, roost there at night, instead of returning with the rest of the poultry to the hen-house. Yarico certainly was a most grateful and interesting bird.

"One could almost believe the parrot had intellect, when he keeps up a conversation so spiritedly; and it certainly is singular to observe how accurately a well-trained bird will apply his knowledge. A friend of mine knew one that had been taught many sentences; thus—'Sally, Poll wants her breakfast!' 'Sally, Poll wants her tea!' but she never mistook the one for the other; breakfast was invariably demanded in the morning, and tea in the afternoon; and she always hailed her master, but no one else, by 'How do you do, Mr. A.?' She was a most amusing bird, and could whistle dogs, which she had great pleasure in doing. She would drop bread out of her cage as she hung at the street-door, and whistle a number about her, and then, just as they were going to possess themselves of her bounty, utter a shrill scream of—'Get out, dogs!' with such vehemence and authority, as dispersed the assembled company without a morsel, to her infinite delight. I have heard of another parrot, too, that was caught up by an eagle. The parrot, in its ignorance, was quite amused at such a unique mode of conveyance, and seeing the old gardener, who had lost most of his hair, at work, exclaimed, 'Bald-pate, I ride—I ride!' 'Yea,' replied the old man, slowly raising himself; 'yes, yes, and you'll pay for it.' The story goes on farther to say, that the gardener, no way offended by the bird's uncourteous mode of address, followed the eagle to the next field, where he alighted with his prey, and there actually rescued the parrot just as the eagle began to strip him of his feathers; by which time, we may presume, the saucy bird had learned that it was not the pleasantest thing in the world to ride with an eagle. The raven, too, is a bird of humour and sagacity. There was one kept a few years ago at Newhaven—an inn on the road between Buxton and Ashbourn. This bird had been taught to call the poultry when they were fed, and could do it very well, too. One day, the table was being set out for the coach-passengers' dinner; the cloth was laid, with the knives and forks, spoons, mats, and bread, and in that state it was left for some time, the room-door being shut, but the window open. The raven had watched the operation very quietly, and, we may suppose, felt a strong ambition to do the like. When the coach was about arriving, and dinner was carried in, behold, the whole paraphernalia of the dinner-table had vanished! It was a moment of consternation—silver spoons, knives, forks, all gone! But what was the surprise and

amusement to see, through the open window, upon a heap of rubbish in the yard, the whole array very carefully set out, and the raven performing the honours of the table to a numerous company of poultry, which he had summoned about him, and was very consequentially regaling with bread. There is a story, and which I believe is fact, of two boys going to take a jackdaw's nest from a hole under the belfry-window in the tower of All Saints' Church, Derby. As it was impossible to reach it standing within the building, and equally impossible to ascend to that height from without, they resolved to put a plank through the window; and while the heavier boy secured its balance by sitting on the end within, the lighter boy was to fix himself on the opposite end, and from that perilous situation to reach the object of their desire. So far the scheme answered. The little fellow took the nest, and, finding in it five fledged young birds, announced the news to his companion. 'Five, are there?' replied he; 'then I'll have three.' 'Nay,' exclaimed the other indignantly, 'I run all the danger, and I'll have the three.' 'You shall not,' still maintained the boy in the inside; 'you shall not. Promise me three, or I'll drop you!' 'Drop me, if you please,' replied the little hero; 'but I'll promise you no more than two;' upon which his companion slipped off the plank. Up tilted the end, and down went the boy, upwards of a hundred feet, to the ground. The little fellow, at the moment of his fall, was holding his prize by their legs, three in one hand, and two in the other; and they, finding themselves descending, fluttered out their pinions instinctively. The boy, too, had on a stout carter's frock, secured round the neck, which, filling with air from beneath, buoyed him up like a balloon, and he descended smoothly to the ground; when, looking up, he exclaimed to his companion, 'Now you shall have none!' and ran away, sound in every limb, to the astonishment of the inhabitants, who, with inconceivable horror, had witnessed his descent.

"How wonderful is that instinct by which the bird of passage performs its annual migration! But how still more wonderful is it when the bird, after its voyage of thousands of miles has been performed and new lands visited, returns to the precise window or eaves where the summer before it first enjoyed existence! And yet such is unquestionably the fact. Four brothers had watched with indignation the felonious attempts of the sparrow to possess himself of the nest of the house-martin, in which ~~lay its young brood~~ of four unfledged birds. The little fellows considered themselves as champions for the bird who had come over land and sea, and chosen its shelter under their mother's roof. They therefore marshalled themselves with blow-guns, to execute summary vengeance; but their well-meant endeavours brought destruction upon the mud-built domicile they wished to defend. Their artillery loosened the foundations, and down it came, precipitating its four little inmates to the ground. The mother of the children, good Samaritan-like, replaced the little outcasts in their nest, and set it in the open window of an unoccupied chamber. The parent-birds, after the first terror was over, did not appear disconcerted by the change of situation, but hourly fed their young as usual, and testified by their unwearied twitter of pleasure, the satisfaction and confidence they felt. There the young birds were duly fledged, and from that window began their flight, and entered upon life for themselves. The next spring, with the re-

appearance of the martins, came four, who familiarly flew into the chamber, visited all the walls, and expressed their recognition by the most clamorous twitterings of joy. They were, without question, the very birds that had been bred there the preceding year."

Again we recommend the *Juvenile Forget-Me-Not*.

The Landscape Annual. The Tourist in Italy. By Thomas Roscoe. Illustrated from Drawings by J. D. Harding. Pp. 287. London, 1832. Jennings and Chaplin.

IN our No. 766, we spoke of the embellishments of this volume in the tone of encomium inspired by their beauty; so that we are now only called upon to express our opinion of its literary merits. That opinion is also very high. We think Mr. Roscoe has acquitted himself most ably; and has brought such vivid images of the history and romance of fair Italy before us, as most add greatly to his reputation as a writer of this class. The accounts of the various places to which the engravings refer are extremely judicious and interesting; the descriptions pleasing, and the anecdotes entertaining. Altogether, the *Tourist in Italy* must be a popular book, whether considered as a specimen of art, or as an example of literary talent. It is not, however, easy to illustrate this judgment by extracts—the whole might be quoted; and we rather select to keep up our system, than with the hope of enabling the public fully to appreciate the work. The following may be new to most of our readers.

"In the dawn of art, about 1285, Cimabue, one of its earliest restorers, in going through the Campagna from Florence to Vespignano, saw a shepherd boy, who, instead of attending to his flock, was busily engaged in tracing figures with a piece of pointed stone upon a rock. He stopped, and, surprised at the skill which the child evinced, asked if he would go home with him and become his pupil. The boy readily assented; and to this circumstance did Italy owe her celebrated Giotto, the father of modern painting, and Dante a friend and so-lace in his exile, whom he has extolled in his immortal poem:

*'Credette Cimabue nella pittura
Tener lo campo, ed ora ha Giotto il grido;
Sì che la fama di colui oscura.'*

Giotto, indeed, not only surpassed his master, but soon filled Italy with the fame of his works. Rome, Naples, Florence, Padua, and Avignon, abounded in the master-pieces of his hand, and in every branch of the art. His reputation induced Pope Benedict IX. to depute one of his courtiers to invite him to decorate St. Peter's; but first he was to obtain some specimens of his skill. By the way, this trusty agent selected other specimens from every artist he could find, intending to compare them with Giotto's, and, arriving at Florence, he walked into the painter's shop, where he explained the Pope's wishes, concluding with a demand to see him make a design. Giotto took his pencil, and using it like a pair of compasses, made a circle perfectly equal with his hand. Then, with a facetious air, he handed it to the courtier, observing: 'See a wonder! this is your design.' 'I must have a different kind of design to this,' returned the courtier coolly. 'Enough, and too much,' retorted the painter; 'put it up with the rest, and you will see the result.' The deputy, declaring that he would report his conduct to his holiness, in a great passion left the place, in the firm belief that Giotto was making a fool of him. He was agreeably surprised, therefore, when some wiser heads at

Rome assured his holiness there was not another artist in Italy who could do the same; and from that time came in use the popular proverb, when wishing to designate a person of the courtier's taste: 'Tu sei più tondo che l'O di Giotto,—You are more round (thick-headed) than Giotto's great O,'—the word 'tondo,' in Tuscany, being expressive both of a circle and of little wit. The poet Dante, in exile at Ravenna, hearing that his distinguished fellow-citizen was then staying at Ferrara, sent to invite him to come and join him; and he painted for the lords of Polenta several frescos in the church of San Francesco. It was here a friendship was formed between these extraordinary men, which served to soothe the grief and bitter feelings of the poet's mind. From Giotto he is said to have acquired that knowledge and skill in matters of art in which he is known to have been no mean proficient, and which may perhaps have given to his poem that vivid and picturesque force which, while striking terror to the soul of the reader, brings the shadowy forms before the eye. While at Florence, in the year 1322, tidings were received by Giotto of the death of his friend the celebrated poet—whose ashes have twice refused to rest in the bosom of his ungrateful country:—

'Even in his ashes live his wonted fires!'

as if his spirit, speaking from the urn, spurned the futile offer of being reconciled to his hated persecutors. Though in the midst of his successful and splendid career, Giotto was much concerned at this event; and some of the next works he executed for the King of Naples—comprehending the Apocalypse, and other histories, at Assisi—he is stated to have owed, from the conversations he had held with him, to the fine invention of Dante, who thus amply repaid him. So highly did the King of Naples estimate Giotto's social qualities, as well as his genius, that he would spend hours with him, while painting in his studio, delighted with his acute remarks. The king one day observing that he was determined to make him the first man in Naples, 'It was for that reason,' replied Giotto, 'that I took up my quarters at *Porta Reale*, to be ready to receive myself.' On another occasion the king said to him, 'Giotto, if I were you, I would not labour so hard this hot weather.' 'Nor I, certainly,' returned the painter, 'if I were the king.' One day, as he was completing a picture, the monarch observed in jest, 'Now, Giotto, I should like you to paint me something on a larger scale; for instance, my own kingdom.' Giotto did as he was requested; and setting to work, soon after presented the king with the painting of—an ass suffering under a heavy bastinado, which instead of resenting, the beast was busy with its paws and nose snuffing up another and larger flagellum than that he felt upon his back, as if desirous of making an exchange. On both the instruments of good order were painted the royal crown and sceptre of magisterial sway. Whether or not the king thought he had carried the jest too far, it is certain Giotto soon after set out to visit other cities of Italy."

We have only to repeat, that the *Landscape Annual* has not this year lost any of its annual charms.

Insect Miscellanies. Library of Entertaining Knowledge. London, 1831. C. Knight.

UNDER the title of *Insect Miscellanies*, we have a winding up of what has been published on the natural history of insects in the *Library of Entertaining Knowledge*. It treats more

particularly of the senses and food of these interesting tribes, of their social and domestic habits, and, with an excellent analytical chapter on their systematic arrangements, is at once more complete and amusing than any of its predecessors. Insects have, in miniature, a ganglionic or cerebral organisation as perfect as that of many of the higher animals: the structure of their heart, the distribution of their nervous system, and the complexity and fitness of their various organs of taste, smell, hearing, and vision, have always rendered their objects of contemplative admiration. Instinct, as usually defined, was surpassed in these small creatures; there was no blind impulse, no necessities of organisation or of place:

" Their tiny breasts, inspired with mighty souls,"
(*Trapp*, *Georg.* iv. 100.)

awed man into respect for the Creator of such concentrated intelligence, and lessened the pride with which he was accustomed to regard himself. The author has, we think, shewn very great judgment in avoiding any discussions on these matters, by classifying the senses under their appropriate heads, and their propensities to action under their general and more marked characteristics; thus simplifying results which must appear abstruse when we are ignorant of their causes, and rendering the metaphysical part of natural history intelligible to the youthful mind.

That insects possess such high perfection in the various faculties of touch, taste, &c. could hardly be believed, had not the multiplied observations of naturalists placed the question beyond a doubt. In the possession of the first of these senses the spider stands pre-eminent: it exhibits the power of touch in the construction of its web and the capture of its prey; the harvest spider also, by its delicacy of touch, explores the objects among which it travels. The palpi, or feelers, whose analogues are found in the whiskers of the cat, the seal, and the night-jar, and in the appendages of the lips of some fish, are also remarkable organs of touch; and from the possession of the same sense on the surface and at the extremities of their wings, insects speed their flight with greater security, as a man who approaches a wall on the dark has the impression of the air on his face. It is incorrect, however, to say that the perception of heat, or of various temperatures, is a peculiar sense: Dr. Darwin said this fact was proved by the heat of a furnace giving no pain to the nerve of the eye, while it scorches and pains the parts adjacent. The nerves of perception are distinct from the nerves of volition; as, again, those of the senses are from the nerves of touch only; and hence the mistake. It is by the quick perception of slight changes of temperature that insects are warned of a change of weather: when it is wet and windy, spiders spin only very short lines; but "when a spider spins a long thread, there is a certainty of fine weather for at least ten or twelve days afterwards." Light and electricity have also a marked influence on the economy of insects, though more strikingly on plants and animals, lower in the scale of organisation.

"Insects, it would appear, are still nicer than cattle in their selection of food, and, of course, in the acuteness of their taste. The caterpillar of the antler-moth, though it feeds on a variety of grasses, and sometimes commits such ravages in the meadows of Sweden as to endanger the lives of the cattle for want of food, does not touch the fox-tail grass; yet to us the leaves of this grass taste little, if any thing, different from some of those which it so

greedily devours. The caterpillar of the ringlet-butterfly, again, feeds only on one species of grass, the annual pos; while the caterpillar of the gate-keeper confines itself to the dog's-tail grass."

Our author relates many curious facts to prove that insects possess considerable taste; even the midge has its preferences and antipathies, like its less innocent fellow-insect—the bug.

The more beautiful insects frequent the gay and melliferous flower-bed, and they are guided in their pursuit and choice of these by the organ of smell; the fragrance, therefore, of the meadow and the mountain is not lost upon the smallest of the winged creation. From the direction of this instinct, beetles hurry to bury dead animals, ants follow the pathway from opposite colonies, and bees seek the honey-bearing plants. Mr. Rennie relates, that no butterfly, in passing over a wall fifteen feet high, at Havre de Grace, omitted to descend for the purpose of visiting the blossoms of an Alpine blue-bottle (*Centaurea montana*). There is no sense, the seat of which has been so much an object of discussion as that of smell: anatomical details will not, however, amuse the general reader, and we refer any one desirous of a lucid and careful statement of the facts to the perusal of the volume before us.

The emission of sounds more or less harmonious—the music of insects—should, we think, have been a sufficiently satisfactory proof of the existence of an organ of hearing in the same beings, even though Linnaeus and Bonnet doubted the fact. The drum of the grasshopper and the chirp of the cricket are examples of this music; and the Grecian poets so praised the music of the cicada, as to assert that it fed on dew, and lived in perpetual youth. In the spirit of banter, Aristophanes makes Cherephon ask Socrates whether gnats buzz with their mouth or tail, as Mouffet pronounced that the sound comes from the mouth, because the sound is louder when they approach than when they retire. We would not, however, from such quotations, throw ridicule on the research after the nature of the organisation which produces sound; on the contrary, the variety and the exceeding beauty of these structures must repay by their study all well-informed minds. Mr. Rennie supports the opinion, also held by Kirby and Spence, that the antennæ are the organs of hearing in insects; and these organs in crabs and lobsters, and, by analogy, in insects, he says, may perform something of the same office as Laennec's instrument called the stethoscope, which medical men use for assisting the ear to ascertain the sounds produced within the chest by breathing, speaking, the beating of the heart, and other organic movements.

The faculty of perceiving light, which belongs to animals not endowed with eyes, attains a very high degree of perfection in the insect tribe, whose eyes are oftentimes numerous, or placed in various positions, or, when single, capable of giving several images of the same object. "It may, at first sight," says our author, "appear not a little puzzling to conceive how a spider with eight eyes, a centipede with twenty, and a butterfly with thirty-five thousand facets in its two eyes, can perceive only one object; yet the difficulty is not of a very different kind from that of our own two eyes, representing only a single object and not two."

The eye of some insects is the most beautiful organ that can be examined, and infinitely surpasses all that is most exquisite in human workmanship. In the bee, the eyes are thickly covered with hair; the uvea, or paint behind

the outer coat, is of a deep purple colour: in other insects it is green, in some blue, in some black, and in others it has a very beautiful mixture of various colours. Professor Müller, of Bonn, has lately published some interesting researches on the structure of the eye in insects, which are introduced into these *Miscellanies* in a condensed form.

We shall pass over the chapters on the food of insects, making one remark on the luminosity of the ocean. Many more luminous molluscs and crustaceans than those alluded to by Mr. Rennie, have been described by naturalists; and crustaceous animals, though they do not swim well, are much more abundant than our author thinks. The gulls at the mouth of the Thames feed mostly upon a small species of luminous crustacea, which is more particularly seen on the springing up of a breeze; and in the northern seas they are still more abundant.

It is a singular fact, that insects should be actuated by feelings somewhat similar to those possessed by the higher animals—should rob and spoil, defend their homes, be jealous, revengeful, and disputative, and should war in armies,—yet such is the case. Thus bees, if the meat of one hive be spent, will assail their next neighbours, with intent to rob and spoil them of their provision: the white ants have a portion of their community set apart for the duties of war, and they exhibit the most perfect form of insect tactics. Ant-battles have been recorded from the oldest times, and none of these records possess more interest than those transmitted to us by the younger Huber, and partly recorded in this little volume, which we shall now take leave of, with the recommendation that it is one of Mr. Rennie's most successful productions, and presents at once a useful and interesting view of that branch of natural history of which it treats.

Glen Moubray: a Tale. 3 vols. London, 1831. Simpkin and Marshall; Edinburgh, Constable.

HARDENED as we are in our critical vocation, still there are some things that

"do overcome us like a summer cloud,
With an especial wonder:"

and we confess the volumes before us are in this number. An incoherent tissue of absurdities for a story; rhapsodies, whose meaning "glimmers not;" long quotations; and some particularly ridiculous love-letters;—such are the contents of *Glen Moubray*.

The Eve of St. Agnes. By Mrs. Catherine Mason, late Mrs. C. Ward, author of "Mysterious Marriage," "Cottage on the Cliffs," "Rose of Claremont," &c. &c. 4 vols. London, 1831. Newman.

MYSTERIES, love-affairs, rewards and punishments, death to one hero, and a wife to the other—(quære, which is the punishment?)—such are the contents of these pages. The work is inscribed to Lord Morpeth.

The Scottish Chiefs: a Romance. Vol. II. By Jane Porter. London, 1831. Colburn and Bentley.

WE do not think it was judicious to make two volumes, in separate publications, of this work. People do not like to wait in the middle of a story; and we therefore strongly recommend to the publishers that they adhere to their original plan of single volumes; for a deviation from it is only likely to create a prejudice against what promises to be one

of the most popular publications of the day. The illustrations to the second volume are inferior. Helen Mar has been chosen by both artists as their subject, and the coarse and heavy figure of Mr. Ferriere is just the opposite of the sweet and graceful creature imagined by Mr. McClise. The one idealises as much as the other destroys the interest of the reader. In the engravings themselves there is great room for improvement. A few interesting notes improve this edition.

The Moravians in Greenland. 18mo. pp. 320. Second edition. Edinburgh, 1831. Oliphant.

A PIOUS and pleasing account of the Moravian settlement in Greenland, and of the efforts of the brethren to convert the natives.

Ben Howard; or, the Pedlar and the Publican. Pp. 207. London, 1831. Harvey and Darton. A LITTLE work, by the author of the *Poor Child's Friend*, intended to discountenance vice and recommend virtue to the young. Our readers are aware that we are extremely difficult to please in publications of this class; for, however well intended they are, we too often find in them parts inconsistent with the whole, and statements which are apt to be misunderstood, and consequently to lead to wrong quite as much as there are passages to point to the right path. Thus, in this book, we cannot say that we approve of making the hero a thief in order to shew how much happier he is when honest: such an example might tempt to stealing, and the tempted might not have a Pedlar to win him back to virtue. In other respects the performance is most creditable and effective.

Polytechnic Library. L. Art of Glass-blowing, &c. By a French Artist. Pp. 112. London, 1831. Bumpus and Griffin.

CHEMISTS or experimentalists who may desire to become so far independent of instrument-makers as to be able to blow some of their own apparatus, will find instructions in the art in this small volume.

Rollin's Ancient History, Part I. 8vo. double columns, pp. 68. London, 1831. Thomson; Harding.

THIS is the commencement of a cheap reprint of Rollin's *Ancient History*. All that we see stated concerning the plan is, that it is to be completed in twenty-one monthly parts. We think well of the design, for this author can never be too widely diffused, or too much read.

Roscoe's Novelist's Library, Vol. IV. Peregrine Pickle, Vol. II. Cochrane and Co. G. CRUIKSHANKS' frontispiece, the tailors baffling the bailiff, is a most humorous cut; and the magician is also excellently conceived and executed. The other two illustrations have nothing particular, but serve well to illustrate the text.

Herodoti Historiarum Libri IX. Recensit et Adnotationibus Scholarum in usum instructus Carolus Augustus Steger, in Regio Gymnasio Wetzlariensi Præceptor. Gissæ, apud G. F. Hyerum. 3 vols. 8vo. in two.

M. HEYER, the publisher of this most useful and valuable edition of Herodotus, at Giessen, has favoured us by the transmission of a copy for our opinion, and we have much pleasure in responding to the call, by stating that it well deserves the popular reception it has met with in

Germany, and only needs to be known to be equally acceptable to English scholars. Professor Steger has laboured with true German diligence upon the text, which we find to be unusually correct. There is also an Index Græcatis, of great importance to the understanding of this ancient author; and the notes are ample and full of instruction. The price in Germany is, we observe, very moderate, and we presume the work may be imported at a reasonable rate into this country. Sure we are that, wherever it can be met with, it will be esteemed a treasure by the learned.

Remarks on the general Tenour of the New Testament, regarding the Nature and Dignity of Jesus Christ: addressed to Mrs. Joanna Baillie. By the Bishop of Salisbury. Salisbury, 1831, Brodie and Co.: London, Rivingtons; and Hatchard and Son.

THE learned and pious prelate whose name is prefixed to this publication has thought it expedient to defend the Christian church from the attack of Mrs. Joanna Baillie; and he has done so with all the patience, temperance, and ability, which was to be expected from his character. His arguments are, that the doctrines of the Church of England are founded on the plain evidence of Scripture; that a knowledge of the original language and of the Old Testament is indispensable to the critical understanding of controverted passages; and that Christ is distinctly shewn to be the one, true, almighty, and eternal God. The bishop points out the incompleteness of Mrs. Baillie's Scripture quotations relative to the nature and dignity of Christ; and from other quotations which he supplies and comments upon, contends that her conclusions are erroneous. We are compelled by our rule to abstain from the theological difference; but we may recommend this volume to every lover of the church and of truth.

Family Classical Library, No. XXII. Thucydides, Vol. III. London, Valpy.

A CONTINUATION of Dr. Smith the Dean of Chester's translation. It goes to Book VIII. of the Peloponnesian War.

Divines of the Church of England. No. XVII. London, Valpy.

THE fifth volume of Jeremy Taylor well sustains the utility and value of the preceding volumes.

ARTS AND SCIENCES.

FLOW OF THE THAMES: LONDON BRIDGE.

[HAVING received the subjoined letter from Mr. Riley, we took the best means in our power to be enabled to answer it satisfactorily; and as the information is of much interest, particularly to the inhabitants of London and the banks of the river above bridge, we submit the whole to the public attention.]

To the Editor of the Literary Gazette.

SIR,—In a small work lately published, *A Professional Survey of the Old and New London Bridges*, it is stated,* that "the total width of the water-way between the arches is 690 feet at all times of the tide, being 66 feet more than the old bridge afforded at high-water mark."

Now, if the water-way of the old bridge at high-water mark was 524 feet, the present water-way is only increased one-eighth; but if the water-way of the old bridge was only 450 feet at high water, as stated by Hawksmoor, who surveyed the bridge in the time of Sir Christopher Wren, the present water-way

is more than double that of the old bridge. Until this point is settled, the probable effects to be produced on the river and its shores cannot be calculated; and as I have been much engaged in inspecting and noticing the results on the River Ouse, and the outfall at Lynn, produced by a clearer water-way, the effects on the Thames is a subject of interest to me.

Can you, therefore, furnish me, through the medium of your *Gazette*, (to which I have been an occasional contributor, and of which I am a constant reader,) with the authentic measurement of the different arches, piers, and the water-way through each arch, of the present old London Bridge, both at high and low water, and at what intermediate period the tide reaches the starlings, so as to calculate with some more certainty the passage of the water? Mr. Telford in his report does not mention this.—I remain, sir, &c.

J. RILEY.

Popplewick, near Nottingham, Sept. 20.

The original old structure had nineteen arches, together with a draw-arch, making twenty openings, at the period it was first erected—in 1176. The largest span, or opening, was then thirty-five feet, with piers averaging, as they do now, from twenty-five to thirty-four feet in thickness.

In the year 1759, the pier in the middle of the river was removed, and the present centre arch turned, the old houses removed, and the roadway widened to its present state.

London Bridge, up to the middle of the year 1826, contained nineteen arches; the largest span of the centre being seventy feet, and forty-eight feet wide.

The water-way between the piers, above the starlings, was 594 feet; the solids occupied by the piers, 407 feet. The water-way between the starlings at low water, was 231 feet; and the space occupied by the piers and starlings was 700 feet.

In the middle of the years 1826 and 1827, it became necessary to remove two piers—one on each side of the river, north and south, for the purpose of relieving the water-way, at the period the cofferdams were up for the construction of the new bridge; and there consequently now only remains seventeen openings, whose width of water-way above the starlings is 542 feet; and the space occupied by the piers is 369 feet. The water-way below the starlings, at low water, is 299 feet; and the space occupied by the starlings is 632 feet.

The new bridge has a water-way of 690 feet, clear at all times of tides, and the piers occupy ninety-two feet; and the lineal high water-way through the arches and openings of the old structure, during spring tides, is about 485 feet.

LITERARY AND LEARNED.

COLLECTION OF JAPANESE CURIOSITIES AT AMSTERDAM.

MR. J. F. VAN OVERMEER FISSCHER, who was for about nine years employed in the Dutch factory in Japan, took advantage of his situation to collect this great number of curiosities, most of which are very valuable. This cabinet is better calculated than any descriptions or drawings to make us acquainted with the manners and customs of a people so interesting, in many respects, to Holland, and to give us an idea of the high degree of civilisation and of advancement in many branches of art and science which that nation has attained. The cabinet is divided into twelve departments.

The first is that of geography: it contains a number of maps of Japan; plans of the city of Jeddo; a very circumstantial travelling map of the great road from Miaco to Jeddo; and, above all, a collection of twelve maps of China, representing that empire as it existed under the several dynasties that have governed it.

The second division contains 500 volumes, printed in the Japanese language, a considerable number of which are adorned with wood-cuts; likewise a number of manuscripts, all treating of the religion, history, legislation, and language of Japan, and also on the various arts and sciences cultivated in that empire.

The third division, besides a collection of 300 very remarkable and ancient medals, contains a number of valuable lacquered articles, and other similar objects, among which there are some of very remote antiquity.

Above 600 drawings and prints, by Japanese artists, form the fourth division; and the fifth contains articles connected with the various religious sects in Japan: among them is the model of a temple, in which the style of the architecture and the internal arrangement are represented with the minutest accuracy. Here too are some remarkable animals, like that which was exhibited at Amsterdam some years ago, and which some persons then took for a mermaid. These monsters are composed with great care and art by the Japanese from parts of different animals, to serve as offerings to some of their idols.

The sixth division consists of Japanese arms and armour; the seventh, of a great collection of natural history; the eighth, of Japanese dresses and household furniture; the ninth is a complete collection of Japanese musical instruments, many of which are very magnificent, and used only at the court of the emperor, or in the palaces of the nobles.

The tenth is a rich and select collection of articles used by the Japanese in domestic life, and for household purposes.

Models of various buildings, with ten models of shops and vessels, and a number of tools used in the exercise of various arts, compose the eleventh division, in which there is also a series of pictures, each representing a Japanese workman at his work. Here, too, is a remarkable model of a copper-mine, which gives a clear idea of the manner in which the Japanese work their mines.

The twelfth division comprehends such things as could not properly be placed with the preceding; among which is a complete collection of furniture in the European fashion, all made of the most valuable lacquered work, which, though not properly a part of a Japanese collection, gives great lustre to this cabinet, and far surpasses any thing of the kind ever before seen here.

This short sketch gives but an imperfect idea of this valuable collection, which we hope will remain in the Netherlands.

FINE ARTS.

NEW PUBLICATIONS.

Traditions of Lancashire. Second Series. By J. Roby, M.R.S.L. Longman and Co.

WE have lying before us a set of the plates that are to embellish the second series of Mr. Roby's curious and interesting work; and we can justly speak of them as entitled to high praise. There are few parts of the kingdom more abounding with picturesque scenery than that which they illustrate. Mr. G. Pickering, from whose tasteful pencil the various views

have proceeded, has made the most of the natural advantages thus offered to him, and has been ably seconded by the graver of Mr. E. Finden. Among the most attractive subjects, are, "the Pile of Fouldrey"—"Rivington Pike"—"Clitheroe Castle"—"Ulverston Sands"—"Windlesham Abbey"—"the Thutch, near Rochdale," &c. We look anxiously for the author's continuation of his delightful design.

Devonshire and Cornwall Illustrated. Nos. XXIV. to XXVII. Fisher, Son, and Co.

THE embellishments of this popular publication continue to be as pleasing as ever. It is really surprising how they can be afforded at so moderate a rate.

Illustrations of the American Ornithology of Alexander Wilson and Charles Lucien Bonaparte; with the addition of numerous recently discovered Species: and including Representations of the principal Insects, Forest-Trees, and Fruits, of America. Drawn, etched, and coloured, under the superintendence of Captain Thomas Brown, F.L.S. M.W.S. &c., President of the Royal Physical Society. Folio. No. I. Edinburgh, Constable; London, Hurst, Chance, and Co.; and Moon, Boys, and Graves.

THIS splendid, though comparatively cheap, publication is intended as a companion to the letter-press recently reprinted in *Constable's Miscellany*. "The advantages," Capt. Brown remarks, "which this, the first English edition, has over the original justly celebrated work, is, that the birds of each genus are brought together, in place of being promiscuously scattered through a variety of plates containing species of different genera. I have added also representations of all the forest-trees of America, with their fruits, together with the principal insects of that country." The present Number exhibits representations of twenty-five birds, (eagles, hawks, woodpeckers, warblers, and that magnificent creature the snowy owl), thirteen forest-trees, and twelve insects; and the work, when complete (which it will be in ten Nos.), is to comprehend the whole of the American *syva*, besides every bird which has been discovered in that country. At its conclusion "a few sheets of letter-press will be given, which, in addition to the technicalities of the various birds, will contain an account of the habitations and localities of the fruits, forest-trees, and insects, of the United States, now for the first time introduced." The first No. is a fine specimen; and if the remaining portion of the work be executed with equal taste and beauty, (of which we can have no doubt, when we see that such men as Scott, Lezard, Millar, Clark, Mitchell, and Giekie, who are the best artists, in their way, in Edinburgh,—are employed in the undertaking), it will be an admirable publication, and will be well entitled to stand side by side with the celebrated *British Ornithology*, by Selby.

Views in the East; from original Sketches by Captain Robert Elliot, R.N. Part XII. Fisher, Son, and Co.

THE Caves of Ellora, those singular and extraordinary works of an unknown age, form the subjects of the three plates which embellish the twelfth Part of the *Views in the East*. Of the Bisma Kurm, Captain Elliot observes: "There is something peculiarly graceful, well-proportioned, and elegant, in the form of this cave; and it does infinite credit to the skill of its projectors: the style of it is at once simple, impressive, and grand; and it strikes the be-

holder with that degree of satisfactory wonder which can only be understood by those who have actually contemplated the object. Whoever they may have been (and it is not known) that had genius to plan, and industry to execute such a work,—however remote or approximate the age (and it is yet undiscovered) in which they laboured,—whatever may have been their design (and that is not now under consideration) in undertaking and accomplishing such a task,—they have left behind them a monument of skill, that must continue to excite the admiration of all who have any feeling for the nobler works of art, as long as the object itself remains to demand attention." "The Skeleton Group" in the Rameswur, (which, although only a second or third-rate cave with respect to size, contains, it seems, more elaborate and better-executed sculpture than any other in the whole range), is exceedingly curious.

The Retreat of a Baggage-wagon at the Battle of Naseby. Painted and etched by Henry Melling. Moon, Boys, and Graves. A VERY masterly etching; and in both design and execution full of fire and spirit.

Heath's Picturesque Annual for 1832. From Drawings by Clarkson Stanfield, Esq. Moon, Boys, and Graves.

SIX-AND-TWENTY as picturesque and beautiful views of cities, towns, cathedrals, palaces, fortresses, bridges, mountains, plains, lakes, passes, &c., principally in Italy and Germany, as ever came under our critical inspection. Those who may suppose that, because they are all from the pencil of a single artist, they must necessarily possess a monotony of character, will be very agreeably disappointed. Mr. Stanfield has communicated to them great variety. In some he has concentrated his light, in others he has diffused it. Some he has represented in broad day, others under the influence of the setting sun. In short, he has availed himself of all the resources with which his talents and experience have so amply supplied him, to impart to every one of the scenes which he has here treated a distinct and peculiar interest. When we mention the names of J. B. Allen, R. Brandard, J. Carter, S. Fisher, E. Goodall, C. Heath, T. Jeavons, H. Jorden, W. Miller, W. Radclyffe, J. Smith, W. R. Smith, R. Wallis, and J. T. Willmore, as the engravers of the various plates, it must be unnecessary to add that their execution is of the highest excellence.

The New Sporting Magazine.

WE have proofs of the embellishments of the New Sporting Magazine for August, September, and October; and they do the proprietors of that publication, and the artists engaged in it, the highest credit. In particular, we have never met with two little plates executed with more truth, force, and spirit, than *Racing—the Starting Post*, engraved by J. R. Scott, from a picture by A. Cooper, R.A.; and *The Duke of Portland's Yacht Pantaloon, sailing with Sir E. Codrington's Fleet*, engraved by W. R. Smith, from a painting by J. C. Schetky, Esq.

Proofs of the Plates of Ackermann's Forget-Me-Not for 1832.

MR. ACKERMANN'S *Forget-Me-Not* bears the same relation to the English Annuals that the *Iliad* bears to Poetry. We trust that our worthy Teutonic friend will feel the dignity of this comparison of him to Homer; and that when he reads it, to use the words of Curran with reference to Fox, "a smile will ripple over the broad and calm Atlantic of his coun-

tenance." In the volume, which is on the eve of publication, a tasteful ornamental frontispiece introduces the following embellishments.

Triumph of Mordecai. J. Martin del., E. Finden sculp. A fine specimen of Mr. Martin's skill in grouping immense assemblages of human beings, and in grand architectural composition.—*The Frosty Reception.* Painted by R. W. Buss, engraved by S. Davenport. Of the picture we spoke with the praise which it deserved when it was exhibited last year at the Suffolk Street Gallery. Mr. Davenport has done it great justice.—*Don Juan.* J. Holmes pinx., W. Finden sculp. Very like Lord Byron, indeed. But is not Mr. Holmes apprehensive of a visit from the noble poet's ghost for the identification?—*Toku, on the Godavery.* W. Purser del., J. Carter sculp. Beautiful oriental scenery, executed with great clearness and transparency.—*La Pensée.* J. Holmes pinx., Mrs. Hamilton sculp. A penny for your thoughts! The plate does the fair engraver exceeding credit.—*Uncle Toby and the Widow.* H. Richter pinx., C. Rolls sculp. The vivid recollection we entertain of Mr. Leslie's exquisite picture, will for some time render us too prejudiced fairly to criticise any other work from the same subject.—*Mariana.* Sir T. Lawrence pinx., R. Graves sculp. A graceful portrait, charmingly engraved; the drapery in particular.—*The Thunder-storm.* J. Wood pinx., W. Finden sculp. Pretty, but rather theatrical.—*The Disappointment.* H. Corbould pinx., S. Davenport sculp. Who can help sympathising with the forsaken damsel? The clowns at the maypole have neither taste nor gallantry.—*Mayence.* S. Prout pinx., J. Carter sculp. A pretty little scrap of Prout.—*The Stage-struck Hero.* W. Kidd pinx., T. Engleheart sculp. Bravo! bravo! bravo! Can we end better?

Proofs of the Plates of Ackermann's Juvenile Forget-Me-Not for 1832.

NINE pleasing prints. Our favourites are:—*The Ballad.* A. Farrier pinx., W. Chevalier sculp. A beautifully composed and sweetly finished little rustic group.—*Returning from Market.* W. Shayer pinx., J. Carter sculp. Very like Gainsborough. Is there higher praise?—*The Shepherd's Boy.* H. Warren pinx., H. Rolls sculp. The figures are interesting, and the solitude of the mountainous back-ground is finely characteristic.—*Abbeokuta.* T. Uwins pinx., W. R. Smith sculp. An admirable union of sublimity and picturesque beauty.

Illustrations of Friendship's Offering, for 1832. Smith, Elder, and Co.

WE have not yet seen the text of this publication (indeed, we believe it is not quite completed); but if its merits prove equal to those of the graphic embellishments, the work will be, as usual, an "Offering" which may be presented by one "Friend," and accepted by another, with mutual gratification. Subjoined is a brief notice of them!

Lady Carrington. Engraved by C. Rolls, from a picture by Sir T. Lawrence. Elegant in character, and beautiful in execution.—*The Fairy of the Lake.* Drawn by H. Richter; engraved by E. Finden. Highly imaginative and original in its conception.—*The Poet's Dream.* Painted by R. Westall, R.A.; engraved by J. Goodyear. Who would not be a poet, to be so attended in his sylvan stesla!—*The Embarkation.* Drawn by J. Whicheo; engraved by R. Brandard. A charming little rival of Claude.—*The Orphan.* Painted by

J. Holmes; engraved by H. C. Shenton. A sweet English-rustic composition. We wish all orphans were as well off.—*Expectation.* Painted by E. C. Wood; engraved by W. C. Finden. Rich and tasteful; but singularly coincident in composition and arrangement with Mr. Parrie's "Bridemaid."—*The Greek Mother.* Painted by H. Corbould; engraved by H. Rolls. An expressive and classical group.—*The Dismal Tale.* Painted by T. Stothard, R.A.; engraved by H. C. Shenton. The tale may be dismal, but there is something very cheery in the social little assemblage of listeners.—*The Palace.* Drawn by W. Purser; engraved by E. Finden. Gorgeous in forms and in effect.—*Myrrha and Myrto.* Painted by J. Wood; engraved by T. A. Dean. The ladies would be rather tall if they were to rise from their recumbent position. It is, however, an elegant and graceful composition; and the style in which it is engraved is singularly rich and mellow.—*The Prediction.* Painted by A. Johannot; engraved by C. Rolls. A favourable prophecy, we will be bound. The effect is very pleasing.

CORONATION: CAVALCADE PROCESSION.

WE are gratified to hear that Mr. R. B. Davis, the Animal Painter to the King, has it in command from his most gracious Majesty to paint a series of pictures illustrative of that splendid spectacle, than which nothing more striking in character and effect has ever appeared in this, or, we believe, in any country. With the studies already made, his Majesty has been pleased to express his entire satisfaction. We have no doubt that both as a work of art and an historical document, the subject will be found in every point of view of the highest interest.

DRAMA.

DRURY LANE.

THIS theatre opened on Saturday with the *Honeymoon*, in which three new performers made their first appearance; *imprimis*, a Mr. Jones from Edinburgh, where he has been a favourite for many years. He is a pleasant actor, with a good deal of mannerism, and certainly an excellent addition to the Drury Lane company. *Secundo*, Mrs. Bendel, a lively actress; and last, a Miss Kennett, who played the little part of *Zamora* with great sweetness and simplicity, and was much applauded. Miss Philips was the *Juliana*, and Mr. Wallack the *Duke Aranza*, of the night. Miss Philips cannot play comedy. In all the first scenes she was too boisterous, but in the simple and serious parts very delightful. Wallack played the Duke only tolerably. A Miss Gordon made her first appearance on these boards in the slight part of *Ottavia*, in the *Brigand*; but was so agitated all through, that it was impossible to judge of her merits.

On Tuesday *Werner*, and on Thursday *Alfred*, permitted of noble displays of the histrionic powers of Macready. Both were efficiently cast, and received with the applause they so well deserved.

COVENT GARDEN.

THIS theatre opened on Monday with *Hamlet*; *Hamlet* by Mr. Young; and never did this accomplished performer acquit himself more perfectly.

THE ADELPHI

OPENED with a new melo-dramatic piece, called the *Sea Serpent*—a nice horrible piece, in

which Yates, Mrs. Fitzwilliam, Buckstone, O. Smith, Miss Daly, and Hemmings, played admirably; and there is some pleasing music by Rodwell. We must not forget the Serpent himself, who acted with great effect: the real Boa constrictor would do well to go and study him as an example. Truly, the audience seem determined to be amused at this theatre. It was quite delightful to see such a set of merry faces, and to hear the peals of mirth during the whole evening. The *Sea Serpent* was announced for the next night amid great applause. In the second piece, *Was I to blame?* Yates and his wife kept the audience in a roar of laughter. To any one who is inclined for a downright evening's amusement, we again and again cordially recommend the little Adelphi.

OLYMPIC.

THIS beautiful little theatre opened on Saturday last, and was crammed as soon as opened. Before the rising, or rather drawing, of the curtain, (for it flies apart in a novel and graceful manner,) scarcely a peep of the stage was to be obtained. After "God save the King," which was exceedingly well sung, we gave up all hopes of seeing the performance, and therefore retired, consoling ourselves for our own disappointment by the consideration of the success of the fair lessees. On Monday we returned to the charge, and were gratified by the excellent acting of Liston, in an adaptation of M. D'Espagny's clever drama of *Dominique*, which has here obtained the cognomen of *Talk of the Devil*. M. D'Espagny's three acts have subsided into two, and we think the piece gains by the loss. Liston is himself in the second act, and some other very clever person in the first. Squad acting and "admirable footling" go hand in hand in this new effort of our popular comedian; and those who can truly appreciate either, will not regret a squeeze at the Olympic. Mr. C. Horn and Mr. J. Bland have given new life to the old favourites of last season, the *Charles Spinks* and the *Olympic Revels*. Bland, as *Apollon*, in the latter, is most especially entitled to our praises and congratulations. Madame Vestris sang and looked as charmingly as ever, and has captivated, we perceive, to add to the very many pretty faces which the female portion of her company boasted last season.

VARIETIES.

Astronomical Cards.—One of those ingenious inventions to render the acquisition of science an amusement for youth. Mr. M. A. Ryan has here contrived three games of astronomy, viz. the planetary, the zodiacal, and the game of the constellations. The players take the places of the sun, the planets &c.: on their answers to questions depend the forfeits and rewards. We can safely recommend these cards to our young friends, who may gain much information from them.

Literary Fund: the late Mr. Strahan. During his life-time this philanthropic and benevolent individual presented a thousand pounds to the Literary Fund; not content with which most liberal donation, he has by his will bequeathed another thousand pounds to the same excellent Institution. This is to be free of the legacy duty, and does honour to the memory of Mr. Strahan, who, well acquainted with the distribution of this charity, knew that he could not leave a blessing where it would be better bestowed.

King's College.—The ceremony of the public opening of the King's College is to take place

to-day; and will, no doubt, be very impressive and interesting, though we have seen no programme of the proceedings. Our readers may refer to the *Lit. Gaz.* of the 8th of May, 1830, No. 694, for an engraved elevation of this fine structure, and for a detailed account of its plan and arrangements. The school, in six classes, under the Rev. J. R. Major, M.A. as head master, and the Rev. J. Edwards as second master, will now commence. One of the chief features, both in the school and college, is "Religious and Moral Instruction, in conformity with the principles of the established Church." Public examinations and lectures also form part of the system.

The Amulet.—This volume for 1832, together with its beautiful collection of engravings, reached us too late for a review in this week's *Gazette*. We cannot, however, allow our sheet to go to press without expressing the high satisfaction we have derived from both.

Early closing of the Theatres.—We have to notice with our hearty commendation the measures taken (especially at Drury Lane) for bringing the performances to a conclusion about half-past eleven o'clock. We have often advised this improvement; and the proprietors may depend upon it, that many persons will now be induced to visit the theatre who were previously kept away by the late hours, which made the seeing of a play impossible to any one residing at a distance, except at the expense of a night's rest.

Tribute to the Memory of George III.—The committee nominated to carry this design into effect have decided upon an equestrian statue, in bronze, of our revered monarch. It is to be executed by Mr. Matthew Wyatt, the original projector of this grateful memorial, and whose models of horses for it attracted so much just admiration. A desirable situation in the metropolis will be prepared for this work of art; and we trust as fine as it is likely to be a lasting monument will be produced.

Periodicals: the Press.—A journal in Turkish and French is about to be published at Constantinople. M. Blaquere, the editor of the *Courier de Smyrne*, is, it is said, to conduct the French portion, while the Turkish part is assigned to Esad Effendi, the historiographer of the empire.

The new Volcanic Island.—The last accounts of this island, contained in the *Semaphore*, state that the eruption has ceased, and that the crater is now filled with boiling water, from which a sulphurous smoke continues to issue. The island is chiefly formed of a spongy lava and puzzolane. The brink of the crater is thirty feet in height at the lowest part, in other places eighty feet, and in the centre 200 feet. It is easy to land on the south-west side. Smoke issues from several points of the sea around.

Machine for saving Lives at Sea, &c.—A Mr. Canning has invented a very simple but a very effectual apparatus for saving the lives of sailors, &c. from wrecks at sea. It consists of spars, booms, or any similar materials always to be found on board of vessels, fastened together with ropes, and made additionally buoyant by means of barrels.

The March of Cockneyism.—The following inscription,

"BRITANNIA'S GLORY
IS TRUE BLUE,"

is to be seen on the door and sides of Blanch's Fulham omnibus; in which it might, therefore, seem very expedient for our friends of *Cockayne* to travel in search of villars, when in want of such places.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. 1, Oct. 2.]

Mr. Murray has just issued a prospectus of a complete and uniform edition of the Works of Lord Byron, with his Letters and Journals, and Life by Moore. The publication is to commence with the new year, and to be completed in fourteen monthly volumes, about the size of the Waverley Novels, and with frontispieces, and vignette title-pages, engraved on steel, after original designs by eminent artists. Mr. Murray, in his announcement, that the copyright to the matter to be contained in this work has cost him upwards of £25,000; we like the design so well, we could almost predicate that it will repay this large sum. The specimen of engraving, Constantinople, by E. Flinden, from a drawing by Stanfield, is very pretty; and the typography clear and handsome.

A Series of Landscape Illustrations of the Works of Lord Byron, to accompany Mr. Murray's new edition: they will be engraved by the most eminent Artists, and appear in a similar manner to the Landscape Illustrations of the Waverley Novels.

Sketches of the Principal Events connected with the History of Modern Europe; in which their influence on the interests, happiness, and morals of Society, are particularly considered. By the Rev. H. G. O'Donnoghue, A.M.

In one volume, uniform with Wordsworth, Selections from the Poems of Southey.

Reflections on the Politics, Intercourse, and Commerce of the Principal Nations of Antiquity, translated from the German of A. H. L. Heeren. We rejoice to find that this admirable work is about to appear in an English translation. Africa—comprising the Egyptians, Ethiopians, Carthaginians, &c., is the commencement.

The Usurer's Daughter, by one of the Contributors to Blackwood's Magazine.

LIST OF NEW BOOKS.

Campaigns and Cruises in Venezuela, &c., 3 vols. 12mo. 21s. 6d. Illustrations of the Literary Souvenir, 1832, imp. 4to. 11. 10s.; colomb. 4to. 3s. 6d. in portfolio. Hennell's Forms of Declarations, 8vo. 7s. 6d. bds. Description of the Contents, Objects, and Uses of the Public Records, 8vo. 5s. bds. Elliott's Amusements for Little Girls, 12mo. 2s. 6d. bds. Longitude... 0 3 51 W. of Greenwich.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

We should be much obliged to J. C. C. for any communications.

The *Literary Gazette* does not give an obituary. Touching the letter dated "University Club, Oct. 8," we can only say, that it has two very obscure recommendations—first, we do not know whom it is from; secondly, we do not know what it is about.

The *fat justitia* has been done upon *Glen Mouney* because we received the author's appeal for forbearance. We are under a planet which compels us to speak truth; and therefore we can only hope that, as there were causes operating against this first and unpractised attempt, greater merit and success may attend any future effort.

ADVERTISEMENTS.

Connected with Literature and the Arts.

TO ARTISTS, ARCHITECTS, and DRAFTSMEN.—Since the death of Mr. Langdon, the late surviving Partner of Messrs. Brookman and Langdon, the close attention has been given to the Manufacture of Drawing Pencils in Cedar by S. Mordan and Co., who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing those objections and annoyances so frequently complained of in Drawing Pencils. All who wish to be satisfied as to the genuineness of these Pencils, may see them manufactured at No. 29, Castle Street, Finsbury, which establishment now has the honour, exclusively, to supply all the Government Offices.
Sold retail by all respectable stationers, &c. throughout the United Kingdom. S. Mordan and Co.'s name is on each Pencil.

ARTISTS and others are respectfully invited to inspect the very extensive and elegant Stock of Or-Molu Frames, Mats, and Morocco Cases for Miniatures, &c., which are manufactured in the most superior manner by W. Miers, No. 111, Strand; Master, by Appointment, to Her Majesty.
A liberal allowance is made to Artists and to the Trade, and on Country and Foreign Orders.
111, Strand, nearly opposite to Moxter Hall.

Now ready.
THE PROOF PLATES to HEATH'S PICTURESQUE ANNUAL, from Drawings by Clarkson Stanfield, engraved by the most celebrated Engravers, consisting of Twenty-six highly-finished Plates, in a Portfolio.
Plain Proof, 5s. 2s.; India Proof, 5s. 2s.; before letters, 4s. 4s.

Also,
The Proof Plates to the Keepsake for 1832, consisting of 17 beautiful Plates, engraved in the most highly finished manner.
Plain Proof, 5s. 2s.; India Proof, 5s. 2s.; before letters, 4s. 4s.
In a Portfolio.

Published for the Proprietor, by Moon, Boys, and Graves, 6, Pall Mall; to whom Orders are respectfully requested to be sent.

MUSIC.

Important Musical Announcement.
Just published, dedicated to Her Majesty on her Coronation.
SONGS of ALMACK'S, illustrated with Portraits of the Queen and the Female Nobility, after Sir William Beechey and Sir Thomas Lawrence. The Poetry by F. W. N. BAYLEY, Esq. The Melodies by H. R. Bishop and J. Addison. The whole arranged, with Symphonies and Accompaniments for the Piano-forte, by J. Addison.
Each Song in this work tells some incident in the life of an illustrious character, which has, at one period or other, taken place in the Almack's Rooms. The following are the Contents:

1. A Rose dropped from her Bosom. Character, the Hon. Mr. —.
2. He dances with another now. Col. S.
3. She is up and away. The youngest Daughter of Sir G. —.
4. The Hall is large and light. Lord L.
5. My Lord trends lightly o'er the Floor. The most Marquess!
6. She leans upon her Mother's Arm. The Debutante of 1832.
7. Why does Young Love seize us? A Younger Brother.
8. My Heart is all alone. The Bachelor Duke.
9. O no, Papa, it cannot be! Lady N.
10. Do you see you lovely Woman? Lady Y.
11. Where in that Mazourka graceful. Lady L., Countess G., and Lady D.
12. He passes her in sorrow. Lord S. Goulding and D'Almaine, Bobo Square.

BOOKS PUBLISHED THIS DAY.

Dent and Barker's Lexicon.
In 1 thick vol. large 8vo. price only 11. 5s.
A GREEK and ENGLISH LEXICON, for the Use of Schools and Colleges; containing a variety of Critical, Philological, and Scientific Matter not hitherto found in any Greek Dictionary. Also, an English and Greek Lexicon, comprising a number of Idiomatic Phrases, for the Use of more advanced Students.
Printed for Macintosh and Stewart, Edinburgh; and Simpkin and Marshall, London.

Dr. Blund's Philosophical Problems.—In 8vo. 10s. 6d.
PROBLEMS in the DIFFERENT BRANCHES of PHILOSOPHY, adapted to the Course of Reading pursued in the University of Cambridge.
By M. BLUND, D.D.

Late Fellow of St. John's College, Cambridge, Author of "Algebraical Problems," &c.
Whitaker, Treasurer, and Co. Ave Maria Lane.

Also may be had,
A Key to the Algebraical Problems; containing the Solutions of all the Equations and Problems in the Appendix to the fifth edition. 8vo. 6s.
Each Sequence of some unauthorized attempts having been made to publish "a Key" to part of the Problems, the Author has been induced to prepare this complete copy of his own Solutions, which is now offered to the public.

The Waverley Novels.—New Edition.
Royal 18mo. price 5s. each vol. cloth boards.

TWENTY-NINE VOLUMES of the Work

have appeared, and comprise—
Waverley
Guy Mannering
The Antiquary
Rob Roy
The Black Dwarf
Old Mortality
The Heart of Mid-Lothian
The Bride of Lammermoor

The Legend of Montrose
Ivanhoe
The Monastery
The Abbot
Kenilworth
The Pirate
The Fortunes of Nigel
And

Peveril of the Peak, the Second Volume of which is published this day, illustrated by Beaulieu and Fraser.
* The above Volumes contain Sixteen New Introductions by the Author, besides copious Notes to each Volume.

Portrait of Sir Walter Scott, painted in 1830, by John Watson Gordon, Esq. The Engraving from this Portrait is far advanced, and will be given with the First Volume of St. Romain's Well, which will appear in February, 1833.

Waverley Novels.—New Issue.

Volume Tenth of the New Issue, comprising Part of Old Mortality, is also published this day.
* This New Issue has been found very convenient to Subscribers, who wish to commence with Waverley, and have the Work from the beginning in monthly deliveries, without paying at once for all the Volumes of the First Issue which have already appeared.

Printed for Robert Cadell, Edinburgh; and Whittaker and Co. London.

Who have lately published,

1. Capt. Basil's Fragments of Voyages and Travels. 8 vols. 15s. Plates.

FOREIGN QUARTERLY REVIEW,

No. XV.

1. Danish Drama; Oehlenschläger.
2. Foreign Policy of England.
3. Lettish Popular Poetry.
4. Niebuhr's Roman History, Vol. II.
5. Russian Novels and Novellists; Bulgarrin.
6. Ancient Municipal Institutions of France.
7. Spain.
8. Toulton's History of the Roman Emperors.
9. Victor Hugo's Roman Drama.
10. Low German Language and Literature.

Notice to Correspondents: Mr. Thos. Taylor and Professor Lobbeck.

No. XVI. will be published in October.

"The Fifteenth Number of the Foreign Quarterly Review has just made its appearance, and maintains the high character for talent and industry which the work has already won from the world of perfect justice. We may say with perfect justice, that a reader of good education and literary taste can take up no other periodical with a better prospect of entertainment and information."—*Spectator*.

"We extract from an exceedingly able article in the Foreign Quarterly Review, a specimen of Niebuhr's statement on the subject of the Agrarian Law, &c."—*Examiner*.

"We are gratified to observe that this admirable periodical continues to be conducted with unabated zeal and industry. As a whole, we do not hesitate to pronounce it the most interesting and valuable periodical of the day. Whether we consider the objects which it has in view, or the ability which it brings to its task, or the peculiar character of the subjects it discusses, we must certainly give it as our opinion, that the Foreign Quarterly has no rival in this country. We of course do not mean to assert that it is not surpassed by some of its contemporaries, in particular points; hence, we are not disposed to be fond of it on matters of literary interest—so far, especially, as these bear upon the progress of foreign countries, both in mind and morals."—*Edinburgh Evening Post*.

"Vires acquirit eundo"—the Foreign Quarterly improves upon every number. The interest and the amusing relief which each other in fine harmony. It is difficult, where all is good, to fix upon the best; our favourable opinion, however, preponderates towards the review of Niebuhr, which is conceived in a philosophical spirit akin to the original. It is, however, from the article entitled 'Foreign Policy of England,' that we have selected our specimen of the number. The character there drawn of Lord Castlereagh is the only one we have met with, in the most distant degree, approaches to the original."—*Edinburgh Literary Journal*.

"This most useful periodical loses nothing of its wonted spirit and talent. The present number contains some excellent articles, among which we may mention those on Oehlenschläger's Danish Drama, on the popular poetry of the Letts or Livonians, and on the Ancient Municipal Institutions of France. The article, however, which has interested us most, is the review of the second volume of the new edition of Niebuhr's Roman History, which we have a brief, but clear and instructive exposition of the author's peculiar views and conclusions, which have given an entirely new aspect to a considerable portion of the Roman history."—*Scotsman*.

"In the work now before us, the acumen of the critic is so happily blended with the refined taste of the scholar, the profound reflection of the politician, and the intelligence of the historian, that we may safely pronounce it one of the most valuable and varied sources of intellectual entertainment and general information, to be found in the whole range of periodical literature."—*Christianity Journal*.

"Several of the articles in this number—that, for example, on the second volume of Niebuhr's Roman History—are among the best we have seen in any periodical."—*Edinburgh Courier*.

"None of our periodicals, with the exception of the Westminster Review, appear to us any thing like the business, the industry and precision of this work. In the present dearth of literary novelties, it is quite refreshing to meet with a No. of such varied interest."—*Glasgow Free Press*.

"The character of this number is not doubtful. For variety of subjects, extent of information, and the clearness with which the results of patient research are communicated, it is unique."—*Derbyshire Courier*.

"There is not one of our periodicals that has more completely fulfilled the high promise with which it started, than the Foreign Quarterly Review. We can assure our readers, that whether they wish instruction or pleasure, there is no where that they will be more fully gratified than by a perusal of the Foreign Quarterly Review."—*Perthshire Advertiser*.

"This is an unexceptionable number of a periodical which has deservedly attained a high rank in literature. It contains a judicious mixture of grave and gay subjects, and displays not merely a more intimate acquaintance with, but also a sounder appreciation of the literature of almost every country in Europe, than we had previously supposed would have been found in English writers."—*Scots Times*.

"The merits of this work are so peculiar, novel, and of such a high order, that scarcely any criticism could do adequate justice to them. The articles of this number are full of the highest interest, and are as admirable in point of selection, as they are, each and all, masterly handled. That on the Foreign Policy of England will be read with the utmost interest at the present moment."—*United States*.

Of the Publishers may be had,

All the preceding Numbers of this popular Journal. Nos. I. to X. price 7s. 6d. each; Nos. XI. to XV. 6s. each. And also the Ten Numbers of the Foreign Review, 6s. each.

Price 12s. much improved and enlarged, the 3d edition, illustrated by Plates, of

A MANUAL of MIDWIFERY; or, Compendium of Gynecology: comprising an Account of the Symptoms and Treatment of the most important Diseases of Women and Children, with the Management of the various Forms of Parturition.

Printed for Renshaw and Bash, 55, Strand, near Essex Hall. A work requiring no information.—*Good's Study of Medicine*, by Professor S. Cooper.

Price Six Shillings.

New Burlington Street, Oct. 8, 1831.

IMPORTANT WORKS COMPLETED.

Messrs. Colburn and Bentley beg to acquaint the Public, that the following Works are now completed by the last Volumes; and Purchasers of the former Volumes are requested to send their orders for the completion of their Sets to their respective Book-sellers.

Dr. Doddridge's Diary and Correspondence, Vol. V. containing his Sacramental Meditations.
"We know not when, if ever, we have perused volumes of the description of these now before us, with more intense curiosity, amusement, and instruction."—*Literary Gazette*.

Evelyn's Memoirs, Vol. III. in Quarto, comprising his Miscellaneous Writings; new first collected and edited, with Notes. 21s. 6s. boards.

The miscellaneous writings of the philosopher and naturalist, Evelyn (most of which are extremely rare), are here presented to the public in a quarto volume, to range with his "Diary and Correspondence." The tracts forming the present volume are, more or less, on subjects of great interest, including lively pictures of the manners and amusements of his time; Memoirs, Political, Domestic, and Religious; Tracts on Art, Agriculture, Architecture, Art, Science, &c. &c. in all of which the sound intellect of this amiable and high-minded English gentleman will be traced.

D'Israeli's Commentaries on the Life and Reign of Charles I. King of England. Vol. V.
"Another delightful book added to the former productions of this esteemed writer, full of curious personal and political history."—*Literary Gazette*.

Godwin's History of the Commonwealth of England, from its commencement to the Restoration of Charles II. Vol. IV.
"This work is a solid proof of great endeavors and abilities."—*Literary Gazette*.

Conversations of Literary Men and Statesmen. Edited by Walter Savage Landor. Vol. III.

The Reminiscences of Henry Angelo. The Second and concluding Volume.

This work contains numerous original anecdotes and curious traits in the personal history of many noble and illustrious characters. The book abounds not only in piquant matter relating to persons of rank, but of talent also; for the elder Angelo's intimacy with Gibbon, as well as with Keats, Keats, Keats, &c. made his house, in Carlisle Street, for many years the rendezvous of Sir Joshua Reynolds, Garrick, the Shermans, the Linleys, Gainsborough, Foote, Bach, &c. &c.

BLACKWOOD'S EDINBURGH MAGAZINE, No. CXXXVI. for October 1831.

1. Passage from the Diary of a Physician, Chap. XII.; Mother and Son; a Word with the Reader at Parting—2. On Parliamentary Reform and the French Revolution, No. X.; What is the Hill now?—3. Extracts from an Unpublishable Story, Chap. I. Orange Processions; Chap. II. Assassins and Representatives; Chap. III. Inquiry into the Causes of the Poor; Moore's Lord Edward Fitzgerald—4. The Lunatic's Complaint, by Deila—5. The Magic Mirror, by the Elrick Shagbush—7. Ignoramus on the Fine Arts, No. III.; Hogarth, Revick, and Green—8. Homer's Hymns, No. III.; Apollo—9. Toff's Annals and Antiquities of Hajat-han—10. Marguerite of France, by Mrs. Hemans—11. The Freed Bird, by the Same—12. Lines written on Tweedside, Sept. 18, 1831—13. What should the Poem be?

Printed for William Blackwood, No. 45, George Street, Edinburgh; and T. Cadell, Strand, London.

New Burlington Street, Sept. 1831.

INTERESTING WORKS COMPLETED.

Messrs. Colburn and Bentley having lately completed the publication of the following Works, Purchasers of the earlier Volumes are requested to send their orders for the perfecting of Sets to their respective Book-sellers.

Memoirs of the Empress Josephine. Vol. III. comprising her Private Correspondence with Napoleon and other celebrated Persons. Edited in French and English.
"A curious and entertaining piece of domestic biography of a most extraordinary person, under circumstances almost unprecedented."—*New Monthly Magazine*.

Memoirs of the Countess de Genlis. Written by herself. Vols. VII. and VIII. Editions in French and English.
"This work will be found to abound in anecdotes of the most eminent literary and political characters, who figured at the latter end of the eighteenth and the commencement of the nineteenth centuries."

The Duke of Rovigo's Memoirs. Vol. IV. comprising the period of the Battle of Waterloo, and the Entry into Allied into Paris. Edited in French and English.
"These Memoirs are invaluable."—*Literary Gazette*.

Napoleon's own Memoirs. Dictated at St. Helena to the Generals who shared his Captivity, and published from the original Manuscripts, corrected by himself. The Fourth Edition, making altogether 7 volumes. Editions in French and English.

"On these sheets are traced events that will never be forgotten, and will decide the judgment of posterity. It is the book of life or death to many whose names are recorded in it."—*Opinion of Les Cases in his Journal*.

Conversations of the Emperor Napoleon with the Count de las Cases. Parts VII. and VIII. Editions in French and English.
This Work is universally acknowledged to form the most perfect epitome of the character and opinions of this extraordinary man extant.

"It is all pleasing, and always interesting."—*Athenæum*.
 "A suitable companion to the volumes of Miss Mitford."—*Leader*.

By CHARLES PARKER, Architect.

Printed for James Carpenter and Son, Old Bond Street.

The Garrick Papers, printed uniformly with Evelyn and Pepsy. In 1 vol.

DAVID GARRICK'S PRIVATE CORRESPONDENCE with the most celebrated Persons of his Time, now first published from the Originals.

This highly interesting and important work comprises upwards of Two Thousand Letters, from Persons of the greatest eminence in the Political, Literary, and Dramatic World. Among other Names, besides those of Bishop Warburton, the fosterer of Warburton—Burke—Johnson—Hume—Gibbon—Sir Joshua Reynolds—Goldsmith—Robertson—Junius—Beattie—Churchill—Mason—Cumberland—Boswell—Colman—T. and J. Watton—Dr. Burney—Sheridan—Murphy—Dr. Hoadly—Mrs. Montagu—Mrs. Cowley, &c.

"When we consider the vast space that the first actor of ancient or modern times occupied, during his busy career, in the world's eye—when we remember that, from the first year of his appearance in London, in 1741, down to the moment of his retirement from the stage, in the year 1776, he was constantly before the public—that during this protracted period he was on terms of more or less intimacy with all the wits, the illustrious, the patriotic, or great Britain—that he was the favourite of Dr. Johnson, the friend and companion of the celebrated Lord Camden, the associate of Quin and Foote, and Barry and Henderson, the protégé of Pope, the correspondent of Bishop Warburton, the fosterer of the early genius of Sheridan and Siddons;—when we remember all this, we can readily comprehend the interest that, even at this comparatively distant period, must be attached to the biography of such a man:—the present volume, we repeat, will not disappoint such expectations. It is introduced by a well-written Memoir of Garrick, and contains his voluminous correspondence with all, or nearly so, the illustrious characters of his time. The letters of Bishop Warburton, in particular, are uncommonly entertaining and clear upon many points in the great actor's life hitherto obscure and unexplained."—*Sun*. Henry Colburn and Richard Bentley, New Burlington Street.

Dedicated to the Duke of Devonshire.

On the 1st of Oct. was published, the Fourth Number of **MEMOIRS OF THE BEAUTIES OF the COURT OF KING CHARLES II.** By Mrs. JAMESON.

New Work on the Peerage, Extinct, Dormant, and in Abeyance.

A necessary Companion to all other Peerages. Nearly ready for publication, beautifully printed in double Columns, uniformly with Burke's Peerage and Baronetage.

A DICTIONARY OF THE PEERAGES

of ENGLAND, SCOTLAND, and IRELAND, Extinct, Dormant, and in Abeyance.

By JOHN BURKE, Esq.

Author of a General and Heraldic Dictionary of the Peerage and Baronetage of the British Empire, &c. &c.

This work, formed on a plan precisely similar to that of Mr. Burke's very popular Dictionary of the Peerage and Baronetage, will comprise the whole of the Peerages of the three Kingdoms which have been suspended or extinguished since the Conquest, particularizing the members of each family, in each generation, and bringing the lineage, in all possible cases, through either collateral or females, down to existing houses. It will connect, in many instances, the new with the old nobility; and it will in all cases show the cause which has influenced the revival of an extinct dignity in a new creation.

When it is considered that the most illustrious peers of England were swept away in the devastating conflicts between the Houses of York and Lancaster—in the wars of the Edward and Henry—and more recently, in the season of civil commotion, it is presumed that a work of this description, not confined to mere names and dates, but supplying much historical, biographical, and domestic detail, cannot fail to engage public attention, and to be considered as a great desideratum in all libraries. It may be particularly noticed that this new work will appear nearly as much to extend as to extinct persons of distinction; for though dignities pass away, it rarely occurs that their families do. The editor has therefore sought, with the utmost assiduity, those branches still remaining amongst the nobility and gentry, which have sprung from old and illustrious ones, so that the reader who searches will be found to have been successful. Henry Colburn and Richard Bentley, New Burlington Street.

Works nearly ready for publication, by Whittaker, Treacher, and Co. Ave Maria Lane.

In 3 vols. 8vo. with 100 Engravings.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Bravo: a Venetian Story. By the Author of the "Pilot," the "Water Witch," the "Borderers," &c. 3 vols. 12mo. London, 1831. Colburn and Bentley.

MR. COOPER has here taken new ground, and with all the vigour and variety of novelty. Change of scene is sometimes as good for the mind as it is for the body; and, perhaps, the best proof of the originality of the present work—we must say, we should never have identified the writer from internal evidence,—preface and politics being put out of the question. It is curious to observe how the same objects affect different minds. Lord Byron stood "in Venice on the Bridge of Sighs," and recalled her glories—

"A thousand years their cloudy wings expand
Around me, and a dying glory smiles
O'er the far times, when many a subject land
Looked to the winged Lion's marble piles,
Where Venice sat in state, throned on her hundred isles."

When

"her daughters had their dowers
From spoils of nations:"

"and of her feast
Monarchs partook, and deemed their dignity increased."

To his eyes her romantic associations came hand in hand with her glories: the poet remembered the interest English genius had before flung around "the pleasant place of all festivity."

"Ours is a trophy which will not decay
With the Rialto: Shylock, and the Moor,
And Pierre, cannot be swept or worn away—
The keystones of the arch: though all were o'er,
For us re-peopled were the solitary shore."

Mr. Cooper sees things in "quite another guess kind of way." He turns from the palaces of Venice to enter into her prisons, and from her pleasures to dwell on her punishments: instead of her patricians, he sympathises with her populace; and his readers have that advantage, which Mr. Cooper knows so well how to seize, of the subject brought before them being unhackneyed. The scene is laid at the time when Venice lived rather on past than present power, when glory was rather a shield than a sword; and when weakness in government led to even more than usual suspicion, and was covered with even more than ordinary mystery. The interest is most dramatically excited and sustained, and the scenes invested with that vivid reality which constitutes the great charm of Mr. Cooper's narratives. Jacopo the Bravo is a Venetian, instead of an American spy; and, as in the pedlar's case, his conduct is hallowed by a redeeming motive—which, however, we will not forestall. We select a scene from the festival of wedding the Adriatic; the competitors in the gondola race are just submitting their claims. It will introduce all the principal characters, without prematurely revealing any of their secrets; and will show how completely our author has caught the spirit of the time and scene.

"The first who came out of the crowd of boats which environed the vacant place that

had been left for the competitors, was a gondolier of the public landing, well known for his skill with the oar, and his song on the canal. 'How art thou called, and in whose name dost thou put thy chance?' demanded the herald of this aquatic course. 'All know me for Bartolomeo, one who lives between the Piazzetta and the Lido, and, like a loyal Venetian, I trust in San Teodoro.' 'Thou art well protected; take thy place, and await thy fortune.' The conscious waterman swept the water with a back stroke of his blade, and the light gondola whirled away into the centre of the vacant spot, like a swan giving a sudden glance aside. 'And who art thou?' demanded the official of the next that came. 'Enrico, a gondolier of Fusina. I come to try my oar with the braggarts of the canals.' 'In whom is thy trust?' 'Sant' Antonio di Padua.' 'Thou wilt need his aid, though we commend thy spirit. Enter, and take place.' 'And who art thou?' he continued, to another, when the second had imitated the easy skill of the first. 'I am called Gino of Calabria, a gondolier in private service.' 'What noble retaineth thee?' 'The illustrious and most excellent Don Camillo Montforte, Duca and Lord of Sant' Agata in Napoli, and of right a senator in Venice.' 'Thou shouldst have come of Padua, friend, by thy knowledge of the laws! Dost thou trust in him thou servest for the victory?' There was a movement among the senators at the answer of Gino; and the half-terrified varlet thought he perceived frowns gathering on more than one brow. He looked around in quest of him whose greatness he had vaunted, as if he sought succour. 'Wilt thou name thy support in this great trial of force?' resumed the herald. 'My master,' uttered the terrified Gino, 'St. Januarius and St. Mark.' 'Thou art well defended. Should the two latter fail thee, thou mayest surely count on the first!' 'Signore Montforte has an illustrious name, and he is welcome to our Venetian sports,' observed the doge, slightly bending his head towards the young Calabrian noble, who stood at no great distance, in a gondola of state, regarding the scene with a deeply-interested countenance. This cautious interruption of the pleasantries of the official was acknowledged by a low reverence, and the matter proceeded. 'Take thy station, Gino of Calabria, and a happy fortune be thine,' said the latter; then turning to another, he asked in surprise—'Why art thou here?' 'I come to try my gondola's swiftness.' 'Thou art old, and unequal to this struggle; husband thy strength for daily toil. An ill-advised ambition hath put thee on this useless trial.' The new aspirant had forced a common fisherman's gondola, of no bad shape, and of sufficient lightness, but which bore about it all the vulgar signs of its daily use, beneath the gallery of the Bucentaur. He received the reproof meekly, and was about to turn his boat aside, though with a sorrowing and mortified eye, when a sign from the doge arrested his arm. 'Question him, as of wont,' said the prince. 'How art thou named?' con-

tinued the reluctant official, who, like all of subordinate condition, had far more jealousy of the dignity of the sports he directed than his superior. 'I am known as Antonio, a fisherman of the Lagunes.' 'Thou art old!' 'Signore, none know it better than I. It is sixty summers since I first threw net or line into the water.' 'Nor art thou clad as befiteth one who cometh before the state of Venice in a regatta.' 'I am here in the best that I have. Let them who would do the nobles greater honour, come in better.' 'Thy limbs are ungoverned—thy bosom bare—thy sinews feeble—go to; thou art ill advised to interrupt the pleasures of the nobles by this levity.' Again Antonio would have shrunk from the ten thousand eyes that shone upon him, when the calm voice of the doge once more came to his aid. 'The struggle is open to all,' said the sovereign; 'still I would advise the poor and aged man to take counsel; give him silver, for want urges him to this hopeless trial.' 'Thou hearest; alms are offered thee; but give place to those who are stronger, and more seemly for the sport.' 'I will obey, as is the duty of one born and accustomed to poverty. They said the race was open to all, and I crave the pardon of the nobles, since I meant to do them no dishonour.' 'Justice in the palace, and justice on the canals,' hastily observed the prince. 'If he will continue, it is his right. It is the pride of St. Mark that his balances are held with an even hand.' A murmur of applause succeeded the specious sentiment; for the powerful rarely affect the noble attribute of justice, however limited may be its exercise, without their words finding an echo in the tongues of the selfish. 'Thou hearest—his highness, who is the voice of a mighty state, says thou mayest remain;—though thou art still advised to withdraw.' 'I will then see what virtue is left in this naked arm,' returned Antonio, casting a mournful glance, and one that was not entirely free from the latent vanity of man, at his meagre and threadbare attire. 'The limb hath its scars, but the infidel may have spared enough for the little I ask.' 'In whom is thy faith?' 'Blessed St. Anthony, of the Miraculous Draught.' 'Take thy place.—Ha! here cometh one unwilling to be known! How now? who appears with so false a face?' 'Call me Mask.' 'So neat and just a leg and arm need not have hid their fellow, the countenance. Is it your highness's pleasure that one disguised should be entered for the sports?' 'Doubt it not. A mask is sacred in Venice. It is the glory of our excellent and wise laws, that he who seeketh to dwell within the privacy of his own thoughts, and to keep aloof from curiosity by shadowing his features, rangeth our streets and canals, as if he dwelt in the security of his own abode. Such are the high privileges of liberty, and such it is to be a citizen of a generous, a magnanimous, and a free state! A thousand bowed in approbation of the sentiment, and a rumour passed from mouth to mouth, that a young noble was about to try his strength in

the regatta, in compliment to some wayward beauty. 'Such is justice!' exclaimed the herald, in a loud voice, admiration apparently overcoming respect, in the ardour of the moment. 'Happy is he that is born in Venice, and envied are the people in whose councils wisdom and mercy preside, like lovely and benignant sisters! On whom dost thou rely?' 'Mine own arm.' 'Ha! This is impious! None so presuming may enter into these privileged sports.' The hurried exclamation of the herald was accompanied by a general stir, such as denotes sudden and strong emotion in a multitude. 'The children of the republic are protected by an even hand,' observed the venerable prince. 'It forthem our just pride, and blessed St. Mark forbid that aught resembling vain-glory should be uttered! but it is truly our boast that we know no difference between our subjects of the islands, or those of the Dalmatian coast; between Padua, or Candia; Corfu, or St. Giorgio. Still it is not permitted for any to refuse the intervention of the saints.' 'Name thy patron, or quit the place,' continued the observant herald, anew. The stranger paused, as if he looked into his mind, and then he answered—'San Giovanni of the Wilderness.' 'Thou namest one of blessed memory!' 'I name him who may have pity on me in this living desert.' 'The temper of thy soul is best known to thyself; but this reverend rank of patricians, yonder brilliant shew of beauty, and that goodly multitude, may claim another name.—Take thy place.'

"There were many unmasked and high-born dames, whirling about in their boats, attended by cavaliers in rich attire, and here and there appeared a pair of dark lustrous eyes, peeping through the silk of a visor, that concealed some countenance too youthful for exposure in so gay a scene. One gondola, in particular, was remarked for the singular grace and beauty of the form it held, qualities which made themselves apparent even through the half disguise of the simple habiliments she wore. The boat, the servants, and the ladies, for there were two, were alike distinguished for that air of severe but finished simplicity, which oftener denotes the presence of high quality and true taste, than a more lavish expenditure of vulgar ornament. A Carmelite, whose features were concealed by his cowl, testified that their condition was high, and lent a dignity to their presence by his reverend and grave protection. A hundred gondolas approached this party, and after as many fruitless efforts to penetrate the disguises, glided away, while whispers and interrogatories passed from one to the other, to learn the name and station of the youthful beauty. At length, a gay bark, with watermen in gorgeous liveries, and in whose equipment there was a studied display of magnificence, came into the little circle that curiosity had drawn together. The single cavalier, who occupied the seat, arose, for few gondolas appeared that day with their gloomy-looking and mysterious pavilions, and saluted the masked females, with the ease of one accustomed to all presences, but with the reserve of deep respect. 'I have a favourite follower in this race,' he said, gallantly, 'and one in whose skill and force I put great trust. Until now, I have uselessly sought a lady of a beauty and merit so rare, as to warrant that I should place his fortune on her smiles. But I seek no farther.' 'You are gifted with a keen sight, Signore, that you discover all you seek beneath these masks,' returned one of the two females; while their companion, the Carmelite, bowed graciously to the compliment, which seemed little more than was warranted

by the usage of such scenes. 'There are other means of recognition than the eyes, and other sources of admiration than the senses, lady. Conceal yourselves as you will, here do I know that I am near the fairest face, the warmest heart, and the purest mind of Venice!' 'This is bold augury, Signore,' returned she, who was evidently the oldest of the two, glancing a look at her companion, as if to note the effect of this gallant speech. 'Venice has a name for the beauty of its dames, and the sun of Italy warms many a generous heart.' 'Better that such noble gifts should be directed to the worship of the Creator than of the creature,' murmured the monk. 'Some there are, holy father, who have admiration for both. Such I would fain hope is the happy lot of her who is favoured with the spiritual counsel of one so virtuous and wise as yourself. Here I place my fortune, let what may follow; and here would I gladly place a heavier stake, were it permitted.' As the cavalier spoke, he tendered to the silent fair a bouquet of the sweetest and most fragrant flowers; and among them were those to which poets and custom have ascribed the emblematic qualities of constancy and love."

Mr. Cooper indulges in divers political digressions, whose whole and sole object is to prove that every thing went wrong in the world till America set the example of right; and that no form of government was ever enlightened or advantageous, till that discovered by the United States. All our surprise is, that Mr. Cooper does not address America as Azim did Zelica, and exclaim,

"Oh my own love! why should a single day,
A moment, keep me from those arms away?"

What can induce him to linger on this side the Atlantic? To be sure, that is no business of ours; all we have to do, is to assure our readers, that among the many productions of Mr. Cooper's prolific pen, few are more vivid in interest, or more original, than *The Bravo*.

The Amulet: a Christian and Literary Remembrance. 1832. Edited by S. C. Hall. London, Westley and Davis.

WE shall allow the editor to speak for himself, in the first instance. He states that he "has endeavoured to fill the present volume with a larger proportion of articles of permanent interest and value than heretofore; so as to avoid, as far as possible, a very general complaint against the annual works—that they are merely butterflies of a season, and lose their attraction when that season is past. He has therefore sacrificed, in some degree, amusement to information; but, at the same time, he has sought for such communications as may excite attention, and gratify not the less because they aim at accomplishing a better object than that of whiling away an idle hour." We must, in justice, add, that we think he has succeeded. The essay on the Gnostics, by Marmion Savage, is full of curious and recondite research; and we quite agree with the view taken of these early interlopers on Christianity. The Rev. William Ellis has contributed a very interesting paper on "Infanticide in the Pacific Islands,"—that horrible crime now so rapidly disappearing under the mild influences of religion. One little fact, which we quote, speaks volumes.

"In one of the islands, a short time ago, after the examination, and while several hundred children were cheerfully partaking of the refreshment which their parents had provided for the occasion, while the parents were delighted spectators of the scene, a venerable chief arose and addressed them, evidently under

the influence of strongly excited feeling. 'I was,' he exclaimed, as he proceeded in his address, 'a mighty chief. The spot on which we are now met was sacred to me and my family. Large was my family, but I alone remain; the rest have died; they knew not this good world which I am spared to see; my heart is longing for them, and often says within me, Oh, that they had not died so soon! Great are my crimes: I am the father of nineteen children—all of them I have murdered! now my heart longs for them. Had they been spared, they would have been men and women, learning and knowing the word of the true God. But while I was destroying them, no one stayed my hand, or said, 'Spare them.' Now my heart is repenting—is weeping for them.' To such a parent what agony must the scene of perhaps five or six hundred lively, happy children, gladdening their parents' hearts, have afforded! We rejoice to believe that no future parents will experience pangs of remorse from such a cause."

"A Visit to Nicosa," by Dr. Walsh, is almost as pleasant in the narration as it must have been in reality: we take our first specimen, that our readers may share in the envy we ourselves felt.

"We found ourselves in an elevated valley, embosomed in higher hills, with a magnificent lake below us. The hills were clothed with trees of an infinite variety of foliage, covered with fruit—chestnut, walnut, plum, cherry, fig, apple, quinces, pears, and medlars—in such incredible profusion, as to be sufficient to supply the whole population of England; yet here there was no one to gather them. You may think it an exaggeration to say that these fruit-trees formed large forest wood; but the luxuriance of vegetation in this country is such, that dwarf plants with us grow here to the size of giants. About mid-day, we stopped at a *dervan*, or pass in the forest, where there is generally a small Turkish guard; attached to this was, as usual, a coffee-house, where we lighted our chibouques, and had some coffee. The coffee-house was under the shade of a large tree, covered with yellow fruit, the nature of which, as I had not seen any thing like it before, I was curious to ascertain. Against the stem I found a hanging ladder, which I climbed up; and after ascending forty steps, each one foot perpendicular, I found I had not got so high as the middle of the tree. The tree was a cherry-tree, producing an immense profusion of fruit, of a beautiful transparent amber colour, and of the richest flavour. I brought down my hat full, and they sent us a basket full, for which we paid the value of about a penny to the man for the trouble of gathering. I took away with me some of the stones, to try to propagate the kind at Constantinople, where it is unknown, as well as account of the delicious flavour of the fruit, as the beauty and magnitude of the tree, which could not be less than one hundred feet high: I also sent some to the Horticultural Society of London."

Our traveller also mentions an odd instance of prejudice.

"Several of the tracts on moral and religious subjects, which had been printed in England for distribution among the poorer classes, were afterwards translated into modern Greek by different religious societies, and sent out here for similar distribution among the Greeks. We had some of these with us, and gave them to such of the children as could read. Next day one of the priests brought them back, and said they were dangerous books. We begged of

him to point out any dangerous passage, and he marked one; namely, 'What is your duty to your brother? Answer: To love him, and to assist him.' Now, said he, if that was pointed out to the Turks, they would immediately conclude that it meant our brothers in the Morea; and so it would bring destruction on us all. It so happened that I had received the proclamation which the new government of the insurgent Greeks had published, just as I was setting out, and so, not having time to read it, I took it with me to amuse us in the boat. If, therefore, the suspicion of the Turks had been excited by this tract, and they had then found the insurgent proclamation in my pocket, no doubt but all the Greek priests would be hanged on the spot; and the least we could expect would be, to be sent to keep company with the bishops in the torture-prison of the Bostandje Bashas. We, therefore, did not attempt the distribution of any more tracts on our journey."

We conclude with a Turkish dinner and tea.

"We were shewn into a large room with a *divan*, or sofa, continued all round the walls, and here we stretched ourselves. They brought us the usual entertainment of pipes and coffee; and, after some time, the muzzelim's son and his uncle entered the room, seated themselves on the *divan* opposite, and smoked their pipes, without saying a word. After passing an hour in this silent way, preparations were made for supper. The young man stood up, took a cloth from a servant, and, with a dexterous fling, spread it in a circle on the floor; in the centre of this he placed a joint-stool, and on the stool a large metal tray. We were now motioned to approach, and having sat cross-legged on the floor round the stool, we drew the skirts of the cloth over our knees, while servants brought embroidered napkins, and laid one on each of our shoulders. When all the company were seated, including our janissary, the first dish entered, and was laid on the tray; round the edge of the tray were placed long slices of brown bread, with a horn spoon between each, so as to project over, and form a complete border; and in the middle was set a large pewter basin of *pease-soup*: having all dipped in our spoons, and taken a few mouthfuls, it was removed, and immediately succeeded by another filled with *sauces*; into this the muzzelim's son dipped his hand, and we all followed his example. This was also removed, and replaced by one of *yourt*, a kind of sour-milk, with balls of forced meat floating in it. Next succeeded balls of meat wrapped up in vine leaves; then mutton boiled to rags on *homos*, a kind of pea like a ram's head, which they are very fond of in this country; and, lastly, a *pitaf*, or dish of boiled rice, with which all Turkish entertainments conclude. A glass of pure water was now handed round, of which we all drank, and then followed servants with a ewer and basin, in which we washed. The whole apparatus was now removed, and we resumed our pipes and seats on the *divan*, having despatched our supper with such silent celerity that the whole occupied but six and a half minutes! Our entertainer may be considered as a Turkish lord mayor of a town—an English lord mayor does not entertain his friends after so frugal a fashion. A dinner of six and a half minutes, and a glass of water! I wish Alderman — had been with us. As we had brought apparatus in our baggage, we now procured some hot water, and entertained our hosts with a dish of *tea*, which they had heard of, but never tasted. We sweetened a cup in the most approved manner with sugar, and *served it*

with milk, and then presented it. A Turk never takes any thing of this kind but coffee, without milk or sugar, which is as black, thick, and bitter, as soot: when, therefore, he filled his mouth with the mawkish mixture we made for him, his distress was quite ridiculous. He could not swallow it, and he would not spit it out, for a Turk never spits in company; so he kept it churning in his mouth, till he could keep it no longer; he then made a pretext for going out, which he did as fast as a Turk can move, and got rid of it over the stairs. When he returned, however, he said the ladies of the harem requested to taste our tea also. So we sent them in a specimen: we soon heard them burst into loud fits of laughing at the extraordinary stuff; and we were informed they liked it as little as the men."

We would call particular attention to the "Actual State of the Slave Trade on the Coast of Africa." We select one or two brief passages.

Speaking of the Isles de Loes: "From their vicinity to the mouths of the rivers Dembia, Pongas, and Nunez, the islands would be an important station for trade, as the intercourse would be much more free and direct from hence than from Sierra Leone. If the islands were once regularly established, with a small military force of men of good character, and under a commandant not likely to be removed; and if a proper system of cultivation were adopted and encouraged, so as to afford a regular and constant supply of wood, water, and refreshment, to ships of the squadron which would regularly frequent them, the number of resident merchants would increase; so that they might become a depot of African produce, and a place of considerable importance. Traders would all touch here, and deposit their cargoes, instead of running up the unhealthy rivers on the opposite pestiferous coast, subject as they now are to vexatious delays, and to the mortality of their crews from the necessity of drinking the tainted water of these streams. Above all, by making it a free port, open to all foreign vessels and merchandise, the resident British traders would become the agents of the French and Americans, who would prefer resorting here to ascending the rivers on the continent, as they now do, with their goods. The eligibility of this place as a station must depend on its local advantages; and it appears to be less exceptionable than any which has yet been tried. Wholesome water, from a pure spring, is abundant. Above sixty yards above high water-mark is a copious source, from which vessels were supplied by tubes over the rocks; and boats are filled, without landing the casks, at the rate of thirty tons per day. Fire-wood is in profusion; oranges and limes may be procured by only sending to pick and choose them; poultry may be had in any quantity; pigs are so numerous that they run about the island without seeming to belong to any particular person; excellent sheep may be bought for ten shillings each; and bullocks, in prime order, are always grazing on the pastures. Should experience realise this flattering picture, it will be highly gratifying to the friends of Africa; and one healthy and plentiful spot will, at length, be found by the English on this insalubrious coast, where they may fairly try their benevolent experiment."

Price of Slaves.—"For a man, 9 ounces, or 216 yards of cloth, or 9 rolls of tobacco, or 36 gallons of spirits, or 139 handkerchiefs. For a woman, 8 ounces, or 192 yards, or 8 rolls, or 32 gallons, or 128 handkerchiefs. For a child, 6 ounces, or 144 yards, or 6 rolls, or 24 gallons, or 96 handkerchiefs."

African Monarchs.—"The sovereignty of the coast is divided between two barbarians; one called 'King Pepel,' residing on the river Bonny, and the other 'Duke Ephraim,' on the Old Calabar. The contest for making slaves, and the opportunity of disposing of them, has excited a deadly enmity between these native ruffians, which the English cruisers avail themselves of. Whenever one of them proposes a cargo, the other immediately sends information of it to any ship of war on the coast, detailing the particulars of the cargo, and the state of forwardness for sailing; by which means many have been seized, and the envious and malignant passions of these savages made subservient to the cause of humanity. On one occasion of information of this kind, sent by King Pepel to the British, by which his rival lost his cargo, he was so exasperated that he prepared an expedition to attack him, and take vengeance for the injury and insult. He got a coffin made for Pepel, which he intended to bear before him as an ensign, and sent a messenger to apprise him of it. 'Tell Pepel,' said he, 'that I am coming, and bringing his coffin.' 'Tell Ephraim,' said the other, in reply, 'to bring the coffin, and I will put himself into it.'"

"Cemeteries in India" is a touching subject, treated with much feeling, by Miss Emma Roberts. There are only three stories, but all of them good: we like Mr. James's "Scenes from the Civil War," especially. Among the poetical varieties, we would instance Miss Jewsbury's "Dying Girl to her Mother," and "Song of a Guardian Spirit," by Mrs. Hemans. L. E. L. has been a very efficient contributor: for finish and thought, her productions here are among her best—the prose tale of "the Betrothed" is very dramatically told. We shall leave the following poem, by Mrs. Norton, to speak for itself.

"The Child of Earth.

Fainter her slow step falls from day to day,
Death's hand is heavy on her darkening brow;
Yet doth she fondly cling to earth, and say,
'I am content to die—but, oh! I not now!—
Not while the blossoms of the joyous spring
Make the warm air such luxury to breathe—
Not while the birds such lays of gladness sing—
Not while bright flowers around my footsteps wreath.
Spare me, great God! lift up my drooping brow—
I am content to die—but, oh! I not now!"

The spring hath ripened into summer-time;
The season's viewless boundary is past;
The glorious sun hath reached his burning prime:
Oh! must this glimpse of beauty be the last?
'Let me not perish while o'er land and sea,
With silent steps, the Lord of light moves on;
Not while the murmur of the mountain-bee
Greets my dull ear with music in its tone!
Pale sickness dims my eye and clouds my brow—
I am content to die—but, oh! I not now!"

Summer is gone: and autumn's sober hues
Tint the ripe fruits, and gild the waving corn;—
The huntsman swift the flying game pursues,
Shouts the halloo! and winds his eager horn.
'Spare me awhile, to wander forth and gaze
On the broad meadows and the quiet stream,
To watch in silence while the evening rays
Slant through the fading trees with ruddy gleam!
Cooler the breezes play around my brow—
I am content to die—but, oh! I not now!"

The bleak wind whistles: snow-showers far and near
Drift without echo to the whitening ground;
Autumn hath passed away, and, cold and drear,
Winter stalks on with frozen mantle bound:
Yet still that prayer ascends. 'Oh! laughingly
My little brothers round the warm hearth crowd,
Our home-fire blazes broad, and bright, and high,
And the roof rings with voices light and loud:
Spare me awhile! raise up my drooping brow!
I am content to die—but, oh! I not now!"

The spring is come again—the joyful spring!
Again the banks with glistering flowers are spread;
The wild bird dips upon its watery wing:
The child of earth is numbered with the dead!
'Thou never more the sunshine shall awake,
Beaming all redly through the lattice-pane;
The steps of friends thy slumbers may not break,
Nor fond familiar voice arouse again!"

Death's silent shadow veils thy darkened brow—
Why didst thou linger?—thou art happier now!"

We now leave the book to the public favour it so well deserves. The editor amply redeems his promise of combining amusement and information; and the contents add to their individual merit the charm of variety. In these days, when appearance goes so far, we must not forget to commend the external aspect of the *Amulet*—it does the taste of its publishers much credit.

The Humourist; a Companion for the Christmas Fireside. By W. H. Harrison, author of "Tales of a Physician," &c. Embellished by eighty Engravings, designed and executed by W. H. Brooke. 12mo. pp. 300. London, 1832. Ackermann.

THE *Humourist*, at least, keeps good time. It was on the 16th of October last year that we reviewed the predecessor of this volume; and here we are on the 15th called to notice Mr. Harrison's second contribution to the amusement of the Christmas fireside. While most of the other Annuals (all, we believe, except Hood's and Miss Sheridan's) procure the co-operation of a number of popular pens, our author boldly attempts to raise the crop and reap the field of humour alone. It is sown with eighty engravings by W. H. Brooke; and the text is produced to illustrate these various and laughable designs, beginning with Emigration, and ending with a Brother of the Angle. The first represents an Irish family on the move, drawn by a single horse, and cart and horse covered with population; to which the author in his preface thus alludes: "He neither claims nor merits exemption from the common lot of authors. Like the animal in the first illustration of this Number, he has found his path an *up-hill* one; and the attempt to draw a multitude, with so many conflicting sentiments, laborious. He has had great critics on his back, and small ones upon his withers; while the shafts of censure have galled his sides. Could he, however—to carry the simile not farther, but back, that is to the tail of the car—dare to hope that, like the Irishman with the uplifted shillelah, he is about to make a hit, he should forget his past labours in the prospect of future reward."

And Mr. H. continues:—"The writer acquits himself of a duty in acknowledging the zealous co-operation of the artist to whose talents he is indebted for the embellishments,—in reference to which, it is presumed, that, whatever sentence may be passed on the literary department, the reader will say with Falstaff—

'Good Master Brooke, I desire more acquaintance of you.'

As who does not, that is acquainted with the

fertility of his fancy, and the artist-like execution of his designs?

The slender thread which connects the prose tales and poetical illustrations of the *Humourist* together, is too fine to admit of our taking our course, spider-ways, along it; and we shall therefore select two or three pieces or parts, as the fittest examples we can find of the general character and merits of the work. The opening is cheerful as its title—"Christmas."

"Thrice welcome, Christmas! maugre thine approach
Be mark'd by skies somewhat too cold and murky;
I hail thy harbinger, the Norwich coach,
Laden, inside and out, with chine and turkey,
And sausage by the fathom. Thou hast other
Attendants on thy state, in liveries rich,
Green, red, and blue, a family of which
The Humourist is but the younger brother;
Who, while transcendent many a rival shines,
Still hopes the world will smile on his designs;
Though some like none but China plates, and sigh
For that much-relied Annual, a mince pie.
And yet, mine ancient crony, 'tis with pain
I mark some members absent from thy train,
Who in good days of yore were wont to swell it.
Where is Snap-dragon? all extinguish'd—
Where mystic Mistletoe? unsafely banish'd!
To grace the kitchen, and I live to tell it!
Where's the Blind Man's Buff? alas! this march of mind,
With all its boasted blessings, hath refined
Us out of half our former recreations!
Where is old Hunt the Slipper? with the snow
Which melted many, many years ago.
Where Forfells, paid (I hate alliterations)
In cunning Cupid's current coinage kisses?
Dispatch'd to Coventry by modern misuses.
Where are the Country Dances, once promoted
To such distinction in our revels? Voted
Old-fashion'd as the Laird of Balmawhapple.
'Cast off,' 'Poussette,' the modish belle derides,
As figures rude as Runic ones; 'Change Sides'
Is practised only in St. Stephen's Chapel.
Where is, I ask, our quondam friend the Reel,
Once footed to the liveliest of tunes?
Scorn'd e'en by shopmen as most 'ungenteel,'
And left to Highlander and Cherokee,
Who, though in most things else they disagree,
Concur in their contempt for pantaloons.
But I must quit the subject, lest, in fact, I
Become that bore, *laudator temporis acti*:
And, since the March of Intellect, the thief,
Hath left us our plum-pudding and roast beef,
Methinks 'twere scarcely wisdom to repine:
And, courteous reader, whose'er thou art,
Gallant or lovely, *maugre* thou bear apart.
Full off in Christmas festivals, and thine
Be health and joy, and many a jocund meeting:
For 'tis a merry season, and in sooth
It glads the heart to see the cordial greeting
Of friend with friend, and mark the smile of youth
Reflected on the wrinkled brow of age.
Oh! could I feel that this my humble page,
When at the festive board the story lags,
When wit grows dull, and conversation flags,
Would fill the yawning chasm, and revive
The silenced laugh, and 'keep the game alive,'
I would not grudge my toil, nor vigils kept
By flickering taper while the world hath slept:
No, my kind public! be your smile conferr'd on
My labours, and I ask no richer guardon."

This is succeeded by the "Cares of Corpulence," in prose; and that, in turn, by the "Zoologist," "Taming a Tartar," "the Governor," and many other sketches. From these we select "THE BILL," as a subject of the day.

"Reform."

We've often thought, and p'rhaps 'twill strike
The reader, the Reform Bill's like
Our subject-plate, a waggon;

The fore-horse in the team 's a Grog,
And, though they're working night and day,
But heavily they drag on.

For our own parts, we never mix
In state or civic politics,
Yet wish 'the Bill' may be a
Most sov'reign cure for England's ills,
And prove, like Abernethy's pills,
A perfect panacea.

We boast no legislative powers,
But leave to wiser heads than ours
The labours for which we
Have no vocation, while we say,
Cut every rotten branch away,
But do not harm the tree.

Without pronouncing on 'the Bill,'
In praise or censure, there are still
Some things we can't help noting:
For instance, those who 'other day
Got ten pounds for their vote, will pay
Ten pounds a-year for voting.

In many a wight whose crippled toe
On cushion rests, 'the Bill' will blow
Up hope's expiring embers:
He'll soon discard his gouty shoes,
Blas'd with the liberty to choose
Another set of members.

The poor especially, 'tis said,
Expect 'the Bill' will cheapen bread—
We rather doubt it: still
Some reason in the hope we see,
They've heard so much concerning the
Provisions of 'the Bill.'

And, should it pass into a law,
Such wonders as the world ne'er saw
'Twill bring about, we trow;
Since it has clauses which propose,
We're told, to give a voice to those
Who have no voices now.

Thus Birmingham, for deeds in crime
So famed, though safe from war's alarms,
Will profit by the plan:
While Manchester, of high renown,
Will send two members up to town
By Pickford's caravan.

And Sheffield too, that shines in steel,
Its benefits will surely feel
Through all its various trades;
It needs no second sight to see
Its representatives will be
Two keen, well-temper'd blades.

Nay, in the 'Commons' House, a few
Would have the colonies vote too:—
How strange 'twould be, some day,
When Parliament for business meets,
To see two members take their seats,
Return'd from Botany Bay!

'Tis more than probable 'the Bill'
Will oust a few old members: still
There must be some who never
Can care about a seat, since they
Would be, could they but have their way,
Upon their legs for ever.

Our song is sung:—if ask'd to own
Our party, we would answer, none—
Whig, Radical, or Tory:
We rank ourselves among the friends
Of those who, scornful private ends,
Seek England's weal and glory."

We regret that the pictorial puns, as well as the prose narratives, from their fixed nature in connexion with the designs, are beyond our possibilities in the way of extract: we can only refer to them as being often very ludicrous, and indulge our readers with the exhibition of two of the engravings.

The Heir at Law.

A Brother of the Angle.

Forget Me Not. Edited by Frederic Shoberl. Ackermann. 1832.

WE have always a kindly feeling towards this pretty little volume; it was the first of these literary luxuries, and we seem to owe it a debt of gratitude. This year's is an improvement on the last, and is pleasant and varied. Mr. (or we ought to say Dr.) Croly has been, we suspect, a very effective contributor. To enumerate what, from internal evidence, we guess to be his productions, will give the best notion of their variety. "The Triumph of Mordecai;" "Don Juan and Haidee;" "Uncle Toby and the Widow;" "The Nun of San Ildefonso;" and a delightfully told romantic extravaganza, called "The Beauty lessoned into Love." "A Vision of Robert the Bruce," by a Modern Pythagorean, is clever; and the "Ordeal of Toka," by Mr. Fraser, is an interesting story, and new in its Hindoo (what shall we call them?) properties: new scenes, names, and costumes, are great attractions. We shall endeavour to curtail an original and spirited American tale, called "The White Lynx of the Long Knives," who, we should premise, is a Captain Thorndyke, a British officer remarkable for his courage and readiness of resource.

"One evening, Thorndyke's rangers were endeavouring to snatch a little repose in a temporary encampment, near the margin of the Quonektacut, in the neighbourhood of the Coos falls. The sentinels having been posted, and every necessary precaution against surprise adopted, the captain took the opportunity to stroll along the river's brink, gazing with admiration upon the wild and fresh handiwork of nature, at the same time that he kept an eagle eye on the watch for any traces of the wily foes of whom he was in pursuit. Straying farther and yet farther, he, unconsciously perhaps, followed the swift current; hurrying onward to leap the precipice at no great distance below, until he turned the spur of a rocky elevation, which came abruptly down nearly to the water, around the base of which the river took a sudden bend, and swept off in a different direction. He was at this moment startled, for an instant, by observing a little Indian boy, not exceeding eight or ten years of age, on the opposite side of the stream, amusing himself by skipping small flat stones upon its surface. His first duty was to reconnoitre, and, taking a rapid glance in every direction, he perceived that there was a small Indian lodge on the opposite side of the river, some hundred rods below; but with his glass he could also perceive that it was occupied only by a few women and children, the warriors being absent. He again turned his eye upon the savage urchin at his sport. The little fellow, after searching for and finding such small slates as his strength could master, preparatory to each successive cast of the stone, would retire a few rods, and then dart forward swiftly to the river's brink to give greater impulse to the missiles. He had not perceived the ranger, who stood watching his motions; and, becoming more intent upon his sport, and less and less circumspect as he pursued it, he at length ran forward with a stone too heavy for his little arms to wield, and, in the act of exerting his utmost force in the cast, lost his balance, and plunged headlong into the dark and rapid waters. The little savage could swim of course; and Thorndyke, in that exercise, could have matched Leander or Lord Byron. Perceiving, however, that the current was too swift and strong for the boy to master, without stopping to inquire whether he might not be perilling

his life to save one who might grow up, and at some future time take his own scalp; the ranger sprang forward, and, outstripping the current a short distance, plunged intrepidly into the torrent, where the dusky little hero was struggling unappalled, though uselessly, against the stream, and happily succeeded in rescuing him from the cataract, over which he must inevitably have been swept, had he been borne along many rods further. The mother, having missed her little truant, and gone in search of him, arrived upon the river's brink just in time to witness his danger and the manner of his rescue. The agony of one moment was only exceeded by the joy of the next. Her child had been saved, but the parties were hostile, and the boy was a prisoner in the hands of a foe upon whom her people had no claim for generosity or mercy. Thorndyke perceived her doubts and the struggles passing in her mind; observing, also, a canoe that lay close under the bank, at no great distance above, he drew a white handkerchief from his pocket, and, waving it in the air, pointed to the bark, and beckoned her to come over and receive her child. Neither distrust nor danger weighed a feather against the natural affection of the mother. She reached the canoe with the fleetness of a fawn, and paddled across the stream, where she clasped her child in such an embrace as a she-bear might afford to a recreant cub. But it was an affectionate hug; and, for a few moments, she alternately scolded the little truant, and covered him with kisses. The young savage, having been rescued from a danger of which he was not conscious, cared no more for the ducking than an otter. Fixing his eyes upon a red bandanna handkerchief upon the ranger's neck, as a part of his fatigue dress, and expressing a desire for it, our hero readily gave it to him; and, for the further gratification of the child, he likewise disencumbered his watch-chain of a supernumerary trinket, which excited the young Indian's admiration. With these presents, mere trifles in themselves, yet of great value in the estimation of the savages, the gratified, if not grateful, mother returned to her own side of the stream, and the ranger lost no time in reaching his camp—balancing in his own mind the hazard he had run, in venturing so far from his brave companions, against the inward glow of satisfaction he felt in having been the instrument of essentially relieving the agony, and contributing to the happiness, even of a savage mother, by restoring to her bosom a child, to her as dear as though it had been cradled in the palace of St. James. The interview between our hero and the squaw had necessarily been brief: but the former was too close and accurate an observer not to remark that the latter was a woman of a superior cast of character. Her name was *Mis-kwa-bun-o-kwa*, or, *The Red Light of the Morning*. Her countenance exhibited more comeliness than is usual in her tawny race; and the whole expression of her features indicated energy, firmness, and personal intrepidity."

Soon after, Thorndyke goes on active service under General Abercrombie.

"The whole of this memorable passage of Lake Sacrament resembled more the pageant of a grand aquatic gala, or a dream of romance, than a chapter of real life. Stretching down the lake, the scenery partook of the same wild and glorious character, and every mile of the progress disclosed new objects of wonder, or presented fresh sources of delight. The tops and shaggy sides of the mountains afforded new phases with every turn, while the relative

positions of the boats were changing continually; as they shot forward among the islands studding the whole distance of the lake, and hills, rocks, islands, every thing, were reflected back, fresh and beautiful as Nature had made them. It was a day of unmingled pleasure. A fine elastic breeze swept through the gorges of the mountains, serving to brace the nerves and produce a glow of good feeling, humour, and hilarity, which lasted till the setting sun. The animal spirits were often cheered and enlivened by favourite airs from the well-appointed regimental bands. Wheeling aloft with untiring wing, as if moving with, and watching over, the armament, were several noble bald eagles, whose eyries hung on the beetling crags, affording to the soldier a happy omen of victory. The bagpipes of the Highlanders would thrill every soul in the armada with the pibroch, or an expert bugleman electrify the multitude, by causing the hills and the glens to echo with the stirring notes wound from his brazen instrument. The effect of the varying and shifting movements of the barges among the islands, with their different streamers fluttering in the air, now shooting in this direction and now running in that, was exceedingly fine. Taking these movements in connexion with the nodding of plumes, the dazzling glitter of polished arms, and the flashing of the oars at every stroke, as they rose from the sparkling waters, the whole prospect was of surpassing magnificence. Gayest among the gay on this occasion was our friend Captain Thorndyke, with his spirited company of rangers, destined to act on the right flank."

He is, however, taken prisoner by the Indians and bound to a tree.

"In the hour of triumph, amidst the shouts of the victory, he could have laid down his life freely to add to the glory of his country; but to hear the retreating tread of his friends, and to be thus left behind wounded and helpless for the torture, was a situation affording but little consolation. Once, only, were his solitary reflections disturbed before the close of the action; but they were in nowise rendered agreeable. An Indian lad, too young to go out upon the war-path, but who was yet hovering on the skirts of the camp, and prowling about, snuffing blood in the breeze, like the tiger's whelp, came suddenly upon Thorndyke, with his little hatchet, or tomahawk, glittering in his hand. After gazing upon the wounded and pinioned soldier for a moment, a sudden thought seemed to dart upon the tawny stripling's mind, and, measuring by the eye a suitable distance from the tree to which the captive was bound, he prepared to throw his hatchet. It was an awful moment for our hero, and to his own mind the last. The youth raised his arm, and swiftly the hatchet hurtled through the air, striking into the trunk of the tree, within a span of the prisoner's head. The young savage then advanced, and taking his hatchet repeated the throw—the instrument whizzing by his ear, and striking a spot yet nearer to the head of the victim. In this way the lad continued his fearful experiments for a considerable length of time—sometimes striking the tree farther from his mark, and at others grazing the locks of the sensitive prisoner. Having at length amused himself sufficiently in this manner, or some other fancy, perhaps, striking his mind, the young Indian bounded off deeper into the forest; and the ranger afterwards learned that the lad had merely been practising in the art of throwing the tomahawk, and had wantonly selected his head for the mark, in default of a better, with

a view of ascertaining how near he could come to the object without striking it. Rather a perilous experiment! thought the prisoner."

But we must shorten his many escapes, and proceed to the last.

"Distinguished captives, eminent for their deeds on the war-path, must atone for the blood they have shed, and the scalps they have taken, by the torture of fire, aggravated in every way that their ingenious tormentors can devise. The more refined and exquisite the torture, the more honourable to the victim who writhes under it; and arrangements were forthwith commenced for a great war-feast, at which the White Lynx was in this way to be particularly honoured, and all the Indians in the vicinity were summoned to attend the sanguinary rite. Nothing could exceed the wild and frantic expressions of joy manifested by the savages at having so notable a prisoner; and the preparations for the feast were made upon a scale corresponding with the importance of the event. The council of chiefs soon sat in judgment, and the day of execution was fixed. But to the prisoner delay was no reprieve, for the cruel method of his confinement made him look upon death as a welcome relief. A vast number of savages had been convened on this occasion; and all those who had suffered the loss of friends and relatives by the *Yengeese Long Knife* were especially summoned to participate in the general revenge. The preparations having been completed, the warriors came forth into the camp, horribly disfigured with black and red paint, and commenced their diabolical ceremonies, by singing their own exploits and those of their ancestors, gradually working themselves up into the most furious passion, by their yells and war-whoops, and other hideous cries; assuming menacing attitudes, and brandishing their knives and war-clubs in a manner appalling to the beholder. After a sufficient degree of excitement had by these means been produced, the prisoner was brought forth from the narrow cabin in which he had been confined, amid the shouts, and taunts, and jeers, of the savage multitude, and bound to the tree left standing in the middle of the encampment for such purposes. His body had been stripped of its clothing and blackened with divers rude and grotesque figures, according to the fancy of the artists, and the skin of a raven was placed upon his head. Had the prisoner been an Indian Sachem, he would have been required to sing his own death-song. This, if really a lion-hearted chief, he would have done with alacrity, boasting at the same time of his own prowess, and not forgetting to inform his tormentors how many of their warriors he had slain. He would likewise have mocked at every species and refinement of cruelty practised, as being nothing in comparison with the tortures which he had inflicted upon some of their own tribe. The combustibles, consisting chiefly of pitch pine-knots and dried brush-wood, had previously been provided. The prisoner having been securely bound, the work of torture commenced: his flesh was pierced with bodkins, and sharp plugs of resinous wood were driven into the wounds. These, when the fire should take hold of them, would render his sufferings more acute. A small troop of boys were likewise suffered to shoot showers of arrows at his body from a given distance. But neither the strength of their bows, nor the vigour of their arms, enabled the young archers to speed an arrow to a vital part. Indeed, it was only intended as an amusement for the lads, which would at once serve to try their skill and mul-

tiply the torments of the prisoner. During these inflictions, and numerous others, which it would be tedious to enumerate, hundreds of grim visages were fixed intently upon him, ready to raise the shout of exultation, and upbraid him with being 'a woman,' in the event of his uttering a groan, or shewing any indications of pain or fear. They were disappointed. Although his flesh often quivered with agony, as their diabolical work proceeded, yet not a sigh or a groan escaped his lips. He had been bred to the Indian wars from his youth, and, well knowing their customs and his own fate, he had steeled himself for the trial, and bore every cruelty with such unflinching fortitude, such unshrinking and unchanging composure, as to excite the admiration of his tormentors, upon whom he looked around without any other apparent emotion than a contemptuous and scornful curl of his haughty lip. These painful inflictions over, the wood for the sacrifice was piled round his body; and Thorndyke, having taken a last look upon the blue heavens above, and as much of this fair world as he could see beyond the dark circle of Indians of all ages and sexes by whom he was surrounded, was calmly expecting the moment when his body should be enveloped in the fatal sheet of fire. The torch was applied, the flames were beginning to crackle, and the smoke to curl around him, when, with a wild scream, a female rushed through the crowd, which was exultingly singing, and yelling, and dancing about the stake, and, seizing the combustibles, scattered them abroad in the twinkling of an eye. Heaving and panting with the exertion, she took from her bosom the silk handkerchief mentioned in an early part of this narrative, and, holding it aloft for an instant, drew a knife from her wampum belt, and severed the bands which bound the victim, she herself falling to the earth speechless at the same instant. The Indians, who had stood appalled at the boldness of the adventure, divined the cause at the sight of the handkerchief, well knowing its history. Their vengeance was at once disarmed, and they immediately manifested their approbation of the woman's gratitude for the preservation of her child, and the noble and resolute manner in which she had accomplished her purpose. *Miskwa-bun-o-kwa*, it appeared, had by some means heard that the prisoner to be executed was the generous saviour of her son at the Coos rapids, and she had run thirty miles through the woods, over brake, and bog, and fen, to save him. One moment longer, and she would have been too late. Wearied with the rapidity of her journey, and overcome with emotion, she sank exhausted to the earth the moment she had accomplished her purpose. The whole scene was now changed. Thorndyke was instantly taken into favour, and his wounds dressed—a transition in his fortunes rendered far easier by his noble bearing at the stake—and the ceremonies of the sacrifice were executed for those of a joyous festival. The Red Light of the Morning was a woman of high consideration among the tribe, from her extraordinary strength of character; the death-dance now gave way to the pipe-dance, which is performed in honour of strangers of distinction; and the proceedings of the day were concluded by a grand feast, for which purpose a stag and a moose-deer were roasted. The last course was the flesh of a dog, with which all the great feasts of the Indians are terminated."

We must quote a description of fire in the woods.

"Some companies of the routed army, on their passage up the lake during the preceding afternoon, had landed upon the western shore, and kindled several fires to cook their provision; and as our two voyagers now doubled Sabbath-day Point, they descried immense fires flaming high upon the lofty eminences at a distance. Those heights had once before been run over, and the timber scorched and deadened by fire; and, by a long drought, the leaves, and the fallen trees, and the scathed trunks of giant hemlocks and pines still standing, had become as combustible as tinder. From the fires kindled below by the soldiers, the consuming element had spread with great rapidity, making its way from the water's edge, and ascending from cliff to cliff to a great height. In some instances the trunks of immense trees, rearing their tops to the clouds, stood like so many huge columns, wrapped from root to crest in winding-sheets of fire. At other points the flames were running over and playing upon the broken surfaces of the rocks, and through their crevices, wherever combustibles offered, climbing, like chains linked along the ledges, to an elevation of from six to eight hundred feet. The whole western barrier of the lake was for a long distance clothed in living flame. All this fiery splendour was perfectly reflected from the bosom of the lake, now lying unruffled by a breath of air, while overhead the clouds were lighted up like a canopy of lurid red, imparting to the whole scene a degree of sublimity and terrific splendour which can better be imagined than described. Never was seen a more magnificent display of the fiery element; and the pleasure, as the flames curled up towards the heavens, or were reflected like meteors streaming across the waters, was accompanied by the consolation that, for once, while the work of destruction was in progress, not a single human habitation was exposed, or the life of a human being endangered. Wild beasts and rattlesnakes, which abounded in the mountains, were the only living sufferers by the searching element."

Mr. Harrison, Dr. Bowring, and Mr. Hood, are all that remain to be named in terms of praise; for we must confess, many of the minor stars might safely have been omitted, and never missed: all we recommend to Mr. Shoberl next year is, a little editorial cruelty.

We have no room for any poetical exemplars; but must again heartily recommend the *Forget Me Not*, as worthy not to be forgotten.

Ackermann's Juvenile Forget Me Not; a Christmas, New Year's, and Birth-day Present, for Youth of both Sexes. Edited by Frederic Shoberl. London, 1832. Ackermann.

If we put out of the question a very unreasonable proportion of particularly bad poetry, the contents of this little volume are very praiseworthy. There is a charming story called "the Little Queen," by Miss Isabel Hill, who ought to have acknowledged that it is taken from the French;—she has, however, much improved on her foundation. "Ghost Stories," by the Old Sailor, are excellent both in design and execution; and we must mention with much praise "Caroline Cleveland," by Miss Mitford; "the Gentleman," also by Miss Hill; "the Little Thief," by Miss M. L. Beever; and "the Young Artist," by Mrs. Hofland. We quote part of a pretty poem by Mary Howitt.

"The Humming-Bird.

The humming-bird !—the humming-bird,
So fairy-like and bright;
It lives among the sunny flowers,
A creature of delight !
In the radiant islands of the east,
Where fragrant spices grow,
A thousand, thousand humming-birds
Are glancing to and fro.
Like living fires they flit about,
Scarce larger than a bee,
Among the dusk palmetto leaves,
And through the fan-palm tree,
And in the wild and verdant woods,
Where stately moors tower—
Where hangs from branching tree to tree
The scarlet passion-flower—
Where on the mighty river-banks,
La Platte or Amazon,
The cayman, like a forest-tree,
Lies basking in the sun—
There builds her nest the humming-bird
Within the ancient wood,
Her nest of silky cotton down,
And rears her tiny brood.
She hangs it to a slender twig,
Where waves it light and free,
As the campasero trolls his song,
And rocks the mighty tree.
All crimson is her shining breast,
Like to the red, red rose;
Her wing is the changeful green and blue
That the neck of the peacock shows.
Thou happy, happy humming-bird,
No winter round thee lowers—
Thou never saw'st a leafless tree,
Nor lived without sweet flowers !"

Now, this is an exquisite specimen of poetry for children; but what child can sympathise with, for example, lines "to an Infant on the Night of its Birth?" or the allegory of "Genius and Industry?" whose moral is ridiculous—as if the one were incompatible with the other. These pages are prefaced by a lively address from Mr. Harrison.

The Winter's Wreath, for 1832. London, Whitaker, Treacher, and Co.; Smith, Liverpool.

LITERARY leisure and refined taste are the characteristics of this little volume: in it poetry seems rather an elegant amusement than an original talent, and composition just a graceful accomplishment. We have no fault to find with either style, thoughts, or feelings; all that is wanted is, something more of peculiar character. Verse abounds, but it is of that degree equally objectionable in verse, friendship, or coffee—"a cold medium." The prose is the best; and among the tales we must particularise "the Last Interview," by J. R. Chorley—a very clever Germanism; "the German Jew," the idea of which is most original, by William Howitt; and the "Envoy Extraordinary," by the Author of *Selwyn*. We like one of Mr. J. B. Chorley's stories so well, that we quote the *dénouement*; it is called "the Persecuted."

"The following fragment was found, by a friend, amongst the papers of T. Baynard, Esq., of — College, after his decease in consequence of a duel." We must abridge the lively commencement, by stating that the hero's most intimate friend has been obliged to go abroad to cure a rheumatic attack—not, however, till all the pleasure of their intimacy had been destroyed by the restraint and depression of the one's complaint. Mr. Baynard, in his first vacation, consoles himself by an intimacy with his friend's family, finds them very delightful, and falls in love with one of his sisters. On his second vacation, he finds father, mother, the one daughter, and the servants, all ill with the rheumatism too: every room in the house is blockaded with screens, every door and window armed with a sandbag, to keep out the draught. However, the daughter who has

escaped completes her conquest of the hero, who on being asked to take a family dinner on Christmas day, resolves also to take courage and put the important question.

"Jane looked lovelier than ever. She was beautifully dressed, and wore, for the first time, a cap; a kind of head-tire which admirably suited the character of her countenance, although her sister was pleased to flout at it most unmercifully, and called her 'grand-mamma.' She was very silent during dinner; perhaps my manner, in some degree, may have betrayed my intentions; at all events, her demeanour raised my hopes. There were no guests save myself; and as Sir Thomas, although hilariously inclined, was still under regimen, we were not long in rejoining the party in the drawing-room. Eagerly did I await the departure of the tea-tray, the signal for Sir Thomas's evening nap and his lady's abstractions over Jeremy Taylor. As soon as the moment arrived, I begged for music, in order to procure a *l'été-à-l'été* under protection of the piano, which stood at some distance. Maria, kind soul, I am persuaded, divined my intention, and began to perform a very obstreperous sonata, while a little manoeuvring placed her sister and myself in the corner, with our backs to the old couple, and apparently listening assiduously to the music. I will not, for the gratification of impertinent curiosity, reveal the particulars of our dialogue; suffice it to say, that before the conclusion of the *allegro nobile*, I was pouring forth a very torrent of insinuating whispers, while my sweet friend occupied herself in busily turning over an old music book, which, by the by, was held the wrong side uppermost. The moment was approaching—a declaration trembled on my lips, when Lady Clive called out from the fire-place, with a doleful accent, 'Jane, love, do ask Marshall to bring me my white boa. I really apprehend that the stiffness is returning to my neck.' It was a most detestable interruption! I could have stamped with choler. Jane appeared nothing loath to hide her evident agitation by a hasty flight, and did not return for some time: when she reappeared, it required some suing to win the shy little fairy back to her place in the corner. I succeeded, however, after some confusion, in resuming the theme of my discourse, and fixing Jane's attention. Again I was on the point of pronouncing the word, when the visible uneasiness of my fair listener made me pause and look around. So entirely had I been engrossed by my suit, as not to observe that the music, having gradually waxed fainter and slower, had at length wholly ceased; and I must have been announcing my partiality, for the last few minutes, as audibly as the town crier; for my voice had insensibly risen as I warmed in the subject. I shall never forget the awkwardness and mortification of that moment. Maria sat, looking wickedly mischievous, rubbing her hands, and declaring that the cold of the day had brought back the rheumatism in her fingers to such a degree, that she could positively accompany my recitations no longer. O villainous rheumatism! how bitterly did I execrate it at that moment! Had the *rondo* lasted but three minutes longer, I should have known my fate, and escaped the unutterably embarrassing situation in which both my mistress and myself were placed. To proceed further was of course out of the question: two such interruptions are more than human fortitude can endure. I sat in anger and confusion, while Maria skipped away to the fireside, and Jane began to play with great earnestness and dreadfully out of time. There

was, at least, one comfort, that the ancients seemed unobservant of what had passed. Thus affairs remained throughout an air and six variations—the candles were unsnuffed, the old couple slept, and Maria appeared deeply busied with a book in the chimney corner. The moment seemed propitious. I silently approached my charmer, and feigning to turn the page, leaned over her shoulder, gently took her hand, and whispered a word in her ear, softly pressing my cheek against hers. I protest I hardly touched it; but she uttered a shriek, so acute, that it roused Sir Thomas from his doze, and brought all the family crowding round us. Alas! in the blindness of my fate, I had not wisdom to read the import of the cap which I had so much admired, as a warning. My beloved—she too had been suffering from rheumatism, and the pain, no less than the emotion provoked by my stolen caress, had led to the catastrophe. What could be said? Jane stammered out a lame explanation; laying the blame upon the candle catching her frock, &c. &c. For my part, confusion disabled me from uttering a syllable; and the rather, as Sir Thomas and his lady cast such suspicious looks, first at me and then at their daughter's heightened complexion, that I believe they inwardly charged me with the commission of some impertinence. Jane fled, and I remained a most unenviable spectacle, which I could see Maria enjoying. Mortification and surprise had entirely overthrown my self-command, and it was hopeless to attempt its recovery. I looked at my watch; the hour was late, and served me as an excuse for immediate departure. On my solitary ride homewards, serious reflections came over me, not unmingled with a kind of superstition. Was it prudent to engage myself for ever in a tie involving such consequences? There seemed to be some destiny opposing my connexion with this family. My Jane, whom I had fondly thought an exception to the general fate, she, too, was rheumatic: father, mother, brother, sister, all alike, the victims of that pestilent visitation! Hitherto I had been led by passion; my disappointment allowed reason to prevail for a moment, and the prospect before me, viewed by her light, appeared most disastrous! That night I resolved to abandon my suit. Two hard conditions attended this sacrifice. The first, injustice to a woman I tenderly loved: the other, the loss of my own happiness, which I felt could not exist without her. Nevertheless, I made the sacrifice, or rather acquiesced in a painful necessity. A further difficulty now arose in the manner to be adopted in withdrawing my particular attentions; and in meeting this process my courage quite deserted me. In a day or two, however, I summoned resolution to attempt the first step, and heavily set forth for Anley, on a morning as miserable as my own feelings. Old Daniel shook his head (*his* ague had returned) in reply to my inquiries, and said that all the family were confined to their apartments by rheumatism, which had attacked them on the morning after Christmas-day. I left my condolences, and returned vexed at the frustrated resolve which had cost so much to attain, but more than ever convinced of its propriety. A second and a third visit brought me the same tidings: time wore on, and term was approaching. My confidence in my own firmness grew weaker at each successive visit, and I determined to take leave of the family by writing. After despatching a letter to Sir Thomas, expressive of gratitude and sympathy, and containing kind adieux to his family, I packed up my portmanteau, and set forth for

London. Thus ended my twelve-months' dream of happiness—dispersed solely by that English pestilence, rheumatism. I have lost my own, and I fear sadly wounded another's peace of mind; and still feel that I could not have acted otherwise. Virtue, intellect, beauty, gentle blood—even these were but a part of the promise destroyed by such a seeming trifle. Again I say, let no man despise small things!—P.S. I have just learned that Clive is coming back, in hot haste, to call me to account for imputed trifling with his sister's affections; so that to the previous list of distresses, I shall probably add a mortal quarrel with the man, of all others, whom I love the best."

We have not room, else we had marked a very beautiful sonnet of Dr. Bowring's for quotation; but must be content with a single specimen of the *Winter's Wreath*.

Friendship's Offering, for 1832. London, Smith, Elder, and Co.

WE congratulate Mr. Pringle, for he must look with much satisfaction on the result of his editorial labours. We do not think very highly of the poetry; but his collection of tales is the best we have seen. "The Substitute," by the Author of Tales by the O'Hara Family; "the Incendiary," by Miss Mitford; "the Temptation of the Capuchins," by Derwent Conway; "the Incognita of Munich;" "the Golden-Basket-Bearer," by Mr. St. John; "the Orphan," by the Hon. Mrs. Norton; "the Queen Anne's Sixpence,"—are seven as original and interesting stories as ever did credit to an Annual. If we except Mary Howitt's "Dismal Story," we must say the poems are not on a level with the prose: they are pretty enough for echoes, but are quite deficient in character of their own. "A Dream of Fairy-Land," by the editor himself, is not among his happiest efforts. The translation of "the Midnight Parade of Napoleon" gives no sort of idea of the original; and in quoting the following pieces we do it from justice, for they are too good for their companions.

Verses. By William Motherwell.

"Oh agony! keen agony,
For trusting heart to find
That vows believed were vows conceived
As light as summer wind.

Oh agony! fierce agony,
For loving heart to brook,
In one brief hour, the withering power
Of unimpassioned look.

Oh agony! deep agony,
For heart that's proud and high,
To learn of Fate how desolate
It may be ere it die!

Oh agony! sharp agony,
To find how loath to part
With the fickleness and faithlessness
That break a trusting heart!"

"Stanzas written in a Cathedral." By T. K. Hervey.

How loud, amid these silent aisles,
My quiet footstep falls—
Where words, like ancient chronicles,
Are scattered o'er the walls:
A thousand phantoms seem to rise
Beneath my lightest tread,
And echoes bring me back replies
From homes that hold the dead!

Death's harvests of a thousand years
Have here been gathered in—
The vintage where the wine was tears,
The labourer was Sin:

The loftiest passions and the least
Lie sleeping side by side,
And love hath reared its staff of rest
Beside the grave of pride!

Alike o'er each, alike o'er all,
Their lone memorials wave;
The banner on the sculptured wall,
The thistle o'er the grave—
Each, herald-like, proclaims the style
And bearings of its dead;
But hangs one moral, all the while,
Above each slumbering head.

And the breeze, like an ancient bard, comes by,
And touches the solemn chords
Of the harp which death has hung on high,
And fancy weaves the words:
Songs that have one unvaried tone,
Though they sing of many an age;
And tales, to which each graven stone
Is but the title-page.

The warrior here hath sheathed his sword,
The poet crush'd his lyre,
The miser left his counted hoard,
The chemist quench'd his fire;
The maiden never more steals forth
To hear her lover's lute;
And all the trumpets of the earth
In the soldier's ear are mute.

Here the pilgrim of the hoary head
Has flung his crutch aside,
And the young man gained the bridal-bed
Where Death is the young man's bride;
The mother is here whom a weary track
Led sorrowing to the tomb,
And the babe whose path from heaven, back,
Was but its mother's womb.

The moonlight sits, with her sad sweet smile,
O'er the heedless painter's rest;
And the organ rings through the vaulted aisle,
But it stirs not the minstrel's breast;
The mariner has no wish to roam
From his safe and silent shore,
And the weeping in the mourner's home
Is hushed for evermore.

My heart is as an infant's still,
Though mine eyes are dim with tears;
I have this hour no fear of ill,
No grief for vanished years!—
Once more, for this wild world I set
My solitary bark;
But, like those sleepers, I shall yet
Go up into that ark!"

The last we shall quote is by Mrs. Norton.

"There is no trace of thee around,
Beloved! in this abode:
The winds sweep o'er the silent ground
Where once thy footsteps trod.
There is no shadow in the glen,
No echo on the hill;
The sun that sets shall rise again,
And find them lonely still.

And still the same wild thoughts of glee
Are bright upon each brow;
Of all who used to welcome thee,
Ah! which remembers now?
I gaze and gaze upon each fair,
And young, and joyous face,
Into their undim'd eyes; but there
No thought of thee I trace.

Why then to sorrow wakes my soul?
Why springs the painful tear?
Why muse I sadly on the whole?—
I know thou hast been here:
I know thou hast, though nought remains
To tell thy presence now;
The sunset beaming through those panes
Hath lit thine eager brow.

The lonely cypress, murmuring
And bending to the breeze
(Like my worn heart, the one sad thing
The sunshine cannot please),
The wooded hill, the clear blue sky,
The small lake's placid shore—
All that I look on now, thine eye
Hath watched in days of yore.

O'er the smooth path, so trimly kept,
The sunny shaven green,
Where I have thought of thee and wept,
Thy wandering foot hath been.
And it was once a bliss to be
In spots where thou hadst ranged,
To wander round and dream of thee—
Ah! wherefore am I changed?

It is not that my heart hath swerved
From what it ought to be;
Oh! fondly hath that heart preserved
Each little thought of thee!
It is not that I do not love
Even more than I did then;
But that thou never more shalt rove
Through these sweet scenes again."

The prose tales, though short, being too long for our limits, we have been unwilling to spoil by curtailment; and content ourselves with repeating, that the best set of short stories we have this year seen are in the *Friendship's Offering*. We should notice, that the binding of this volume is particularly deserving of praise, as being at once handsome and lasting.

The Taurobolium; or, the Sacrifice of the Constitution, a Satire. 8vo. pp. 104. London. Hatchard and Son.

The Voice of Albion, a Poem commemorative of the Crisis, &c. &c. By Henry Sewell Stokes. 8vo. pp. 171. London. Cochrane and Co.

THE former of these is a high-Tory classic satire, well written, and embodying in good composition most of the arguments of the "Conservatives" against the Reformers. The latter is a red-hot diatribe on the opposite side, eulogising all that the first reviles, and reviling all that the first eulogises. Observing proofs of talent in both, we are sorry to see it expended on such a subject,—upon which parliamentary debates, pamphlets, and everlasting newspapers, fatigue the world sufficiently, without the supernumerary aid of poets.

Belgium in 1830, a Poem. By Rachel Robinson. Pp. 48.

ANOTHER political poem—a poem thrown away. It is strenuously in favour of the house of Nassau, and against the Belgian revolution, of which we suppose the writer was a witness.

Cuvier's Animal Kingdom. Translated by E. Griffiths and others. Part XXX. Insecta, Part III. London. Whittaker, Treacher, and Co.

THE translators of Cuvier's great work have now advanced to the third main division of zoological science, the History of Insecta. In pursuance of the plan adopted in the former volumes, they have relieved the dry scientific details of the Baron by a mass of valuable illustration collected from the writings of other naturalists; and have shewn much discrimination in selecting only such statements as are supported by sufficient evidence. The plates are executed with great fidelity; and the work continues to promise that desideratum—an English standard work on zoology, suited to the advanced state of the science.

A Manual of Materia Medica and Pharmacy, &c., from the French of H. M. Edwards, M.D., and P. Vavasseur, M.D. Corrected and adapted to British practice by John Davies, M.R.C.S., &c. pp. 490. London, 1831. Whittaker, Treacher, and Co.

AN attention to arrangement is not only useful from the assistance which it affords to the memory, but also for the facilities which it gives to reference. The particular advantages of this translation, from the excellent French work of Drs. Edwards and Vavasseur (the former a countryman, well known by his various contributions to natural history, pathology, and medicine), consist in its grouping together remedies which belong naturally to the same families, and those which are endowed with similar physiological properties. This arrangement is practically useful; the matter is concise, and the work will in consequence be found a valuable addition to the library of the medical pupil.

Plain Rules for improving the Health of the Delicate, &c. &c. By W. Henderson, M.D. 12mo. pp. 328. London, 1831. Whittaker and Co.

THERE have been so many plain rules to keep us in health, that it is absolutely astonishing we should ever be sick; and as for dying, it ought to be out of the question. Dr. Henderson gives us nothing new on the subject—except the account of a new specific of his own.

which is to be had at Perth, and (he says) cures all stomach complaints.

ORIGINAL CORRESPONDENCE.

To the Editor, &c.

RUINS OF PALENQUE.*

April 26, 1831.

SIR,—I am desirous of communicating to the literary world, through your universally circulated *Gazette*, some idea of these antiquities, which rescue ancient America from a charge of barbarism.

These ruins extend for more than twenty miles, along the summit of the ridge which separates the country of the wild Maya Indians (included in the district of Peten) from the state of Chiapas, and must anciently have embraced a city and its suburbs. The principal buildings are erected on the most prominent heights, and to several of them, if not to all, stairs were constructed. From the hollows beneath, the steps, as well as all the vestiges which time has left, are wholly of stone and plaster.

The principal edifice I have discovered, and style the palace, is built in several squares; but the main halls, or galleries, run in a direction from the N.N.E. to the S.S.W. Allowing for the variation of the compass, which is 9° E., this position, and its perpendicular, are most exactly observed in all the edifices I have examined, be their situation what it may. This is the more remarkable, as it does not arise from the formation of streets, as no such regular communications existed between the houses. These are formed of galleries eight feet wide, separated by walls a yard thick, and two rows of galleries complete the building: the height of the walls to the eaves is nine feet, and thence three yards more to the top, to which the roofs incline, being covered by horizontal stones a foot wide. The chasms between the inner roofs of the two galleries were originally filled up, though containing large niches, and now universally grown over with bushes and trees. The stones, of which all the edifices are built, are about eighteen inches long, nine broad, and two thick, cemented by mortar, and gradually inclining when they form a roof, but always placed horizontally: the outside eaves are supported by large stones, which project about two feet. Doors are numerous in all the halls, and the spaces which contained the top beams are exactly preserved in the stone, though the wood-work has entirely disappeared. All the habitations must have been exceedingly dark, if the doors were of wood and kept shut; as the windows, though many, are but small circular and square perforations, and subject to no particular arrangement. Evidently the architects avoided symmetry, not from ignorance but design. Besides the niches in the roof and the windows, the walls are perforated by holes of this shape

each about two feet wide: they are very frequent; and, though they completely pierce the wall, are separated in the middle by a partition of plaster: their use I cannot divine. Several holes in the walls also contain stone pillars, of from six inches to one foot high; some capa-

ble of holding the strongest animal, and others delicately small; inserted both high and low, and not always opposite one another.

The front of the palace contained five doors, lofty and wide, as in all the buildings: on each of the pillars which separate them is an erect human figure in relief: in most of these, throughout the ruins, it is difficult to distinguish men from women, as their dress appears the same; the head adorned with high plumes, the breast and arms naked, with necklaces and bracelets, and sometimes covered by a short tippet; the middle and thighs enclosed in a wrapper, crowded with ornaments, and its ends finely worked, hanging down between the legs, which are naked, as well as the feet. Some figures are distinguished by the awkward height of their head-dress, and the unnatural horizontal projection of the bows and ends of the sash which fastens the wrapper: all the heads are in profile, and many hold long staves in their hands, headed by some undefinable objects; but no weapons are to be seen with any of the figures or basso-reliefs, and none have ever been found but flint heads of arrows or lances, similar, though larger, to those used by the wild Indians at the present day. There are also some squatted figures, apparently of plebeians, with wrappers, but without any ornaments or head-dress. The sashes, &c. of several appear to have been coloured, and even much of the writing was painted.

The grand centre entrance of the palace, joining its two front galleries, and under which I have bivouacked, never had any door, and its top is circular: behind the second gallery steps descend into an inner court, and on each side of them are three gigantic busts, worked in relief, on inclined stones. In another of the courts are the remains of a square tower, still about a 100 feet high, as its top has fallen: the steps which lead up through its interior are rectangular, and it contains a regular series of doors or windows. In one of the galleries of the palace is a sort of picture, contained on a stone of an oval shape, about two yards in diameter; the figures are in relief, and still bear evidence of having been coloured: a female, dressed as above described, and with ear-rings, sits cross-legged on a seat or sofa, which is just large enough to hold her, and has at each end the representation of an animal's head, with a collar round the neck; a person, apparently an old woman, dressed in a tippet and wrapper, both worked like a plaid, presents on her knees, to the sitting female, a human head, adorned with a solitary tuft of feathers. The back of the head is turned towards the lady, who looks earnestly on it, while her expression of grief and horror is well represented,—her right hand is near her heart, and the left rests on her thigh. Some square tablets are inscribed in the upper part of the picture; the wall around is of various colours, and an inscription on the cornice overhead is painted in two horizontal rows of small square tablets. Near this is the principal entrance to the vaults, which run underneath the palace, and which I have explored by candle-light, though much annoyed by the large bats that infest all the ruins. Over this same entrance are worked, in relief, the figure of a rabbit on one side, and an ugly human figure on the other; both surrounded by flagstone work, apparently imitating boughs and feathers. The architecture of the vaults is similar to that of the buildings above ground. A female head over one of the passages, with an ornament pendent from her nose, represents grief or sleep. This circumstance, and that of the vaults containing a

number of what are apparently stone couches, lead me to suppose they were used as dormitories.

The building which I name the study stands on a neighbouring and higher hill than the palace, and the ascent to it is very steep; it has five doors, each with evidence of having contained wooden frames, the pillars or walls separating them containing full-length figures of about six feet high, one of which is dressed in a petticoat reaching nearly to the ankle, and fringed at the bottom, bearing, as well as another figure, naked infants on their right arms, and not in the manner of the modern Indian women, who always set their children astride on their hips. The inside walls of the study contain three large stone quadrangles, each divided by indented lines into 240 equal compartments, about six inches square, twelve running from top to bottom, and twenty from side to side, and containing different characters in relief. I have copied those in best preservation, of which the two following are a specimen:—the same characters appear to be very rarely repeated in the various tablets.

A building, apparently used for religious purposes, stands on a hill in the vicinity, and still higher than the preceding edifices: two galleries form its foundation; the front one occupying its whole length, the back divided into three compartments. The eastern of these has the appearance of a dungeon, though its very small entrance has no evidence of a door. The western compartment is a simple room; the centre piece also without a door; but from the pillars inserted, as already described, in the walls, I conjecture it had curtains. This room has a small chapel built within it, having a flat top: the back of the chapel, and two stone slabs, which form the front, but leave between them a wide entrance, are highly and elegantly worked in relief. On the west stone is the representation of a man looking towards the entrance, his head adorned with boughs and feathers; a small crane is seated on one of the boughs, with a fish in its mouth; he has a tippet, trousers half-way down the thigh, bands round his calves, and a sort of boot without soles, only covering the back of the leg,—a horrid figure squatted down, with its back turned to the upright one, has no feet, but its legs terminate in a tail. The other slab contains a hideous old man, with a bough in his mouth. Opposite these two figures are stone pillars, as elsewhere observed both near the floor and higher up, to which victims or culprits may have been tied. Inside, on the back wall of the chapel, are two small human figures; the larger one placing the head of a man adorned with feathers on the top of a cross, such a one exactly as used by Christians; the other represents a child, both looking at the head, barefooted, with their ankles adorned; behind each of them are sets of square tablets, containing characters very neatly executed. Perhaps I am wrong in supposing this to be a chapel, and that human victims were sacrificed in it; these deeds have generally been executed in the presence of large assemblies of people; while but comparatively few could have witnessed them if done here. This might, there-

* By referring to our Literary Notices, it will be seen that we are indebted for this interesting account of a place utterly unknown to European geography and antiquities, to the Governor of the adjoining province.

fore, have been a canopy under which magistrates sat in the administration of justice. Above all these rooms two narrow parallel walls ascend to a height of eighty feet above the ground: they are perforated by squares, and between them one ascends by projecting stones to the top, whence there is a most extensive view over the plains to the north.

About two hundred yards below the palace a limpid stream has its rise; it bursts from between the rocks, and is covered over from its source for more than a hundred yards, by a gallery which follows its bend; where the gallery ends, there is evidence of a continuation of edifices for about fifty yards more down the course of the stream: the whole appears a strange arrangement.

Not far hence is a prison on the edge of a stupendous precipice: by placing a stone over it, the captive was effectually prevented from escaping, though large windows in the edge of the precipice admitted light and an extensive view.

The whole of the ruins are now buried in a thick forest, and months might be delightfully employed in exploring them. My time is unfortunately limited; but I have seen sufficient to ascertain the high civilisation of their former inhabitants, and that they possessed the art of representing sounds by signs, with which I hitherto believed no Americans previous to the conquest were acquainted.

The neighbouring country, for many leagues distant, contains remains of the ancient labours of its people,—bridges, reservoirs, monumental inscriptions, subterraneous edifices, &c.; but this spot was evidently the capital, and none could be better chosen for the metropolis of a civilised, commercial, and extended nation; having from its elevation a most delightful temperature; behind it a still cooler region for the supply of such productions as a warmer sun does not admit of; and before it the extensive, flat, and hot regions of Tabasco and Yucatan,—the former in the more immediate neighbourhood, intersected by large, deep, and navigable rivers, which, with their innumerable ramifications and connexions with the sea, offer every facility for an immense commerce. It is strikingly remarkable, the almost exact corresponding situation of this country in the new, with that which Egypt held in the old world, placed at the junction of the northern and southern continents, with a Mediterranean sea, a delta, and an Isthmus. Every thing bears testimony that these surprising people were not physically dissimilar from the present Indians; but their civilisation far surpassed that of the Mexicans and Peruvians: they must have existed long prior to the fourteenth century; since the former, who would have been their neighbours, and not deficient in enterprise and talent, would certainly otherwise have learnt from them the art of writing. I would say, that this nation was destroyed by an irruption of barbarians from the north-west, which is an additional reason for giving them a much higher antiquity than the foundation of Mexico, as long previous to that event it is known that no such irruptions had taken place.

I also presume that the Maya language is derived from them: it is still spoken by all the Indians, and even by most of the other inhabitants throughout Yucatan, the district of Peten, and the eastern part of Tabasco; the Puctunc, a slight corruption of it, is spoken in this immediate vicinity, and to the south-west, nearly as far as the Pacific. Why this original language should be more corrupted near the ancient seat of empire than in the distant pro-

vinces, is no more to be accounted for than the greater similarity of the Portuguese than the Italian to the Latin. The following words are Maya and Puctunc.—*king*, sun; *uh*, moon; *ek*, stars; *ha*, water; *kak*, fire. There is a great similarity between these languages and those spoken farther to the south throughout the state of Guatemala, particularly in nomenclature, which in the Puctunc is as follows, and the Maya differs but little from it:—1, humpel; 2, chapel; 3, uahpel; 4, ohumpel; 5, hoppel; 6, wokpel; 7, hukpel; 8, washakpel; 9, bolampel, 10, lakumpel.

With regard to the present inhabitants of these regions, the wild Indians to the south are an uncivilised and timid tribe, who occupy an immense tract of country in the interior of the continent; and the subdued Indians who inhabit the states of Chiapas and Tabasco are equally in a low scale of improvement. When asked who built these edifices, they reply, "The devil!" A pretty village, styled Palenque, and which has had the honour of giving its name to these ruins, was built about a century ago, six miles to the north-east. The longevity of its inhabitants, and the beauty of its women, prove the excellence of this climate. At a party there, a few days ago, I inquired of the priest and alcalde, as the oracles of Palenque, who they supposed were the builders of these ancient edifices. The priest shook his head, and hinted at their being antediluvian! while the alcalde stoutly affirmed that they must have been built by a colony of Spaniards prior to the conquest!!!

J. G.

LITERARY AND LEARNED.

OPENING OF KING'S COLLEGE.

SATURDAY was an inauspicious day for this interesting ceremony. The political agitation of the moment, and the badness of the weather, conspired to deprive it of much of that *clat* which would doubtless otherwise have attended its start into being. As it was, several hundred persons of both sexes were present in the chapel, where an appropriate and impressive sermon was preached by the Bishop of London, whose leading argument was, that education, unconnected with moral and religious instruction, was not likely to make men either virtuous or happy. There was knowledge, his lordship justly observed, which was not wisdom; which species of knowledge was the pregnant source of much evil and misery.

After the service, the Rev. W. Otter, the principal of the College, delivered a lecture on religious instruction, in which he enforced similar doctrines, and embellished his discourse with many classical and poetical quotations. It was, nevertheless, rather of the longest, after what had preceded.

The company, or congregation, then departed. Among those present we noticed the Archbishop of Canterbury, the Bishop of Bristol, the Bishop of Llandaff, Lord Henley, Chief Justice Sir N. C. Tindal, Mr. Sotheby, Archdeacon Pott, Dr. Richards, &c. &c. The chapel is very plain, and rather heavy and ill lighted. The other parts of the interior we did not examine, beyond the entrance hall and staircase, the effect of which is massive and grand.

FINE ARTS.

NEW PUBLICATIONS.

Illustrations of the Keepsake, for 1832.

THE illustrations of the approaching volume of the *Keepsake* continue to shew the advantage which results from such publications being

under the superintendence, not merely of an amateur, but of a professional man of talent and technical experience. They are exquisitely finished; and, indeed, in all respects, eminently beautiful. We think, however,—and the remark is equally applicable to several of the other Annuals,—that the infusion of landscapes is rather greater than is required by variety; and in such works, historical and poetical are undoubtedly the most valuable subjects, and those which excite the highest interest.

Presentation Plate, engraved by S. Mitton, from a drawing by H. Corbould; *Title*, engraved by C. Heath and S. Mitton, from a drawing by Stothard and Corbould. Two ornamental plates, which tastefully introduce both the literary and the graphic treasures of the volume.—*Mrs. Stanhope*. Painted by Rochard; engraved by C. Heath. A lovely head, reminding us of Milton's fine line—

"For softness she, and sweet attractive grace."

Constance. Painted by Miss L. Sharpe; engraved by C. Heath. As charming a specimen of Miss Sharpe's talents as we have ever met with.—*The Champion*. Painted by A. E. Chalon, R.A.; engraved by F. Bacon. If a slight air of dandyism and conceit betrays itself in the knight, it is excusable when such a bewitching creature appears to be taking so lively an interest in his fate.—*Byron's Dream*. Drawn by J. D. Harding; engraved by J. T. Willmore. Mr. Willmore has most skillfully engraved Mr. Harding's fine drawing, which made so strong an impression on the public in the Gallery of the Society of Painters in Water-colours.—*The Repentance of Nineveh*. Painted by J. Martin; engraved by H. Le Keux. The sublime is Mr. Martin's peculiar province; and the present is a magnificent exemplification of the power of his imagination; representing as it does, with all that terrific depth and solemnity of effect of which he is so unrivalled a master, a countless multitude "singing mightily unto God."—*Mary*. Drawn by J. M. W. Turner, R.A.; engraved by W. Miller. *St. Germain en Laye*. Drawn by J. M. W. Turner, R.A.; engraved by R. Wallis. Two pleasing local views, abounding with the fascination of Mr. Turner's pencil.—*Do you remember it?* Painted by Miss L. Sharpe; engraved by C. Heath. We are filled with indignation at the vile traitor who has brought a tear into so heavenly an eye.—*Caroline Damerel*. Painted by J. W. Wright; engraved by J. C. Edwards. An animated conversation-piece, with a powerful effect of light and shade. The expression we shall no doubt be better able to appreciate after we have read the tale of which it is the illustration.—*Isola Bella; Lago Maggiore*. Painted by C. Stanfield; engraved by J. T. Willmore. Beautiful indeed.—*The Wedding*. Painted by Miss L. Sharpe; engraved by C. Rolls. Retaining, as we do, our objection to the novel-like episode of the forsaken fair, we repeat our original commendation of this clever and interesting composition.—*Scandal*. Painted by R. Smirke, R.A.; engraved by J. Mitchell. We do not know which to admire the more; the ludicrous but powerful expression which the painter has thrown into his design, or the perspicuous and masterly manner in which the engraver has transferred that expression to his plate. It is decidedly one of the finest things in the volume.—*Interior of Zwinger Palace, Dresden*. Painted by S. Prout; engraved by W. Wallis. Of no great interest, except as exhibiting a happy management of effect.—*Good Angels*. Painted by H. Howard, R.A.; engraved by C. Rolls. Potent they must be, as well as good, to afford an adequate protection against

so hideous and many-headed a monster.—*The-rese and the Countess*. Drawn by De Veria; engraved by F. Bacon. A little affected; but ably composed, and delightfully engraved.

Illustrations of the Literary Souvenir, for 1832.

WHEN it is considered for how long a period the annual publications, of which the *Literary Souvenir* has always been one of the most distinguished, have been regularly produced, it denotes no little research and effort on the part of their editors, still to be prepared, at the appointed season, with a collection of works of art calculated to attract that general attention and to excite that general interest so indispensable to success. We are happy to say that the embellishments which we are about to notice will maintain the character acquired by their predecessors.

Allegre. Painted by A. E. Chalon, R.A.; engraved by W. Ensom. A lively commencement. The spice of foreign coquetry which Mr. Chalon occasionally—as, for instance, in the present case—introduces into his female figures, adds much to the radness of their effect.—*The Supper by the Fountain*. Painted by T. Stothard, R.A.; engraved by F. Engleheart. Various and extensive as are Mr. Stothard's qualifications as an artist, this is precisely the kind of subject in which he is most completely at home.—*Oberwesel, on the Rhine*. Painted by D. Roberts; engraved by E. Goodall. An exquisitely beautiful little plate. *The Right Hon. the Marchioness of Salisbury*. Painted by Sir Thomas Lawrence, P.R.A.; engraved by W. Ensom. Although there is much quiet dignity in the attitude, we do not consider this to be one of Sir Thomas's happiest portraits.—*Numa in the Grotto of Egeria*. Painted by H. Howard, R.A.; engraved by C. Rolla. Worthy of Mr. Howard's classical taste and feeling.—*Going to Mass*. Painted by T. Johannot; engraved by E. Portbury. Very odd.—*Lady Jane Gray preparing for Execution*. Painted by J. Northcote, R.A.; engraved by W. Mitchell. The picture from which this charming little print has been engraved is now in the possession of Mr. Neeld, of Grosvenor Square, and is certainly one of the most satisfactory specimens of the powers possessed by Mr. Northcote when he was in the meridian of his fame.—*The Tower of London*. Painted by J. M. W. Turner, R.A.; engraved by W. Miller. And, to judge from the atmospheric volumes which surround it, undergoing a heavy bombardment.—*The Tarantella*. Painted by Montvoisin; engraved by W. Greatbatch. We are very much afraid that one of the fair dancers is about to lose her equipoise. It is a gay group, however; and Mr. Greatbatch has outdone himself in the execution of the plate.—*Vespers*. Painted by W. Boxall; engraved by W. H. Watt. A sweet little creature. May never approaching slumbers be peaceful!—*The Deveria Family*. Painted by A. Deveria; engraved by S. Sangster. We have not at present the honour of their acquaintance.—*The Arrest*. Painted by A. Johannot; engraved by C. Cooke. In this representation of the apprehension of the unfortunate Charles, the general composition and expression are much superior to the details.

Illustrations of the New Year's Gift, for 1832.

RIGHT pretty little prints; which we are sure will be very amusing and gratifying to the young folks to whom, with the work which they embellish, they may be presented by some affectionate or friendly hand. Our favourites are: *Red Riding Hood*, painted by Sir Thos.

Lawrence, P.R.A., engraved by T. S. Engleheart; *Antwerp*, painted by D. Cox, engraved by R. Wallis; *The Orphans*, painted by A. Scheffer, engraved by W. Chevalier; and *The Sailor's Widow*, painted by A. Scheffer, engraved by T. S. Engleheart.

Illustrations of the Amulet, for 1832.

THE embellishments of the *Amulet* have always been among the most pleasing of those which the recurrence of the season of "Annals" has produced. In the present year they perfectly maintain their character, and some of them, indeed, are, in our opinion, superior to any which this clever publication has yet displayed.

The title is adorned with a small portrait of Lady Cawdor, engraved by C. W. Marr, from a painting by Sir Thomas Lawrence, which has all the patrician marking of the features so peculiar to the lamented president.

The Death of the First-born. Painted by George Hayter; engraved by W. Greatbatch. A fine historical composition, full of expression, character, and force.—*The Greek Girl*. Painted by H. W. Pickersgill, R.A.; engraved by C. Fox. We testified our admiration of this exquisite picture in our notice of the exhibition at Somerset House last year; and we can speak with equal praise of the merits of Mr. Fox's as exquisite engraving.—*Corinne*. Painted by Baron Gerard; engraved by J. Goodyear. We cannot say that we think this a happy personation of Madame de Stael's celebrated heroine.—*The Portrait*. Painted by Sir T. Lawrence, P.R.A.; engraved by J. H. Watt. These we recollect—and who that saw it does not recollect?—the fascinating portrait of the equally fascinating Lady Blessington, which appeared in the exhibition some years ago, will be delighted with the fidelity and taste with which Mr. Watt has transferred it to steel.—*The Death of Euclides*. Painted by B. R. Haydon; engraved by S. Sangster. Although we could wish to see Mr. Haydon's noble and energetic picture engraved on a larger scale, and are surprised that it has not yet been so, this small plate recalls the various merits of the original as forcibly as its size will allow.—*Venice; the Embarkation*. Drawn by Clarkson Stanfield; engraved by E. Goodall. A splendid little plate. The sun absolutely gilds the distance, and glitters in the sky.—*Moonlight*. Painted by W. Boxall; engraved by C. Marr. Very original and picturesque in conception and effect.—*Sophie*. Drawn by Sir T. Lawrence, P.R.A.; engraved by J. Thomson. Graceful and lady-like.—*The Rising of the Nile*. Drawn by D. Roberts; engraved by E. Goodall. The grandeur of the composition is well suited to the vast importance, to those who form so conspicuous a part of that composition, of the event which it represents.—*The Marchioness of Londonderry and her Son*. Painted by Sir T. Lawrence, P.R.A.; engraved by C. Rolla. In united dignity and elegance this was certainly one of Sir Thomas's most admirable works.

A Parrot. On stone by J. W. Giles. Ackermann.

Or this publication the only notice that need be taken is in the words of the original, "Pretty, pretty Poll!"

The Launch of H.M. 84-gun Ship the Thunderer, drawn on the spot by G. B. Champion.

On stone by T. S. Cooper. R. Ackermann. THIS is a lively representation of a lively scene, and will grace the portfolio as a memorial of one of those events in which the British navy

is much interested,—the launch of one of her mighty bulwarks in the presence of a sailor king.

The National Portrait Gallery of Illustrious and Eminent Personages; particularly of the Nineteenth Century. With Memoirs by William Jerdan, Esq., F.S.A., M.R.S.L., M.R.A.S., &c. Part XXX. Fisher, Son, and Co.

THE thirtieth Number of this popular publication (for so we are perfectly justified in calling it) contains memoirs of His Highness Prince George of Cumberland, the Earl of Aberdeen, and Lieut.-General Sir Rufane Shawe Donkin. The last two contain much information, not hitherto known to the public, respecting the eminent individuals to whom they relate; the one distinguished in the field of politics, the other in that of arms; and both liberalising (if we may so express it) the main occupation of their lives by literary studies and pursuits. The most interesting memoir in the Number, however, is, without doubt, that of Prince George of Cumberland; and as we are sure our readers will be gratified to learn something of the character of this amiable young prince, we will transcribe it for our columns.

"We are well pleased to engraft variety on these memoirs, by introducing the portrait of one so young as Prince George of Cumberland; whose birth, and the high expectations which await his futurity, render him already a very interesting object to the British nation. When we have looked upon the open countenance of this fine manly boy, as we have seen him in public places, we could not help fancying how much of the destinies of England might be bound up in his character and disposition, and we felt a wish to know something of both. Presuming that similar ideas, and a like desire, may have sprung up in the public mind, we trust we are not premature in our selection, nor likely to be blamed for our endeavour to gratify a very natural curiosity. Prince George is the only child of his Royal Highness the Duke of Cumberland, and Frederica-Caroline-Sophia-Alexandrina, daughter of the Grand-Duke Charles of Mecklenberg-Strelitz, (widow, first of Prince Frederick Louis of Prussia, and secondly of Frederick William, Prince of Salm-Braunfels), whose marriage was solemnised on the 29th of May, 1815. On the 27th of May, 1819, Prince George was born at Berlin; but, though of foreign birth by locality, his upbringing and education have always been purely English. From infancy he was committed to the charge of an English *bonne*, or nurse—an individual, we are assured, of most exemplary conduct and excellent understanding; and it is a good sign to know, that she is still attached to her charge with all but maternal solicitude and affection. The days of mere childhood had hardly passed, when the young prince displayed a precocity of intellect and talent, which still continues to mark his progress in years. Till about the age of seven, his instruction, such as befitted these tender years, requires no particular notice. At that period, the Rev. R. W. Jelf was selected, (we believe by his late majesty,) to undertake the important trust of his education, and proceeded to the continent upon his mission. Of Mr. Jelf's learning and accomplishments to recommend him to such an office, it might be thought flattery were we to state all that we have heard; suffice it to say, that his reputation at Oxford, his manners as a gentleman, his piety as a divine, and his qualifications in every point of view,

have the warmest testimony of the most competent and the most eminent authorities to which it is possible to defer. This choice, therefore, we consider to have been most fortunate for the prince, for his family, and for the country. During five years he has seldom been many hours absent from his pupil; and we hail it as another good omen, that the preceptor and the student should throughout all that period have preserved at once the kindest and the fittest relationship towards each other. We are assured, and for the purpose of this brief sketch we have not spared inquiry, that Prince George, in his appointed hours for daily study, is attentive, docile, and quick in apprehension, and, when his tasks are finished, peculiarly grateful for the information he has received, thanking his teacher for the boon, the value of which he has so soon learned to appreciate. This, no doubt, must endear him to Mr. Jelf; and if we are truly informed, their mutual regard is a pattern for domestic tuition. It is also highly creditable to the judgment of the august parents of this hopeful branch of our royal stem, that they never interfere with his course of education, except to approve of its manner and its fruits. There is, of course, no events in the life of a youth of twelve years of age, though born in the highest sphere, and brought up under the roof of his father, in whose family the foremost rank is (thanks to Providence) united with the continued blessing of the greatest prosperity; and the chief incident we have to record, in the memoir of Prince George, is his coming to England about three years ago. We have mentioned, that, even previous to this removal, the formation of his mind and habits had been altogether English. He spoke English from his earliest childhood; and he was always under the eye and in the care of English attendants. The patriotic wisdom and foresight of this proceeding cannot be too much commended. It has made him a prince of England, and England alone to him a native land. And this is evident in his whole behaviour, which has not the least tinge of the continent upon it, but is purely and entirely that of an intelligent and spirited English boy. We mean no narrow and prejudiced insinuation towards the youthful character in other countries; but as every nation has its peculiar customs and feelings, which are prized by the community at large, it is desirable that those destined to an influential station among them, should be familiar with their customs, and possessed of an identity with their feelings. That to the precocity of talent we have noticed, Prince George has superadded industry and application, may be concluded, when we state, that, besides his native tongue, English, he speaks French fluently and accurately, is well acquainted with the German language, and far advanced in Latin. He has recently begun the Greek; and in all the other usual studies which comprehend a solid system of liberal education, he is more forward than the generality of even clever and distinguished scholars of the same standing. In this solid system we include history, geography, arithmetic, and other pursuits connected with the sciences and useful knowledge. In all these he is proficient; and in acquiring them he has ever displayed great aptitude and readiness. Indeed, his capacity is such, that there is no subject placed before him, however difficult, which he cannot master and overcome; no point requiring acuteness and comprehension, to which, if his energies are directed, he does not bring ample abilities, and succeed in its complete

investigation, with rather extraordinary facility. We have hitherto described the prince in connexion with his natural gifts and studies. It may belong also to the former to state, that his powers of conversation are uncommonly great. He is a most lively and agreeable companion; full of the gaiety of his happy age, and yet so observant as often to excite surprise by his striking remarks and comments. In his manners he is kind and condescending to every person who approaches him; and is thus a universal favourite, without being spoiled. In all those more immediately around him, he has inspired the warmest attachment; they speak with one voice in terms of affection, which could only be elicited by a deserving individual: and that he is, to employ a trite phrase, the idol of his parents, may readily be supposed. These traits of character, and their effects, we have recorded with the most delightful satisfaction. We could have nothing to tell beyond what pertains to twelve years of age; but surely it is cheering to a British bosom, to contemplate, in one so nearly allied to the British throne, so promising a union of good qualities and virtues. Our task is but brief—we have only the bud to paint; yet from the nature and noble appearance of that bud, we trust it is not too much to hope and to anticipate, that when its fruit has been gathered, some future historian may refer to this early and humble sketch, and declare, as of the Henrys, and Eugenes, and Ruperts, that it not only did not belie, but far excelled, its opening beauty, and matured into a glory and splendour which reflected a lustre upon the name of England."

The portraits, especially that of Prince George (which is from a painting by G. L. Saunders), are executed with their usual excellence.

ORIGINAL POETRY.

THE LATE CORONATION.*

THE coronation, fixed at last,
Gave carpenters delight,
Who wishing folks to see, commenced
Operations for the sight.

Housekeepers cried, they got no rest
For knocking, sawing, nailing;
The men made fun of their complaints,
And seats upon their railing.

The day arrived: through courts and lanes
Some posted postage free,
But sailors thought straight down the Strand
The surest road to see.

Soon every lamp-post near was crowned
With little dirty wags,
While old men on the pavement stood,
And praised our British flags.

Some gentlemen with ladies rode,
'Cause late, in hackneys there;
But coachee was not "summoned," though
He took more than the fair.

Seats early filled, while houses were
Well crowded in each floor,
And those who sat behind soon wished
They'd taken seats before.

That many were not shot that day
Does almost seem a puzzle,
For carts were crammed, and horses too
Were loaded to the muzzle.

* We like to encourage aspiring talent, and insert the following from an anonymous correspondent, seeing as *How he may make a Hood*.—ED.

'Bout ten, the grand procession moved
With slow and steady pace,
Much disappointing some who came
To see the royal race.

When King and Queen the Abbey reached,
While streets echoed "God saves,"
They might have thought themselves at sea,
For all the hats made waves.

They stayed so long, that folks endured
Great hunger for their sakes,
And could get nought to eat, although
Some seats were all on stakes.

Those sitting on the planks wished to
Their homes they were restored,
For here they got no dinner, though
They'd paid well for their board.

At length the King the Abbey left,
While wet fell in golore;
And those who'd cried "Long live the King!"
Now wished the rain were o'er.

As torrents fell, for carriages
Lords bawled in every quarter;
And though they weren't for arch-dukes
meant,
These peers stood in the water.

This wet, of course, did speedily
The pavement folks disturb,
Who ran away, as horses would,
When they got off the curb.

But all these were with mud and rain
Soon drenched up to their necks,
And reached their homes, like seamen, tired
And half-drowned from their *Rex*.

B.

MUSIC.

NEW PUBLICATIONS.

The Mentor's Harp: a Collection of Moral Ballads. The Poetry by T. Haynes Bayly; the Music by T. Phillips. Goulding and D'Almaine.

WE have here eight beautiful moral cavatins, which, with the exception of the fourth, the subject of which is from Mehl's oratorio of Joseph, are indebted for equally beautiful music to Mr. Phillips. In No. 6, the "Garden Pride," the words remind us of a pretty story by Miss Dagley. The "Nightingale and Parrot," No. 3, and the "Minstrel," No. 5, are also great favourites with us: but the whole are sweet compositions, and belong to a species too much neglected among the light and fantastic crowds of every day's publication.

Songs of Almaek's. By F. W. N. Bayly. Music by Bishop and Addison. Goulding and D'Almaine.

THIS book belongs to a new kind of musical publication, which has sprung up of late, into which personal portraits and anecdotes are introduced as the foundations for compositions, written to tunes, either forgotten or appropriated, by popular composers. Lithographic portraits of the Queen, Countess Gower, Lady Dover, and two or three others, are the recommendations of the present work. Verses written on little scandalous incidents, whether real or imaginary, can hardly aspire to be called lyrical: and, as we have ever set our face against personalities and scandal in literature, we are forced to apply like terms of disapprobation against them under the disguise of music. We are therefore sorry to say that this is a very poor affair altogether. Mr. Bayly is capable of much better things.

1. *When I roved a young Highlander.* 2. *Beauty's Bower.* Music by Nathan. Cra-mer, Addison, and Beale.

THE words of the former are by Lord Byron, of the latter by Mr. Bradfield; but the style of the music is a still higher recommendation than the poetry. The ballads themselves are simple and charming; and Mr. Nathan is the only composer who gives us such airs with the important addition of orchestral accompaniments.

Original Songs. 1. *Lassie wi' the Een sae blue.* 2. *Bonnie is my Lowland Lassie;* and 3. *The Mother's Song.* Composed and arranged by a Lady. Smith, Aberdeen. Smith, Elder, and Co., London.

THE lithographic printing of the music, and the embellishments, but especially the former, are so novel and admirable, that the example of lithography, as exhibited by S. Leith, of Banff, deserves the imitation of all London publishers, who desire to have their musical productions more clear and neat than they have ever hitherto been. The airs, though not very original, are sweet and agreeable; and the book is as pleasing a present of the kind as could be laid on a fair lady's table.

DRAMA.

THE GARRICK CLUB.

UNDER this name, and under the auspices of many distinguished individuals, a new club is in progress of formation, the avowed purpose of which is the promotion of all the interests of the Drama. The subscribers, of whom 200 are to constitute the original nucleus, already amount to above 150; and a meeting is to take place this day to decide upon the further regulation, &c. of the establishment. The only broad principles yet put forth are, that it is to combine all the purposes of a club with the advantages of a literary society, by bringing together the patrons of the Drama, and gentlemen who are most eminent in their respective circles. The plan is so far good, and seems entitled to warm support; but the whole must depend upon the disposition of the higher ranks who are parties to this social compact; to care in the election of all the members, so that there may be nothing to counteract their good disposition (presuming it to exist); and to the means employed for promoting the general interests of the stage. If, for example, such men as the Duke of Sussex, the Duke of Devonshire, Lord Mulgrave, Lord Wharcliffe, Lord Lowther, and other persons of noble rank, of whom nearly a third of the club is at present composed, really and efficiently join it, so as to become the acquaintances, and possibly the friends and patrons, of meritorious dramatic writers and other men of genius, this might be a great encouragement and advantage to the latter, as well as a source of gratification, worthy of nobility and wealth, to the former. If they are to be merely nominal subscribers, the club will be no better than any other with which the town abounds. It will possess no difference of character, and can do nothing to help the Drama, in its present low and deplorable condition.

What else might be devised for this desirable end, we are not prepared to say; but something might be accomplished by engaging the fashionable world to frequent the theatres more constantly; by offering honours and rewards for the production of sterling plays; and by discountenancing either the inroads upon propriety, or the continual croppings of trash, which

now prevail in this unweeded garden. If a club of this description has it in its power to cherish genius, and to check pretence, it will effect much by its own effort, and more by its example; and that such may be its laudable result we most cordially hope and desire.

THEATRES.

As is usual at the beginning of seasons, the principal novelties yet seen at the theatres are new performers, of whom there are, however, rather an unusual number; and some new casts of parts in the dramas produced. Upon many of these it is difficult to pronounce at first sight; first, on account of our being accustomed to other actors, and having formed our judgment of characters upon their original conceptions and execution of them; and, secondly, because the *débütants* labour under the disadvantage of being unaccustomed to the extent of London boards, and the fancies of London audiences. For these and other reasons, we seldom decide very peremptorily on first appearances; and are particularly disinclined to do so, when they are so plentiful as to unhinge, in some instances, all the familiar casts of favourite plays.

At Drury Lane we have had *Dominique*, by Kenney and Poole,—two riding on one horse, and yet neither of them riding behind. This version is a closer translation than any we have yet witnessed from the French piece. It is rather long, and went off heavily the first night; and though still somewhat tedious, Wallack has so improved in *Dominique*, as to carry the whole through with greater vivacity. Cooper, as *Chevalier Darcy*, supports him ably; and Mrs. Orger and Mrs. C. Jones, as the *soubrette* and the mother, display great talent, and contribute largely to the success of the entertainment.

On Tuesday, the *Country Girl* was revived; *Miss Peggy* by Miss Kennell. In the phrase of the stage, she was ill played up to; but in spite of this material drawback, she more than confirmed the very favourable opinion we had formed of her talents. Lively without pertness, natural without vulgarity, and piquant without impudence, she acquitted herself to admiration in a part which not only requires great skill, but is rendered more trying by the recollection of perfect personation, with which it is attended. Her lolling against Moody, and her arch look into his face while Belville is kissing her hand, was delightful; and her joyous laugh and caper at Guardy's betraying that she is a girl, called forth a hearty round of applause. Miss Kennell's person is neat; her countenance wants beauty. Mr. Balls, in *Sparkish*, was quite at home: he is a prince of fops. Mr. Andrews, as *Moody*, was not above mediocrity; *Althea* did not raise Miss Gordon in our estimation; but Miss Chaplin, a *débütant*, in *Lucy*, was a very nice and smart little maid. The rest of the *dramatis personæ* were very indifferent for a theatre royal; Mr. Benson Hill being out of his line in *Belville*.

At Covent Garden, *The Inconstant* has been strongly got up, with Miss E. Tree as *Bizarre*, and Miss Taylor as *Ortana*. The *Barber of Seville* introduced a new and fine bass to us, in Mr. Reynoldson from Edinburgh, who played *Dr. Bartolo* most satisfactorily; while Mr. Wilson and Miss Inverarity were all that could be wished in *Fiorello* and *Rosina*.

The Olympic has given us *I'll be your Second*; a very lively and amusing bagatelle from "Le Témoin," which was completely successful.

VARIETIES.

Politics.—We have often said the *Literary Gazette* should have nothing to do with politics; but we consider the following, which has been impressively repeated by a contemporary, so very important at a period when a great statesman might do the country yeoman's service, that we are induced to copy it *pro bono*. There is (says our friend) "no study better suited to the training of the sagacious and analysing and generalising faculties essential to a statesman, than that of medicine."—Why have we not some doctors in parliament, to minister to the state? why not go to the College of Physicians for a new Cabinet?

Phrenology.—A letter, signed by the Edinburgh editor of the *Phrenological Journal*, reached us, and has since appeared in the *Times* newspaper, which has more room for the products of the organs of combativeness than the *Literary Gazette*. Yet had justice required our insertion of that letter, we would have made room for it; but the question it agitates is between its writer and a correspondent of the *Times*, not between him and us. We did not say that the infernal cruelties we reprobated were perpetrated by the Phrenologists of Edinburgh: all we did was to express our abhorrence of these atrocities, and to censure their diffusion in a journal professing to be devoted to a science; and so far adopting them as to ground arguments and illustrations in favour of that science upon them. We stated frankly that we had seen No. of the journal but the one sent to us (XXIX.), which contained the second portion of these inhuman experiments; and therefore we cannot be accused of misrepresenting the fact, by whom such crimes were committed. That we copied some of these abominable details while we censured them, we acknowledge; but how else could we point the public indignation against them, their perpetrators and abettors? We have really no ill-will towards Gall, Spurzheim, Combe, or Deville: in several things they are clever men; but they have carried their hypotheses to a very foolish length, while some have got notoriety, and others made money, by means of phrenology!

Oriental Treasures.—We are informed that the collection of Mr. Marsden is at this time on sale, and that a French professor is now (or was a few days ago) in London, to treat for the purchase of it for the Royal Library at Paris. It is stated to us to be in the hands of Messrs. Hankey, the bankers.

March of Refinement.—A servant maid, in a small town in Herefordshire, last week left her situation in consequence of her being incapable of "reconciling her feelings to the—very bad grammar spoken by her mistress."—*Country Paper.*

Some Italian journals mention that a new organised being has been discovered in the interior of Africa, which seems to form an intermediate link between vegetable and animal life. This singular being has the shape of a spotted serpent. It drags itself along on the ground, and, instead of a head, has a flower shaped like a bell, which contains a viscous liquor. The flies and other insects, attracted by the smell of this juice, enter into the flower, where they are caught by the adhesive matter. The flower then closes, and remains shut until the prisoners are bruised and transformed into chyle. The indigestible portions, such as the head and the wings, are thrown out by two lower spiral openings. This vegetable serpent has a skin resembling leaves, a white and soft

flesh, and instead of a bony skeleton, a cartilaginous frame filled with yellow marrow. The natives consider it delicious food. — *Morning Paper*.

The privilege of fishing in the lake of Grand-lieu, near Machecoul, was formerly held by this remarkable tenure, — that the grantees were obliged, every year, to dance a new dance, and to sing a new song to a new tune, before the lord.

The vassals of the Lord of Vidérou were bound to pare his nails on Christmas and Whitsun eves. They were allowed to commute this service for a present of two new-born kittens, brought in a pan, at Christmas, and for a basket of fresh grapes and a pair of scissors at Whitsuntide.

The *rochet*, in ecclesiastical costume, derives its name from a Celtic word, which in Bas-Breton signifies *chemise*.

The forest of Brecon, where Merlin is supposed to be buried, and where the scenes of many romances are laid, is the present forest of Paimpoint.

The Princess Mary of Scotland landed at Morlaix in 1648, on her way to the French court, previous to her marriage with Francis II. As her guards passed over the bridge, some confusion took place, and a cry of treason was raised. The Seigneur de Rohan, who stood by the door of her carriage, exclaimed, *Jamais Breton ne fait trahison*, and the tumult ceased. — *Gentleman's Magazine*.

Quare? — In one of the favourable opinions of the press, often quoted by publishers in the subsequent advertisements of books, and known (sometimes wrongfully, but often rightly,) by the name of puffs, we find the following compliment to the authoress of *Pin-Money*: — "The authoress has an admirable acquaintance with the habits, the foibles, and the vices, of the society she has delineated!" — *Morning Post*.

LITERARY NOVELTIES.

[*Literary Gazette's Weekly Advertisement*, No. L.I. Oct. 15.]

The Juvenile Forget Me Not (Mrs. Hall's). — In doing justice to this Annual in our last No., we by accident passed over one of our notes, to which, in justice to our criticisms, and to our readers who depend upon them, we must now refer. It is to point out the number of typographical errors which occur in the paper entitled "the Young Traveller," which is so pleasing in itself, that we more regret its being disfigured by errors, unfavourable to the conveyance of accurate knowledge to the young. As our copy of the book was a very early one, corrections may be inserted on a small slip of paper, as errors, and placed in the volumes for the public; and the future editions, which so deserving a work is sure to reach, be entirely purified of these typographical over-sights. — This matter induces us to offer a remark on the multitude of inconveniences and mistakes which arise and are perpetuated by the carelessness of MSS.; and we should say almost particularly by the "new and improved systems of writing," which are held forth for the benefit of all, but especially of ladies. The letters look clear and flowing to view; but, on examination, every desideratum to a legible hand is discovered to be wanting: — the *m's* and *n's* are as like *o's*, and *o's*, and *v's*, as they can look; and the *o's* are any thing but round, and strongly resemble *s's*; the *f's* are undotted, the *l's* unlooped, and the *r's* unstruck. A little attention to these points would save a great deal of trouble, and prevent much confusion.

The Castle of Otranto, lately announced to form, in conjunction with the romance of Frankenstein, the forthcoming volume of the Standard Novels, is, we learn, for the present postponed; and the volume will consist of the latter story and the Ghost-Sea of Schiller.

Vol. I. comprising Essex, Hertfordshire, Kent, Surrey, and Sussex, of the Family Topographer; being a compendious Account of the Ancient and Present State of the Counties of England, edited by S. Tymms.

Lieutenant-Colonel Galindo writes to us from Peter (May 16th), in Central America, with the command of which district he is intrusted, that he has just returned from a tour to the ruins of Palenque, of which he is kind enough to send us an interesting account, which will be found in our preceding columns; and he also mentions that he is preparing for publication an Historical, Statistical, and Descriptive Account of the whole of Central America; a region so little explored, as hardly to be known to the European reader. We look for this work, therefore, with impatience.

A Manual of the History of Philosophy, from the German of Tenneman, by the Rev. Arthur Johnson, M.A. — A New Argument for the Truth of the Christian Religion, by the same Author.

LIST OF NEW BOOKS.

Literary Souvenir for 1833, small paper, 12s. in turkey morocco; large paper, 1l. 4s. bds. — The New Years Gift for 1833, by Mrs. Alaric A. Watts, fcp. 8s. hf-bd. — History of the Roman Hierarchies, by J. Abbott, A.B. 8vo. 9s. bds. — Glen Moubray, 3 vols. 8vo. 1l. 8s. bds. — Frost's Geography and Astronomy, 12mo. 8s. bd. — Hardman's Irish Minstrelsy, 2 vols. 8vo. 1l. 6s. bds. — Nimrod on Hunters, fcp. 8vo. 1s. bds. — The Amulet for 1833, turkey morocco, fcp. 12s. Illustrations to do, unlettered, 2l. 10s.; lettered, 1l. 10s. in portfolio. — The Juvenile Forget Me Not for 1833, fcp. morocco, 8s. — Valpy's Third Greek Dialect, English Notes, 8vo. 14s. 6d. bds. — The Winter's Wreath for 1833, fcp. 12s. alk.; proofs on India paper, 1l. 4s. in portfolio. — Friendship's Offering for 1833, fcp. 12s. stamped morocco; Illustrations to do, India paper, before letters, 1l. 11s. 6d.; after letters, 1l. 1s. French proofs, 15s. in portfolio. — The Bravo, by the Author of "the Spy," &c. 3 vols. 12mo. 1l. 11s. 6d. bds.

Quantity of rain in inches and decimals, 4.13.
Winds—3 East—0 West—3 North—0 South—1 North-east—5 South-east—11 South-west—7 North-west.

General Observations.—The extreme of heat the same as in September last year; the minimum above those in the last three years, and the mean temperature higher than since 1836; the barometer high, but the range not so great as in the last three years. The quantity of rain more than the average, although less than last year; twice in the month, viz. on the 1st and 28th, more than an inch of rain fell in the twenty-four hours; on the night of the 28th the rain fell exceedingly heavily, attended by much thunder and lightning; thunder was also heard, and lightning seen, on the preceding evening, about eight o'clock. The evaporation 0.35 of an inch.

TO CORRESPONDENTS.

The Power of Melody is received, and is intended for insertion when our Reviews happen to be less laden with poetical extracts.

If G. does not stand for Goose, he has at least employed the quill of one.

To E. H. Greenhow, of North Shields, we have to answer, that the death of Wilson, the American orthologist, took place many years ago, and has been frequently mentioned in the *Literary Gazette*. It was by a mistake in a late No. we spoke of it as a recent event—probably caused by an account of the death of Audubon, who has excited attention as a naturalist.

ERRATA.—In our remarks last week on the drama, Drury Lane, for "Beaudenel," read "Brudenell," the name of the new actress; and in the Olympic, for "fooling," read "fooling."

The False Step was too late for this week. The influx of the Annals at this season has fallen, we trust, not heavily upon our present sheet. To accommodate them, we have postponed some Reviews, &c. of sterling works; and yet we have only been able to take cursory views of these elegancies. We must copy a "Devil's Impromptu upon this subject!"

The Winter's Wreath, Forget Me Not, And all this pretty set, Have nearly made our weekly sheet An Annual Gazette.

Not being so much afraid of mobs as of wet weather, we beg to say that it was only the latter which prevented our visiting Drury Lane on Thursday, to see Mr. Templeton and Miss Field in *Rosina*.

The Author of the Corn-Law Rhymes is too impatient with us: if he cannot wait till we have an opportunity of reviewing his volume, it shall be returned to him, without his troubling himself to write snappish letters.

We cannot yet answer the inquiry from Chelsea College.

ADVERTISEMENTS,

Connected with Literature and the Arts.

UNIVERSITY OF LONDON SCHOOL.

The Council have decided on the admission of the School within the walls of the University at Christmas, when the necessary arrangements shall have been completed. A Prospectus of the School may be had at the Office of the University; or Mr. John Taylor, Bachelior to the University, 29, Upper Gower Street; or at Messrs. Baldwin and Cradock, Booksellers, Paternoster Row.

The Studies of the Pupils were resumed after the Hays, on the 24 inst.

JOHN WALKER, A.B. Head Master.

16, Gower Street.

SCHOOL OF PHYSIC IN IRELAND.—

The Professors will commence their Lectures and Hospital Attendance on Monday, the 7th of November, at the following hours:—

At 11, Dr. Crampton on Materia Medica and Pharmacy.
At 12, the Hospital will be visited by the Clinical Lecturers.
At 1, Dr. Macartney on Anatomy and Surgery.
At 2, Dr. Barker on Chemistry.
At 3, Dr. Leashy on the Practice of Medicine.
At 4, Dr. Graves on the Institutes of Medicine.
Dr. Allman's Lectures on Demonstrations on Botany will commence in the last week in April, and before the middle of July.

The Lectures on Midwifery, by Dr. Montgomery, (Professor to the students of the law,) commence on the 7th of November, and will be delivered at 10 o'clock.

The Lectures in Anatomy, Chemistry, and Botany, will be delivered in Trinity College; the Lectures on Midwifery, Materia Medica, Practice of Medicine, Institutes of Medicine, and Clinical Lectures, in Sir Patrick Dun's Hospital.

Clinical Lectures will be delivered on two days in the week, by Dr. Crampton and Dr. Barker.

The Summer Course of Clinical Lectures, at Sir P. Dun's, will commence the first week in May, and be continued to the end of July.

Demonstrations will be given in Trinity College, by Dr. Macartney.

Operating Pupils instructed in General and Pharmaceutical Chemistry, at the Chemical Laboratory, Trinity College.

(Signed) DAVID BAKER, M.D.

Registrar to the College of Physicians.

26th September, 1831.

TO ARTISTS, ARCHITECTS, and

DRAFTSMEN.—Since the death of Mr. Langdon, the late surviving Partner of Messrs. Brookman and Langdon, the late partner of the firm, has given to the Manufacturers of Drawing Pencils in order by S. Mordan and Co., who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing these objections and annoyance so frequently complained of in Drawing Pencils. All who wish to be satisfied as to the genuineness of these Pencils, may see them manufactured at No. 15, Castle Street, Finsbury, where the Lead is obtained from the best sources, exclusively, to supply all the Government Offices.

Sold retail by all respectable Stationers, &c. throughout the United Kingdom. S. Mordan and Co.'s name is on each Pencil.

REFORM.—Harding's Authentic Edition

(the Sixth) of Lord Brougham's very elegant Speech on the Second Reading of the Reform Bill is now ready, very considerably enlarged, printed in good type and fine paper, with the Addition of Earl Grey's admirable Reply to the Opposition in answering up, with a very correct List of the Majority and Minority. Only Sixpence, well worth the cost. Revised and corrected by the late Reporter of Hansard's Parliamentary Debates.

The Publisher gratefully acknowledges, with gratitude, the decided preference given to his "National Edition." The Trade who have not been able to obtain a Supply, may now have them from the Publisher, Mr. T. Agnew and Sons, 15, Old Bailey, and Mr. W. Harding, (Pulpit Office), 3, Paternoster Row; and E. Lay, 25, Old Bailey.

Of whom may be had,

Harding's System of Short-Hand, 12th edit.

BOOKS PUBLISHED THIS DAY.

New Burlington Street, Oct. 8, 1831.

IMPORTANT WORKS COMPLETED.
Messrs. Colburn and Bentley beg to acquaint the Public, that the following Works are now completed by the last Volumes; and Purchasers of the former Volumes are requested to send their Orders for the completion of their sets to their respective Booksellers.

I.
Dr. Doddridge's Diary and Correspondence, Vol. V. containing his Sacramental Meditations.
"We know not when, if ever, we have perused volumes of the description of these now before us, with more intense curiosity, amusement, and instruction."—*Literary Gazette*.

II.
Evelyn's Memoirs, Vol. III. in Quarto, comprising his Miscellaneous Writings, now first collected and edited, with Notes, &c. 2*s.* boards.
The miscellaneous writings of the philosopher and naturalist, Evelyn (most of which are extremely rare), are here presented to the public in a quarto volume, to range with his "Diary and Correspondence." The tracts forming the present volume are, more or less, on subjects of great interest, including lively pictures of the manners and amusements of his time; memoirs, political, domestic, and religious; treatises on morals, horticulture, art, science, commerce, &c.; in all of which the sound intellect of this amiable and high-minded English gentleman will be traced.

III.
D'Israeli's Commentaries on the Life and Reign of Charles I. King of England. Vol. V.
"Another delightful book added to the former productions of this esteemed writer, full of curious personal and political history."—*Literary Gazette*.

IV.
Godwin's History of the Commonwealth of England, from its commencement to the Restoration of Charles II. Vol. IV.
"This work is a solid proof of great endowments and abilities."—*Literary Gazette*.

V.
Conversations of Literary Men and Statesmen. Edited by Walter Savage Landor. Vol. III.

VI.
The Reminiscences of Henry Angelo. The second and concluding Volume.

This work contains numerous original anecdotes and curious traits in the personal history of many noble and illustrious characters. The book abounds not only in piquant matter relating to persons of rank, but of talent also; for the elder Angelo's intimacy with Englishmen, as well as foreigners, professors of all the fine arts, &c. made his house, in Carlisle Street, for many years the rendezvous of Sir Joshua Reynolds, Garrick, the Sheridans, the Linleys, Gainsborough, Pope, Beck, &c. &c.

Paris in London, price only Threepence.
The First Number of an amusing new Journal, entitled

Nimrod's Letters on Condition.

In a handsome 8vo. vol. price 1*l.*

REMARKS ON THE CHOICE OF HORSES, their MANAGEMENT, and on the CONDITION of HUNTERS; in a Series of Letters, by NIMROD, as they appeared in the Sporting Magazine: with Notes and a copious Index.

The Work has been carefully revised by a gentleman perfectly competent to the task: all the irrelevant matter has been expunged, and several notes added by way of explanation or elucidation, required by the lapse of time and the change of circumstances under which it must appear. The volume contains a mass of important matter, of paramount interest not only to masters of hounds, but to every gentleman connected with the turf or the field.

LONDON: printed and published by M. A. Pittman, 18, Warwick Square, Newgate Street; sold also by J. M. Richardson, 3, Cornhill; Chapple, Pall Mall; Booth, Duke Street, Post Office Place; R. Ackermann, Jan. at his Eclipse Sporting Gallery, 19, Regent Street; and may be had of all Booksellers in the United Kingdom.

Price 1*l.* 5*s.* boards, and 1*l.* 10*s.* in silk, illustrated by M. Vignette, (35 of which are Landscapes, by Turner.)

SATURDAY, OCTOBER 22, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Columbia River; or, Scenes and Adventures during a Residence of Six Years on the Western Side of the Rocky Mountains, among various Tribes of Indians hitherto unknown: together with a Journey across the American Continent. By Ross Cox. 2 vols. 8vo. London, 1831. Colburn and Bentley.

THOUGH some time has elapsed since these strange adventures occurred, between 1811 and 1817, they are so surprising, to say the least of them, that we cannot dislike their publication at any period. The author represents himself as a trader connected with the north-west, or the Hudson Bay Company; and, having ascended and descended the Columbia river eight or nine times, wintered with the natives on its banks and on those of its tributary streams, traversed the Continent, and seen much of Indian life—his narrative is sufficiently marvellous to match with the most marvellous stories of ancient or modern travel. Suppose we at once afford a specimen of this, by extracting a portion of his account of perils and disasters during a fortnight when he happened to be separated from his companions.

“After walking and riding eight hours, I need not say we made a hearty breakfast; after which I wandered some distance along the banks of the rivulet in search of cherries, and came to a sweet little arbour formed by sumach and cherry-trees. I pulled a quantity of the fruit, and sat down in the retreat to enjoy its refreshing coolness. It was a charming spot, and on the opposite bank was a delightful wildness of crimson haw, honeysuckles, wild roses, and currants: its resemblance to a friend’s summer-house in which I had spent many happy days brought back home with all its endearing recollections; and my scattered thoughts were successively occupied with the past, the present, and the future. In this state I fell into a kind of pleasing, soothing reverie, which, joined to the morning’s fatigue, gradually sealed my eyelids; and unconscious of my situation, I resigned myself to the influence of the Slowy god. But imagine my feelings when I awoke in the evening, I think it was about five o’clock, from the declining appearance of the sun! All was calm and silent as the grave. I hastened to the spot where we had breakfasted: it was vacant. I ran to the place where the men had made their fire: all, all were gone, and not a vestige of man or horse appeared in the valley. My senses almost fled me. I called out in vain in every direction, until I became hoarse; and I could no longer conceal from myself the dreadful truth that I was alone in a wild, uninhabited country, without horse or arms, and destitute of cover. Having now no resource but to ascertain the direction which the party had taken, I set out examining the ground, and at the northern point of the valley discovered the tracks of horses’ feet, which I followed for some time, and which led to a chain of small hills with a dry, gravelly bottom, on which the hoofs

made no impression. Having thus lost the tracks, I ascended the highest of the hills, from which I had an extended view of many miles around; but saw no sign of the party, or the least indication of human habitations. The evening was now closing fast, and with the approach of night a heavy dew commenced falling. The whole of my clothes consisted merely of a gingham shirt, nankeen trousers, and a pair of light leather moccasins, much worn. About an hour before breakfast, in consequence of the heat, I had taken off my coat and placed it on one of the loaded horses, intending to put it on towards the cool of the evening; and one of the men had charge of my fowling-piece. I was even without my hat; for in the agitated state of my mind on awaking, I had left it behind, and had advanced too far to think of returning for it. At some distance on my left I observed a field of high strong grass, to which I proceeded, and after pulling enough to place under and over me, I recommended myself to the Almighty, and fell asleep. During the night confused dreams of warm houses, feather beds, poisoned arrows, prickly pears, and rattle-snakes, haunted my disturbed imagination.”

We do not follow his succeeding days and nights in regular order, but copy the most extraordinary incidents which he relates of them.

“I suffered much from want of water, having got during the day only two tepid and nauseous draughts from stagnant pools, which the long drought had nearly dried up. About sunset I arrived at a small stream, by the side of which I took up my quarters for the night. The dew fell heavily; but I was too much fatigued to go in quest of bark to cover me; and even had I been so inclined, the howling of the wolves would have deterred me from making the dangerous attempt. There must have been an extraordinary nursery of these animals close to the spot; for between the weak shrill cries of the young, and the more loud and dreadful howling of the old, I never expected to leave the place alive. I could not sleep. My only weapons of defence were a heap of stones and a stick. Ever and anon some more daring than others approached me. I presented the stick at them as if in the act of levelling a gun, upon which they retired, vented a few yells, advanced a little farther, and after surveying me for some time with their sharp fiery eyes, to which the partial glimpses of the moon had imparted additional ferocity, retreated into the wood. In this state of fearful agitation I passed the night; but as day-light began to break, nature asserted her supremacy, and I fell into a deep sleep, from which, to judge by the sun, I did not awake until between eight and nine o’clock on the morning of the 25th. My second bandages having been worn out, I was now obliged to bare my knees for fresh ones; and after tying them round my feet, and taking a copious draught from the adjoining brook for breakfast, I recommenced my joyless journey. My course was nearly north-north-east. I got no water during the

day, nor any of the wild cherries. Some slight traces of men’s feet, and a few old horse-tracks occasionally crossed my path: they proved that human beings sometimes at least visited that part of the country, and for a moment served to cheer my drooping spirits. About dusk, an immense-sized wolf rushed out of a thick copse a short distance from the pathway, planted himself directly before me, in a threatening position, and appeared determined to dispute my passage. He was not more than twenty feet from me. My situation was desperate, and as I knew that the least symptom of fear would be the signal for attack, I presented my stick, and shouted as loud as my weak voice would permit. He appeared somewhat startled, and retreated a few steps, still keeping his piercing eyes firmly fixed on me. I advanced a little, when he commenced howling in a most appalling manner; and supposing his intention was to collect a few of his comrades to assist in making an afternoon repast on my half-famished carcass, I redoubled my cries, until I had almost lost the power of utterance, at the same time calling out various names, thinking I might make it appear I was not alone. An old and a young lynx ran close past me, but did not stop. The wolf remained about fifteen minutes in the same position; but whether my wild and fearful exclamations deterred any others from joining him, I cannot say. Finding at length my determination not to flinch, and that no assistance was likely to come, he retreated into the wood, and disappeared in the surrounding gloom. The shades of night were now descending fast, when I came to a verdant spot surrounded by small trees, and full of rushes, which induced me to hope for water; but after searching for some time, I was still doomed to bitter disappointment. A shallow lake or pond had been there, which the long drought and heat had dried up. I then pulled a quantity of the rushes and spread them at the foot of a large stone, which I intended for my pillow; but as I was about throwing myself down, a rattle-snake coiled, with the head erect, and the forked tongue extended in a state of frightful oscillation, caught my eye immediately under the stone. I instantly retreated a short distance; but assuming fresh courage, soon despatched it with my stick. On examining the spot more minutely, a large cluster of them appeared under the stone, the whole of which I rooted out and destroyed. This was hardly accomplished, when upwards of a dozen snakes of different descriptions, chiefly dark brown, blue, and green, made their appearance: they were much quicker in their movements than their rattle-tailed brethren; and I could only kill a few of them. This was a peculiarly soul-trying moment. I had tasted no fruit since the morning before, and after a painful day’s march under a burning sun, could not procure a drop of water to allay my feverish thirst. I was surrounded by a murderous brood of serpents and ferocious beasts of prey, and without even the consolation of knowing when such misery might have a probable ter-

mination. I might truly say with the royal Psalmist, that 'the snares of death compassed me round about.' Having collected a fresh supply of rushes, which I spread some distance from the spot where I massacred the reptiles, I threw myself on them, and was permitted, through Divine goodness, to enjoy a night of undisturbed repose. I arose on the morning of the 26th considerably refreshed; and took a northerly course, occasionally diverging a little to the east. Several times during the day I was induced to leave the path by the appearance of rushes, which I imagined grew in the vicinity of lakes; but on reaching them my faint hopes vanished; there was no water, and I in vain essayed to extract a little moisture from them. Prickly thorns and small sharp stones added greatly to the pain of my tortured feet, and obliged me to make farther encroachments on my nether garments for fresh bandages. The want of water now rendered me extremely weak and feverish; and I had nearly abandoned all hopes of relief, when, about half-past four or five o'clock, the old pathway turned from the prairie grounds into a thickly wooded country, in an easterly direction; through which I had not advanced half a mile when I heard a noise resembling a waterfall, to which I hastened my tottering steps, and in a few minutes was delighted at arriving on the banks of a deep and narrow rivulet, which forced its way with great rapidity over some large stones that obstructed the channel. After offering up a short prayer of thanksgiving for this providential supply, I threw myself into the water, forgetful of the extreme state of exhaustion to which I was reduced: it had nearly proved fatal, for my weak frame could not withstand the strength of the current, which forced me down a short distance, until I caught the bough of an overhanging tree, by means of which I regained the shore. Here were plenty of hips and cherries; on which, with the water, I made a most delicious repast. On looking about for a place to sleep, I observed lying on the ground the hollow trunk of a large pine, which had been destroyed by lightning. I retreated into the cavity; and having covered myself completely with large pieces of loose bark, quickly fell asleep. My repose was not of long duration; for at the end of about two hours I was awakened by the growling of a bear, which had removed part of the bark covering, and was leaning over me with his snout, hesitating as to the means he should adopt to dislodge me; the narrow limits of the trunk which confined my body preventing him from making the attack with advantage. I instantly sprung up, seized my stick, and uttered a loud cry, which startled him, and caused him to recede a few steps; when he stopped, and turned about, apparently doubtful whether he would commence an attack. He determined on an assault; but feeling I had not sufficient strength to meet such an unequal enemy, I thought it prudent to retreat, and accordingly scrambled up an adjoining tree. My flight gave fresh impulse to his courage, and he commenced ascending after me. I succeeded, however, in gaining a branch, which gave me a decided advantage over him; and from which I was enabled to annoy his muzzle and claws in such a manner with my stick as effectually to check his progress. After scraping the bark some time with rage and disappointment, he gave up the task, and retired to my late dormitory, of which he took possession. The fear of falling off, in case I was overcome by sleep, induced me to make several attempts to

descend; but each attempt aroused my ursine sentinel; and after many ineffectual efforts, I was obliged to remain there during the rest of the night. I fixed myself in that part of the trunk from which the principal grand branches forked, and which prevented me from falling during my fitful slumbers. On the morning of the 27th, a little after sunrise, the bear quitted the trunk, shook himself, 'cast a longing, lingering look' towards me, and slowly disappeared in search of his morning repast. After waiting some time, apprehensive of his return, I descended and resumed my journey through the woods in a north-north-east direction."

At the end of fourteen days thus pleasantly spent, the author fell in with some Indians, who treated him kindly, and conducted him to his white friends.

The next winter was passed among the Indians called Flat-heads.

"A large band (we are told) of the Flat-head warriors were encamped about the fort. They had recently returned from the buffalo country, and had revenged their defeat of the preceding year, by a signal victory over their enemies the Black-feet; several of whose warriors, with their women, they had taken prisoners. M'Millan's tobacco and stock of trading goods had been entirely expended previous to my arrival, and the Indians were much in want of ammunition, &c. My appearance, or I should rather say, the goods I brought with me, was therefore a source of great joy to both parties. The natives smoked the much-loved weed for several days successively. Our hunters killed a few mountain sheep, and I brought up a bag of flour, a bag of rice, plenty of tea and coffee, some arrow-root, and fifteen gallons of prime rum. We spent a comparatively happy Christmas, and, by the side of a blazing fire in a warm room, forgot the sufferings we endured in our dreary progress through the woods. There was, however, in the midst of our festivities, a great drawback from the pleasure we should have otherwise enjoyed. I allude to the unfortunate Black-feet who had been captured by the Flat-heads. Having been informed that they were about putting one of their prisoners to death, I went to their camp to witness the spectacle. The man was tied to a tree; after which they heated an old barrel of a gun until it became red hot, with which they burned him on the legs, thighs, neck, cheeks, and belly. They then commenced cutting the flesh from about the nails, which they pulled out, and next separated the fingers from the hand joint by joint. During the performance of these cruelties the wretched captive never winced, and instead of suing for mercy, he added fresh stimulants to their barbarous ingenuity by the most irritating reproaches, part of which our interpreter translated as follows:—'My heart is strong. You do not hurt me. You can't hurt me. You are fools. You do not know how to torture. Try it again. I don't feel any pain yet. We torture your relations a great deal better, because we make them cry out loud, like little children. You are not brave: you have small hearts, and you are always afraid to fight.' Then addressing one in particular, he said, 'It was by my arrow you lost your eye;' upon which the Flat-head darted at him, and with a knife in a moment scooped out one of his eyes; at the same time cutting the bridge of his nose nearly in two. This did not stop him: with the remaining eye he looked sternly at another, and said, 'I killed your brother, and I scalped your

old fool of a father.' The warrior to whom this was addressed instantly sprung at him, and separated the scalp from his head. He was then about plunging a knife in his heart, until he was told by the chief to desist. The raw skull, bloody socket, and mutilated nose, now presented a horrid appearance, but by no means changed his tone of defiance. 'It was I,' said he to the chief, 'that made your wife a prisoner last fall;—we put out her eyes;—we tore out her tongue;—we treated her like a dog. Forty of our young warriors—' The chieftain became incensed the moment his wife's name was mentioned; he seized his gun, and, before the last sentence was ended, a ball from it passed through the brave fellow's heart, and terminated his frightful sufferings. Shocking, however, as this dreadful exhibition was, it was far exceeded by the atrocious cruelties practised on the female prisoners; in which, I am sorry to say, the Flat-head women assisted with more savage fury than the men. I only witnessed part of what one wretched young woman suffered, a detail of which would be too revolting for publicity. We remonstrated against the exercise of such horrible cruelties. They replied by saying the Black-feet treated their relations in the same manner; that it was the course adopted by all red warriors; and that they could not think of giving up the gratification of their revenge to the foolish and womanish feelings of white men.

"While pride, policy, ambition, self-preservation, or the love of aggrandisement, often deluges the civilised world with Christian blood; the only cause assigned by the natives of whom I write, for their perpetual warfare, is their love of buffalo. There are extensive plains to the eastward of the mountains, frequented in the summer and autumnal months by numerous herds of buffaloes. Hither the rival tribes repair to hunt these animals, that they may procure as much of their meat as will supply them until the succeeding season. In these excursions they often meet, and the most sanguinary conflicts follow. The Black-feet lay claim to all that part of the country immediately at the foot of the mountains, which is most frequented by the buffaloes; and allege that the Flat-heads, by resorting thither to hunt, are intruders whom they are bound to oppose on all occasions. The latter, on the contrary, assert, that their forefathers had always claimed and exercised the right of hunting on these 'debatable lands;' and that while one of their warriors remained alive on the right should not be relinquished. The consequences of these continual wars are dreadful, particularly to the Flat-heads, who, being the weaker in numbers, were generally the greatest sufferers."

"The Flat-heads believe in the existence of a good and evil spirit, and consequently in a future state of rewards and punishments. They hold, that after death the good Indian goes to a country in which there will be perpetual summer; that he will meet his wife and children; that the rivers will abound with fish, and the plains with the much-loved buffalo; and that he will spend his time in hunting and fishing, free from the terrors of war, or the apprehensions of cold or famine. The bad man, they believe, will go to a place covered with eternal snow; that he will shiver with cold, and will see stars at a distance which he cannot enjoy, water which he cannot procure to quench his thirst, and deer which he cannot kill to appease his hunger. An impenetrable wood, full of

panthers, and serpents, separates these 'shrink-
ing slaves of winter' from their fortunate bre-
thren in the 'meadows of ease.' Their punish-
ment is not, however, eternal, and, according
to the different shades of their crimes, they are
sooner or later emancipated, and permitted to
join their friends in the Elysian fields. Their
code of morality, although short, is compre-
hensive. They say that honesty, bravery, love of
truth, attention to parents, obedience to their
chiefs, and affection for their wives and chil-
dren, are the principal virtues which entitle
them to the place of happiness; while the
opposite vices condemn them to that of misery.
They have a curious tradition with respect
to beavers. They firmly believe that these
animals are a fallen race of Indians, who,
in consequence of their wickedness, vexed
the Good Spirit, and were condemned by him
to their present shape; but that in due time
they will be restored to their humanity. They
allege that the beavers have the powers of
speech; and that they have heard them talk
with each other, and seen them sitting in
council on an offending member. The lovers
of natural history are already well acquainted
with the surprising sagacity of these wonderful
animals; with their dexterity in cutting down
trees, their skill in constructing their houses,
and their foresight in collecting and storing
provisions sufficient to last them during the
winter months: but few are aware, I should
imagine, of a remarkable custom among them,
which, more than any other, confirms the In-
dians in believing them a fallen race. Towards
the latter end of autumn, a certain number,
varying from twenty to thirty, assemble for
the purpose of building their winter habita-
tions. They immediately commence cutting
down trees; and nothing can be more wonder-
ful than the skill and patience which they ma-
nifest in this laborious undertaking; to see
them anxiously looking up, watching the lean-
ing of the tree when the trunk is nearly se-
vered, and, when its creaking announces its
approaching fall, to observe them scampering
off in all directions, to avoid being crushed.
When the tree is prostrate, they quickly strip
it of its branches; after which, with their
dental chisels, they divide the trunk into se-
veral pieces of equal lengths, which they roll
to the rivulet across which they intend to erect
their house. Two or three old ones generally
superintend the others; and it is no unusual
sight to see them beating those who exhibit
any symptoms of laziness. Should, however,
any fellow be incorrigible, and persist in re-
fusing to work, he is driven unanimously by
the whole tribe to seek shelter and provisions
elsewhere. These outlaws are therefore obliged
to pass a miserable winter, half starved in a
burrow on the banks of some stream, where
they are easily trapped. The Indians call them
'lazy beaver,' and their fur is not half so va-
luable as that of the other animals, whose per-
severing industry and *prévoyance* secure them
provisions and a comfortable shelter during the
severity of winter.

"They have a tradition relative to the origin
of mankind, of which the following is the sub-
stance:—Man was at first created by a divinity
named *Etalapass*; but he was originally imper-
fect. His mouth was not divided, his eyes
were closed, and his hands and feet immov-
able; in short, he was rather a statue of flesh
than a living being. A second divinity, named
Koansem, less powerful than *Etalapass*, but
more benevolent, seeing man in this imperfect
state, took pity on him, and with a sharp stone
opened his mouth, unsealed his eyes, and im-

parted motion to his hands and feet. Not satis-
fied with these gifts, the compassionate deity
taught mankind how to make canoes, paddles,
nets, and all their domestic utensils. He also
overturned rocks into the rivers, which, by ob-
structing the progress of the fish through the
waters, enabled them to take sufficient to satis-
fy their wants. We observed no idols among
them; and although they had some small gro-
tesque-looking figures, carved out of wood, they
seemed to pay them no respect, and often of-
fered to barter them for trifles. Civilised
countries are not exempt from superstition:
it is therefore not surprising to find it exist
among untutored savages. They believe that
if salmon be cut cross-ways, the fishery will be
unproductive, and that a famine will follow.
In the summer of 1811, they at first brought
but a small quantity to the people who were
then building the fort. As Mr. McDougall
knew there was no scarcity, he reproached the
chiefs for furnishing such a scanty supply:
they admitted the charge, but assigned as a re-
ason their fears that the white people would cut
it the unlucky way. Mr. McDougall promised
to follow their plan, upon which they brought
a tolerable good quantity, but all roasted; and
which, in order to avoid displeasing them, our
people were obliged to eat before sunset each
day.

"*Haigua*, which I have so often mentioned,
is a white round shell of extreme hardness,
varying from one to four inches in length, and
from three-eighths to half an inch in circum-
ference. It is hollow, slightly curved, and
tapers a little towards the ends. These shells
are highly estimated, the longest being the
most valuable. They are found in the neigh-
bourhood of Nootka, and form an important
article of local traffic. The Indians regulate
the prices of their various articles by *haigua*;
a fathom of the best description being equal in
value to ten good beaver-skins. The most
enlightened nations are inundated with char-
latans: it is therefore not surprising they
should flourish among rude barbarians. Every
Indian village has its quack doctor, or, as they
call him, 'the strong man of medicine.' The
moment a native is attacked with sickness, no
matter of what description, the physician is
sent for. He immediately commences opera-
tions by stretching the patient on his back;
while a number of his friends and relations
surround him, each carrying a long and a short
stick, with which they beat time to a mournful
air which the doctor chants, and in which they
join at intervals. Sometimes a slave is de-
spatched to the roof of the house, which he
belabours most energetically with his drum-
sticks, joining at the same time with a loud
voice the chorus inside. The man of medicine
then kneels, and presses with all his force his
two fists on the patient's stomach. The un-
fortunate man, tortured with the pain pro-
duced by this violent operation, utters the most
piercing cries; but his voice is drowned by the
doctor and the by-standers, who chant loud
and louder still the mighty 'song of medicine.'
At the end of each stanza the operator seizes
the patient's hands, which he joins together
and blows on. He thus continues alternately
pressing and blowing, until a small white
stone, which he had previously placed in the
patient's mouth, is forced out. This he ex-
hibits with a triumphant air to the man's re-
lations, and, with all the confidence and pom-
pousness of modern quackery, assures them the
disease is destroyed, and that the patient must
undoubtedly recover. Mr. Franchère states
he has seen some of them carefully envelop the

small stone, which they call the source of evil
in a piece of cedar bark, and throw it into the
fire. It frequently happens that a man who
might have been cured by a simple dose of me-
dicine, is by this abominable system destroyed;
but whether recovery or death be the con-
sequence, the quack is equally recompensed."

We shall not occupy space by copying the
details of Indian execution, for robbing the
traders, though they are tragical enough; but
notice, shortly, the various tribes in these
parts, and one of their most curious customs.

"They differ little (says the author) from
each other in laws, manners, or customs; and
were I to make a distinction, I would say the
Cathlamahs are the most tranquil, the Killy-
mucks the most roughish, the Clatsops the most
honest, and the Chinooks the most incontinent.
The Chilts, a small tribe who inhabit the coast
to the northward of Cape Disappointment, par-
take in some degree of these various quali-
ties. The abominable custom of flattening their
heads prevails among them all. Immediately
after birth the infant is placed in a kind of
oblong cradle formed like a trough, with moss
under it. One end, on which the head reposes,
is more elevated than the rest. A padding is
then placed on the forehead with a piece of
cedar-bark over it, and by means of cords
passed through small holes on each side of
the cradle the padding is pressed against the
head. It is kept in this manner upwards of
a year, and is not, I believe, attended with
much pain. The appearance of the infant,
however, while in this state of compression,
is frightful, and its little black eyes, forced
out by the tightness of the bandages, resemble
those of a mouse choked in a trap. When re-
leased from this inhuman process, the head is
perfectly flattened, and the upper part of it
seldom exceeds an inch in thickness. It never
afterwards recovers its rotundity. They deem
this an essential point of beauty, and the most
devoted adherent of our first Charles never
entertained a stronger aversion to a *Round-
head* than these savages. They allege, as an
excuse for this custom, that all their slaves
have round heads; and accordingly, every child
of a bondsman, who is not adopted by the tribe,
inherits not only his father's degradation, but
his parental rotundity of cranium. This de-
formity is unredeemed by any peculiar beauty,
either in features or person. The height of
the men varies from five feet to five feet six
inches; that of the women is generally six or
eight inches less. The nose is rather flat,
with distended nostrils; and a mouth, seldom
closed, exposes to view an abominable set of
short, dirty, irregular teeth. The limbs of
the men are in general well-shaped; but the
women, owing to tight ligatures which they
wear on the lower part of the legs, are quite
bandy, with thick ankles, and broad flat feet.
They have loose hanging breasts, slit ears,
and perforated noses, which, added to greasy
heads, and bodies saturated with fish oil, con-
stitute the sum total of their personal attrac-
tions. The good qualities of these Indians are
few; their vices many. Industry, patience,
sobriety, and ingenuity, nearly comprise the
former; while in the latter may be classed,
thieving, lying, incontinence, gambling, and
cruelty. They are also perfect hypocrites."

We are almost tempted to quote the epi-
sode of Miss Jane Barnes, a bar-maid from
Portsmouth, who accompanied an adventurer
among these Indians; but we must defer
aught farther for this week.

The False Step; and the Sisters. 3 vols. 12mo. London, 1832. Bull.

Two very interesting stories. Unless internal evidence much deceives us, this author has appeared ere this before the public; and if so, we must say there has been great improvement. "*The Sisters*" is our favourite; it is touching, even to pain—it illustrates the old poet's words,

"Oh! fearful thing to let one only hope
Engross the human heart."

"*The False Step*" gives not the history of a divorced wife, but of her children, and the shame and sorrow visited on their innocent heads. As we have often observed, a continuous narrative is badly calculated for extract; but we think the following scene may trust to its own impression. Lindsay Bathurst has married Jeannette against his judgment, being aware of her mother's frailty, which she herself is not. Jeannette has, under particular circumstances, visited a Mrs. Grant, an old friend, despite of her husband's prohibition.

"Jeannette was almost a stranger to moral fear; but when she beheld the deep shade on Lindsay's brow, instead of the gladness that should have been there, she experienced an inward tremor that all but deprived her of the power of speaking. She was conscious of it; and, exerting herself to overcome it, her first words were—'Lindsay, I have disobeyed you—I have seen Mrs. Grant.' 'You may spare yourself the trouble of confession, Jeannette: I know it already.' 'I wished you to do so; but I had hoped you would have heard it first from me.' 'It is of little consequence from whom we learn that which is beyond remedy. You can never, Jeannette, make amends for this one act of disobedience. I had such powerful reasons for what I asked.' 'You should then have revealed them to me, Lindsay.' 'I could not—Matilda knows I could not. She knows too, Jeannette, that you are the last woman in the world that ought to risk an imprudent or a thoughtless action.' Matilda looked imploringly at Lindsay, to warn him that he was on dangerous ground. In vain: he continued—'The very last! Jeannette, you know not what you have done!' Jeannette felt she was over-blamed, and her repentance consequently decreased. In a very different tone and opposite spirit to what she had hitherto spoken, she replied—'This is cruel! You assume a rigour that you cannot feel. What I have done is neither morally nor religiously wrong.' 'Assume! Would to Heaven that what I now feel were only assumed! Jeannette, if you attempt to justify what you have done, you will drive me to madness.' Jeannette paused before replying. She saw that her husband's feelings were strongly excited, and she was conscious that her own were also; she had therefore some check on her expressions, but not a sufficient one.' 'You are unjust to me, Lindsay. You give me a command, which I am induced by very peculiar circumstances to transgress. Your reasons for issuing that command you do not reveal to me, and yet you ungenerously reproach me with their force. This, in another, I should call tyrannical.' Matilda gently approached her, and whispered, 'Hush, hush! Jeannette.' 'No, my dear Matilda, I must now speak. What concealments have I ever had from him? Let Lindsay now give me those reasons of which he has only hitherto spoken darkly: let me hear why I am the last woman in England who should venture to risk her reputation.' Her cheek glowed with indignation as she

spoke; and she looked at Lindsay fixedly, awaiting his reply. Lindsay returned that look, and exclaiming suddenly, 'Must it be!' continued: 'Then, Jeannette, hear me; but remember, always remember, that this is of your own seeking.' Jeannette fearlessly confronted his gaze; and Lindsay, scarcely pausing, proceeded: 'Jeannette, your mother's name was once on the public lip what Mrs. Grant's is now.' 'My mother! Lindsay. Oh, you mock me!—you do not, you cannot think it true.' 'I know it to be so.' They were the last words he spoke in anger. He had no sooner uttered them than he trembled with apprehension at what he had done. Jeannette listened; then turning to Matilda, said: 'Do not you, my sister, contradict him?' Matilda threw her arms around her, and, in the lowest whisper, breathed—'I cannot.' Jeannette stood as if transfixed by the intensity of her surprise, and she once more said with vehemence—'It is not true!' But the sentence had no sooner escaped her than the truth she had so boldly denied with her lips fell upon her heart with a conviction almost freed from doubt. Past events, once enveloped in mystery, as their solution was thus first presented to her, rushed upon her mind with the celerity and destructiveness of a whirlwind. At one 'fell swoop' they swept from her heart every past and present delight, every strong affection, every enjoyment of memory, every darling vision of hope: yet with the delirium of extreme wretchedness, she strove awhile to escape from the shock of conviction. She threw herself at Lindsay's feet, and implored him, as he loved her, to recall his words. When she asked him to do so, he would gladly, if it had been possible, have surrendered existence itself to have recalled the last few minutes of his life. She said, 'Speak to me!—speak to me!' in accents that pierced him to the soul; but he could not. The strong-built, powerful Lindsay had not at that moment the strength of his infant. A long, painful, and oppressive silence followed—a silence that often afterwards recurred to the memories of each. Lindsay was the first to break it. 'Jeannette,' he said, in the low and thrilling tone he had used when first he ventured so to call her; but it was all he uttered—he could not speak his purpose. It was sufficient to rouse her from the stupor of grief into which she had sunk, or, rather, it called forth the outward demonstration of that sorrow which could not speak. Jeannette met Lindsay as he approached her, and throwing her arms around him, wept long and passionately on his bosom. No upbraidings could have moved him so deeply: he felt, and he felt truly, that all feeling of unkindness towards him had merged in the one terrible affliction with which he had so unhappily made her acquainted. He felt, too, that the repentance already awakened within him was as useless, as unavailing, as the bitterness of her innocent sorrow. He kissed her pale forehead, and his tears fell in torrents over her. She returned those kisses with fervency: he hoped and thought he was forgiven; and so he would have been, if it had been a question of forgiveness. Resentment lives on the surface only of the heart, not in its depths. No human being, suffering as Jeannette then suffered, could feel anger: she knew well that her grief could never end, but all beside was peace."

There is an acute observation, which we must quote. "It is a great advantage to be spoken ill of, though men in general do not so consider it."

It is a curious custom, that of antedating books; this one is marked 1832. Ah! we are

in a great hurry to get over the few days we have to live!

Memoirs of celebrated Female Sovereigns. By Mrs. Jameson, authoress of the "*Diary of an Ennuyée*," &c. 2 vols. 12mo. London, 1831. Colburn and Bentley.

THE preface sets out by saying, it is "the intention of this work to present, in a small compass, and at one view, an idea of the influence which a female government has had, generally, on men and nations, and of the influence which the possession of power has had individually on the female character." Now it must not be supposed, from this, that Mrs. Jameson has gone into the philosophy of petticoat government, (strangely so called when ladies wear the *inexpressibles*), as it is practised on the smaller family and social scheme: no, her work refers to crowned female heads, from Semiramis to Catherine II.; and she has presented her readers with very interesting historical views of the lives of Cleopatra, Zenobia, the two Joannas of Naples, Isabella of Castile, Mary of Scotland, and her too potent rival Elizabeth of England, Christina of Sweden, our Queen Anne, and Maria Theresa, besides the two of Assyria and Russia whom we have already mentioned.

As we like female opinion, and especially coming from so clever a woman as the authoress of the *Diary of an Ennuyée*, upon female politics and freemasonry, we must quote the following remarks from the preface:

"There may be a difference of opinion as to whether women ought, or ought not, to be intrusted with the executive government of a country; but if, in a very complicated and artificial system of society, the rule of a woman be tolerated or legalised as a necessary evil, for the purpose of avoiding worse evils arising from a disputed succession and civil commotions,—then it remains a question how far the feminine character may be so modified by education, as to render its inseparable defects as little injurious to society, and its peculiar virtues as little hurtful to herself, as possible. Women, in possession of power, are so sensible of their inherent weakness, that they are always in extremes. Hence, among the most arbitrary governments recorded are those of women. They substitute for the dominion of that superior strength, mental and physical, which belongs to the other sex, and with which should rest 'all lawful rule and right supremacy,' the mere force of will; and call that power which is founded in weakness. Christina of Sweden has left a memorable sentence under her own royal hand, which may serve as a commentary on the threadbare adage, 'when women reign, men govern.'"

After quoting Christina's letter to Bonvisi, Mrs. J. adds:

"Ludicrous as this may sound in so many words, we have here the true feminine idea of empire,—viz. the privilege of saying *je le veux*: and, however modified by the character of the individual,—however dissembled—for all had not the frank audacity of Christina,—we may trace the same feeling, the same principle of action, in every woman who has either inherited power, or achieved political greatness: and not more in the acute Elizabeth, and the haughty energetic Catherine, than in the stupid, heartless Anne, and the amiable Maria Theresa. On the whole, it seems indisputable that the experiments hitherto made in the way of female government, have been signally unfortunate; and that women called to empire have

been, in most cases, conspicuously unhappy or criminal. So that, were we to judge by the past, it might be decided at once, that the power which belongs to us, as a sex, is not properly, or naturally, that of the sceptre or the sword."

Able as these volumes are, it is a matter of much difficulty to extract from them any separate passages which can convey an adequate notion of their judicious and impartial character, or of the skill and talent with which they are written. We can only say, that every narrative is most interesting, and that a work of the kind equally agreeable to old or young could hardly be produced. At the close of the memoir of Mary, the unhappy Queen of the Scots, we find a concise parallel, however, which will afford some idea of Mrs. Jameson's style and manner.

"The striking similarity between the character and fate of Mary of Scotland and Joanna of Naples, has frequently been alluded to; but the parallel has never, I believe, been closely and regularly drawn, and it presents a series of very curious coincidences. Both were from their birth destined to a throne,—both were called to reign in early youth,—both were highly and equally gifted by nature, in mind and in person,—both beautiful, and even resembling each other in the character of beauty attributed to each,—both were remarkable for a love of pleasure, a taste for magnificence, and an early predilection for literature and learned men. If Mary was the most accomplished of the two, it was because she lived in more favourable times, and her education took place under more favourable auspices. She loved poetry, and patronised Ronsard, the best poet of his time. The court of Joanna was graced by Petrarch, one of the greatest poets of any age. Joanna left many monuments of her splendid taste; for she had enjoyed, in the midst of tumults and reverses, some intervals of tranquillity, and reigned thirty years. Mary's short and unquiet reign did not permit her to leave any lasting memorials of her splendour or her beneficence, and what she might or would have done must be left to conjecture. Mary and Joanna were both married in their infancy, and without their own choice, to men far inferior to themselves, both in mental powers and personal accomplishments. Andreas of Hungary was brought to Naples to be educated with his future bride; and Mary was sent to Paris to be educated with her future husband. According to some historians, Andreas appears to have greatly resembled Francis in his disposition: they describe him as timid, deficient in intellect, but good-natured and affectionate: according to other writers, he united all the deficiencies of Francis to all the vices of Darnley. Both queens have been accused as accessory to a husband's murder, under circumstances nearly similar, and on very uncertain and contradictory evidence. The marriage of Joanna with Louis of Tarento, who had been suspected of conspiracy against her former husband, had nearly proved as fatal in its consequences as Mary's union with Bothwell, and exposed her to the same dishonourable imputations. The marriage of Joanna with Louis caused a rebellion among her subjects, and her own banishment from her kingdom for several years: Mary's precipitate union with Bothwell likewise gave her subjects an excuse for rebellion, and banished her from her kingdom for ever. Louis of Hungary, with his open violence and secret treachery, his ceaseless machinations and deadly irreconcilable hatred, played the same

part in the history of Joanna that Elizabeth enacted in that of Mary. There is reason to imagine that the idea of the black banner, painted with the murder of Darnley, which Mary's rebel subjects paraded before her eyes at Carberry Hill, was suggested by the terrific banner of the King of Hungary, borne before him when he invaded Naples, and on which was represented the murder of Andreas: the coincidence would otherwise be almost incredible. The state of Naples in the reign of Joanna, the power and ferocity of the feudal barons, the uncivilised condition and factious spirit of the populace, remind us strongly of the situation of Scotland when Mary succeeded to her hereditary crown; and both Joanna and Mary, as women, appear to have been strangely misplaced in the barbarous times in which they lived. Mary, a queen, in her own capital, saw David Rizzio stabbed almost before her eyes, powerless to save him. Joanna, in her own palace, beheld her seneschal, her nurse Philippa, and her friend Sancha, dragged from her side to perish in torture. In both instances it happened that these circumstances of horror took place when Mary and Joanna were each on the point of becoming a mother; in both instances their condition, their entreaties, and their tears, failed to procure either forbearance or compassion from the savages who outraged them. But by far the most striking coincidence, is the similarity in character, conduct, and fate, between the Earl of Murray and Charles of Durazzo: both were remarkable for talents and accomplishments, equally skilled in war, in policy, and intrigue; both were valiant, crafty, ambitious. Murray was the brother of Queen Mary, had been distinguished by her with boundless confidence and affection, and in the beginning of her reign had been loaded with benefits, and promoted to offices of the highest trust and power. Joanna had taken Charles of Durazzo under her protection when an orphan, had adopted and cherished him as a son, and married him to her heiress. Murray plotted with Elizabeth to dethrone his sister and sovereign, and built his power on her ruin; Durazzo, with treachery and ingratitude yet more flagitious and detestable, joined with Louis of Hungary, and first dethroned, then murdered his benefactress. Within a short time afterwards, Durazzo was himself murdered by a woman; and Murray, within a few years after his accession to power, perished, if not by the hand or act of a woman, yet the wrongs of a woman inspired and armed his assassin. Both Mary and Joanna owed their chief troubles and final ruin to a religious schism; they both refused in their latter years to purchase freedom and life by relinquishing their regal dignity; both died in prison, and by violence. The imprisonment of Mary was long and cruel, and a sore trial of her fortitude. On the other hand, the captivity of Joanna was short, but her death horrible to the imagination,—mysterious, frightful, unseen, unpitied, and executed by vile hands. She perished as a victim; Mary, like a martyr: by vile hands indeed, and viler practice; but with friendly hearts near her, and all Europe looking on to admire, to applaud, and to bewail her."

The life of Christina is, though the materials are all so well known, a very excellent piece of biography; and, at the risk of repetition, we will conclude our review with a quotation from it—for though the facts may be familiar, they are so well told as to possess uncommon attraction.

"Clement X. died in 1676: her intrigues in favour of Cardinal Conti were again un-

successful, and the choice of the conclave fell on Cardinal Odeschalchi, (Pope Innocent XI.), an old man, whose plain, firm good sense, and simplicity of character, were not to be dazzled by Christina's accomplishments, nor discomposed by her eccentricities. During his pontificate, she became involved in some disputes with the papal court, which will farther illustrate her character. It appears that certain privileges and immunities had long been extended to the retinues of the foreign ambassadors at Rome, and these, instead of being confined to their own families and residences, at length extended to the immediate neighbourhood, so that there were, in fact, two-thirds of the city in which it was contrary to etiquette to arrest a criminal. The various abuses to which this state of things naturally led, became at length intolerable. The pope would no longer allow his jurisdiction to be circumscribed, and the laws defied under his eyes, and in his own capital. The King of Spain and the Emperor yielded to his remonstrances. The King of France, after a long resistance, and many disputes, at length gave way. Christina, in a very sensible letter to the pope, resigned her privileges to a certain extent; her residence, and the persons of her suite, being, of course, considered as sacred and inviolable. But the affair did not end here. A man, convicted of some offence, was seized by the sbirris: as they were driving him with blows through the streets, he escaped, and ran to take shelter in a stable attached to the palace of the queen. It was locked; but he seized upon the staple, or chain, of the door with such force, that no efforts of the sbirri could tear him away; they put a cord round his neck, and still, with the courage or the obstinacy of despair, he kept his hold, though on the brink of strangulation. Christina was at this moment in her chapel, and a multitude had gathered round her palace; the noise of the affray, the shouts, cries, and imprecations of the populace, reached her. She no sooner learned the cause, than she ordered Landini, the captain of her guards, and another of her attendants, to rescue the man, and to cut down the officers of justice if they resisted; the cowardly sbirri fell on their knees, and at once resigned their prisoner, who was carried off amid shouts of 'Viva la regina!' and placed in safety. The queen loudly complained of the insult offered to her dignity, in attempting to arrest a man within the precincts of her palace. The pope as loudly insisted on the insult offered to his authority; and his treasurer demanded that Landini and his companion should be immediately delivered up to justice. The queen replied to the treasurer in these words, under her own hand."

"To dishonour yourself and your master, is then termed justice in your tribunal? I pity and despise you, now; but shall pity you much more when you become cardinal. Take my word, that those whom you have condemned to death, shall live, if it please God, some time longer; and if they should die by any other hand than his, they shall not fall alone."

CHRISTINA ALESSANDRA.

'From my palace, this 24th July, 1687.'

"Meantime she armed her suite, protected her attendants, who, in fact, had only acted by her orders, and openly braved the pope; being in every thing supported and abetted by the French ambassador, with whom she now made common cause against the papal government."

* This letter has become celebrated for its energetic brevity: the original is in Italian.

The Cardinal Albani endeavoured in vain to bring the royal Amazon to reason; he reminded her, that he whom she thus defied was the pope. 'And what if he be a pope?' replied Christina; 'I will make him know that I am a queen.' The straightforward old pope, without being in the slightest degree discomfited by her violence and imperial airs, maintained an imperturbable *sang froid*. One very warm day that she had paraded the streets with her armed servants, including the two who had been denounced, the pope sent her a present of some exquisite fruit from his garden on the Monte Cavallo, accompanied by a polite message. She thanked him, but added, 'Do not let the pope imagine that he can lull me to sleep with his feigned courtesies!' When this was repeated to the pope, he merely shrugged up his shoulders, and observed, 'è donna!' — 'tis a woman!' Considering to whom he applied the expression, he could not have used a more insulting term of contempt; Christina, accordingly, was furious: she compared herself to Cæsar among the pirates. The pope, driven to harsh measures, and determined to carry his point, excommunicated the French ambassador (Lavardin), and withdrew the pension of 12,000 ducats which Christina had hitherto enjoyed. 'Tell him,' said she, in answer to this notification, 'that I have accepted his benefits as a penance inflicted on me by the hand of God, and I thank him for having removed from me such a subject of shame and humiliation.' This contention with the pope served to amuse and excite her during the remainder of her life. She was now about sixty, and her health began to decline. She told Burnet in 1687 that she considered herself as 'one of the *antiquities* of Rome,' and by all others she was certainly regarded as one of its greatest curiosities. A traveller, who was introduced to her at this period, has left us a very graphic description of her person and dress. She had discarded the doublet 'couleur de flamme,' the black wig 'bien poudrée,' and the laced cravat with its knot of scarlet ribands; and her attire, though scarcely more becoming to her sex, was rather more suitable to her age. She was usually habited in a coat or vest of black satin, reaching almost to the knees, and buttoned down the front; under this a very short petticoat. Her own light brown hair, once so beautiful and luxuriant, was cut short and combed up so as to stand on end, without covering or ornament. She was very short, fat, and round; her voice, her features, and her complexion, were completely masculine, and had ceased to be in any respect agreeable. Her eyes, however, retained their brilliance, and 'her tongue bewitched as oddly as her eyes.' Her manners, whenever she chose, were winning. She kept up a splendid court, received strangers affably, and conversed with the utmost freedom.*

"The property Christina left at her death was estimated at about 500,000*l.* of our money. Her cabinet of medals and antiques, which was the finest in the world, was purchased by the Odeschalchi family: her magnificent collection of books and MSS. was purchased by Alexander VIII. and now forms part of the library of the Vatican. It appears that, while in Italy, she cultivated a real taste for art; her gallery contained some of the most splendid works of the Italian masters. The greatest part of these were purchased by the Regent Duke of Orleans, and on the dispersion of his gallery, after the

Revolution, found their way to England. Her passion for medals was a kind of mania: she entertained the design of giving the history of her life in a series of medals, and about one hundred were engraved at different times: the subjects and inscriptions were generally her own invention, and stamped with her peculiar character. The last of these medals, struck in 1689, bears the head of the Queen on one side, and on the reverse a bird of Paradise, soaring far above the land, the sea, and the clouds, with the inscription in Italian, 'Libero io nacqui, e vissi, e morrò sciolto' — 'I was born, have lived, and will die free.'

"Among the sayings of Christina, a few are worth remarking, either for their truth, or as characteristic of the woman. 'Fools,' she was accustomed to say, 'are more to be feared than the wicked.' 'Whatever is false, is ridiculous.' 'There is a species of pleasure in suffering from the ingratitude of others, which is reserved for great minds alone.' 'We should never speak of ourselves either good or evil.' This was a maxim which she was continually violating in her own person; she appears to have been the greatest egotist extant (for a female). 'To suffer for having acted well, is itself a species of recompense.' 'We read for instruction, for correction, and for consolation.' 'There is a star above us, which unites souls of the first order, though worlds and ages separate them.' 'Life becomes useless and insipid when we have no longer either friends or enemies.' 'We grow old more through indolence than through age.' 'The Salique law which excludes women from the throne, is a just and a wise law.' 'Cruelty is the result of baseness and of cowardice.' 'To speak truth, and to do good, is to resemble, in some sort, the Deity we worship.' 'This life is like an inn, in which the soul spends a few moments on its journey.' There are several anecdotes related of Christina, which I do not find under any particular date, and which may, therefore, be inserted here. When Michael Dahl, a Swedish painter, who was afterwards in the service of William III., visited Rome, he was employed to paint a portrait of Christina. One day, while she was sitting to him, she asked him what he intended to put in her hand. 'A fan, please your majesty.' 'A fan!' exclaimed Christina starting up, with a tremendous oath; 'a fan! — A lion, man! a lion is fitter for the Queen of Sweden!' Once as she was looking with evident admiration at Bernini's statue of Truth, a cardinal *bel esprit*, who was standing by, exclaimed, with an air of gallantry, 'Heaven be praised that your majesty so much admires truth, a thing which so few princes can even tolerate!' 'No wonder,' replied the queen instantly, 'all truths are not of marble!' (*Je le crois bien — c'est que toutes les vérités ne sont pas de marbre.*) A manuscript volume containing an account of her conversion from Lutheranism to Popery, having been sent to her, she wrote a few words on the back of it, which have since passed into a proverb, and may well be applied to the principal actors on many other occasions: — 'Chi lo sa, non scrive; chi lo scrive, non sa; — 'the person who knows all about it, does not write; and the writer knows nothing of the matter.' One day that she was laughing and talking very loud during the celebration of the mass, the pope, as a gentle hint, sent her his own rosary, and desired her to make use of it. 'Non miga voglio essere un' Catolica da bacchettone!' exclaimed Christina, making use of a strong, but rather vulgar expression, which signifies that she had not become a Catholic to tell her beads."

We most heartily recommend this work to our readers.

A Treatise on the Comparative Geography of Western Asia. Accompanied with an Atlas of Maps. By the late Major James Rennell, F.R.S. L. and E. 2 vols. 8vo. London, 1831. Rivington.

It is difficult at once to do justice to the extent of the present work, or honour to the dignity of the subject. The tract chosen of the territory situated between India and Europe contains almost the entire scene of ancient military history in Asia, from the early period of the Trojan war, and the splendid conquests of Cyrus, to the contests of the Romans with the Gauls, the Seleucids, and Mithridates; and it is one of the most interesting portions of the great continent in respect to its history and antiquities.

At the same time — from the paucity of data, both as far as regarded the astronomical bearings of places, the geodesical determination of distances, and the errors which have grown up and been sanctioned by time and authority — it presented difficulties in the way of geographical inquiry, over which nothing but the critical acumen of Rennell, supported by a strong natural bent of mind, and the high munificence and protection of majesty, could have triumphed.

In the construction of this Atlas, it will be easily understood that every thing that could be turned to account, every notice, travel, or observation, that could aid the purposes of geographical inquiry, have obtained the sedulous attention of the author; and the collection of these various materials, with their application to the uses of geography, the illustration of the great expeditions of antiquity, and the history of former times, comprise the general objects of the work, which can only be said to contain a portion of this labour. The Dissertation on the Troad was published in 1814, and the Expedition of Cyrus, by the same author, in 1816. And while the details on the construction are complete within themselves, the second part is also enriched with numerous and important geographical desiderata.

Authorities for the distribution of space, founded on geographical positions and lines of distance, comprise almost the whole of the discussions on construction, which farther include no references to natural or political divisions of country. Intermediate positions are established generally by lines of distance, which are corrected in their length and direction either by bearings, latitudes, or cross lines of distance. It is in a great measure to two lines of this character — the one the work of M. Niebuhr, and which extends from Hillah on the Euphrates to the neighbourhood of Brusa; and another set of lines drawn in different directions across Asia Minor, by Mr. Browne — and to the trace of the southern shore of the Euxine by M. de Beauchamp, that the face of Asia Minor assumes its present appearance on the map.

The oriental astronomers and geographers. Major Rennell remarks, have also furnished great supplies towards the formation of the work, in itinerary distances, latitudes, and longitudes, which though often corrupted, still afford a vast body of information, and that in cases where it could not be obtained in any other shape.

Itinerary measures either regard distance or time. Major Rennell allows 84 Roman miles to a degree in Asia. 2-563 geographical miles is taken as the general mean of the modern Per-

* "She said to Burnet when he visited her, 'Providence had need have a special care of this holy see of ours: since I have lived here, I have seen four popes, and (with an oath,) all fools and blockheads!'"

sian farsang, the roads to the N. and N.W. of Ispahan excepted. The verst (87 to a degree), the Turkish mile, and the Greek mile, agree within $\frac{1}{4}$ or $\frac{1}{5}$ of each other, consequently they have the same origin. With regard to distances by time, the ordinary journey on foot hardly differs throughout the world. Major Rennell's observations estimate it at 22 to 24 British miles by the road, and, in direct distances, taking the mean at 23, at somewhat under 18 miles per day for a single day, or two or three days; but when several are thrown together, as from 5 to 10, 17 $\frac{1}{2}$ geographical miles may be sufficient, by reason of the compound winding that necessarily arises on any length of space. For journeys on horseback in Turkey and Persia taken singly, 30 British miles may be allowed, or 23 geographical miles direct. But in distances that require several days to perform them, 25 or 26 may be amply sufficient. Where caravans are composed of different animals, the slowest pace regulates the rate of motion. Niebuhr's results, adopted by Major Rennell, average from 2-23 to 2-25 miles per hour in Asia Minor.

Aleppo may be regarded as the central point of the whole construction of the southern quarter, the principal positions round about it having been determined by compass bearings by Mr. Drummond and others. The first line which apportions the differences of longitude between Aleppo and Kaswin, is founded on Niebuhr's observations. The second line connects Aleppo and Orfah with Bagdad and Basrah: all three of these and Hillah have been determined by celestial observation, and are connected collaterally with Mosul and Nasebin. The discussion on this line is principally occupied in a correction of Mr. Carmichael's route across the Great Desert, and the information furnished by the Arabian geographers. The direction of the lines towards Damascus was checked by tracing cross lines from Racca on the one hand, and Tortosa on the other, to Hema. The extension of this line to Kahira, Alexandria, and Siwah, or Oasis of Ammon, has been facilitated by the observations of the French expedition, those of Browne and Hornemann, and Captain de Haviland's map. Suez is then connected with Ailah, and Ailah with Jerusalem and Damascus, extending the line to Palmyra.

The next country to which Major Rennell turns his attention, having completed his chain of positions throughout Syria, Mesopotamia, and the adjacent countries on the south-east, is to Armenia, Aderbigian, and other countries on the north: nearly the whole process of this construction is founded on computed distances.

The connexion of Kaswin and Ispahan are both determined by the observations of M. de Beauchamp, whose labours have enriched geography from the shores of the Propontis to the Caspian Sea and the heart of Persia. A MS. map of Kempfer's contained the roads generally between Derbend and Ispahan; and Major Rennell had further at his disposal a sketch of Colonel Malcolm's route from Bushire to Tehran and Bagdad.

The paucity of geographical materials is not so great for the Caspian Sea—the difficulty lies in the want of connexion. Major Rennell places it 12° more obliquely from the meridian than M. d'Anville. The form is derived from the new Russian map, but differently arranged in point of position. It may be remarked, that all the Russian surveys end generally at their own frontier, and all beyond is made up from the marches of their detachments, or journals of voyagers.

The continuation of the eastern quarter

comprises the lines of connexion of Kaswin and Tehran with Hamadan, Bagdad, and Mosul, founded on various authorities, more particularly Bell, Chardin, Kempfer, and Olivier. The connexion of Bagdad, Basrah, and Ispahan, with Shiraz, at the time Major Rennell wrote, was difficult and operose, on account of the scarcity of correct information.

The western quarter, or Asia Minor, although containing less than a fourth part of the surface comprised in the general map of positions, has been formed into a separate map, of nearly an equal surface with it. This part of the great continent of Asia has been frequently visited, and consequently more explored; and the materials were so numerous, as to induce Major Rennell to give certain portions of this geography in still larger scales, that they might be useful in the construction of future maps. The positions around the eastern shores of the sea of Marmora or Propontis, from Constantinople to Mahalitch, was the first part of this labour. Niebuhr and Browne's lines were next to be corrected, the other materials, and more especially the caravans' route from Smyrna to Anguri, and the line from the same town, and from Sardis and Ephesus to Kuniyah or Iconium. The connexion of Brusa with the Dardanelles, Pergamus, and Smyrna, was effected from lines given by the Rev. Messrs. Chishal and Uskoe; and the map of M. Kauffer is adopted as the authority for the connexion of the Dardanelles with the Troad, Adramyttium, Pergamus, and Smyrna: for information regarding the two latter places, we are principally indebted to Mr. Wm. Hamilton. The construction terminates with the Rum Ili, which has hitherto appeared in a very defective state in our present books of geography.

Such is the basis of this splendid work, which offers an invaluable mass of facts for the correction and improvement of geographical science; and is one of the best specimens of Major Rennell's genius, and the proudest tribute to his posthumous fame.

The Sisters' Budget: a Collection of Original Tales in Prose and Verse. By the Authors of "the Odd Volume," &c. 2 vols. 12mo. London, 1831. Whittaker and Co.

Two very pleasant and varied volumes; but we cannot approve of the parade of popular names on the title-page, and the term "original tales" seems rather a misnomer; for the majority are translations, and the three Scotch tales have been published before. To this we must say, that we like the translations much: they are well chosen and well done; and, to our taste, are the most entertaining portion of the work. The idea of Kennedy's "Fruit of Knowledge" is both new and excellent; but it is not so well worked up—its pleasantness is ponderous; and, if we mistake not, the tone of its author's mind is essentially grave and severe. The "Myrtle Correspondence between Miss Mitford and T. S. C." is a Della Cruscan resurrection. "The Flight of Birds," by Mrs. Hemans, is a very touching little poem. With its Greek, scraps of oriental languages, and metaphysics, we confess we do not understand a Mrs. Kennedy's "La Zingara;" it is the shadow of a story. "The Miller of Calder" is a pretty little picture of Scotch rural life. "The Conspirator," by Mrs. Hodson, begins most dramatically; but it leaves off in the middle: a story without an end is a cruelty to the reader. Mr. Macfarlane's "Barba Yorghi" is the most amusing of the collection; and we will quote one of his adventures, in proof of our assertion.

"I am a native, Chilibi (Signore), of the town of Chesme, where my father lived before me; and where, what with cultivating his vines, and carrying on a little trade by sea, he contrived to become a man of some substance; but, alas! on an evil day the evil eye fell on him—he caught the ague, lost two whole cargoes of prime raisins that some free-traders from Samos intercepted, and mortally offended the Aga, by absurdly protesting he had paid a certain sum of money, when that worthy said he had not. Never did ruin come more of a lump: my father's first cousin, a wealthy vine-dresser, refused to assist him, as he said his misfortunes were deserved, and he had repeatedly told him never to venture his property to the winds and waves; and the Aga sent to make a seizure on our vineyards, where his savage troops willfully committed injury among the unoffending bushes and plants to ten times the amount of the debt he originally pretended. We might, perhaps, have got countenance and assistance until matters were brought round; but people were afraid of doing any thing for a man marked with the seal of the Aga's hate, for the Aga, you must know, Chilibi, was a hard and violent man. My father's fever and ague got worse and worse; but after all, poor man, he was the most fortunate of us all; for he went to nail his fever to the tree of St. John, at the village of Panagea, and fell from his donkey, and expired on the road-side as he was returning home. My mother, too, soon followed; for it had been predicted to her by a Yerook, years ago, that if her husband died before her, she would die soon after him. So then, Chilibi, we were left, six helpless brats, and I the eldest, at twelve years of age. My father's cousin got me embarked, for charity, on board of a Turkish saccolewa, where I was made to work like a slave, and was beaten like a beast of burden. Another Greek lad, about my age, and helpless as myself, from the neighbouring island of Ipsara, was serving on board the boat; but, after my first voyage, he had had such a bellyful of hard work and hard beating, and was so dissatisfied with our mode of life altogether, that he determined to mend his condition, cost what it might, and absolutely turned Turk. He was forthwith removed from the rough sea service, and, under the protection of the Moolah, sent to school to study his new faith, and to learn how to read and write Turkish. I met him some months after, on my return from a voyage, strutting about in a bran new violet-coloured benishe and red trousers and yellow papoushes, with a snow-white turban round his brows, and looking as sleek and comely as any of the lineal descendants of Mahomet. I confess his splendour dazzled me a little; nor was I a whit better satisfied with my hard life than I had been before, or he had been with his; but I was strong in my faith! Indeed, my father's cousin, when he first put me on board the saccolewa, as he slowly poured a handful of paras into my palm, conjured me, whatever might happen, to take care of my religion. I remembered, too, my poor dying mother's exhortation never to forget the Panagea, and I still wore on my arm the relic she had bound there, to protect me in the evil hour. Besides this, I had counsellors in the Greek sailors on board, who were accustomed to work the vessel while the Turks slumbered over their chibougues: by them I was kept in mind, that however the Moslems might have the upper hand in this world, it would be far different in the next; that there it would be their turn to labour and be oppressed, and damned, and burnt into the bargain—a con-

sideration that gave them much consolation and pleasure, in which I naturally partook. So you see, Chilibi, I have always remained firmly attached to the Greek church—a true Christian. Meanwhile I grew up apace; instead of being the boy that waited on the men, and was kicked and cuffed about at their mercy, I entered in the class that had the boy under them, and kicked and cuffed my successor with greater zeal than the rest; for the gratification was novel to me, and it was like scoring off on his back all the stripes I had received on mine. I began, too, to find something very charming in the black eyes and naked ankles of our island maids; and I soon bought a gulfar, and became anxious about my dress, adopting the smartest fashions and colours in my robes that the confined nature of my income and Turkish proscription would allow. I am an old man now, Chilibi, but I well remember the pride of heart I felt the first time I drew on a perfect suit of new attire, and the confidence with which, in it, I undertook my first amour."

His eye is caught by a maiden in one of the groups at a Greek festival.

"I despatched a boy to purchase me some refreshments, amusing myself, meanwhile, by casting side-long glances at the fair girl, whose attention, as well as that of her companions, I soon saw had been attracted by my approach. When I had to pay for my viands, I drew from my girdle a long, gaudy silk purse; there was not much money in it, I confess, but by my address the few pieces produced the chink of many; and to heighten the idea of my magnificence, I threw down two whole piasters, and told the fellow not to mind the change. All this took the effect I proposed. When two or three bowls of wine had circulated, I could hear the islanders consulting on some matters in which the name of stranger was included; and in a short time, to my great satisfaction, a lady, the mother of the fair Cocona, whom I had honoured with my preference, addressed me, saying that I seemed a stranger in the place—that it was a pity I should sit there moping alone—had I not better join their party? The next minute I formed one of their laughing circle, and sat admiring, and, as I doubted not, admired, opposite to the bright black eyes of young Euphrosyne. The brilliancy of my dress spread a brilliancy and confidence over my mind and conversation. I rattled away as if I had been well to do in the world. Now until that day I had been backward and shamefaced to the extreme; but until that day, be it remembered, I had never seen myself in bright Bronza silk breeches, blue striped cotton stockings, new unsolled papoushes made at Constantinople, and a fine French cloth jacket trimmed with fur, which, though neither ermine nor sable, was new, and looked just as well at a distance. Meanwhile, different groups assembled round the sacred fountain, and the dance began. When the music struck up the island dance, the *serio* Euphrosyne arose, and I, leaping at once to my feet, took her to the head of the dance, which we led off with great spirit, the rest of the performers pairing composedly after us, and following like figures in a triumphal march. Euphrosyne danced so prettily, and was so pretty altogether, that sometimes I forgot my own splendour, which had engaged me almost exclusively; and when in the dance, unseen, I pressed her little hand, and felt, or fancied, that the squeeze was gently returned, every thought of silk breeches and bright new papoushes fled before her—my heart leaped to my mouth; but while I gazed on her beautiful,

fair, smiling face, I remembered that I was a sunburnt, hard-featured fellow, a poor sailor, almost a beggar: indeed I was very near losing courage; but Euphrosyne retired from the dance, and the opportunity which I seized of treating her and her friends to sherbet and some choice sweet-meats (an honour, by the by; which cost me half of the contents of my purse), somewhat renewed my assurance and confidence. Towards sunset the party broke up in groups from the valley, to return to their homes; and as I saw nothing improper in keeping with the friends I had made, I walked off by the side of the fair Euphrosyne. As I was looking into her dark eyes, and dreaming about God knows what, a voice that sounded gratingly to my ear said, "Pray, Sir Stranger, may we ask whence you are, and what procures the island of Calamara the honour of your visit?" It was the careful father of the girl who spoke. Though taken unawares, I was not unprepared for an answer to some such demand, which I expected from the well-known curiosity of the islanders: "I am the son of a merchant of Chesmé," said I, with an affected tone of modesty; "and am come here on matters relative to my father's commerce." Now, though this, I must allow, was a great lie at the time, you will admit, Chilibi, that if it had not been for the loss of my father's ships, and his quarrel with the Aga, and his fever and ague, it might all have been very true. I believe this consideration stopped me from blushing. As to the danger of being discovered, I thought little of it, though I had been several voyages at the island before; "who can trace the mean dirty worm," said I internally, "in the brilliant butterfly?" Indeed, at the moment of my transformation, when I dwelt on my reflected figure in a bit of a looking-glass on board, I hardly knew myself; not, except the few moments of misgiving I have mentioned, had I been properly conscious of my identity the whole day. My assertion had the full effect and success I desired; the consideration of the whole party for me increased mightily; and when we reached the door of their house, which stood among a few others, some distance from the sea-port, I was kindly asked to walk in. This I did with great good-will, as I felt myself bound to the fair Euphrosyne with a spell stronger than a cable rope; and as my love was not of that sort which destroys appetite, I shared their pilaw and the rest of their festival supper with great fervour."

Unfortunately, as he observes, "a cursed wine-shop" lay in his way; and the next day, drinking with his companions, the following scene finishes his love-affair.

"Each gay mariner told his tale of conquest, and recounted his amorous adventures in the scattered isles of the Archipelago, from Cerigo and Candia to Scio, Mitylene, and Lemnos. I was silent, and silent I should have remained, but a shipmate, who had often rated me as a green-horn, cried out tauntingly, 'Every man has had his lass, and has a tale to tell, except Effendi Yorghis; it appears he can do nothing, though he has spent a year's pay in fine clothes.' This was too much: wine gave me courage and invention. To gratify my vanity I ventured the most infamous calumny; and on the trifling adventures with the fair Euphrosyne, I have related to you, I founded a tale of dishonour and seduction—a tale that fairly beat all those of my profligate companions, both as to the expedition with which I had pushed my fortune, and the condition of my victim. I had finished, and my companions were beginning to applaud me, when the words

'liar, villain,' in a voice of thunder, struck on my guilty ear; and on raising my eye I saw advancing from an opposite corner of the room, the athletic form of the brother of Euphrosyne. How he came there I could not conceive; he might, indeed, have long been there, for the lights were not of the brightest, and the deep draught of Samian wine had not cleared my eye-sight; but had I awaked in the deathly embrace of a vampire, had the very devil risen before me with all his terrors, and bent his thunder-scarred brow over me, it could not have stopped and frozen my blood like this apparition. I sat nailed to my seat; my enemy rushed out of the door, swearing the most deadly revenge. 'Fly, Yorghis, fly!' cried my companions. 'Fly, fly,' cried the landlord, 'or your life will pay for it: Sterio will be here in a minute with his kinsmen.' I could neither move nor breathe. 'He has seen his own ghost,' cried my drunken shipmates; 'we must rouse him.' On this they shook me roughly, and thrust me out at a back window. The spell I had laboured under was broken: I bounded like a ball down to the sea-shore, whose waters engulf all the gay attire flung aside in the hurry of flight.

We believe the arrangers, and also the principal contributors to these volumes, are the Misses Corbet.

Fragments de Géologie et de Climatologie Asiatiques. Par A. de Humboldt. 2 vols. 8vo. Paris, 1831.

WE cannot but felicitate the literary and scientific world on the appearance of the first work which contains a part of the results that have crowned the labours of the Baron de Humboldt and his learned companions, Professors Ehrenberg and G. Rose, during an arduous and extended journey in the interior of the continent of Asia.

The information obtained by men versed in Chinese, Mandchou, and Mongolian literature, has hitherto been our sole source of knowledge with regard to the geognostic constitution of the interior of this vast continent; and it is gratifying to find that the results of this expedition give new consistency to the materials previously collected by Abel Rémusat, Klaproth, and other orientalisks.

The geography of central Asia is made to assume an entirely new face. Several volcanoes in activity have taken their place in the middle of the continent; and, while these, and other facts of equal importance to the physical history of the globe, have resulted from the observations of these naturalists, the outline and configuration of the country receives an accuracy in its delineation which surpasses our most sanguine expectations, and which lends itself admirably to the development of the progressive history of civilisation in those very countries which were the cradle, if not the birth-place, of mankind.

The interior of Asia does not form a continuous table-land, but is traversed from east to west by four great systems of mountains, which have manifestly influenced the movements of nations. They are the Altai, which, in the west, terminate by the mountains of the Kirghese; the Thian-chan, the Kuen-lun, and the chain of the Hima-leh. Between the Altai and the Thian-chan we find Dzungaria and the basin of the Ili; between the Thian-chan and the Kuen-lun, little, or rather high, Bucharia or Kachgar, Jerkend, Khotan, or Yuthian, the Great Desert (Gobi or Chamo), the Thourfan, Khamil, and Tangout, that is to say, the northern Tangout of the Chinese,

which must not be confounded, as is done by the Mongolians with Tibet (Thibet), or the Si-fan; lastly, between the Kuen-lun and the Himma-leh, eastern and western Tibet, where are H'lassa and Ladak. If we wish to mark out simply the three table-lands or plains situated between the Altai, the Thian-chan, the Kuen-lun, and the Himma-leh, by the position of three alpine lakes, those of Balkachi, Lop, and Tengri (Terkiri of D'Anville), may be chosen; they correspond to the table-lands (*plateaus*) of Dzoungaria, Tangout, and Tibet. Independently of the excellent geographical details in these four systems by De Humboldt, there is an extract from the great geographical work of China by Klaproth, on the Altai mountains.

Appended are also some valuable itineraries collected by De Humboldt, and which will be of great use in the construction of maps of the interior of Asia, now found to be so faulty; and sufficient elevations have been found to enable the same author to point out the relation of the height of these table-lands to similar geognostical configurations in Europe, in Africa, and in the New World.

But the most striking result of this journey is the discovery of volcanic action in the central Asiatic chains of mountains. The proof of the upraising of these mountains, and that at different periods, being demonstrated both by the character of the rocks and organic remains elevated on their flanks, and in coincidence with the ingenious views of Elie Beaumont, by the parallelism of the axis of chains of the same era; the connexion of these phenomena with volcanoes properly so called, which effect earthy matters in a state of fusion, with the saes, or mud volcanoes, of South America, Italy, Taurida, and the Caspian Sea; the formation of naphtha, of beds of gypsum, and of anhydrous salt containing petroleum, and even metallic masses, with thermal springs, with the formation of certain metallic veins; with earthquakes, whose effects are not always dynamic; and, lastly, with the slow or instantaneous elevation of different parts of the globe,—is also a most interesting train of inquiry.

Considerations of this kind,—which effect an intimate connexion between so many different phenomena, viewing volcanic action in the light of a permanent communication between the interior of the earth and the atmosphere which envelops the oxidated and hardened crust,—remove these phenomena from the domains of geognosy, and place them among the most important objects in the physical history of the globe; bringing us nearer to the link established by Sir William Herschel between the revolutions of this globe and those of the system of which it forms but a single member.

Climatology—a science which takes its name, and may be said to have originated with the author of the present work—is founded on the same considerations, viz. the refrigeration of the oxidated crust, the radiation of heat, and the distribution of the opaque masses (continents), and the liquid and diaphanous masses (*pelagie*). The second volume contains the geographical discussions which have guided De Humboldt in his researches on the temperature of Asia, and contains a body of philosophy of the greatest interest to the natural history of the earth, and which we only regret not to have more space, that we might lay the results before our readers.

The Cabinet; or, the Selected Beauties of Literature. Edited by John Aitken. Pp. 488. London, 1831, Hurst, Chance, and Co.; Edinburgh, Constable.

THIS is one of those works whose spirit of dishonesty (we can use no milder term) we have always and utterly condemned. First, as striking at the root of original composition: who would be at the pains of writing a book, when it is so much easier to compile one? Secondly, as so exceedingly unfair towards authors themselves. Most of our modern writers lay the foundation of their reputation by writing in periodicals. Now, it is exceedingly hard upon them, that some other should come, sweep their fragments together, and, by publishing them connectedly, enjoy the fruit of their talents. We leave it to the justice of the public to perceive the unfairness of such collections. To this we must add, that the present selection is equally deficient in taste and judgment. One half of the book is not worth preservation, being by names whose insignificance might have preserved their obscurity; and the other pieces are so well known as to be in the memory or library of every lover of polite literature. Some particularly absurd notes are appended. We give one, on a sonnet to Lady D., as a specimen.

“Undoubtedly, there are hundreds among the proud aristocracy of England who would glory in being considered the object to whom these elegant lines are addressed; yet, such is the unconquerable modesty of their ingenious author, [that] having printed the name in full, we were compelled, out of tenderness to his feelings, to cancel the leaf.”

Memoirs of the Empress Josephine. By J. S. Memes, LL.D., author of the “History of Sculpture,” &c. Edinburgh, 1831, Constable and Co.; Hurst, Chance, and Co., London.

As we purpose returning to this very attractive volume, we shall now merely recommend it to the public as the only complete life of one whose destiny had all the importance of history, the excitement of romance, and the interest of personal character. The life of the Empress Josephine is indeed a delightful work.

Discourses adapted to the Pulpit, from the Tracts and Treatises of eminent Divines. By the Rev. Edward A. Bray, Vicar of Tavistock. Rivingtons. London.

THE standard of pulpit eloquence has seldom reached a more elevated point than in the days of those able and pious men whose works are thus happily recalled to our recollection. We cannot but approve and applaud the design of directing attention to these venerable sources of piety, and rescuing the wisdom and impressiveness of our predecessors from total neglect and oblivion. Mr. Bray has delved deep into the rich mines of olden divinity; and by a judicious selection from the ponderous tomes of the great ornaments of our church, has supplied an instructive and tasteful volume. Our author would fain lead the student to a like labour, and remind him, that although these folios be somewhat formidable, and research therein somewhat laborious, yet the undertaking is well nigh a duty, and one that will not fail of its reward, in the acquirement of solid information and sound doctrine. Mr. Bray has also published some scholar-like translations from the fathers. We trust these admirable extracts will tend to counteract the flippant yet predominant disposition of the day, to dis-

regard every thing old (old wine excepted), to the preference of any crudity, if it wear but the semblance of novelty. Whether our church be altogether free from this charge, we do not undertake to decide; but were it not now and then for the assiduous labours of a “deep divine,” like our reverend author, we fear we might, ere long, ask the question—Our fathers, where are they? and any conscientious echo must needs answer, Where?

A Practical Guide to Operation on the Teeth, &c. By James Snell, Dentist, &c. 8vo. pp. 207. London. J. Wilson.

THIS is one of the best works that has ever been written on the subject. Free from empiricism and quackery, as it is replete with information, and valuable for its sound sense and honest advice, we most cordially recommend it to public attention. A *précis* of the rise and progress of dental surgery is followed by a description of the operations and instruments now in use; and an opinion as to the best method of treating the various diseases to which the teeth are liable. It is a plain, straightforward, and excellent treatise.

The Military Sketch-Book: Reminiscences of Seventeen Years in the Service, abroad and at home. By an Officer of the Line. Second edition. 2 vols. 12mo. London, 1831. Colburn and Bentley.

IN our *Gazette* of April 21, 1827, (No. 535), will be found our opinion of this publication, which is a series of light and pleasing sketches of peculiarities and adventures in a soldier's life. To the present edition, three new papers have been added, viz. “Traits of Sooty Society,” a description of the black men in our West Indian regiments; “The Escape,” a story of an imminent peril avoided at Mafra by two British officers; and a “Rambling Sketch of Edinburgh,” concluded with an interesting story of a Highland regiment. Of the new publication we need only say, that as it has already found popular favour, it is now even more entitled to it.

Literary and Graphical Illustrations of Shakespeare and the British Drama. 8vo. pp. 204. London, 1831. Effingham Wilson.

A PRETTY-LOOKING volume, containing brief but amusing notices of the principal plays in our language, accompanied by more than 200 wood engravings. The frontispiece, by Harvey and Branston, is beautiful; and we are glad to see the book, as it will assist in the destruction of the ridiculous prejudice so industriously fostered by would-be critics against our modern dramatic writers. When the reader shall find that even such standard pieces as “Love in a Village,” “Rosina,” “Miss in her Teens,” “Irish Widow,” &c. are of French origin, and that out of more than a hundred dramas, Shakespeare's included, scarcely a dozen are to be found which are not more or less borrowed, stolen, translated, or adapted from some play or novel, French, German, Spanish, or Italian,—so much so, indeed, that 113 years ago, on the production of Mrs. Centlivre's “Bold Stroke for a Wife,” claim was made to the public favour, because ‘twas “English humour all, and not one tittle borrowed from Molière!”—we have little doubt he will come to the rational conclusion, that the old playwrights, from time immemorial, stole just as much as answered their purpose; and that their greatly abused successors do no more. The multitude of characteristic and, many of them, admirable wood-

cuts here collected into a single volume, would recommend it far and wide, without the literary portion; but that also being so judicious, stamps the publication with much additional value.

ORIGINAL CORRESPONDENCE.

FRANKENSTEIN.

WE are indebted to the publishers for a copy of Mrs. Shelley's forthcoming preface to *Frankenstein*; from the perusal of which, having ourselves derived much gratification, we use the freedom of laying it before our readers.

"The publishers of the Standard Novels, in selecting *Frankenstein* for one of their series, expressed a wish that I should furnish them with some account of the origin of the story. I am the more willing to comply, because I shall thus give a general answer to the question, so very frequently asked me—'How I, then a young girl, came to think of, and to dilate upon, so very hideous an idea?' It is true that I am very averse to bringing myself forward in print; but as my account will only appear as an appendage to a former production, and as it will be confined to such topics as have connexion with my authorship alone, I can scarcely accuse myself of a personal intrusion. It is not singular that, as the daughter of two persons of distinguished literary celebrity, I should very early in life have thought of writing. As a child I scribbled; and my favourite pastime, during the hours given me for recreation, was to 'write stories.' Still I had a dearer pleasure than this, which was the formation of castles in the air—the indulging in waking dreams—the following up trains of thought, which had for their subject the formation of a succession of imaginary incidents. My dreams were at once more fantastic and agreeable than my writings. In the latter I was a close imitator—rather doing as others had done, than putting down the suggestions of my own mind. What I wrote was intended at least for one other eye—my childhood's companion and friend; but my dreams were all my own; I accounted for them to nobody; they were my refuge when annoyed—my dearest pleasure when free. I lived principally in the country as a girl, and passed a considerable time in Scotland. I made occasional visits to the more picturesque parts; but my habitual residence was on the bleak and dreary northern shores of the Tay, near Dundee. Blank and dreary on retrospection I call them; they were not so to me then. They were the eyrie of freedom, and the pleasant region where unheeded I could commune with the creatures of my fancy. I wrote then; but in a most common-place style. It was beneath the trees of the grounds belonging to our house, or on the bleak sides of the woodless mountains near, that my true compositions, the airy flights of my imagination, were born and fostered. I did not make myself the heroine of my tales. Life appeared to me too common-place an affair as regarded myself. I could not figure to myself that romantic woes or wonderful events would ever be my lot; but I was not confined to my own identity, and I could people the hours with creations far more interesting to me at that age than my own sensations. After this my life became busier, and reality stood in place of fiction. My husband, however, was from the first very anxious that I should prove myself worthy of my parentage, and enrol myself on the page of fame. He was for ever inciting me to obtain literary reputation, which even on my own part I cared for them,

though since I have become infinitely indifferent to it. At this time he desired that I should write, not so much with the idea that I could produce any thing worthy of notice, but that he might himself judge how far I possessed the promise of better things hereafter. Still I did nothing. Travelling, and the cares of a family, occupied my time; and study, in the way of reading, or improving my ideas in communication with his far more cultivated mind, was all of literary employment that engaged my attention. In the summer of 1816 we visited Switzerland, and became the neighbours of Lord Byron. At first we spent our pleasant hours on the lake, or wandering on its shores; and Lord Byron, who was writing the third canto of *Childe Harold*, was the only one among us who put his thoughts upon paper. These, as he brought them successively to us, clothed in all the light and harmony of poetry, seemed to stamp as divine the glories of heaven and earth, whose influences we partook with him. But it proved a wet, ungenial summer, and incessant rain often confined us for days to the house. Some volumes of ghost stories, translated from the German into French, fell into our hands. There was the *History of the Inconstant Lover*, who, when he thought to clasp the bride to whom he had pledged his vows, found himself in the arms of the pale ghost of her whom he had deserted. There was the tale of the sinful founder of his race, whose miserable doom it was to bestow the kiss of death on all the younger sons of his fated house, just when they reached the age of promise. His gigantic; shadowy form, clothed, like the ghost in Hamlet, in complete armour, but with the heavier up, was seen at midnight, by the moon's fitful beams, to advance slowly along the gloomy avenue. The shape was lost beneath the shadow of the castle walls; but soon a gate swung back, a step was heard, the door of the chamber opened, and he advanced to the couch of the blooming youths, cradled in healthy sleep. Eternal sorrow sat upon his face as he bent down and kissed the forehead of the boys, who from that hour withered like flowers snapt upon the stalk. I have not seen these stories since then; but their incidents are as fresh in my mind as if I had read them yesterday. 'We will each write a ghost story,' said Lord Byron; and his proposition was acceded to. There were four of us. The noble author began a tale, a fragment of which he printed at the end of his poem of *Mazeppa*. Shelley, more apt to embody ideas and sentiments in the radiance of brilliant imagery, and in the music of the most melodious verse that adorns our language, than to invent the machinery of a story, commenced one founded on the experiences of his early life. Poor Polidori had some terrible idea about a skull-headed lady, who was so punished for peeping through a key-hole—what to see I forget—something very shocking and wrong of course; but when she was reduced to a worse condition than the renowned Tom of Coventry, he did not know what to do with her, and was obliged to despatch her to the tomb of the Capulets, the only place for which she was fitted. The illustrious poets also, annoyed by the platitude of prose, speedily relinquished their uncongenial task. I busied myself to think of a story,—a story to rival those which had excited us to this task. One which would speak to the mysterious fears of our nature, and awaken thrilling horror—one to make the reader dread to look round, to curdle the blood, and quicken the beatings of the heart. If I did not accomplish these things, my ghost story would be unworthy of its name.

I thought and pondered—vainly. I felt that blank incapability of invention which is the greatest misery of authorship, when dull Nothing replies to our anxious invocations. *Have you thought of a story?* I was asked each morning; and each morning I was forced to reply with a mortifying negative. Every thing must have a beginning, to speak in Sanschian phrase; and that beginning must be linked to something that went before. The Hindoos give the world an elephant to support it; but they make the elephant stand upon a tortoise. Invention, it must be humbly admitted, does not consist in creating out of void, but out of chaos; the materials must, in the first place, be afforded: it can give form to dark, shapeless substances, but cannot bring into being the substance itself. In all matters of discovery and invention, even of those that appertain to the imagination, we are continually reminded of the story of Columbus and his egg. Invention consists in the capacity of seizing on the capabilities of a subject, and in the power of moulding and fashioning ideas suggested to it. Many and long were the conversations between Lord Byron and Shelley, to which I was a devout but nearly silent listener. During one of these, various philosophical doctrines were discussed, and among others the nature of the principle of life, and whether there was any probability of its ever being discovered and communicated. They talked of the experiments of Dr. Darwin: (I speak not of what the doctor really did, or said that he did, but, as more to my purpose, of what was then spoken of as having been done by him), who preserved a piece of vermicelli in a glass case, till by some extraordinary means it began to move with voluntary motion. Not thus, after all, would life be given. Perhaps a corpse would be re-animated; galvanism had given token of such things: perhaps the component parts of a creature might be manufactured, brought together, and endued with vital warmth. Night waned upon this talk, and even the witching hour had gone by, before we retired to rest. When I placed my head on my pillow, I did not sleep, nor could I be said to think. My imagination, unbidden, possessed and guided me, gifting the successive images that arose in my mind with a vividness far beyond the usual bound of reverie. I saw—with shut eyes, but acute mental vision,—I saw the pale student of unhallowed arts kneeling beside the thing he had put together; I saw the hideous phantasm of a man stretched out; and then, on the working of some powerful engine, shew signs of life, and stir with an uneasy, half-vital motion. Frightful must it be; for supremely frightful would be the effect of any human endeavour to mock the stupendous mechanism of the Creator of the world. His success would terrify the artist; he would rush away from his odious handiwork, horror-stricken. He would hope that, left to itself, the slight spark of life which he had communicated would fade; that this thing which had received such imperfect animation would subside into dead matter; and he might sleep in the belief that the silence of the grave would quench for ever the transient existence of the hideous corpse which he had looked upon as the cradle of life. He sleeps; but he is awakened; he opens his eyes; behold the horrid thing stands at his bedside, opening his curtains, and looking on him with yellow, watery, but speculative eyes. I opened mine in terror. The idea so possessed my mind, that a thrill of fear ran through me, and I wished to exchange the ghastly

image of my fancy for the realities around. I see them still; the very room, the dark *parquet*, the closed shutters, with the moonlight struggling through, and the sense I had that the glassy lake and white high Alps were beyond. I could not so easily get rid of my hideous phantom; still it haunted me. I must try to think of something else. I recur to my ghost story,—my tiresome unlucky ghost story! O! if I could only contrive one which would frighten my reader as I myself had been frightened that night! Swift as light and as cheering was the idea that broke in upon me. 'I have found it! What terrified me will terrify others; and I need only describe the spectre which had haunted my midnight pillow.' On the morrow I announced that I had thought of a story. I began that day with the words, *It was on a dreary night of November*, making only a transcript of the grim terrors of my waking dream. At first I thought but of a few pages—of a short tale; but Shelley urged me to develop the idea at greater length. I certainly did not owe the suggestion of one incident, nor scarcely of one train of feeling, to my husband, and yet but for his incitement, it would never have taken the form in which it was presented to the world. From this declaration I must except the preface. As far as I can recollect, it was entirely written by him. And now, once again, I bid my hideous progeny go forth and prosper. I have an affection for it, for it was the offspring of happy days, when death and grief were but words, which found no true echo in my heart. Its several pages speak of many a walk, many a drive, and many a conversation, when I was not alone; and my companion was one who, in this world, I shall never see more. But this is for myself; my readers have nothing to do with these associations. I will add but one word as to the alterations I have made. They are principally those of style. I have changed no portion of the story, nor introduced any new ideas or circumstances. I have mended the language where it was so bald as to interfere with the interest of the narrative; and these changes occur almost exclusively in the beginning of the first volume. Throughout they are entirely confined to such parts as are mere adjuncts to the story, leaving the core and substance of it untouched. M. W. S."

ARTS AND SCIENCES.

PALENQUE.

IN our last *Gazette* we gave some interesting details on the ruins of Palenque—a city situated to the north-west of the village of Santo Domingo, in the state of Chiapa, and in the ancient kingdom of Guatemala—which details were transmitted to us by Lieutenant-Colonel Galindo, governor of the adjoining province. We find that we were wrong in stating that this place was utterly unknown to European geography. It appears that, as far back as 1787, Captain Antonio del Rio addressed a report to the King of Spain on the existence of these ruins, in the country then designated by the name of Casas de Piedras; and in this report some of the facts are mentioned which are contained in our correspondent's notice, more particularly the very remarkable occurrence of bas-reliefs representing the adoration of the emblem of Christianity, and which are exhibited in Del Rio's work, subsequently translated and published in this country. Baron de Humboldt had, with his ordinary sagacity, observed, that the half-civilised people met with in 1537 by the conqueror Quesada, were

clothed in cotton garments, and had the most intimate relations with the people of Japan. Our correspondent's description bears out this notion: he mentions females dressed in tippets and wrappers, worked like a plaid, and the ends also finely wrought. Since that period, in comparing the cycle of the days of the Mayas, or Mayas, (the inhabitants of these uplands) with that of the Japanese, M. de Paravey (*Origine unique des Chiffres et des Lettres de tous les Peuples*) found the same significations in each (evidently astronomical) for the same numbers. Colonel Galindo is decidedly of opinion that the Maya language was derived from these people, whose antiquity must have dated to a period anterior to the foundation of Mexico, and their civilisation have surpassed that of the Peruvians. In fact, Palenque is, in its historical importance, the Thebes of America.

Dr. Siebold, who has lately returned to his native country, after a tedious imprisonment in Japan, prosecuted similar researches, and compared the number of the Mayas with the names of the cycle of the ten days of the Japanese; and he remarked that, excepting the first, the names of all these days terminated in *ka*, as is also the case in seven out of ten of the Maya numbers. In the Caucasus the languages of the Awaras and Lezghis have also the names of their numbers terminating in *ko*, or *ico*. Siebold remarks, that *ko*, which signifies one in Japanese, approximates closely to *atar*, number one in Mayan; *ada* also, among the Abazes of Caucasus, signifies frog, which is the hieroglyphic of the number one. The primitive *ata*, in Sanscrit, also signifies the first.

The Geographical Society of Paris, struck with the importance of a correct knowledge of the ruins of Palenque, both as regards their relation to similar monuments in Guatemala and in Yucatan, and the analogy which exists between these different edifices, considered as the work of the same art and the same people, has also offered a prize of 2,400 francs for a more complete and exact description of them, accompanied by researches on the traditions relating to the ancient people to whom the construction of these monuments is attributed; with observations on the manners and customs of the natives, and vocabularies of the ancient idioms.*

ZOOLOGICAL SOCIETY.

A MONTHLY meeting of this Society took place, at their house in Bruton Street, on Thursday, Oct. 6; Joseph Sabine, Esq. in the chair. It was announced in the Report that his Majesty still continued his patronage of the Society; that he had, during the last month, presented them with three wild boars, three mouslons, and a deer; also with several magnificent stuffed specimens, including a very fine

* Since writing the above, we observe the following in the *Times*, after a quotation of the statement in last week's *Lit. Gaz.*: "A letter has also appeared on the subject in the *Morning Herald*, which refers to Lord Kingsborough's splendid work on Mexican Antiquities for other information on the subject of the Palenque ruins. "These (says the *Times* correspondent, speaking of our description of the American antiquities) are precisely similar, from the description, to the stone-roofed chavels, three or four in number, at Cashel, Glendalough, St. Doolough's, near Dublin, and we believe one other, still existing in Ireland. The wood-work has all disappeared; the windows are many, subject to no particular arrangement, being merely small circular and square perforations. Human figures in *alto-relievo* are frequent on small pillars; and filigree work, imitating boughs and feathers, is perceptible in places. Some of the sculptured ornaments look very like the Corinthian foliage of the ancient architects. The ruins are buried in a thick forest, and the adjacent country, for leagues, contains remains of the ancient labours of the people—bridges, reservoirs, monumental inscriptions, &c. The natives say these edifices were built 'by the devil.'"

male ostrich, an emu, two crested cranes, &c. &c. The number of visitors to the gardens in the month of September was 33,751, and the money received 1,628l. 16s. Mr. Cox inquired if the council had adopted any regulations respecting the offering of premiums; and was informed by the chairman, that it was under consideration, and would very shortly be announced.

At a meeting of the committee of science of the Zoological Society, on Thursday, Oct. 11, Mr. Cox in the chair, Mr. Ogilvie read an interesting paper on the genus *phalangista*. The secretary, Mr. Bennett, read a letter from Dr. Bancroft, of Jamaica, which accompanied a present of fishes from that coast, a small specimen of *drynatus*, and several varieties of remora. The latter is the variety of fish which adheres to the shark and other large fish, by a peculiar apparatus at the upper part of the head, and thus makes use of the locomotive powers of other animals to supply its own deficiency in the means of swimming; it also occasionally adheres to the bottoms of ships. A living specimen of an armadillo was on the table. These animals, although common in South America, and sometimes even used for food, have very rarely been seen alive in this country. The pair already in the gardens have bred twice this season, one of the young ones being still alive. The one now exhibited is of a different kind and more elegant form.

FINE ARTS.

NEW PUBLICATIONS.

Sir Joshua Reynolds's Works.

WE are happy to see that Mr. S. W. Reynolds, engraver to the King, and whose talents, both as a mezzotinto engraver and as a landscape painter, are well known, is resuming the publication (which illness and other circumstances have for some time suspended) of the works of his illustrious namesake. Fifty-two numbers have already appeared; eight more (one of which is now in a course of delivery to the subscribers, among whom are most of the noble and opulent lovers of art) will complete the series; which will then form five splendid and highly valuable volumes. The new part which lies before us amply sustains the reputation of its predecessors.

Ireland Illustrated, in a Series of Views of Cities, Towns, Public Buildings, Streets, Docks, Churches, Antiquities, Abbeys, Towers, Castles, Seats of the Nobility, &c. From original Drawings by G. Petrie, Esq. R.H.A. &c. &c. Engraved on steel under the direction of E. Goodall, &c. &c. With Historical and Topographical Descriptions by G. N. Wright, Esq. A.M., &c. &c. Fisher, Son, and Co.

WE have frequently called the attention of our readers to this pleasing topographical publication in its progress. It is now completed; the very handsome and amusing volume lies before us; and in speaking of it we may justly use the words of the preface: "The public buildings of chief cities and capital towns have all been introduced, and with so much address, on the part of the artists, that, if necessary, they may be viewed as architectural drawings. The singular wildness and peculiar character of the Irish landscape they have endeavoured to make intelligible, by views selected from many different counties; and care has been taken to represent such subjects as were not previously published, and such places as were most beautiful, though the most unknown."

The Landscape Alphabet. Hullmandel.
It is impossible to deny the ingenuity and taste of the designer of these elegant trifles.

Landscape Illustrations of the Waverley Novels.
Part XVIII. Tilt.

If any one should be found to object to the interior of "Craigevar Castle," that it is not strictly a *landscape* illustration, we are sure he would shew more fastidiousness than taste. It is from a drawing by G. Cattermole, and is very beautiful; as are also the other plates of the Number, especially the "Frith of Forth," from a drawing by C. Stanfield.

SKETCHES OF SOCIETY.

THE HAPPY MAN'S SHIRT.

[From the *German of Langbein.*]

[If we place the following tale under the head of a Sketch of Society, instead of its proper poetical station, it is not because we wish to undervalue the composition, but simply because we think the political lesson it affords may be very useful, if applied to the national question of Reform. It is to be hoped that his Majesty's Ministers will look out to the making of a number of happy shirts next session.]

A KING lay dangerously ill,
And nought availed him draught or pill:
He bore his fate with resignation;
While round his bed their consultation
The grave physicians held, the fever
Laughed at their skill as much as ever.

Now all the theatres were closed,
And fiddlers intermitted scraping;
The *beau monde*, as may be supposed,
From *feigning* grief saw no escaping;
They had already, it is said,
Ordered their mournings to be made.

The old court jester seemed as though
His tongue had suffered amputation,
And he who once could chatter so,
Now 'mongst the doctors took his station:
Silent and silly, near the bed
He stood and shook his empty head.

At length, howe'er, it chanced one day
From off his lips the padlock fell—
"Ye sage big-wigs!" he 'gan to say,
"You're only fit for folks who're well:
In spite of all your Greek and Latin,
Death where he will creeps like a rat in!"

Now look ye, sirs, before your eyes
He grapples with the Lord's anointed;
Vain are your drugs and looks so wise—
He laughs to see you disappointed.
So now be off! I know a man,
If he can't cure him, no one can.

He is—what you're not altogether—
A conjuror of wondrous fame:
He can lay ghosts and goblins, whether
From hell or heaven, 'tis all the same;
And to a hair he prophesies;
And when he's called no sick man dies."

"Humph!" says one sage, "do you pretend,
You fool! to know aught of the case?"
"Pshaw!" cried the king, "be silent, friend!
He's the best servant I've in place.
Heed not his talk, good fool, but bring
Your wizard here to heal your king."

Not distant was the wizard's cave,
'Twas seated in a neighbouring wood:
Quickly he rose; led by the knave,
His tottering steps the way pursued.
Like Nestor, he with years was graced,
His silver beard flowed to his waist.

In low, hoarse voice his majesty
With friendly greeting hailed the sage—
"Welcome, most worthy prophet! I
Do bless thy coming. Light of th' age!

Must I—oh tell me is't my doom—
Step from my throne into my tomb?"

"I may not give," the graybeard said,
"An instant answer to thy quest;
The rolling planets must be read—
Hard is their meaning to be guessed.
When morning gilds the mountain's brow,
Thy life or death I'll truly shew."

Thus having said, he went away,
Leaving to greatness all its cares:
True to his word, at dawn of day
He comes again, and with him bears
A magic volume in his hand,
Which none but he could understand.

"Sir king," he spake, "your danger's great,
Death ready stands to claim his own;
But yet your majesty may straight
Your health regain, if you put on
A shirt whose owner hath enjoyed
Happiness always unalloyed."

The courtiers laughed—"the man is mad!"
—A whisper ran around the room;
Yet spake with hope the monarch glad
To his prime minister—"Now come,
My lord, this in your province lies,
This shirt forms part of the supplies.

Why do you muse and look so pale?—
Only to-day you boasting spoke,
Your policy could never fail
To fill my realm with happy folk:
Now of this mighty host I ask
No more than *one*—that be your task."

The statesman left the sick king's bed,
Bearing a cloud upon his face,
And to his cabinet he sped,
Cursing from first to last the case.
He spoilt ten pens in his vexation,
And then he wrote a proclamation.

"Whereas, &c. near our bed
Death ready stands to claim his own;
Yet shall we, hath a prophet said,
Our health regain, if we put on
A shirt whose owner hath enjoy'd
Happiness always unalloy'd."

Therefore, to whom all care's unknown
We now address our proclamation—
Let him forthwith give us in loan
A shirt (though coarse, 'twill serve th'
occasion):

The boon we shall with gold reward,
And favour with our high regard."

At the street corners, scarcely dry,
The paper had not long been pasted,
Than half the town, with eager eye
And neck outstretched, impatient hasted
To read it o'er—when straight a flood
Of bitter comments on't ensued.

Quoth Poverty—"God bless us! So!
We truly are the folks they want:—
We're rich in cares; in shirts—oh, no!
Our huts are mis'ry's fav'rite haunt;
And when taxation opens the door,
Good bye to luck—he's seen no more!"

And many a husband read the bill,
And bit his lip, to think the life
He led at home, and what a pill
It was to have a vixen wife,
Whose temper prov'd, alas! too well
That oft on earth there is a hell.

In short, each one his burden bore,
And each one heav'd a deep-drawn sigh,
And felt, in truth, it griev'd him sore
That he could not a shirt supply;
And day and night they waited—yet
The smallest rag they could not get.

"D—n it!"—for once, the statesman swore—

"Now this, I say, is insolent—
My coach." He searched the kingdom o'er;
But only to such people went
As by the world's false estimate
Have happiness supremely great.

He sought among the rich, who roll
(A swinish multitude) in gold;
He sought the high, whose mighty soul
Could dream of nought but projects bold;
He sought the newly-wedded pair,
Who span-new bands of Hymen wear:

"My friends!" he said, "in verity
We're much surpris'd and discontent
You feel not for his majesty,
And not a single shirt have sent:
If you're not happy—hang it! then
No happiness exists 'mongst men."

Red grew the cheek of many a dame,
And many a valiant knight turn'd pale:
There was a something they might blame,
But fear'd confessing the sad tale;
So from his lordship hid the smart,
And shew'd him all things—save their heart.

Shirts without number, true, he got—
His carriage could not hold them all;
And in the palace scarce a spot
Was left uncover'd—e'en the hall;
And each, although exceeding weak,
The king put on, and—still was sick.

"Just as I thought," the jester cried;
"Spite of your wisdom's excellence,
Except a fool, who would have tried
To find true bliss in eminence?—
'Tis nought but smoke with such a brood;
Ape's tricks and cat-like gratitude."

"Ay! ay! that's true," then said the king:
"My jester speaks both bold and right:
Again, my lord, to travelling—
Nor e'er return, as you're a knight,
Till what we wish you chance to find—
The shirt of health, as was enjoined."

His lordship gave the fool a look
Of vengeance; and then "slave!" he
grunted,

And then for his companion took
A courtier friend; and round they hunted
Full four weeks long, now here, now there—
In short, they travell'd every where.

A trumpeter before them rode,
And as they went, he blew a blast
In every village on the road:

This was their question to the last;
"Is there none happy in this place?"—
But not a single voice said, "Yes!"

"Here's a wild-geese chase!" cried the count;
"Coachman, turn back!—upon my soul,
I'll call that jester to account;
He's made us each an April fool.
The people dread, if they confess,
Lest we should tax their happiness."

"Just so," his fellow-traveller said;
"They think they've been too long without
A slice of bacon to their bread;
And, for my part, I do not doubt
That all the wizard said was fudge:
He's humbug'd king and all, I judge."

Their carriage now with lordly speed
Rolled on towards the capital;
There fortune's star, as they proceed,
They sought with offers liberal.
They'd many a slice of the best bacon;
But happiness would not be taken.

At last, one morn—so runs the tale—
Their journey they had scarce begun,

When, sounding from a grassy vale,
Within a grove, safe from the sun,
By the way-side, a song they heard
In jovial tone, thus word for word:—

"Hurrah! I am a joyous wight,
As though I had a prince's gold!
And, oh! it makes me laugh outright,
When Mammon's vot'ries I behold.
Hurrah! I am as rich myself,
Since I can do without their pelf!"

"Ha! hear you not that merry lay,
Under you spreading beechen shade?—
Upon my word, there warbles gay
The phoenix we are seeking," said
The count to his companion. "Stay!
Coachman, we'll make a last essay."

Alighting, then, led by the sound,
Into the wood they walk'd, and there
They saw a peasant; on the ground
He sat and ate his rustic fare:
The clown—a young, fresh, active youth,
All life and spirit, in good truth—

With what an appetite he ate!
And how content laugh'd on his face!
And, to complete the scene, there sat
At his right hand a jolly lass,
Straight as a wand, compact and round,
And as a fish i' th' water sound.

He kissed her—and that made the spies
Feel their mouths water at the sight;
"Upon my word!" the count then cries,
"Yon fellow revels in delight,
Seas'ning his breakfast with a kiss—
An epicure might envy this!"

Nearer they came. "My friend! So, so,
You relish things betimes I see;
Thou seem'st at a most determin'd foe
To sorrow and anxiety;
And, if thy looks do not deceive,
That thou art happy I believe."

"Ay! that I am!" good Hodge replied;
"My labour yields me all I need;
And tell me where so nioe a bride
As her could I have found?—Indeed,
When she looks on me lovingly,
I'd not change with the king—not I."

"Alas! poor king!" the statesman said;
"Now lies he sick and rack'd with pain;
Yet thou canst raise him from his bed,
With little trouble, well again:
A *shirt*—the wizard's words assure—
A *shirt of thine* will work his cure."

"A *shirt of mine*!" Hodge wond'ring cried—
"A *shirt of mine*!—I'm grieved to say—
I am indeed"—and then he sigh'd—
"I can't oblige you in that way;
Of happiness a large supply—
But d—l a rag of shirt have I!"

"Heavens!" cried the statesman, and grew
pale,
"The happiest man in all this realm
Has got no *shirt*!—the mournful tale
Will all with sorrow overwhelm."
Just as he sung this dirge, down-hearted,
His sacred majesty departed.

O. C. W.

MUSIC.

NEW PUBLICATIONS.

The Gem, a new Set of Quadrilles. W. Ridley.
THE young ladies of Portland House, Ham-
mersmith, for whom this set of quadrilles has
been "expressly composed," may thank the
composer for a very easy and pretty incitement

to dancing. Young performers will find them
pleasant.

*Introduction and Variations to the celebrated
Air, the Swiss Boy.* E. Dearle.

THE variations to this popular air are worthy
of it.

I have been since last I met thee. Louis Léo.
ONE of the most deserving ballads we have
lately seen: the air extremely sweet, and well
suited to the words, which are from Sforza's
poems.

1. *The Love-Knot.* A. Ballad. T. H. Bayly.
2. *O'er the dark Waters.* 3. *The Pirate's
Bride will Zarra be.* Mrs. W. Marshall. 4.
- To win the Love of thee.* Sola. 5. *Ellen of
Lismore.* Barry Cornwall. T. Phillips. 6. *A
Heart that once has loved like mine.* Dr.
- Leyden. G. Ware. 7. *How soft the Air
beneath you hill!* J. A. Nisuke. 8. *I'll meet
the Maid.* E. Merriott. 9. *The Letter.* T.
- Atkinson. T. Macfarlane. 10. *Forget me
not.* T. K. Hervey. J. G. Patrick. 11.
- O'er Billows borne.* J. J. Harte. 12. *With
thee, my Love, beside me.* 13. *Where is she
now?* G. Linley.

THE above may all be classed in the list of
pretty ballads, without any qualities sufficiently
striking or original to demand particular notice.

DRAMA.

DRURY LANE.

Love in a Village last Saturday presented us
with Mr. and Mrs. Wood as *Hawthorn* and
Rosetta; both in excellent voice, but the lady
for preference, as Mr. Wood himself indulged
too much in ornament. A Mr. Templeton
appeared in *Young Meadows*, and sang very
sweetly; and a Miss Field, from Bath, as *Lu-
cinda*, displayed both taste and science. Mr.
Farren was the *Justice Woodcock*; and Mrs.
Humby was the *Madge*, playing well, and sing-
ing awfully.

On Monday, the animal show, so long an-
nounced, was produced at Drury Lane, to a
house crowded in every part. *Hyder Ali* is the
name of the Contrivance which leads to the
various scenes in which M. Martin and his
beasts exhibit—1. as sleeping on a lion; 2. as
pulling two boys off his children; 3. as fight-
ing with two lions against a body of Indians;
4. as fighting with a lion in his den; besides
which, we have a pelican on the stage, mon-
keys in trees, a llama chased across, a tiger
bounding after the children, and two elephants
in triumphal processions. The curious part of
the spectacle is to witness all these creatures
rendered so tame and docile: as for their ac-
tions; they are dull and tiresome in the ex-
treme. Very great expense has, we understand,
been incurred in producing *Hyder Ali* with
these brute accompaniments; and therefore we
much regret that such an experiment should
ever have been made; for it is impossible to
view the design without reprehension, or the
execution of it without fatigue and disgust.
There is no interest inspired by the animals,
even were they seen in a fitting place; but
when we see them superseding all that is left,
and that is little enough, of the legitimate
drama, it seems to us as if the climax, alike of
the degradation of the stage and the corruption
of public taste, had been reached. The whole
is so obnoxious to censure, that we are disin-
clined to speak concerning it in the severe lan-
guage of just criticism; and are glad to take
refuge from our task by inserting some lines
from a correspondent, the latter portion of

which is as good as the exhibition they cele-
brate.

"Et tu, Brute!"

Oh, tragedy! oh, comedy!
With all thy motley train,
How art thou fallen! and, alas!
How low is Drury lain!
How must all human patronage
At Drury have decreased,
When they thus wildly hope to be
Supported by the beast!

About their treasury affairs
For some time they've been sly,
And now to hide their secrets keep
This new *Hyder Ali*;

And, like our ministers of state,
Display a little nous,
In having, as a great colleague,
A Den-man in the house.

They'll ruin wild-beast-shows outright—
For who, in this wise age,
Would peep in caravans, when they
Can view beasts on a stage?
Or seek for birds in cages where;
Poor things! they never sing,
While they may see them on the boards,
And monkeys on the wing!

The elephants do here, of course,
The heavy line increase;
But lions scarcely tame enact
The same parts in the piece;
And people can no more be dull
When inside Drury's doors,
For lions now (in play-bill phrasae)
Will "keep the house in roars."

Yet Drury should not thus be made
A Martin's nest and den,
Where lions act in spectacles,
As if they were old men;
And though we're told they're very tame,
And harmless with their paws,
We should remember, like "the Bill,"
They've some "obnoxious claws."

B.

COVENT GARDEN.

On Monday, Miss F. Kemble appeared for the
first time this season as *Belvidera*; *Jaffer* and
Pierre by Messrs. C. Kemble and Young.

On Wednesday, the *Man of the World* af-
forded Mr. Young an opportunity of shewing
himself as great in comedy as in tragedy. His
Sir Pertinax Mac Gooch is admirable. The
pliancy, the sarcastic humour, the selfishness
of the part, were all delineated with equal truth;
and, in this season of excitement, the political
allusions were not the least fortunate hits in
the representation. Miss Taylor played *Lady
Rodolpha* with great spirit; and a Miss Lee
made a very favourable *début* as *Constantia*.
After this treat, a new farce, with music by
Mr. Rodwell, called *A Genius Wanted*, was
brought out with success. The drift of this
entertainment is to display the versatility of
Miss Poole, who assumes several characters in
order to prove that she is the genius wanted,
and thereby reconcile her father to her grand-
father. In this the juvenile artist shewed sur-
prising comic talent for one so young, and was
rewarded with much merited applause. Mr.
F. Mathews, Duruset, and Meadows, supported
the other characters very ably.

HAYMARKET.

THE Haymarket Theatre closed on Sunday
morning, October 16th; thus keeping up its
rakish character to the last. The performances
were, the *Iron Chest* (one of the longest plays
on the stage), the national anthem, the Fare-
well Speech, and *Three farces*! And what has
been the issue of this unaccountable opposition
to public opinion, loudly and strongly expressed
daily, weekly, and monthly, in every periodi-
cal, and through every channel, respecting the
late hours and their detestable consequences,
and of the attempt to perform grand operas and
tragedies with two singers and one tragedian?
—A loss (we regret to say, notwithstanding it
was deserved), reported to exceed £2,000, but,
at any rate, such a loss as to render it, in the

words of a proprietor, "the worst season that has been known since the building of the theatre." We trust the manager will at last see his error, and next season "reform it altogether." Only eight new pieces were produced, as follow:—

June 15. Widow Bewitched, Interlude: P. Farren. 13 nights.

June 22. Friend at Court, Comedy: Planché. 13 nights.

July 14. School for Coquettes, Comedy: Mrs. Gore. 37 nights.

August 2. Madame Du Barri, Drama: Poole. 6 nights.

August 9. Fricandeau, Farce: H. Payne. 6 nights.

August 30. My Wife, or my Place, Comedy: Shannon. 18 nights.

Sept. 1. Belles have at ye All, Comedy, altered from Cibber. 17 nights.

Sept. 15. John Jones, Interlude: Buckstone. 25 nights.

THE ADELPHI.

Victorine, by Buckstone, was produced here on Monday, and is a most pleasant piece, with a very unexpected dénouement. During the three acts, a lapse of five-and-twenty years is supposed to have taken place, and Yates is particularly suited to this kind of personation; his disguise being so perfect as the man of sixty, that it was impossible to recognise him. Mrs. Yates played most delightfully all through, and is certainly the prettiest lady of 44, and girl of 19, we have seen. Mrs. Fitzwilliam also performed very cleverly. J. Reeve has only a trifling part, of which he made the most. The piece was received with immense applause, and has since deservedly run with the same sort of *éclat* which has attended the *Wreck Ashore*.

We see paragraphs in the newspapers mentioning a version of this piece as forthcoming from the pen of Mr. Planché,—in which statement there is no truth whatever.

VARIETIES.

Miracles.—In the forest of Ouche, in Normandy, is a river, said to be of saintly origin, and which formerly had the reputation of curing the mental and bodily ailments of all who bathed in it. About eight years ago, the friends of a woman who was supposed to be possessed by evil spirits, plunged her so frequently into the sacred stream, that at last the poor creature was actually drowned. Upon hearing of this accident, the prefect of the neighbouring town of Alençon caused the following quaint, but rational, notice to be fixed up near the place:

"De par Sçruier, défense à Dieu
De faire miracle en ce lieu."

Mr. Jones.—We see it stated that Mr. Jones had stood out for higher terms at Drury Lane than could be granted, and, sorry not to have our excellent comedian on the stage, we could not help regretting the circumstance. On inquiry, however, we find that the proprietor had offered him a very liberal engagement, which was only declined in consequence of his time being so entirely occupied in that new line which he has adopted with so much success, the teaching of elocution; of which the pulpit, the bar, and the senate, exhibit the fruits.

The Garrick Club.—At the general meeting last Saturday, the names of two hundred members to form this club were given in; the Duke of Sussex was elected patron, the Earl of Mulgrave (who presided on the occasion) president, and Sir George Warrender vice-president. A committee of twenty-four, including a sub-committee of seven, were chosen to undertake the management of the affairs of the club for three years; and trustees and auditors were also appointed. The entrance was fixed at ten, and the annual subscription at six guineas, with power to raise the latter to seven guineas

if necessary. In the first instance the number is limited to three hundred. A good deal of conversation took place on various points connected with the establishment and its ulterior arrangements; but, finally, every thing was left to the direction of the committee, which consisted of many noble and distinguished members.

New Knights.—In conferring the honour of knighthood on several recent occasions, his Majesty has obviously been led to distinguish men of literary and scientific merit. We thus find Mr. South, Mr. Rennie, Mr. Charles Bell, Mr. Herschel, and Mr. Harris Nicolas, in the list of persons so marked by the royal favour; and we have heard that similar honour is intended for Mr. Babbage, and several other gentlemen eminent in literature and science.

Puff Indirect?—We so rarely fall into the mistake of puffing the *Literary Gazette*, that we ought to be excused now and then in the indulgence of that agreeable *notion*. We mention it accordingly as a curious example of the diffusion of a branch of English literature, that in *one day* last week we received, among our communications, a packet from the Mysore, another from central America, a third from a small town in the heart of Germany, and two from Switzerland. An edition of the *Gazette* is also published as regularly on the banks of the Mississippi as on those of the Thames.

Irish Eloquence.—At a public meeting recently held in Cork, for the purpose of presenting the freedom of that city to Sir Edward Codrington, who with his squadron had just arrived in the harbour, Sir Anthony Perrier, in eulogising the services of a young officer belonging to one of the ships, spoke to the following effect: "I can tell you, Mr. Gregg, very few of them saw as much service as that young gentleman. When the freedom of the corporation was voted to him, he was standing on the North Pole!" (*acclamations of surprise, with mingled looks of astonishment and incredulity*.) Mr. Gregg: "Only that he is about to sail on Friday, or Saturday, we might be on the look-out for a wife for him—(a laugh)—for (with a significant archness), there are some girls disposable here"—(*great laughter*).

La Caricature.—The proprietor, editor, and printer, of a Parisian Journal, entitled *La Caricature*, have been condemned to two years' imprisonment, and to a fine of three thousand francs, for having published two lithographic prints; the one representing King Louis-Philippe, with a mason's apron and trowel, covering with plaster the inscriptions which the people of July had traced on the walls; the other Prince Talleyrand, as a merry-andrew, pulling the strings of a puppet with the emblems of Liberty.

Dublin Museum.—Among the economies of the day, the public annual grant to this institution has been reduced.

Cholera Morbus.—A French periodical publication contains a curious map of the progress of the cholera morbus from India to Europe. If, unhappily, it were not too extensive, we would have it copied for the *Literary Gazette*. The advanced post of this frightful enemy is now at Hamburg; and there seems to be every reason to apprehend that in the spring, if not sooner, it will invade our shores.

Lee Sugg, one of the first ventriloquists who exhibited that curious talent in England, died last week at Southampton, aged 86. Both voices are silent now.

Item.—At Ramsgate the regulations of the pier and harbour are printed and hung up for

the edification of the public; but it does not seem that the writer is a very learned clerk, for one of the boards begins thus: "Item, any vessels," &c. &c.

LINES

On Mr. Chantrey, when on a visit to Mr. Coke at Helkham, having killed a brace of pheasants at one shot, being the first he ever fired; the memory of which he has perpetuated, by presenting his host with an exquisite representation of the birds in marble.

[From the *Gentleman's Magazine*.]

CHANTREY, born ever to excel,
The fatal tube no sooner tried,
Than, victims to his new-found skill,
Two beauteous pheasants died.
Repenting quick the cruel deed,
And urged by pity to atone,
He claims his magic chisel's aid,
And turns them into stone.
Thus sacred justice is appeased,
Each bird in breathing marble lives;
While the immortal fame they gain,
The sculptor shares and gives. T.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement*, No. XLIII. Oct. 26.]

The oldest of the Annuals, *Time's Telescope*, for the next year, is, we are assured, to be much improved in its attractions. The astronomical department is to be again written by Mr. Barker, with whose talent in this branch of science the readers of the *Literary Gazette* are so intimately acquainted; while the portion devoted to natural history, or the appearances of the seasons, is, for the first time, to be from the pen of Professor Rennie.

A translation of the *Memoirs of the Duchess of Albe*, we perceive, is announced. The work is said to contain curious particulars respecting her husband, Gen. Junot, and other distinguished persons attached to the fortunes of Napoleon.

A new edition of *Four Years in the West Indies*; containing a full and authentic Account of the late dreadful Hurricane in Barbadoes, St. Vincent, and St. Lucia: illustrated by lithographic Sketches.

Selections from the *Edinburgh Review*; comprising the best Articles in that Journal, from its commencement to the present time: with a Preliminary Dissertation, and Explanatory Notes. Edited by Maurice Cross.

A Treatise on the Diseases of the Heart and Great Vessels, by James Hope, M.D.
The Sacred History of the World, from the Creation to the Deluge, attempted to be Philosophically considered, in a Series of Letters to a Son, by Sharon Turner.

LIST OF NEW BOOKS.

Historical Memoirs of the House of Bourbon, 2 vols. fcp. 10s. bds.—Neale on Cholera Morbus, 8vo. 6s. 6d. bds.—Cruttwell's Housekeeper's Account-Book for 1831, 2s. sewed.—The Sisters' Budget, 2 vols. 8vo. 21s. bds.—Rev. R. Hall's Works, Vol. II. 8vo. 12s. bds.—Moore's Dictionary of Quotations, post 8vo. 18s. bds.—Otto's Compendium of Anatomy, by South, 8vo. 14s. bds.—Description of the Preparations in the Museum of St. Bartholomew, 4to. 10s. bds.—Balam, by the Author of "Modern Fanaticism Unveiled," 12mo. 6s. bds.—Andrew Fisher's Works, Vol. I. 8vo. 14s. bds.—Illustrations to the Karysake, 1833, proofs, 2s. 3s.; India proofs, 3s. 3s.; India proofs, before letters, 4s. 4s.—Leigh on the Game-Laws, 12mo. 6s. bds.—Wardlaw's Essays on Assurance, 12mo. 5s. bds.—The Astrocyte, or Christian Astrology for 1831, fcp. 8s. hf. bd. morocco.—Commercial Value-Museum, 32mo. 2s. 6d. bds.—Brown's Sketches and Anecdotes of Quadrupeds, royal 18mo. 10s. bds.—Cock's Original Hymns, 18mo. 3s. bds.

Valuable Works on Botany, Gardening, Natural History, &c.
Printed for Longman, Rees, Orme, Brown, and Green.
FIRST STEPS TO BOTANY, intended as
Popular Illustrations of the Science, leading to its Study
as a Branch of General Education.
By JAMES L. DRUMMOND, M.D.
Professor of Anatomy and Physiology in the Belfast Academical
Institution.
3d edition, 18mo. with Cuts, 6s. boards.

By the same Author,
Letters to a Young Naturalist, on the Study
of Nature and Natural Theology. 18mo. with numerous Cuts,
10s. 6d. boards.

**An Introduction to Entomology; or, Ele-
ments of the Natural History of Insects.** By W. Kirby, M.A.
F.R.S. and L.S., and W. Spence, Esq. F.L.S. New edition,
4 vols. 8vo. with Plates and Portraits, 4s. boards.

A Manual of the Land and Fresh Water
Shells hitherto discovered in Great Britain, arranged according
to recent Authorities. By W. Turton. Fcap. Plates. In the
press.

Lectures on the Elements of Botany. By
Anthony Todd Thomson, M.D. Vol. I. 8vo. Plates, 11. 8s. bds.
**An Arrangement of British Plants, accord-
ing to the latest Improvements of the Linnæan System.** By W.
Withering, M.D. F.R.S. F.L.S. &c. 7th edition, including the
most recent Discoveries, and numerous Annotations, illustrative
of Vegetable Economy. By W. Withering, Esq. LL.D. F.L.S.
&c. 4 vols. Plates, 3s. 12s. boards.

A Treatise on the Culture and Management
of Fruit Trees. By William Forsyth, Gardener to His Majesty.
8vo. 7th edition, with Plates and Portraits, 13s. boards.

**The Different Modes of Cultivating the Pine-
Apple, from its first Introduction into Europe to the late Im-
provements of T. A. Knight, Esq.** With 24 Wood Engravings.
8vo. 3s. boards.

The Linnæan System of Conchology. By J.
Mawe. 8vo. with 37 Plates, being 1 to each Genera. 11. 1s. bds.;
coloured, 21. 12s. 6d.

The Botanical Cabinet. In 4to. carefully
coloured, published in monthly Numbers, price 6s. Each Part
contains Ten Figures, with an Account of each, and Rules for
its Cultivation, &c. By Conrad Lodigee and Sons.

The Gardener's Remembrancer. By J.
Macphail. 7s. 6d. boards.

**A New System of Geology, in which the
great Revolutions of the Earth and Animated Nature are recon-
ciled to Modern Science and to Sacred History.** By Andrew Ure,
M.D. F.R.S. &c. 8vo. with 7 Plates and 61 Woodcuts. 11. 1s.
boards.

Elements of Agricultural Chemistry. By
Sir Humphry Davy, Bart. 8vo. 4th edition, 12s. boards.

**The Book of Nature; being a Popular Illus-
tration of the General Laws and Phenomena of Creation.** By J.
Mason Good, M.D. and F.R.S. 3d edition, 8 vols. 11. 18s. bds.

Conversations on Botany, with Twenty-one
Engravings. 18mo. 7th edition, enlarged, 7s. 6d. plain, or 12s.
coloured.

**Conversations on Vegetable Physiology; com-
prehending the Elements of Botany, with their Application to
Agriculture.** In 2 vols. 18mo. with Plates, 12s. boards.

By the same Author,
Conversations on Chemistry. 11th edition,
2 vols. 18mo. with Plates by Lorry. 14s. boards.

In this edition a Conversation on the Steam Engine has
been added.

Conversations on Natural Philosophy. 5th
edition. 10s. 6d. bds. with Twenty-two Engravings by Lorry.

BOOKS IN THE PRESS.

On Saturday, the 29th instant, in small 8vo. embellished
with 100 Woodcuts, price 6s.
THE ELEMENTS OF CHEMISTRY.
famously explained and practically illustrated. Part
the First. Attraction, Heat, Light, Electricity.
John Murray, Albemarle Street.

In a few days,
ITALY'S ROMANTIC ANNALS.
By CHARLES MACPHERLANE, Esq.
Forming the New Series of the Romance of History.

II.
The Affianced One, by the Author of "Ger-
trude." 3 vols.

III.
The King's Secret. By the Author of the
"Lost Heir." 3 vols. New edition, just published.

try. Book-Clubs and Literary Societies supplied.
Catalogues, &c. on application.

Professor Davis on the Diseases of Women and Children.
On the 1st of November will be published, Part I. price 2s. of
OBSTETRIC MEDICINE, its Principles
and Practice; in a Series of Systematic Dissertations on
Midwifery, and on the Diseases of Women and Children.
By DAVID D. DAVIS, M.D.
Professor of Midwifery in the University of London.
The Work will be embellished with upwards of Sixty illus-
trative Plates, and completed in between Thirty and Forty
Monthly Parts. 4to. at 2s. each Part.
Any truly important cases or instructive results of treat-
ment, on subjects coming within the scope of this work, authen-
ticated and addressed to the author in Fitzroy Square, will be
deemed essential favours.

Dr. Turner's Chemistry.—3d edition.
Elements of Chemistry, including the recent
Discoveries and Doctrines of the Science. By Professor E. Tur-
ner, M.D. 3d edition, corrected and enlarged. 1 thick vol. 8vo.
11. 1s. boards.
"The present work is decidedly the best Elements of Chem-
istry now existing."—*Edinburgh Medical and Surgical Journal*,
No. 98.
Printed for John Taylor, Bookseller and Publisher to the
University of London, 20, Upper Gower Street.

In November will be published,
THE COMIC ANNUAL for 1832.
By THOMAS HOOD, Esq.
Printing for Charles Tilt, Fleet Street.
Of whom may be had,
New Editions of the Comic Annual for 1830
and 1831.

On the 1st of November, Messrs. Fisher, Son, and Co.
will publish
BAINES'S HISTORY OF LANCASHIRE,
Part IX. embellished with a Portrait of John of Gaunt,
and the Seals of the County Palatine, and a Copy of Lancaster,
from the Models by S. Chute at the Duchy Office, specially fur-
nished by permission of the Council. Some very interesting and
curious particulars as to Parliamentary Representation, will be
found in the latter Parts of this important work.
"We have never examined a work at once so full of matter, so
clearly and methodically arranged, and so abundant in pleasant
anecdote and useful information. But the County Palatine of
Lancaster is almost classic ground: its history is nearly akin to
romance."—*New Monthly Magazine*, Oct. 1831.

2. Devon and Cornwall Illustrated, Part IV.
and No. XXVIII. Demy 4to. Parts, &c.; India Proof, 8s. Num-
bers, 1s.; India Proof, 2s.

3. National Portrait Gallery, Part XXXI.
containing Portraits and Memoirs of Lord Eldon, Thomas Moore,
Esq. and Sir Alexander Johnston.

4. Imperial Magazine, 2d Series, No. XI.
containing a Portrait and Memoir of Lord Brougham and Vaux,
with the usual quantity of interesting Articles.
Fisher, Son, and Co.; and Simpkin and Marshall, London.

On Nov. 1st will be published, price 6s. in cloth,
TREATISE ON THE MANUFACTURES IN
METAL, Vol. I. Iron and Steel.
Being Vol. XXIV. of "Dr. Lardner's Cabinet Cyclopædia."
Published Oct. 1,
History of France. By E. E. Crovisart (3 vols.) Vol. III.

To be published Dec. 1,
Lives of distinguished British Military Commanders. By the
Rev. G. A. Gleig. (3 vols.) Vol. I.
Printed for Longman and Co.; and John Taylor.

Early in January will be published, the First Part of
LANDSCAPE ILLUSTRATIONS OF
LORD BYRON'S LIFE AND WORKS, intended to ac-
company the new edition announced by Mr. Murray, upon the
same plan as the Landscape Illustrations of the Waverley Novels.
Charles Tilt, Fleet Street.

The Keepsake for 1832.
Early in Nov. will be published, price One Guinea in crimson
alk; large paper (only 250 printed), 21. 12s. 6d.

THE KEEPSAKE for 1832.
Edited by F. MANSELL REYNOLDS.
Embellished with Seventeen highly finished Line Engravings,
executed under the superintendence of Mr. Charles Heath.

Contributors.

Alice Paulet. A Sequel to "Sydenham."
By the Author of "Sydenham." 3 vols. post 8vo.
V.
Memoirs of the Duchess of Abrantes, (Mad.
Junot.) Written by Herself. Comprising her Recollections of
the Life of General Junot, and of other celebrated Persons at-
tached to the Fortunes of Napoleon. In 2 vols. 8vo.
VI.
Frankenstein, a Romance. By Mrs. Shel-
ley. With an Introduction and other new Matter; and the First
Part of the Ghost Story, by Schiller, with a Biographical and Cri-
tical Sketch, forming the Ninth Volume of the Standard Novels.
Small 8vo. neatly bound and illustrated, price 6s.

On the 1st of November will be published, price 12s. in
Turkey morocco,
THE LITERARY SOUVENIR
for 1832.

Edited by ALARIC A. WATTS.
Containing, as usual, Twelve highly finished Line Engravings,
from the Pencils and Burins of the following Artists, including
as will be seen, several of the most celebrated Pictures in modern
Art.

Subjects. Painters. Engravers.
1. Allegory A. E. Chalon, R.A. W. Ennis
2. The Supper by the Sea T. Stothard, R.A. F. Ennis
3. The Tower of London J. M. W. Turner, R.A. W. Ennis
4. The Tarantella, a Neapolitan Dance Montevrain W. Gresham
5. Numa in the Grotto of Egeria H. Howard, R.A. C. Rath
6. Lady Jane Grey pre-paring for Execution J. Northcote, R.A. W. Marshall
7. Overlook on the Rhine D. Roberts E. Goodall
8. The Marchioness of Salisbury W. Russell, F.R.S. W. Ennis
9. Vespers W. Russell F. R. S. W. Ennis
10. The Deveria Family A. Deveria S. Sangster
11. Going to the Sun T. Johnstone E. Portbury
12. The Arrest Alfred Johnstone Conrad Coudy

Four of the above-mentioned subjects are from the pencils
of the most distinguished French artists, and were furnished ex-
pressly for the work.
The large paper edition, with Proofs on India paper, will ap-
pear at the usual time; Proofs, before and after letters, in Fol-
io, are now ready for delivery.

New Year's Gift for 1832.
Also on the First of November will be published, price 6s.
The New Year's Gift and Juvenile Souvenir
for 1832. Containing a Variety of highly finished Line Engrav-
ings, including a Frontispiece, from a well-known Picture by Sir
Thomas Lawrence, of Little Red Riding Hood.
Printed for Longman, Rees, Orme, Brown, and Green,
Paternoster Row.

About to be published, in 1. of 8vo.
THE CAUSES, NATURE, PROGRESS,
and TREATMENT of the FEVERS prevalent on the
Western Coast of Africa; some Account of the Symptoms, Effects,
and Treatment of the other Diseases occurring in that Climate;
together with the Medical Topography of that Coast, from the
River Gambia to Fernando Po, both inclusive.
By JAMES BOYLE, M.D.S.L.
Surgeon R.N., and Colonial Surgeon of Sierra Leone.
Author of a Treatise on Moxæ, &c. &c.
Printed for S. Highley, Fleet Street.

THE FOREIGN QUARTERLY
REVIEW, No. XVI. will be published in a few days.

Regent's Park.
On Wednesday next, with a new Map and numerous
Illustrations on Wood, by G. W. Deane.
KIDD'S PICTURESQUE GUIDE to the
REGENCY PARK.
Printing for William Kidd, 226, Regent Street.

On the 1st Nov. will be published, 18mo. price 2s. 6d.
alk, or 3s. morocco.

SATURDAY, OCTOBER 29, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Rough Sketches of the Life of an Old Soldier.
By Lieut.-Col. J. Leach, C.B. 8vo. pp. 411.
London, 1831. Longman and Co.

NOTWITHSTANDING all we have read of the Peninsular war and of Waterloo; the details of general movements, battles, and sieges; the individual adventures and sufferings of officers and soldiers; we have perused the volume before us with much interest. There is no affectation about the narrative; it is a clear running account of a military life of twenty-one years, spent in various quarters of the world, and distinguished by those thousand accidents, by flood and field, which occur in actual service. The West Indies, the North of Europe, and the Continent generally, were the scenes on which Col. Leach gathered his experience and laurels; and, in modestly describing the occasions, he has produced a work creditable to himself, and likely to be popular with the public.

Having introduced it with this slight exordium, we shall only offer a few brief extracts in support of our opinion; for, though the principal events of the war are painted in a particularly attractive style, we would rather leave them to the readers of the book itself, than fill our pages with statements, the chief features of which are so well known. In short, we select little incidents in preference to grand affairs, and commence with the retreat from Talavera. Col. L. tells us,—

“As neither bread, meat, nor rations of any kind, were to be had, General Crawford ordered that any animals in the shape of cattle, sheep, or pigs, which could be found in the extensive woods in which we halted for the evening, should forthwith be put in requisition for the troops; and never do I remember having seen orders so promptly obeyed. A most furious attack was instantly made on a large herd of pigs, which, most fortunately for us, little dreamt of the fate that awaited them, or, I presume, they would have abetted on our first appearance in the forest. It would be useless to attempt a description of the scene of noise and confusion which ensued. The screeches and cries of those ill-fated swine, as they met their death at the point of the bayonet, the sword, or sergeant's pike, and the rapidity with which they were cut up into junks, with the hair on, and fried on the lids of camp-kettles, or toasted at the fire on a pointed stick, to allay the cravings of hunger of some thousands of half-famished soldiers, was quite incredible, and, I must add, truly ludicrous. As neither bread, salt, nor vegetables, were to be procured, it must be confessed that the repast was a singular one, although it was eaten with the greatest *goût*, and was washed down with some water from a rivulet hard by. At midnight we resumed our march.”

The following is but one of many individual touches which exhibit the horrors of war. We highly commend the author for not giving us too many of such illustrations—a vice too com-

mon with most preceding writers on similar subjects.

“Being stationed at Almofala early in March, I witnessed a disgusting and cruel sight. Having gone with another officer to the mountainous bank which overhangs the river not far from the village, to visit the picket, we perceived a French soldier, *unarmed*, running down the mountain on the opposite side of the river, no doubt with the intention of trying to cross over and desert to us. Three Spanish shepherds, who were tending their sheep on the same side of the river, intercepted him, and beat him to death with their clubs in less time than it has taken me to write an account of the sickening sight. We called out, and made signals to them to desist, and to spare him, but in vain. We fired several shots over their heads to intimidate them, but it had no effect, and the butchery went on without our being able to interfere, or to interrupt those savages in what they considered, no doubt, a most patriotic and meritorious exploit. A deluge of rain had so swollen the river, which roared at the foot of the mountain, that to pass it was impossible; and, indeed, could we have effected it, the blood-thirsty shepherds would have escaped, before we could by possibility have reached them. To have inflicted the summary punishment on them with a rifle ball, which we all felt well inclined to do, would have been only an act of justice; but it was a step, nevertheless, which the higher authorities would have visited with a heavy punishment. If the number of men which the French army lost by assassinations of a similar kind, during the whole of the war in the Peninsula, could be ascertained, it would be an interesting and extraordinary document. Much as every man, possessing the slightest degree of humanity, must abhor the inhuman system of killing stragglers, adopted by the Spaniards, great allowance must, nevertheless, be made for them, who thus retaliated for the countless acts of cruelty committed by their invaders.”

Among the worst of these may be instanced Gen. Loison, of whom Col. Leach says,—

“The name of Loison will not be forgotten by the Portuguese of the present generation; for he was one of the most cruel of their invaders, and at the time he commanded a division in Junot's army, in 1808, previous to the convention at Cintra, permitted such atrocities to be perpetrated by the troops under his command, as would have disgraced a band of untutored savages.”

The description of the natives behind our famous lines of Torres Vedras affords a frightful idea of these universal sufferings.

“Thousands of the unfortunate inhabitants of the provinces through which our army had recently retreated, had abandoned their homes, and were endeavouring to exist between Lisbon and the lines. There was, therefore, an immense population hemmed up in a small space of country, hundreds of them without a house to cover them, or food to eat, except

what was afforded by the bounty of the rich at Lisbon, and by the liberal subscriptions raised for them in England. In the course of the winter, the number of Portuguese who actually died of want was quite dreadful. It was not unusual to see hordes of those poor wretches, old and young, male and female, in rags, the very pictures of death, seated in despair on the wet ground, round a miserable fire, on which was placed an earthen vessel, full of such herbs as could be gathered in the fields and hedges. Thousands contrived to drag on a miserable existence on this vile sustenance. Their death-like, emaciated faces were sufficient to have touched the heart of the most callous and unfeeling. The British soldiers assisted them by every means in their power; and in the Light Division (as well as, I conclude, in every other) soup was made from the heads and offal of the cattle killed for the troops, and distributed amongst the starving inhabitants. I have a thousand times wished it were possible that every man, woman, and child, of all ranks, in England, could have been transported to this heart-rending scene only for five minutes; that by having had an insight into the various miseries to which the ill-fated inhabitants of the theatre of war are inevitably subjected, they might return satisfied, and bless their stars that an army of Frenchmen were not riding rough-shod over old England, and inflicting on its people similar miseries to those which I have attempted to describe.”

When the French broke up and were pursued by our troops, we were half amused by a rather novel military adventure, which the author thus relates:—

“At night our division was ordered into a large pine-wood, to make ourselves as comfortable as we could; but in which we passed as cheerless a night as one uninterrupted deluge of rain might be supposed to produce. Hoping to escape in some measure from the fury of the storm, many of us crept into an old water-course in the wood, in which, rolled up in our cloaks, and doubled up with wet and cold, we did contrive, nevertheless, to fall asleep. But it is impossible to forget being suddenly awoken, a short time afterwards, and feeling myself all at once buoyed up and floating down the little ravine, in the same plight as if I had been dragged under a ship from stem to stern. There was a general outcry from all the party who had sought refuge in this water-course, and a scramble to get on *terra firma* took place. Taking a few mouthful of rum and a cigar, the remainder of the night was spent at the foot of a fir-tree, smoking, shivering, and cursing our stupidity for having taken up so injudicious a position.”

Another, though equally cold affair, is also characteristic of a soldier's vicissitudes.

“The whole country, from Salamanca to Rueda, is one vast sunburnt plain, with scarcely a tree, but abounding with corn, and, near the Douro, with vines. All the towns and villages in this part of the country may literally be called so many wine-vaults. Every house and

street is excavated, and filled with white wine of tolerably good quality. Descending, after a long day's march under a roasting sun, into those deep cellars, where the air and wine were both like ice, was no trifling luxury; the transition being nearly as great as from the equator to the pole. This, however pleasant, might be supposed to have been an unsafe experiment. The only inconvenience, however, complained of, was, that the wine was so cool and delicious, as to render it no easy matter to ascend the long flight of steps, and to regain our billets above ground. Several stragglers who were found in the wine-cellars by the Spaniards, after the French rear-guard had left Rueda, and before we arrived, were put to death; and we saw several others in the churchyard, cut and lacerated in a shocking manner. The system of warfare carried on between the Spaniards and French was revolting to the greatest possible degree."

We give one spectacle more of a remarkable nature: the French had been driven from Portugal and Spain, and our brave army was now pursuing them over the "sacred territory of France," when Colonel Leach says:

"The 25th of August being the anniversary of the formation of our corps, (the rifle corps, or 95th,) the three battalions of it determined, if our French neighbours did not interfere, to dine together, on the banks of the Bidassoa, in our camp-ground. Having constructed a long rude table, with benches round it equally so, seventy-three officers sat down to such a dinner as we could scrape together, under a large hut made of the branches of trees, and within a short distance of the most advanced French sentinels. They looked down on us from the heights of Vera, but were too civil and well-behaved to disturb the harmony of so jovial a set of fellows. Neither vocal nor instrumental music was wanting after the feast; and, with the aid of cigars and blackstrap, we enjoyed the most extraordinary *fête champêtre* I ever witnessed—as may easily be imagined, from the singularity of our situation, and the possibility of our being hurried from the festive board to stand to our arms."

The whole volume presents to us the view of privations succeeded by pleasures, the more vividly enjoyed from their rapid alternations with dangers,—the snatches, as it were, of glimpses of happiness while encircled by the arms of death. The present moment is indeed the soldier's eternity, during such a war as that from 1807 to 1815, when Waterloo crowned the whole with immortal glory.

Among his recreations, our author appears to have been devoted to field sports, and whenever an opportunity offered, his dog and gun were in requisition. We extract an illustration.

"In the forest of Albuquerque, a few leagues distant, are red deer, wild boars, wolves, and foxes. To that forest we made several excursions, taking with us some of our best marksmen, and sleeping the night before in the small walled town of Ouguila, which is on the borders of the forest. Several fine red deer were killed, one of which, a very large stag, I was so fortunate as to bring down with a ball. Although neither wolves nor wild boars were brought to bag, we nevertheless had some shots at them. I look back on those excursions as amongst the happiest days of my life. General Crawford directed that the regiments of his division should frequently be marched to the river Caya, about four miles distant, to bathe. This was done independently by battalions. Trifling occurrences sometimes make lasting impressions; and the animated scene which

our visit to the river produced I have never forgotten. Not only do I cherish the recollection of days long gone by, which were full of excitement, but I derive indescribable pleasure from placing before me, in battle array, some of those 'trifles light as air;' one of which, relative to our bathing excursions in the Caya, shall be detailed in as small a compass as possible. Whether the intention of General Crawford* was, that the regiments should march to the river to bathe as fully armed and accoutred as if they were about to mount guard in some stiff-starched garrison, I cannot say; but I know that every corps did harness and march forth to the river in that form, except our own. Colonel Beckwith, on the contrary, always ordered our men, on these occasions, to take with them neither arms, accoutrements, knapsacks, nor any one thing except their light fatigue dress, foraging-caps, and a stick, for a purpose which shall immediately be explained. The officers were desired to take with them their fowling-pieces and greyhounds; and in this light, easy attire we marched to the river. As soon as we were clear of the walls of Campo Maior, the whole battalion was extended in one long line in skirmishing order, bringing rather forward the wings, and proceeding in this manner straight across the great plain to the river. Hares, rabbits, and partridges, were soon started at all points; when such shooting, coursing, and knocking down with sticks and stones, and such *mobbing* of quadrupeds and birds commenced, that a game-preserving John Bull would undoubtedly have stigmatised us as a most nefarious corps of poachers. The process of bathing having been duly performed, the same scene took place on our return to the town; and the spirit and glee with which all hands entered into the sport may easily be conceived. Those who know nothing of the habits of the red-legged partridge, would be surprised to be told that we frequently made parties to *ride them down*. I can fancy the incredulous stare of some of my countrymen, if they heard any person bold enough to make such an assertion. But that it is not more strange than true, there are many living witnesses to prove. If a red-legged partridge be pursued by a person on horseback whilst on the wing, and a great noise and shouting is made, he will not rise a second time, but will continue running, and at last crouch, and allow himself to be taken up. I have but rarely known them to rise and take a second flight."

With this we conclude; once more expressing the gratification we have derived from Colonel Leach's pen, which we are sure will be shared by most readers, and especially by the military and his companions in arms.

Alice Paulet. A Sequel to Sydenham; or, Memoirs of a Man of the World. By the Author of "Sydenham." 3 vols. 12mo. London, 1831. Colburn and Bentley.

THREE most amusing and clever volumes, decidedly improvements on their predecessors—not, perhaps, in the talent they indicate, but in its more able management. The fault of *Sydenham* was being too desultory, and too crowded with *dramatis personæ*; in *Alice Paulet* the interest is more concentrated, and the characters, from being fewer, are more fully developed. Sydenham's portrait is a true and well-finished picture; the harshness and crudeness of some of the tints are most judiciously toned down by time—time, the ame-

* The author more than once impugns the military skill of this officer.

liator of both moral and pictorial colouring. It is a curious fact, that the young are always severe in their judgments; partly from the innate distrustfulness of juvenile opinion, which is fain to err on the right side, and would be any thing rather than imposed upon; and partly because experience alone makes allowances. It is not till ourselves have descended from our own early standard of perfection, that we pardon others for not having even aspired to reach it. The great characteristic of this work is its good sense: it is a picture of real life; the conclusion is shrewdly drawn, and the estimate accurately taken; and we must say for the author, that

"He is a keen observer, and he looks
Quite through the deeds of men."

We shall place the fruit of some of his observation before our readers. The following is a truly English scene and speech. On the hero's return to the country-seat, the peasantry take off the carriage-horses.

"Thus I was dragged along, amid the shouts of that portion of my friends who were excluded for want of room from the pole and splinter-bar of my vehicle. When we reached the house, I was of course set down with another tremendous round of cheering. I ascended the steps towards the door, and before I entered, turned round, took off my hat with one hand, spread the other upon my breast, and with several profound bows, and looks expressive of the deepest gratitude, gradually backed myself inside. But, as I feared, my annoyance was not at an end, for my friends were not to be so easily got rid of. After waiting a minute or two, in the vain expectation of my re-appearance, clamours began to arise for me to shew myself. Less distinct than these, but sufficiently articulate, were expressions of discontent and displeasure, and still more removed were murmurs, among which the word 'beer' was audible. I still held back, however, hoping that, when they found their hints unnoticed, they would go about their business. This delay only increased the demonstrations of discontent, and caused the demands for 'Sydenham' and 'beer' to assume a more general and peremptory tone. Nicholls, who was at hand, now advised me to go out and say a few words, if it were only to save the windows. He had taken the precaution to have a barrel or two in readiness, if they should become so boisterous as to require that infallible quietus. Accordingly, I made my re-appearance at the summit of the hall steps, and my obedience to the popular voice was rewarded with a shout. Silence being restored, upon my signifying by my gestures that I wished to speak, I addressed the mob nearly as follows:—'Gentlemen, I trust you will pardon me, if the fatigue of my journey, and the unexpected honour which you have conferred upon me, at first so overpowered my faculties, that I was unable to express the gratitude and delight which I experienced at these most flattering testimonies of your confidence and esteem. I should be unworthy the name of Englishman, did I not consider these demonstrations as the most acceptable reward which a member of parliament can receive for his services, and an ample compensation for whatever difficulties and vexations he may have had to encounter in the honest and faithful discharge of his duty. Gentlemen, although I cannot boast of any brilliant talents or eminent services, yet I am conscious of having endeavoured to promote your interests to the best of my ability; and as no man can do more, whatever may be his success, I am not ashamed to shew my face.—[Bravo! hurra! well done!]

you're an honest chap !]—Gentlemen, I deeply regret that circumstances over which I have no control, must preclude the possibility of my becoming a candidate for the honour of your suffrages at the ensuing election ; but, nevertheless, as I trust it is unnecessary for me to assure you, my interest in your welfare and happiness is, and ever must be, unabated.—[Cheers.] Gentlemen,—after a pause, in order to judge whether the last resort was necessary,—“ Gentlemen, a barrel of beer will be brought you immediately, and I hope, after you have drunk my health, you will disperse with that sobriety and good order which has always distinguished you.” Tremendous cheering, under cover of which I retired.” Popularity is an expensive thing.

The defence of the world is very amusingly managed :—

“The world has always appeared to me a most ill-used and long-suffering being. It is represented as a monster of vice and folly. Not a crime or absurdity can be committed, but it must be abused and ridiculed as the author. Not a reprobate, genteel or vulgar, can take the road to ruin, but the world must be execrated as his seducer. It is belaboured weekly by the parsons, daily by the press in every shape, from the sermon to the play, and hourly by individuals of all sorts and sizes ; nay, even many of its own members, who either live on its bounty, or share in its pleasures, will sneer at it to its very face. Does the world ever retaliate, or even murmur under this load of calumny ? Does it ever protest against the hardship of being made responsible for the iniquities and absurdities of those who are predestinated fools and scoundrels ? or of having the abuse of the advantages and pleasures which it offers described as its real characteristics ? Does it ever insinuate that all the slander with which it is overwhelmed proceeds either from the malice and spleen of those who have been disappointed in their speculations upon its good nature and patronage, or from knaves and imbeciles, who are glad to father their villanies and weaknesses upon it ? Does it ever complain of the gross injustice and bitter spirit of persecution with which all its foibles are searched out, dragged to light, and made the theme of every species of invective, reproach, and scorn, while a thick veil is kept carefully drawn over its virtues ? Does it ever vaunt of the admirable policy by which it preserves the honour of both sexes—making the slightest stain upon the reputation of the one an indelible blot ; and the smallest breach of truth, honesty, or courage, irreparable in the other ? Does it remind its detractors that it gives every facility to improvement, submits patiently to chastisement, whether it be the terrible scourge of genius, or the feeble stroke of a puny whipster, and yields a ready obedience to the deliberate voice of public opinion ? In short, does it challenge its opponents to investigate human nature, and to produce a scheme of society which shall secure to mankind a greater average of virtue, wisdom, and happiness, than it can afford ? So much for the world ; which, though I admit, like every thing human, it is not exempt from faults, is, I must maintain, upon the whole, of an amiable character, and utterly undeserving of the indiscriminate abuse which is lavished upon it from every side.”

The master-mind of a small borough is a never sketch :—

“I believe that most boroughs, both rotten and sound, have a master-mind who manages the matter, and whose influence all the parties

concerned acknowledge, though none can give you a satisfactory reason why he possesses it. Perhaps, however, few of these master-minds were gifted with the qualities which constitute the character in such an eminent degree as my friend Ball. He was, in fact, the most completely clever fellow I ever met with in his class of life ; not even excepting my own man, Nicholls, about whom there was rather too much bustle of pretension. The ex-mayor of P— was likewise endowed with an effrontery which nothing could daunt ; and when he was in a jocular mood and knew his company, he could be exceedingly pleasant upon the subject of himself and his conduct. In fact, he was proud of being called a knave ; for he said (or it was said for him) that the epithet implied a superior mind ; and he was flattered at having his assurance admired, because it was an evidence of moral courage. The reader is aware how he used me. It was chiefly by his intrigues that I was deprived of that control over the one seat for P— which remained in my family, after it had abandoned half of the borough, in order to strengthen their tenure of the remainder. He then treated with me as a stranger, and took my money, in consideration of which I was duly elected ; but because, subsequently, a more advantageous offer was made by Lord Daventry, he hands over, without a moment's hesitation, the whole concern to that noble lord. The Havilands, however, who were versed in every variety of political intrigue, threatened to prove too many for a man who, however great his ability, was familiar only with provincial practice. They feared, no doubt, the personal power of Ball, as having too much the character of an *imperium in imperio*, and their first measure after getting into the borough, was to put a plot in operation, the object of which was, to deprive Ball of his influence, and to vest it in some other person who should be a mere tool of their own. The sagacity of the ex-mayor quickly discerns his danger, and takes prompt and vigorous measures against it. He sees that the popular feeling of P— has taken a religious complexion, and forthwith he forsakes Dr. Haviland's congregation, and sends in his adhesion to Lankey, to whose party he is an important acquisition. But he takes a step of still greater importance. He agitates and canvasses actively, and secretly and suddenly raises up the banner of REFORM, under the very nose of the noble marquess, who starts back at the horrible apparition, like the Jew in Scott's romance from the uplifted shield of brawn. Ball's plan was, in fact, nothing less than to open the borough. Several attempts to this effect had been made by adventurers, but had been frustrated by him, and indeed the scheme was hopeless, while he continued to support the corporation interests ; but, now that he opposed them, there was little doubt that he would succeed, supported as he was by all the town's-people, who, under the existing system, were deprived of the elective franchise.”

If the ensuing anecdote be not true, at least it is very probable, which is as much as can be said of most.

“I here, of course, praised his ‘fine boys,’ asked their ages, and addressed the urchins themselves, awkwardly enough I dare say, though I hope in a rather more fortunate style than that of an old bachelor of my acquaintance, who, when a young married lady presented her first-born darling to him for his meed of admiration, not knowing exactly what to say to the poor little gummy wretch, tapped it under the chin, with ‘Aha, little beast!’

to the astonishment, disgust, and indignation of the pretty mother.”

How true is our next extract !

“Men of superior talents, who have generally ardent imaginations, are much more easily deceived by women than those of a more ordinary character. Their fancy invests the object of their admiration with qualities which she does not possess, and they identify the celestial phantom of which they are enamoured with the frail mortal who is the ostensible object of their love.”

There is also truth, and truth most judiciously put, in the remarks on duelling. “Submit the practice of duelling to the test of abstract reason, and its absurdity is palpably manifest. Law hath denounced it with capital punishment, and her decree has been abundantly supported by the arguments of the wise and the good. But the manners and prejudices of society have set at nought law, though seconded (as doth not always happen) by religion, morality, and wisdom. And I fear that until we approach a little nearer perfectibility, we must be content to tolerate the duel, however absurd and iniquitous. It represses tyranny, for it places the strong and the weak upon a level. It checks insolence by the fear of chastisement ; and as the last remnant of chivalry, it must be considered as the guardian of that habit of humanity and courtesy of behaviour, which it contributed to introduce. These, it may be said, are arguments drawn from expediency, to advocate what is wrong ; but this is the age of expediency.”

Our hunting squirearchy are not very favourably depicted ; we take one observation.

“The conversation at one time turned upon a young lady of the neighbourhood, who was just coming out, and of whom one gentleman expressed himself so warm an admirer, that he swore he would call his favourite mare after her ; the highest compliment, I believe, that a sportsman can pay to a favoured one of the other sex. A delicate attention, assuredly, to have the name of her one admires, and perhaps loves, profaned by the rude lips of grooms and stable-boys ! ‘Dress Lady Georgiana ! Take Lady Georgiana to water ! Give Lady Georgiana a feed ! Clean Lady Georgiana's bed !’

In the third volume our young author (for young he evidently is, by his warmth,) gets upon political ground : he is a staunch Tory ; and it is a good sign for a young man to be in earnest, whether right or wrong in his opinions on such matters, which this is no place to decide. Any one can vouch for the graphic reality of the following “reform scenes.”

“In the gossip which always attends any measure of importance, the different reports and assertions which are confidently made respecting its fate are amusing enough. ‘The bill,’ says one careful calculator in its favour, ‘will be carried by sixty-five.’ ‘I know,’ says an oppositionist, with equally scrupulous accuracy, ‘that it will be thrown out by a majority of forty-two.’ ‘There is to be no division,’ affirms a third. ‘Shall you vote for the bill ?’ said I to a Tory country gentleman. ‘Why, I suppose I must,’ answered he ; ‘they'll dissolve if it does not pass, and I can't afford to stand another election just now ; besides, they say there'll be an insurrection in the country if it is thrown out.’ ‘It'll never get through the Lords,’ said one dandy *against*, to another for the measure. ‘I'll bet you six to four—thousands,’ was the conclusive argument in reply. In fact the bill was a very fertile source of gambling, and it was said that there was as

much money upon it as upon the Derby. In fact, at the time, this topic superseded every other. The spirit of politics forced its way even into drawing-rooms, and usurped the throne of fashion. Young men talked to their partners with much complacency of their prospects in the scramble which was to take place; and ladies spoke with alarm of the times, and the dreadful reform measure. 'Do you really think there will be a revolution?' inquired a very pretty woman of me, as of one from whom she expected authentic information. 'No doubt of it,' was my grave reply. 'But are you serious?' 'I am indeed.' 'And—and what will be the consequences?' rejoined the fair inquirer, who, having ascertained that there was to be a revolution, now desired to know what a revolution was. 'The consequences,' answered I, 'are too numerous to be detailed. I can only mention a few, which will be among the earliest. The opera will certainly be put down by act of parliament; the patronesses of Almack's will be dismissed, and their places filled up by tradesmen's wives; so that, instead of waltzing with guardsmen, you will be obliged to content yourself with apprentices, if, indeed, you are so fortunate as to get a subscription. So I advise you to make interest betimes in the proper quarters.' 'I am sure, then, I hope the odious bill will be thrown out,' said the lady; who, however, knowing my character, was not quite sure that I was not quizzing her. This reminds me of a conversation which at this period I overheard in the street between two 'unwashed artificers,' at the door of a house where a petition in favour of the ministerial measure solicited their signatures. 'I say, Bill, canst thee write?' 'Ah, to be sure I can,' answered Bill. 'Well, come in and write thy name to this here petition for reform,' rejoined his companion. 'Reform! what the h—ll's that?' 'Why doesn't thee know? Reform is that we shall be all lords and squires; shouldn't thee like to have thy missis a lady, and to ride in a carriage, with nothing to do but eat and drink like a new one?' 'My eyes! if that's the meaning on't,' said Bill, 'I'll sign it fast enough,—if I don't, I'm blowed!' Accordingly, in they turned, and scrawled their names on the dirty parchment, which was subsequently presented, with previous notice, as the great London petition, signed by a hundred thousand inhabitants."

We add two or three acute remarks: "A man who is vacillating between contending arguments or inclinations, is glad of a straw to turn the scale."

"Violent and openly profligate natures are not desperate, but the subtle and hypocritical are impracticable."

"The reputation of a gamester is as fragile as that of a woman."

An occasional coarseness of epithet is a fault with the writer; it is a mistake to think that this is strength. We conclude by saying, that the work is both entertaining and clever; and, moreover, one of those which make us give an author credit for being even cleverer than his book.

The Literary Souvenir. Edited by Alaric A. Watts. London, 1833. Longman and Co. Why what have we here?—a butterfly with the sting of a wasp, a bird with the painted plume of a peacock and the beak of a hawk? Verily, Mr. Editor, you

"are not too discreet,
To run a-muck and tilt at all you meet."

The longest poem in the volume, and the one to which public attention is most particularly

directed, is, as its writer calls it, "a literary squib." Squib, indeed!—fire and furies, with a vengeance! It ought rather to be entitled the *Fraseriad*, its vituperation being almost entirely directed towards the magazine bearing that name, whose personal attacks on Mr. Watts have provoked this, in our opinion, ill-judged, and, at all events, most ill-placed, retaliation. It is a bad plan to pursue that very line of conduct which you yourself denounce as infamous. We always have protested, and always shall protest, against the personalities now so common in the periodical press, as equally degrading to their writers and deteriorating to literature; and when the abusive attack produces the equally abusive reply, we (avoiding the coarser saw touching certain culinary vessels) can only quote the old English proverb, and say, it is just "pull, devil—pull, baker!" Of the tone of the poem the following extract may serve as a specimen:

"And, cheek-by-jowl, his brother twin,
In all but dulness, Pat Maginn;
Who, though he write the L.L.D.
After his name, will never be
A whit the graver than he is—
Less fond of drunken 'devilries,'
Less ready for a vulgar hoax,
Addicted less to pot-house jokes,
And all the rough plebeian horse-play,
He will so oft without remorse play!
Give him a glass or two of whisky,
And in a trice he grows so frisky,
So full of frolic, fun, and satire,
So ready dirt around to scatter,
And so impatient in his blarney,
They fall alike on friends and foes;
Nay, rather than his humour balk,
His mother's son he'd tomahawk!
And so he can but set once more
His boon companions 'in a roar,'
Will scruple not, good-natured elf,
To libel his illustrious self!
A task so difficult, I own
It can be done by him alone!
And yet, to give the devil his due,
He'd neither slander me nor you
From any abstract love of malice;
But only in his humorous sallies;
For of his friends he'd lose the best,
Much rather than his vilest jest!

But for that booby by his side,
Regina's namesake, not her pride,
That parasitic fish beneath,
That picks its larger brethren's teeth;
Dines in some shark's pestiferous maw,
Sups on a whale's encumbered jaw;
And prone in offal still to wallow,
Bolts what its patrons cannot swallow;
Even so, by garbage fed alone,
Too foul for even Maginn to own,
He builds his pyramid of fame
On ribald jests, without a name;
Sticks to the Standard-bearer's skirt,
And apes his knack of throwing dirt;
Steals his nick-names for every body,
Copies his taste in whisky-toddy,
Retail his jokes with wondrous pains,
And borrows all things but his brains!
Who ventured with the Ensign's backing,
To take the charge, till sent a-packing,
Of Messrs. Treutzel's Foreign Quarterly;
Used Black and Co. so very martyri;
Then kept the world on tenterhooks,
All waiting for a set of books,
Which they who seldom money stint
Refused to pay for or to print;
And left, though they had given the order,
On hand, 'in most admired disorder.'
The Theban deep, who undertook
For C. and B. to write a book,
Which, when the manuscript was sent,
Proved in the same predicament!
And that it ne'er could daylight see
Was plain to them as A, B, C.
Therefore he used their 'firm' ungently,
Colburn reviled, and slandered Bentley;
And like the toad that whispered Eve,
Did fair Regina's ear decieve,
Of rancour full as Bell, or fuller,
Suborned attacks on Lytton Bulwer,

* "A namesake, but no connexion of the able and excellent author of the 'Kuzilbash,' J. B. Fraser."

† "Where are the *Reveries* of History, which Messrs. Whittaker announced from the pen of this gentleman?"

‡ "This person must not be confounded with a cleverer and honest man, Mr. H. G. Bell, the author of *Summer and Winter Hours*, nor with any other Mr. Bell, for 'none but himself can see his parallel.' He is the dictatorial, pragmatical, vigilant (see his libels on Lord and

Which though he read with vast delight,
Poor as they were, he could not write.

Thus have I seen some blow-fly small,
Over a noble sirloin crawl,
On Giblett's ample counter placed,
Tainting the meat it could not taste;
And thus,—for even the meanest things
Can void their filth and use their stings,—
The veriest vermin of the press
The power of mischief still possess;
For jests inflict a double smart
'When some low blackhead points the dart;
And dirt is dirt, and mud annoys,
Even from a knot of blackguard boys
Collected in the public street,
To run a-muck at all they meet;
Who, as their ordure round they scatter,
And every decent coat bespatter,
Conceive themselves—the more's the pity—
Youths of a vein immensely witty;
And deem no humour half so good
As calling names and throwing mud!"

We do say, abuse so outrageous is beyond all bounds of decency, and as offensive to all good taste as it is to all good feeling. Many of the assertions in the notes are made evidently as mere random conjecture: we shall only correct one relative to ourselves, from which the accuracy of others may be judged. Mr. Allan Cunningham is mentioned in a note as writing in the *Literary Gazette*. Cunningham neither is nor ever was a contributor to our pages, and in them never wrote one line of criticism.

We will now turn to what gives us the pleasure of praise. A spirited story by Leitch Ritchie opens the volume; then come some poems of considerable merit by the editor and his wife; one by Mrs. Howitt, "the Doomed King;" "a Legend of the Rhine," told in his own peculiar and lively style, by Mr. Præd; a poem on Egeria, by Mr. Hervey, so beautiful, that we must quote a favourite passage.

"Who hath not his Egeria?—some sweet thought,
Shrouded and shrimed within his heart of hearts,
More closely cherished, and more fondly sought,
Still, as the daylight of the soul departs:—
The visaged lady of the spring that wells
In the green valley of his brighter years,
Or gentle spirit that for ever dwells,
And sings of hope, beside the fount of tears!"

We copy the following account of Quakeresses' dress, as given by one who can speak from experience, Mrs. A. Watts having herself belonged to that community.

"Even the Quakeresses, who, in obedience to the injunction of St. Paul, 'refrain from outward adorning,' and are restricted by their elders to garments composed of scarcely more than two colours, contrive from these simple elements to extract as much food for vanity as a painter from his seven primitive colours, or a musician from his octave of notes. It is true the original materials are limited; but, O for the varieties that their ingenuity will contrive to extract from these simple elements! First, there is 'white,' pure unadulterated white; then there is 'dead' white, then there is 'blue' white, then there is 'pearl' white, then there is 'French' white, and heaven knows how many other whites. Next follow the grays: first there is simple gray, then 'blue' gray, then 'ash' gray, then 'silver' gray, then 'raven' gray, and, for aught I know, a dozen other grays. Then come the fawns, the 'light' fawn, the 'dark' fawn, the 'red' fawn, the 'brown' fawn, the 'hare's' back, and the 'brown paper' colour; then follow (with their endless subdivisions) the families of the 'Esterhazies,' the 'doves,' the 'slates,' the 'puces,' the 'mulberries,' the 'bronzes,' and the 'London smokes,'—varieties innumerable, and with distinctions only visible to the practised eye of a

Lady Lyndhurst), and acrimonious editor of the largest newspaper in England; and as the chief supporter of such an *Atlas* must of necessity be a person of no ordinary muscle; for if it be the 'largest,' it is no less certainly the heaviest newspaper in Great Britain."

Lady Friend. As for their muslin handkerchiefs, let no unfortunate wight, whilst in the act of paying a bill for Brussels lace, envy those who have no such bills to pay: let him rest assured that his burden is borne in some shape or other by his graver brethren: he may know that a muslin handkerchief may be bought for eighteen pence; but he does not perhaps know that it may be bought for eighteen shillings also, and that the 'Sisters' have a peculiar *penchant* for the latter priced article. It is true that a double instead of a single border forms the principal, I should say the only difference, between the India and British manufacture, — no matter; the India is the most difficult to be procured, therefore the most to be desired, and consequently the thing to be worn! And then their *chaussure* — in this point they resemble our French neighbours more than any other people. It is certain that they confine themselves to shoes of two colours, brown and black; but then, their varieties! from the wafer-soled drawing-room to the clog-soled walking shoe! verily their name should be legion, for they indeed are many. And then their gloves — who ever saw a Quakeress with a soiled glove? On the contrary, who has not remarked the delicate colour and superior fitting of their digital coverings? And well may it be so; for, though ready-made gloves may do well enough for an undistinguishing court-beauty, her refinement must stoop to that of a Quaker belle, who wears no gloves but such as are made for her own individual fingers. And then their pocket handkerchiefs — I verily believe that the present fashion of the *mouchoir brodé* proceeded from them. It is true that they do not require the corners to be so elaborately embroidered; but for years have they been distinguished for the open-work border on cobweb-like cambric: nor are they to be satisfied with the possession of a moderate share of these superior articles. No, indeed; if they are to be restricted to necessities in dress, they fully indemnify themselves by having these necessities of the finest possible quality, and in the largest possible quantity. So long ago as the reign of Charles the Second, it was observed of a great statesman, that he was 'curious in his linen as a Quaker'; and this 'impious axiom of the seventeenth century is fully in force at the present day. One observation more, and I have done. In the management of that most unmanageable part of a lady's attire cycled a shawl, we will match any pretty 'Friend' against any fair one of the European continent (always excepting a lady from Spain). O, the smoothing of plaits that I have witnessed, to modify any unseemly excrescence at the back of the neck! O, the patience required to overcome the stubbornness of rebellious sleeves, which threatened to obscure the delicate slope of a pair of drooping shoulders! O, the care that has been required to prevent the beautiful sinuosity of a falling-in back from being too much veiled, or the utter annihilation of the far-famed Grecian bend in the sweep of its remorseless folds!"

There is a pretty little poem called a "Sketch," evidently an imitation, but a very happy one, of L. E. L.'s style; and a very sweet song by G. M. Fitzgerald. Of what remains we will say as little as possible, for there is much of commonplace and inferior quality. On the whole, the *Souvenir*, though not equal to some of its earlier volumes, is at least equal to most of its competitors.

Forms of Prayers, adapted to the use of Schools and Families consisting of Young Persons. Also Poems on religious Subjects. By J. Snow. 18mo. pp. 206. London, 1830. Hatchard and Son.

Of a previous volume, "Sketches and Minor Poems," by the same amiable author, we truly said that it displayed a fine tone of poetical feeling; to which we may add, in respect to the present production, that it also breathes a pure piety and a genuine sincerity, which touch the heart. The prayers are fervent, and eloquent by their simplicity and truth. The sacred poems are very beautiful: from the introduction to them, we are inclined to think that several are from the pen of the late much-esteemed and respected Mr. Christie. With our best wishes we recommend this little volume to the well-meaning and religious: it will promote the views of the former by its wide dissemination, and cheer the latter either among multitudes or in solitude.

A Grammar of the Hebrew Language. By Moses Stuart. 8vo. pp. 248. Oxford, 1831. Talboys.

THIS is a reprint of the third American edition of Professor Stuart's Hebrew Grammar, published here with his concurrence, and superintended through the press by Mr. Pauli, Oriental Professor at Oxford, in conjunction with Mr. Jones, author of a new version of Isaiah. From the character of these gentlemen as Biblical scholars, we were prepared for a very accurate edition of this valuable work; — nor have we been disappointed. To say that but few Hebrew grammars can be compared with it in this respect, would not be very high praise; since productions of this class have rarely, in our country at least, had that minute attention bestowed on their revision, by which alone typographical errors can be avoided. It would have been preferable, however, we think, to have omitted a table of "errata" altogether, than to have noticed only four (in which the same word is *twice* wrong!), when there are nearly a hundred misprints in the book, in addition to those pointed out. Many of them, it is true, are of little consequence; though this is not the case with all: — one, for instance, in page 162, contradicts the rule it is quoted to confirm. We do not mention these oversights to complain of the printing in general, which is uncommonly neat and creditable, — but merely to shew that the work is not quite so immaculate as the short list of errata would seem to imply. That it is very difficult to obtain even a tolerable degree of accuracy in Hebrew typography we well know; and Professor Stuart himself mentions the astonishing fact, that seeing his Grammar through the press was almost as laborious as compiling it! After the high character that has been awarded to the work, as a guide to a knowledge of this venerable language, by persons eminently qualified to judge, it may be thought presumptuous in us to differ; but while we give every praise to the learned author, we cannot help saying that we have seen grammars better suited for the mere beginner than this, which is too elaborate and minute for such a purpose. Mr. Hurwitz' Grammar (noticed in our No. 757) is, in our opinion, more likely to attract the tyro and lead him on, by combining rule, example, and exercise together, than one in which only bare rules are given, either without any, or, at best, with very meagre, exemplifications. But as an excellent book of reference on doubtful points,

we know of none equal to Mr. Stuart's; and confess that he has made clear, and shewn reasons for, some things for which we had searched in vain in other grammars, and which we never properly understood before. An edition of the same author's *Chrestomathy* is, we see, announced by Mr. Talboys; and if as carefully executed as the present work, it will be a grateful accession to the stock of Hebrew lesson-books.

The Comic Offering; or, Lady's Melange of Literary Mirth for 1832. Edited by L. H. Sheridan. London, 1831. Smith, Elder, and Co.

THE comic field seems to be something like the race-course, open to all ages, weights, sexes, and descriptions of competitors. At first Hood walked over the ground (if such droll motion could be called walking); but now, as in all cases where success has rewarded an original design, we have others rushing to the starting-post, and fairly trying their speed. In this line we have already had to notice Mr. Harrison's work; and now Miss Sheridan, *clarum nomen*, demands our attention to her second year's performances. We are glad that we can answer this call in a polite fashion, only that it is also consistent with truth which is not fashionable; and speak of the *Comic Offering* as of a very clever and amusing companion. It is full of embellishments, from the binding to the last page; and many of the ideas graphically embodied are very fanciful and ludicrous, — the more so as being chiefly the productions of a female, who has displayed an exuberance of drollery, while, at the same time, limited to that delicacy which one of her sex addressing herself to the rest was bound to observe. From among the seventy cuts we shall therefore select two or three, in order to afford an opportunity of judging of these pictorial puns and witticisms.

The literary portion of the work is of mixed merit — sometimes better, sometimes worse, as all publications of professed humour must of necessity be. The first poem will be understood, where many a young man understands little else, and we quote it for the entertainment of the Universities.

Letter from an Oxford Student to his Mother.

"Brazen-Nose College, Oct. 1831.

"Dear Mother, — Your anger to soften
At last I sit down to indite, —
'Tis clear I am *wrong* very often,
Since 'tis true I so seldom do *write*!
But now I'll be silent no longer,
Pro and con all my deeds I'll disclose, —
All the *pros* in my *verse* I'll make stronger,
And hide all the *cons* in my *pros*!
You told me, on coming to college,
To dip into books and excel;
Why, the tradesmen themselves must acknowledge
I've *dipped* into books pretty well!
The advice you took pleasure in giving
To direct me, is sure to succeed,
And I think you'll confess I am living
With very great credit indeed!
I wait on the Reverend Doctors
Whose friendship you told me to seek;
And as for the two learned Proctors,
They've *call'd* for me twice in a week!
Indeed, we've got intimate lately,
And I seldom can pass down the street
But their kindness surprises me greatly, —
For they *stop* me whenever we meet!
My classics, with all their old stories,
I now very closely pursue, —
And ne'er read the Remedia Amoris
Without thinking, dear mother, of you!
Of Virgil I've more than a smatter,
And Horace I've nearly by heart;
But though fam'd for his smartness and satire,
He's not quite so easy as Smart.

English Bards I admire every tittle,
And doat on poetical lore;
And though yet I have studied but *Little*,
I hope to be master of *Moore*!

You'll see, from the nonsense I've written,
That my devils are none of the *Blues*;
That I'm playful and gay as a kitten,
And nearly as fond of the *Muse*!

Bright puns (oh! how crossly you bore 'em!)
I scatter, while Logic I cram;
For Euclid, and *Puns* Asinorum,
We leave to the Johnians of Cam.

My pony, in spite of my chidings,
Is skittish and shy as can be;
Not Yorkshire, with all its *three ridings*,
Is half such a *shier* as he!

I wish he were stronger and larger,
For in truth I must candidly own
He is far the most moderate charger
In this land of *high chargers* I've known!

My doubts of profession are vanish'd,
I'll tell you the cause when we meet;
Church, army, and bar I have banish'd,
And now only look to the *Fleet*!

Come down, then, when summer is gilding
Our gardens, our trees, and our founts,
I'll give you accounts of each building,
How you'll wonder at all my *accounts*!

Come down when the soft winds are sighing;
Come down—Oh you shall and you must,—
Come down when the dust-clouds are flying,
Dear mother—Come down with the dust!

The following is more generally amusing;
for who cannot play at

Cross Purposes?

"Child!" said the bard, "dost thou wander now
To gather fresh flowers for thy sunny brow?
Or twin'st thou a garland pure and fair
To fix in thy sleeping brother's hair?
That when he awakes he may smile to see
The nodding roses all pluck'd by thee?"

Tell me, thou child!

"No," said the child, "with accent clear,
I comes jist now wi' ma feyther's beer!"
"Thy father's bier? Has he left thee, child,
To the world's cold blasts and its tempests wild?
Has he left thee beside a deserted hearth
With no one to guard thee on all the earth?
Has he sunk in his pride 'neath the hand of fate
And left thee, thou lone one, desolate?"

Tell me, thou child!

"No!" said the child with that sunny brow,
"He's been all this mornin' arter the plough!"

"Hear'st thou the breezes from yonder hill,
As they speak with lone voices subdued and still,
Telling, as onwards in perfume they sweep,
Of the hidden flow'rs in the valleys which sleep;
Hear'st thou their voices at even-tide,
As thou sinkest to sleep by the river's side?
Tell me, thou child!"
"No," said the child, "I ne'er hears them *speak*,
But I hears them *blowin'* most nights in the week."

As a prose tale, we would recommend that of "the man who carried his own bundle," evidently a real anecdote of Admiral Lord A. Beaulieu, which is unluckily too long for transplanting among our extracts, and would lose so much by pruning to the fitting size, as to destroy its character; so we must be contented with the annexed, and a repetition of our praise of the volume which they help to enliven.

Making a Tumbler of Punch.

An Old Cat!

The Keepsake, for 1832. Edited by F. Mansel Reynolds. Longman and Co.

THIS beautiful volume is as beautiful as ever; and its exquisite plates are accompanied by a pleasant collection of tales and poetry. Its aristocratic table of contents seems just like the list of names given in the *Morning Post* when some gay party has been attended by "all the fashionable world." We own we do not see why, as critics, we should object to what both publisher and public seem to like; and the taste of the former is always ruled by that of the latter. This volume is destined for the drawing-room; and why should not some of its readers see themselves in its pages. "Lady Evelyn Savile's Three Trials" is a sweet and touching story; and the "New King," by Theodore Hook, very lively and very likely. Lord Mulgrave's "Bridemaid" is a very sweet creature, worthy to accompany the plate for which it was written, but which has been delayed. Lord Morpeth has contributed some graceful poems; so has Lady Emmeline Stuart Wortley. Among other tales that have pleased us, we must mention "the Dream," by the Author of *Frankenstein*; "Therese," by Sheridan Knowles; "the Fortunes of a Modern Crichton;" and, if it were more condensed, "the Star of the Pacific," which, albeit, turns on a most improbable incident. We make the following poetical selections.

"*Stanzas*." By Lady Emmeline Stuart Wortley.

When the sweet bulbul thrills the perfumed breeze,
And, crescent-crown'd, gleams those pomegranate-trees,
And thy caïque shoots through the slumbering seas,
Remember me! remember me!
I passionately pray of thee.

When thou hast left this bright and blessed shore,
Perhaps to breathe its heavenly airs no more,
And home seems dearer than 'twas e'er before,
Remember me! remember me!
I passionately pray of thee.

When the last flash of daylight is declining,
When Persian bowers are round thy head entwining,
When Persian eyes are all about thee shining,
Remember me! remember me!
I passionately pray of thee.

When thou hast met with careless hearts and cold—
Hearts that young love may touch, but never hold,
Not *changeless* as the loved and left of old—
Remember me! remember me!
I passionately pray of thee.

When this world's griefs shall come to cloud thy brow,
When this world's smiles shall charm thee not as now,
When light, life, love, and all are dimm'd below—
Remember me! remember me!
I passionately pray of thee.

When thy proud soul its faults and follies mourns,
And the alter'd heart in thy struck bosom burns,
And memory unto the past returns,
Then most, oh, most remember me!
I passionately pray of thee.

"Edith," by L. E. L., is one of that delightful writer's most charming little sketches, full, as they always are, of imagination and feeling.

"Weep not, weep not, that in the spring
We have to make a grave;
The flowers will grow, the birds will sing,
The early roses wave;
And make the sod we're spreading fair
For her who sleeps below;
We might not bear to lay her there,
In winter frost and snow.

We never hoped to keep her long;
When but a fairy child,
With dancing step, and birdlike song,
And eyes that only smiled,
A something shadowy and frail
Was even in her mirth;
She look'd a flower that one rough gale
Would bear away from earth.

There was too clear and blue a light
Within her radiant eyes,
They were too beautiful, too bright,
Too like their native skies;
Too changeable the rose which shed
Its colour on her face,
Now burning with a passionate red,
Now with just one faint trace.

She was too thoughtful for her years,
Its shell the spirit wore;

And when she smiled away our fears,
We only feared the more.
The crimson deepen'd on her cheek,
Her blue eyes shone more clear,
And every day she grew more weak,
And every hour more dear.
Her childhood was a happy time,
The loving and beloved;
Yon sky, which was her native clime,
Hath but its own removed.
This earth was not for one to whom
Nothing of earth was given;
'Twas but a resting place, her tomb,
Between the world and heaven."

"London in September—(not in 1831).
By Lord John Russell.

Remote, unfriended, melancholy, slow,
A single horseman paces Rotten Row;
In Brookes's sits one *quidnunc* to peruse
The broad, dull sheet which tells the lack of news;
At White's a lonely Brummell lifts his glass
To see two empty hackney coaches pass;
The timid housemaid, issuing forth, can dare
To take her lover's arm in Grosvenor Square;
From shop deserted hastes the 'prentice dandy,
And seeks—oh, bliss!—the *Molly*—a *tempora fandi*;
Meantime the battered pavement is at rest,
And waiters wait in vain to spy a guest;
Thomas himself, Cook, Warren, Fenton, Long,
Have all left town to join the Margate throng;
The wealthy tailor on the Sussex shore
Displays and drives his blue barouche and four;
The peer, who made him rich, with dog and gun
Tolls o'er a Scottish moor, and braves a scorching sun."

We had intended quoting a story, but must content ourselves with recommending—they are rather long for our columns, and yet it is a pity to abridge; though it is not improbable that we may try our hand in this way next Saturday. Meanwhile, as a Picture and Literary Annual, we can truly say, that a finer specimen for *gift* or *keeping* has not been produced than this year's *Keepsake*.

The New Year's Gift, and Juvenile Souvenir.
Edited by Mrs. Alaric Watts. London,
1831. Longman and Co.

ALTHOUGH we are this week rather overcharged with the larger brethren of the Annual family, we cannot be so ill-mannered as to allow the performance of a lady to pass without its meed of praise. Mrs. Watts has again produced a very sweet little volume; addressed, we should say, from the general character of its contents, principally to a class of readers who, in common parlance, would be thought younger than that to which the word *juvenile* applies; though it may be perused with pleasure and instruction from the age of nine to fifteen, as well as of four to nine.

Poetical compositions, written down to the capacity of children, are seldom deserving of critical notice; nor do we find any of them in the *New Year's Gift* to tempt us from the usual course, except the "Sailor's Widow," a very pathetic story by Mary Howitt, to whom the volume is, with good feeling and great propriety, dedicated.

"Come close," she said, with trembling voice,
'Come closer unto me!

Oh! what a dreadful night is this
For wanderers on the sea!

Oh! I have prayed for him so long—
So vainly wished him home;
So vainly counted weeks and months—
I fear he will not come!

Ah! there's a wreck upon the waves,
Drifting the storm before!
Methinks it is the very ship
In which he left this shore!

Methinks I see a feeble few,
Faint, clinging to her deck!
God save them all! and bring to shore
That poor and shattered wreck!

He was a tall and goodly man
As ever sailed the sea—
But 't was not for his goodly looks
He was so dear to me!

He had a kind and loving heart;—
Ah! he was warm and true—
As gentle, yet as brave a man
As ever cable threw!

Yet, if it pleases God to give
Him back to us again,
My children, I will wring his heart
To find you are but twain!

For when upon this voyage he went,
Upon this very shore
We parted in the pilot-boat,
His blessing was on four!

He'll ask, 'Where is my little Jack,
That was so stout a limb—
And Willie, with his curling hair,
What is become of him?'

And then, alas! my answering
A dismal tale must be,
How Jack and Willie both are laid
Beneath the churchyard tree!

First, little Willie went to heaven,
He did not suffer long;
He died before two days were passed,
And of a fever strong.

Poor Jack, he had his father's heart,
He watched him night and day,
And then he took the fever too,
And in his death-bed lay.

I'll shew him where their little graves
Are lying, side by side;
The Spring has made them fresh and green,
With daisies beautified.

How will he hold you in his arms,
The while his heart doth ache—
And feel that you, two lonely ones,
Are dearer for their sake!

But look! yon wreck comes nearer now—
—Can plainly I can see,
That to her deck is clinging fast
A feeble company!

Up! let us hasten to the beach—
The struggling vessel flies
Before a current strong—and hark!
I hear their feeble cries.

They hasted down unto the beach;
The winds and waters bore
Aton that miserable wreck
Upon the sandy shore.

And well the woman knew the ship,
And well the men she knew—
Seven weather-beaten, feeble men,
The remnant of the crew;

But he, the one so dear to her,
Was not among the few!

'Oh, where is he! oh, where is he?
My husband dear!' she cried.
The sailors all had pity on her,
And gently thus replied:—

'It was before the storm began,
When on the Indian sea,
At sunset, we were sailing with
The trade-wind pleasantly;

The captain's son—a little boy,
Loved by thy husband well,
As he was playing by his side,
Into the water fell!

The captain saw him fall—but ere
His voice could give alarm,
Thy husband plunged into the sea
And caught him by the arm.

He heaved the boy upon the deck;—
But then came suddenly
Upon him, with its open jaws,
A monster of the sea!

The woman shrieked—'And he is dead!
O tell it not to me!'

'God be a father unto you,
My children dear,' she said;
The warmest heart that ever lived
Lies with the ocean dead!

'Be calm, be calm!' an old man spake,
'Our captain died last eve;
His little son was dead before,
And with us he did leave
For thee the treasure of the wreck,
And prayed thee not to grieve!

He made me swear upon the Book,
Which I did solemnly,
If'er we reached this shore, that I
Would surely seek for thee.

And to thee and thy babes convey
Whate'er the vessel bore;—
Look up, look up! thou weeping one,
For ye will want no more!

'Gold,' said the widow, mournfully,
'Will ne'er the dead restore!
Oh! he is gone—that finest heart—
Oh! he is gone from me!

Upon my weary soul hath come
A great calamity!

And thus she sorrowed long and sore,
And called upon the dead,
And bowed her forehead to the dust,
Nor would be comforted."

From the prose contributions,—though the

description of a trip to Paris by a boy, and the "Cabinet of Curiosities," convey intelligence in an agreeable manner, and there are several interesting stories,—we select as our best example the little fowler of Tempio.

"Francesco Micheli was the only son of a carpenter, in easy circumstances, who resided at Tempio, a town situated in the north of the island of Sardinia: he had two sisters younger than himself, and had only attained his tenth year, when a fire, which broke out in the house of his father, reduced it to ashes, and consumed the unfortunate carpenter in the ruins. This accident was occasioned by the carelessness of the youngest sister of Francesco, who had been playing with some pieces of lighted paper, and by chance suffered the flame to fall upon a heap of shavings which had been swept up in one corner of her father's workshop. The blaze spread rapidly over every quarter of the little dwelling; in vain Micheli exerted himself to arrest its progress. The dry state of the wood of which the cottage was built rendered it an easy prey to the flames; and whilst the unfortunate man was trying to secure a small box, containing the little savings of many years, the sudden fall of the roof buried him in the ruins, and, ere any assistance could be rendered, life was quite extinct; whilst his wife, having secured the safety of her children, contrived to escape through the flames, but was so much scorched and injured as to be rendered incapable of any exertion during the remainder of her life. Totally ruined by this frightful event, the whole family were now left destitute on the world, and were forced to implore the charity of strangers, in order to supply the urgent necessities of each succeeding day. Every morning little Francesco was despatched to seek relief from the numerous friends of his father; but, alas! it is but a weak resource, and an uncertain support, which is founded on the commiseration of others. In many instances he returned unrelieved and disappointed, and the unhappy widow was unable to give bread to her starving children from the alms bestowed upon their little brother. Francesco had a certain innate pride, which shrunk from asking a favour of another. The least inquiry into his circumstances, the shadow of hesitation, the slightest repulse, or an air of coldness and reserve, disconcerted him at once; and at such times he could but return to weep and to lament with his unhappy mother. At length, tired of his vain attempts to support his indigent parent by the extorted kindnesses of others, and grieved at seeing her and his sisters pining in destitution before his eyes, necessity and tenderness conspired to urge him to exertion and ingenuity. He made with lathes, and with some little difficulty, a cage, or aviary, of considerable dimensions, and furnished it with every requisite for the reception of birds; and when spring returned, he proceeded to the woods in the vicinity of Tempio, and set himself industriously to secure their nests of young. As he was skilful at the task and of great activity, he was not long before he became tolerably successful; he climbed from tree to tree, and seldom returned without his cage being well stored with chaffinches, linnets, blackbirds, wrens, ring-doves, jays, and pigeons. Even in the most trifling business, one has always need of a companion, and in this Francesco found his two sisters invaluable assistants: whilst he was abroad in the wood, they sought in the marshes for reeds and bulrushes of which to make little cages; they fed the young birds which he brought home on his return, and they trained with great care such as they found

capable of receiving instruction. Every week Francesco and his sisters carried their little favourites to the market of Sassari, and generally disposed of those which were the most attractive and beautiful. From this source, however, their gains were but trifling; but they wisely considered, that a little was better than nothing, and any thing preferable to beggary; and each evening, with cheerful hearts, they brought home their scanty earnings to their poor mother. The object of all their desires was to be enabled to support their helpless parent; but still all the assistance they were able to procure for her was far from being adequate to supply her numerous wants. In this dilemma Francesco conceived a new and original method of increasing his gains: necessity is said to be the mother of invention; and he now meditated no less a project than to train a young Angora cat to live harmlessly in the midst of his favourites and songsters. Such is the force of habit, such the power of education, that, by slow degrees, he taught the mortal enemy of his winged pets to live, to drink, to eat, and to sleep in the midst of his little charges, without once attempting to devour or injure them. The cat, whom he called 'Bianca,' suffered the little birds to play all manner of tricks with her; she used to leap about and sport amongst them, whilst they would sometimes peck at and tease her; but on all such occasions she would merely stretch out her paw and threaten them, but never did she extend her talons, or offer to hurt her companions. He went even farther; for, not content with teaching them merely to live in peace and happiness together, he instructed the cat and the little birds to play a kind of game, in which each had to learn its own part, and, after some little trouble in training, each performed with readiness the particular duty assigned to it. Puss was instructed to curl herself up into a circle, with her head between her paws, and appear buried in a deep sleep; the cage was then opened, and the little tricky birds rushed out upon her, and endeavoured to awaken her by repeated strokes of their beaks; then dividing into two parties, they attacked her head and her whiskers, without the gentle animal once appearing to take the least notice of their gambols. At other times she would seat herself in the middle of the cage, and begin to smooth her fur, and purr with great gentleness and satisfaction; the birds would play and fly about her, without either fear or restraint; they would sometimes even settle on her back, or sit like a crown upon her head, chirruping and singing as if in all the security of a shady wood. To see a sleek and beautiful cat seated calmly in the midst of a cage of birds, was a sight so new and unexpected, that when Francesco produced them at the fair of Sassari, he was surrounded instantly by a crowd of admiring spectators. Their astonishment scarcely knew any bound, when they heard him call each feathered favourite by its name, and saw it fly towards him with delight and alacrity, till all were perched contentedly on his head, his arms, and his fingers. Delighted with his ingenuity, the spectators rewarded him very liberally; and Francesco returned in the evening with his little heart swelling with joy, to lay before his mother a sum of money which would suffice to support her for many months. The next undertaking of the little Sardinian was one of more enterprise and singularity still. He found one day a nest containing fifteen young partridges, which he brought to his aviary, and began to educate. Five, however, died within a few

days, but the remaining ten fully answered his highest expectations. After some weeks of previous training, he contrived to attach them to little cannons made of brass, and taught them to draw them leisurely along a table. He then drew them up in two files, each girt with a sabre, and the other appurtenances of a soldier of artillery; every bird was taught to stand motionless beside his gun, and, at the word of command, the partridge to the right lit a match at a chafing-dish on the table, and courageously fired off his piece of ordnance. At a second command, the company to the left performed the same exercise; nor were either, after a little practice, in the least degree terrified at the noise which they had created. At a third signal, a few of the little warriors fell over on their side, stretched out their stiffened limbs, and counterfeited death; whilst others flew off, limping, and apparently screaming with the pain of their wounds. The commandant again beat a roll of the drum, and all flying to their ranks, resumed their order, and repeated their ingenious evolutions. Amongst the feathered pupils of Francesco, however, all were not endowed with equal sagacity and talent; some were intractable and stupid, whilst others betrayed an instinct almost amounting to reason. Of the latter class was one partridge, which he named *Rosoletta*. She followed him wherever he went with the attachment of a dog; she hopped after him from house to house, when he walked the streets of Tempio, and flew from tree to tree when he wandered in the woods, and rarely by night or day did she lose sight of her affectionate master. If she disappeared for an instant, a whistle from Francesco brought her to his side, when she would mount upon his arm, flap her wings, and chirrup with delight. With a docility by no means common in birds, *Rosoletta* not only obeyed her instructor herself, but seemed to penetrate his wishes with regard to her companions; and even sometimes ventured to assist him in the education of his more giddy pupils. If a chaffinch, more stupid or more mischievous than the rest, put his comrades into disorder, or a thoughtless linnet wandered from the ranks, *Rosoletta* would instantly follow, and striking the offender with her wing, attempt to keep him in order. Francesco had once been at great pains to train a beautiful goldfinch, but one morning the ungrateful little bird escaped from his cage, flew to an open window, and reaching the adjoining garden, was seen no more. The little merchant was in despair at his loss; the more so, because he had promised him to the daughter of a lady from whom he had received much kindness. Five days elapsed, and the little wanderer returned not; he had given him over for lost, when on the sixth morning *Rosoletta* was seen chasing before her along the linden trees, a bird which was screaming at the top of its voice, and attempting by every means to escape from her. Only judge of the surprise of Francesco, when he saw his truant beauty driven on and guarded by the faithful partridge! *Rosoletta* led the way by little and little before him, and at length seated him in apparent disgrace on a corner of the aviary, whilst she flew from side to side in triumph at her success. Francesco was now happy and contented, since by his own industry and exertions he was enabled to support his mother and sisters. Unfortunately, however, in the midst of all his happiness, he was suddenly torn from them by a very grievous accident. He was one evening engaged in gathering a species of mushroom very common in the

southern countries of Europe; but not having sufficient discrimination to separate those which are nutritious from those that are poisonous, he ate of them to excess, and died in a few days, along with his youngest sister, in spite of every remedy which skill could apply. During the three days of Francesco's illness, his birds flew incessantly round and round his bed; 'some,' says the Abbé Reperonci (an Italian, who recounts his story), 'lying sally upon his pillow, others flitting backwards and forwards above his head, a few uttering brief and plaintive cries, and all, in fact, taking scarcely any nourishment during his sickness.' Dying as he was, the affectionate child could not avoid being sensible of the attachment of the little companions whom he had instructed with so much care. He never once betrayed any uneasiness for himself; but often and bitterly did he weep for his mother, and exclaim from time to time, 'Alas! who, when I am gone, will support my desolate mother, or tend my neglected birds?' None of his feathered favourites manifested on his decease such real and inconsolable grief as *Rosoletta*. When poor Francesco was placed in his coffin, she flew round and round it, and at last perched herself upon the lid. In vain they several times removed her; she still returned, and even persisted in accompanying the funeral procession to the place of graves. During his interment she sat upon an adjoining cypress, to watch where they laid the remains of her friend; and when the crowd had departed, she forsook the spot no more, except to return to the cottage of his mother for her accustomed food. Whilst she lived, she came daily to perch and to sleep upon the turret of an adjoining chapel, which looked upon his grave; and here she lived, and here died, about four months after the death of her beloved master. The tomb of Francesco is yet to be seen in Sassari; and the burial-ground where he lies is still called 'the Cemetery of the Little Fowler.'

There are articles in the shapes of enigmas, riddles, &c. &c., which we cannot attempt to penetrate so as to profess ourselves able to give a critical opinion upon them: they will, however, serve to exercise the ingenuity of younger critics. We should have noticed the *Perma* tale of "Bathmendi," by Caroline Fry; but having met with it before, in *Arctus's Pocket Magazine*, and *Le Brothron's French Grammar* (we think), we were rather surprised to encounter our old friend among original pieces. We presume that Mrs. Watts has been kept in the dark as to the previous publication: at all events, we can most heartily recommend her work of this year to all who admire talent in the fine arts, and taste and judgment in catering for the youthful mind.

Elements of Chemistry familiarly explained and practically illustrated. Part I. 18m. pp. 318. London, 1831. Murray.

NOT having had time to examine this volume with sufficient care, we must satisfy ourselves with a brief and temporary notice of it in this Number. We should have thought it a very difficult task to write an elementary work on the science of chemistry, which would present enough of what was new or useful, whether in its plan or its details, to ensure success among so many contemporaneous publications. The object of this book is to furnish something less learned and elaborate than the usual systematic works, and at the same time more detached, connected, and explicit than the *Conversations* and *Catechisms*; and it fulfils those objects with great success. The first part treats of

attraction, heat, light, and electricity: and as what is written on these subjects can only be considered as a peep at a beautiful country, to tempt us on to travel—the gift of some information as an inducement to more extensive research,—we shall not be very critical. Our continental neighbours have long ago taken all these important branches of science from the domains of chemistry, where, indeed, they can no longer dwell, without meeting with undeserved neglect; indeed, their successful pursuit demands a quantity of mathematical knowledge, which may be valuable, but is not requisite, in order to become an expert analyst, or a good practical chemist. There is much more philosophy in this little volume (the first of its series) than might be expected; and there is that singleness of design which belongs peculiarly to the writings of a person conversant with, and enthusiastic in, the development of his subject.

The Picturesque Annual. Travelling Sketches in the North of Italy, the Tyrol, and on the Rhine. With Engravings, from Drawings by Clarkson Stanfield, Esq. by Leitch Ritchie, Esq. 12mo. pp. 256. London, 1832. Longman and Co.

We do not know when we have been so pleased with a volume as with the one before us. The idea is good, quite new, and admirably executed. Mr. Leitch Ritchie is at once a picturesque, a sentimental, and a graphic traveller, and writes with equal facility and animation. He has evidently enjoyed the beautiful country through which he has been wandering, and he makes his readers enjoy it too. He has introduced two or three of those short romantic stories in which he so excels; but we are under the necessity of postponing our examples till our next.

ORIGINAL CORRESPONDENCE.

PROJECTED NEW COLONY.

In olden times the proposition to found a new colony would have attracted general and deep attention; but in our days we are so accustomed to extraordinary events, that great and useful ones fail to excite a tithe of the consideration due to them. The pamphlet before us,* and the annexed communication by an able writer, contain so much of what we consider to be true in principle, and valuable in application, on the subject of emigration, that we have much satisfaction in calling the attention of the public to both. Indeed, they seem to have made a considerable impression upon our colonial department, if we may judge from the following notice in the *Hampshire Courier* of last week, where they are evidently acted upon to a certain degree, as far as they could be in a colony established on a different plan.

"The Commissioners for Emigration have caused it to be intimated that government have determined to appropriate the sums produced by the sale of lands in New South Wales and Van Diemen's Land to the encouragement of emigration by unmarried females to those colonies, under certain regulations. Females between the ages of 15 and 30, members of families about to proceed to the colonies, may receive £8 each from the commissioners, to be paid to the heads of their families, or to the captain of the ship in which they are conveyed: if not forming part of a family, and possessing the funds necessary, in addition to the £8, to complete the price of their passage, they will be admitted as candidates for the bounty of government. As soon as a sufficient number of persons have signified their wish to emigrate, and the conditions been complied with, the commissioners will take up a vessel for the conveyance of these emigrants, into which no other passengers will be admitted. Should the number of applications be too great for the funds, females who contribute the largest proportion of the cost of their passage will be entitled to a preference; but, in the absence of other distinctions, priority of application will form the rule of selection."

So soon after the all but total failure of those extravagant hopes of success which attended

the formation of the Swan River settlement, the projectors of a new colony in Australia must put forth some very strong recommendations of their scheme, in order to obtain for it even a moderate degree of support: nay, more—they must shew distinctly, that, whatever were the causes of failure at the Swan River, those causes cannot operate in their project.

The original cause of failure at the Swan River appears to have been an inattention of government to that irrational desire to obtain large tracts of wilderness, which belongs to most emigrants from an old to a new country. The inhabitants of an old country, in which competition for land, arising from density of population, renders land highly valuable, imbibe a belief that land by itself is riches, and that to possess a large territory any where is to possess wealth. The truth, however, is, that land, so long as it is without population, is absolutely without value; and that the value of land depends altogether on competition, which is strictly regulated by the proportion between population and land. This truth, like many other plain truths in political economy, never strikes the vulgar observer of what takes place in an old country. Such a one, seeing that land exchanges for wealth, is contented to believe that land is wealth; and if he emigrate to a new country, he concludes, that in order to become rich, he has only to procure an extensive grant of ground. Hence his ardent desire to obtain a province of wilderness, without the least regard to those circumstances which could alone give value to his possession.

To the delusive notion, that land is valuable in proportion merely to its extent, the government, in founding the Swan River settlement, lent the greatest encouragement, by bestowing the first grant, to the extent of 500,000 acres, upon the cousin of a cabinet minister. It was supposed by others, that what the government considered good for Sir Robert Peel's cousin, would be good for them; and others, therefore, applied for large tracts of waste. But it was impossible to give the first grant in the best situation to more than one person: hence arose a charge of favouritism and jobbing against the givers. In order to meet this charge, regulations were framed, by which all were allowed to appropriate an unlimited quantity of land, on the condition to which Mr. Peel had subscribed—that condition was, an investment of capital on the land at the rate of 1s. 6d. per acre. Thus the longing for a vast territorial possession was easily gratified. It was indulged in the most reckless manner.

Many persons possessing from 1000l. to 10,000l. either emigrated or sent agents to the colony, and obtained as much land as their capitals would enable them to claim. During the first year of the settlement, the extent assigned was at least five times that of all the land granted in New South Wales during a period of forty years. Land became, or rather was allowed to continue, a mere drug, of no more value than the atmosphere above it. The capitals taken out could fructify—could be preserved, indeed—only by being used on the land in conjunction with labour; but the labourers taken out, finding this, and holding the same wild notions as their masters concerning the value of the mere soil, refused to work for those who had defrayed the cost of their passage. The indentures, by which they were bound for a given term at a fixed rate of wages, were cancelled *de facto*, by the state of the colony, in which no police regulations, nor even any laws, had yet taken

root, and in which the most painful and least profitable of tasks would have been to punish or pursue refractory bond-servants. If these people worked at all for hire, it was only until they had saved the very small capital which would enable them to set up as landowners and cultivators on their own account; consequently, the possessors of large capitals and large grants were soon left without labourers. As other capitalists arrived with labourers, those whose capital was perishing for want of labour wherewith to employ it, offered extravagant wages to the new-comers of the class of labourers, and thus seduced them from the service of those who had brought them to the colony. But these extravagant wages, again, speedily enabled these new-comers to set up as cultivators on their own account. At length, nearly all the labourers who were taken out cost-free had deserted their masters; and almost all the capitalists were reduced to the necessity of working in the same manner as their late servants. No one who labours for and by himself alone can manage any but a very small capital: the larger capitals, therefore, perished. The banks of the Swan River were strewed with implements of husbandry and the ruder manufactures, because there was no one to use them; seeds rotted in casks on the beach, because no one had prepared the ground for their reception; sheep, cattle, and horses, wandered, because there was no one to tend them, and either died of hunger, or were destroyed by hungry settlers whose stock of imported food was exhausted. This miserable state of things continued for some time, and finally resulted in one still more fatal to the prosperity of the colony.

Though some of the labourers taken out were parish paupers and others of degraded habits, a portion of them had been faithful servants in this country, and remarkable for honesty, sobriety, and industry. The violent change which took place in the condition of all classes,—the sudden revolution, which converted labourers for hire into landowners, and reduced their masters to the condition of labourers, exerted a most baneful influence on every one. Capitalists, who yet possessed piano-fortes, fine linen, and other luxuries,—not to mention their immense estates!—were reduced, in some cases, to want, and in nearly all to despair. Labourers, whatever had been their habits in England, who set up for themselves as landowners, vied with each other in improvidence. When the little capitals which they had saved by a few months or weeks of labour for hire, were exhausted, so also had the greater capitals perished; and thus the labourers found themselves without the means of subsistence either as settlers or as hired servants. Many of them then returned to the masters whom they had deserted and ruined, insisting on being employed according to the engagements which they themselves had been the first to break. It is a curious circumstance, that Mr. Peel, who took out a great number of labourers, was at one time without hands to cultivate a portion of his immense grant, and at another time, as we have been informed, was obliged to take refuge in an island from the violence of the deserters, who, when they had nothing left, expected to be maintained by him, who had little or nothing left. The confusion and misery that ensued may be easily imagined. It ended in a second emigration of great numbers, both capitalists and labourers, to Van Diemen's Land, where capital obtains high profits, and labour high wages; and at present the only settlers at the Swan River are a few persons—few in

* Plan of a Company to be established for the purpose of founding a Colony in Southern Australia, purchasing Land therein, and preparing the Land so purchased for the Reception of Immigrants. London, 1831. Ridgway and Sons.

comparison with the number who emigrated from England—persons of undaunted mind and very prudent habits, who are still struggling with the difficulties created by the unguarded profusion of the government in its disposal of waste land. These persons have lately addressed a petition to the parent government, praying that they may be supplied with convict labourers; although one of the circumstances originally urged in favour of the Swan River project, was, that the settlement was not to be demoralised by the immigration of convicts. Why are convicts now urgently demanded? Because convicts cannot immediately obtain land, but must labour for a time as servants. Why can none other than convict servants be retained? Because of the unwise regulations of the government for the disposal of waste land. Herein lies the secret of the failure, so far, of the Swan River project. By all accounts, the soil and climate of the colony are as fine as they were ever represented to be. To the want of labour, and to that alone, may be traced all the evils that have afflicted this infant colony.

In the new colony, provision is made for securing an ample supply of labour at all times. This, the one thing needful, is provided for by a very simple regulation. No land is to be given away: all land is to be sold to the highest bidder above a fixed minimum price; and the whole produce of sales is to be employed in conveying labour to the colony. By selecting the emigrants taken out cost-free; by confining the offer of a free passage to young married or marriageable persons of both sexes in equal proportions, the greatest amount of labour will be procured at the least cost. Thus the purchaser of land, though he will appear to buy land, will, in fact, buy labour, and at the cheapest rate. So that no labourer will be able to obtain land until he shall have procured a considerable sum by labouring for hire; and when he shall become a landowner, his place will be supplied by other labourers, to be sent out with what he shall have paid for land.

The adoption of this principle in the disposal of waste land appears admirably calculated to prevent that dispersion, both of capital and labour, to which the ill success of the Swan River colony must be attributed: in the present instance, it is to be secured from the beginning, and throughout the colony, by a Royal Charter, which it is understood his Majesty's government will grant to the Company now in the course of formation.

This Company is to possess a capital of 500,000*l.*; of which sum one-fourth is to be paid to the government for land, and to be by the government immediately expended in supplying the Company with labourers. With another portion of the Company's capital, the labourers so sent out will be employed in founding a town on the Company's land, and otherwise increasing its value by roads, docks, bridges, &c.; so that it may become the seat of government and the centre of commerce. With another portion of their capital the Company will defray all the expenses of colonial government, until the male adult population shall reach ten thousand, when a legislative assembly is to be called, and the colony is to defray its own expenses of government, besides repaying to the Company what the latter shall have advanced on that score. The remainder of the capital of the Company is to be advanced to settlers possessing some capital, who may purchase land either of the Company or of the government. Thus, up to the extent of 125,000*l.*, persons having, let us say for example, 2000*l.*, may take shares to the amount

of 1000*l.* in the Company, borrow 1000*l.* of the Company, and so retain their entire capital for use, besides reaping a share of the Company's profits, to be derived from the re-sale of their land at a much enhanced price. The instances cited, and especially that of the prosperous Canada Land Company, of the rapid increase in the value of land which occurs in parts of new colonies where population congregates, leave no doubt that, if this Company should fix the seat of government and the centre of commerce on their purchase, and if, moreover, every appropriation of land in the colony should produce a corresponding increase of the colonial population, the grant of the Company will rapidly acquire a great increase of value. Upon the whole, their prosperity is made dependent on the prosperity of the colony, and all the regulations appear to be framed with a view to the general advantage, as a means of profit to themselves.

The sound principle of self-government, and the return to the old-fashioned but excellent system of charter, instead of leaving the colony always dependent on a minister at home, are advantages which will distinguish this from all very modern colonies; and we must add, that the government deserve high credit for promoting an experiment, which promises to be successful, and which, if it should succeed, must lead to the destruction of that system of patronage, favouritism, and jobbing in the disposal of new land, which, however injurious to any colony where it prevails, a selfish colonial Secretary would not have abandoned.

The rules and regulations of the charter which is to incorporate the Company and found the colony, are to extend to all settlements that may be formed on the southern coast of Australia, between the 132d and 141st degrees of east longitude, and the islands on that line of coast. The spot fixed on for the first settlement is Port Lincoln, a magnificent harbour at the entrance of Spencer's Gulf (see any map), of which a particular description is given by Flinders. The latitude of this spot corresponds with that of Sydney and the Swan River; and Spencer's Gulf lies about midway between those places. Not far from Port Lincoln is an island, to which Flinders gave the name of Kangaroo, in consequence of the great number of kangaroos which he saw there. It is about 80 miles long by 40 broad; and concerning this spot very minute and satisfactory information has been obtained from persons who have carefully examined it, and especially from Capt. Sutherland, late of the ship *Lang*, who is now in London, and who passed an autumn, winter, and spring, on the island.

The following extracts from Capt. Sutherland's Report, and from Peron's *Voyage de Découvertes aux Terres Australes*, will excite rather than satisfy the curiosity of those who may wish to be fully acquainted with the grounds on which the Company in question founds its hopes of success. For further information, we must refer them to the pamphlet before us, which contains charts of the line of coast to be comprised in the charter of Port Lincoln and of Kangaroo Island, as well as a particular account of the objects and means of the Company.

"On the western shore, and near the entrance of Spencer's Gulf, is Port Lincoln, one of the most beautiful and most secure harbours in Australia. The bottom is everywhere excellent, and the soundings are regular from ten to twelve fathoms (French) very close to the shore. The extent of this most magnificent harbour affords sufficient anchorage for any number of ships. At the mouth of the harbour, Boston Island is situated, on each side of which is a passage, free from danger, of between two and three miles in width. Nature seems to have done every thing in favour of this port; for that sterility and monotonous

appearance which marks the land in the neighbourhood, here vanishes and give place to a fertility to which we had long been strangers: the land is more elevated, rises quickly from the shore, and is thickly clothed with timber. It is true that we found no stream of fresh water; but the vigour and the freshness of the vegetation, and the elevation of the land, seem to indicate the existence of rivulets, or, at least, of some considerable springs. On this favoured spot the inhabitants must be numerous—for the whole coast appeared to us to be covered with the fires of the natives.—Peron's *Voyage*, vol. ii. p. 202.

"The most interesting part of Spencer's Gulf is the magnificent harbour of Port Lincoln, of which we have already given a description in the fifteenth chapter of this work, but which is well worthy of further notice. The Port is composed of three bays, each of which, from its extent, is capable of containing the combined navies of Europe: the soundings are regular from ten to twelve fathoms, with a soft, muddy bottom. Boston Island is situated at the entrance of this excellent harbour, on either side of which there is a passage, through which the largest man-of-war may work with perfect ease. The north passage is the narrowest, and leads into Boston Bay; that on the south is wider, and opens on one side into Western Bay, and on the other into Spalding Cove. Two small islands are placed at the opening of the Southern Bay, which likewise afford good anchorage. The same may be said of Grantham Island, as well as of every part of the Port. Shall I now revert to what I have before stated as to the fertility of the soil? Shall I speak of the beautiful valleys, which appeared to indicate the existence of springs or streams of fresh water? Ought I to dwell on the numerous fires we perceived all along the shores, which led us to conclude that this spot was far more thickly peopled than any other part of the southern coast? Equal, if not superior, to Port Jackson, Port Lincoln is in every respect one of the best and most beautiful harbours in the known world; any of all those we discovered or visited on the coasts of Australia, it appears to be, and I here repeat it, the most inviting, the most advantageous, for the establishment of an European colony. The peremptory orders we had received from our commander, compelled us to quit this interesting spot before we had had time to complete our examination of the Port.—*Id.* vol. iii. p. 162.

"On the 8th of January, 1819, we arrived at Kangaroo Island from Sydney, after a pleasant passage of fourteen days, during which nothing particular occurred to attract our attention. We anchored in Lagoon Bay, in about four fathoms water (sand and mud), close in shore: our first object being to procure salt to ballast the ship and to cure skins. To facilitate this object two boats were despatched, with five men in each, to discover the salt Lagoon, and ascertain where the seals resorted to round the island. While these two boats were thus engaged, our other boat and three men were employed in searching for water, and examining the various bays and creeks. During our ramble on this occasion we discovered a well with a small supply of water, near which we observed a flat stone, with some writing on the surface. This appears to be the place where the French navigator watered: the ship and captain's names, with the particular dates, were cut on this stone; but being in French, we paid little or no attention to it, not at the time imagining it would be of consequence at any future period. Close to Point Marsden in Nepean Bay, about twenty yards from the sea at high water, behind the bank washed up by the sea, we dug a hole about four feet deep—it immediately filled with fresh water. We put a cask into it, which was always filled as fast as two hands could bail it out. The water was excellent, as clear as crystal, and I never tasted better. This hole supplied us while we were in Nepean Bay, and so plentifully, that we had no occasion to look further for fresh water thereabouts. When on the south and west coasts of the island, we had no occasion to dig for water, having always found plenty in lagoons close to the beach. The water of the lagoons, though not better, is not so good as that of the springs: the people settled on the island (mentioned hereafter) had not dug for water till I arrived there, but depended entirely on the lagoons: they, however, followed my example, and I was told had no difficulty in obtaining excellent water by digging in various parts of the island. On the return of the boats, in three or four days, we weighed and stood further into the bay, in a much more safe anchorage, being sheltered from all winds. We moored ship, and each individual took part in pursuing the objects of the voyage: my own lot, with another person, was to stay by the ship, during which time I had many opportunities of examining the bays, harbours, sands, and different anchorages, with many other occurrences and incidents which I could not now relate, from lapse of time. While here, we had abundance of fish of several kinds; the best we found was the snapper, some weighing above seven pounds; they are excellent eating, and preferable to some of our English fish: oysters, and very other species of shell-fish, were abundant. These, with our daily supply of kangaroos, enabled us to live in great plenty: indeed, I never was on a voyage which pleased me better, or in which we were better supplied.

"Harbours and Roadsteads.—Twenty ships could moor within 100 yards of the shore, and the same number anchor in safety further off, the water being always smooth, sheltered by the land from the north-west, and from the southward by Kangaroo Head, and from the north-east by Sutherland's Shoal, extending from the point below Point Marsden about six miles, always dry at half-ebb for nearly the whole distance. The shore is thickly lined with wood and shrubs, interspersed with several high hills protecting the anchorage: the opposite

coast on the main is Cape Jervis, which I should judge to be about fourteen or fifteen miles from the first anchorage, but nearer to Kangaroo Head by three or four miles. The main-land here is very high, and at the head of the bay wears every appearance of an inlet or river.

"The Soil.—I had an opportunity of seeing much of the interior of the island, having crossed the country in company with two sealers, who had been residents on the island for several years. The land wears every appearance of being fertile—a deep loam with coarse grass, abounding with kangaroos and emus: where these animals feed, the grass is much better for pasture. Occasional ponds of rain water are seen, and a plentiful supply of pure spring water is always attainable by digging for it. The land here is as good as any I have seen in Van Diemen's Land; in the neighbourhood of Sydney I have not observed any equal to it. Trees are scattered every where over the plains—the Swamp Oak or Beef-wood, and the Wattle (both of which indicate good land), are growing in abundance here. Close on the shore, within from a quarter to half a mile of the sea, the wood is very thick; but when this belt of wood is passed, you come on to an open country, covered with grass, where there are often hundreds of acres without a tree: I calculated, by comparison with New South Wales and Van Diemen's Land, there might be on this plain, on the average, three or four trees to the acre. I once crossed the island, a distance of about sixty miles, in two days. Once past the belt of wood which surrounds the island, we walked straight on end over the plains, found plenty of water in ponds, saw abundance of kangaroos and emus, and met with no difficulty or trouble. As we crossed the island I looked to the right and left, and saw every where the same open plains, now and then changed in appearance by close timber of great height, on high points and ridges of land. In some places we found the grass very high and coarse, in patches; but where the greatest number of kangaroos and emus were found, the grass was short and close. In the other places, short close grass was found between the coarse high patches. Whilst crossing the island we saw plenty of parrots and wild pigeons, and black swans on the lagoons.

"The Climate appeared to me very temperate, and not subject to oppressive heat; nor do the rains fall in torrents as at Sydney; the dews are heavy, but not injurious to health, which we had ample opportunity of proving, owing to the frequent exposure of our men, many of whom have slept under trees and bushes for several nights together, and though almost wet through, never experienced any ill effects. I had fifteen men under my command, and though they were a class of people who take no care of themselves, not one of them was ill during our stay; nor did my own health suffer at all, though I was exposed to all weathers both night and day. January, when I reached the island, is the middle of the summer; and the autumn and winter elapsed during our stay. In the winter it appeared to me much less cold than in Van Diemen's Land; and I observed, generally, that the changes of temperature are less sudden and frequent than in New South Wales.

"The period during which I stayed on and near the island was from the 8th of January to the 18th of August. I myself landed only once on the main, in the high between Point Riley and Corny Point. The soil was thickly covered with timber and brushwood. Some of my men landed at several different places on the main, being sometimes absent three weeks at a time in search of seals. On these occasions they carried with them bread and some salt meat; but having a musket and a dog with them, they always obtained fresh meat (kangaroo) when on the main, as well as on some of the islands. On these expeditions they never took fresh water with them. They often spoke of the places they had seen as being very pleasant. I never saw or heard of any native dogs on the island of Kangaroo; and, from the very great number of kangaroos, do not believe that there are any. Some of the kangaroos which I killed on the island weighed 120 lbs. Our men used to go to hunt them at sun-rise, when they leave the woods to feed on the grassy plains. I have known as many as fifteen taken by my men in one morning. We never touched any part but the hind quarters."

—Captain Sutherland's Report.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR NOVEMBER.

12^d 22^h—the Sun will eclipse Mercury; a celestial occurrence that, from its nature, will not be visible either with the eye or telescope. This passage of the Sun over Mercury will, however, be interesting as the precursor of the positions of these bodies relative to the Earth on the ensuing 5th of May, 1832,* when the planet will transit the disc of the Sun, and appear on it as a circular black spot for nearly seven

* The year 1832 will be distinguished by several remarkable celestial phenomena. The comet of Encke will cross the earth's orbit in the spring, and the comet of Biela (the dreaded comet of 1832), in the autumn. In May a transit of Mercury; in July a solar eclipse, remarkable for the minuteness of the obscuration—3^d only of the sun's diameter will be concealed. Several occultations of the planets will occur during the year. In September the ring of Saturn will disappear.

hours. This interesting phenomenon will be visible, from its commencement to its termination, to the whole of Europe and a great part of Africa; the ingress will be visible to Asia, and the egress to America. There is no doubt but that every lover of the science of astronomy, within the limits of the visibility of the transit, will endeavour to witness the spectacle—to see this bright and beautiful gem, that shines with such a rosy brilliancy as the morning or evening star—now melting away in the full effulgence of the rising day, and then heralding the bright hosts of stars to glitter on the midnight sky,—to see this lovely jewel of the ruddy dawn or evening shades enter on the Sun's glowing orb, with not merely dimmed splendour, but shrouded in intense blackness, pursuing its course over a field of glory, yet clad in gloom;—such a phenomenon will not fail to interest; and the observer, as he marks the blackness of the planet in contrast with the splendour of the Sun, may apply the celebrated line to the messenger of the gods—

"Dark with excessive light his robes appear."

The eclipses and transits of Mercury, for many centuries to come, can take place only in the months of May and November: there will be eleven transits between the present period and the year 2000, of which the following will be visible in this country:—5th May, 1832; 8th May, 1846; 9th November, 1848; 11th November, 1861; 4th November, 1868; 6th May, 1878. The next transits of Venus visible in this country, will be in the years 1882 and 2004.

22^d 12^h 35^m—the Sun enters Sagittarius.

Lunar Phases and Conjunctions.

	D.	H.	M.
☉ New Moon in Libra.....	4	1	38
☾ First Quarter in Capricornus.....	12	6	45
☉ Full Moon in Taurus.....	19	6	57
☾ Last Quarter in Leo.....	28	22	28

The Moon will be in conjunction with

	D.	H.	M.
Venus in Virgo.....	1	6	45
Mars in Virgo.....	2	21	30
Mercury in Libra.....	3	13	25
Uranus in Capricornus.....	11	14	0
Jupiter in Capricornus.....	21	0	
Regulus.....	an occultation.		
Saturn in Leo.....	an occultation.		
Venus in Virgo.....	29	17	40

Occultation of Regulus.—25^d—the immersion of this bright star in Leo will occur before the rising of the Moon: the star will emerge from behind the Moon's dark limb at 10^h 37^m.

Occultation of Saturn.—26^d—This will be an exceedingly interesting phenomenon, should the atmosphere prove favourable. The following are the times of immersion and emersion:

	H.	M.	S.
Immersion.....	16	46	13
Emersion.....	17	54	36

The following diagram will illustrate the phase and position of the Moon, and the points of immersion and emersion:

The ring of Saturn is now very contracted (it will be invisible 29th Sept. 1832): the proportion of the major to the minor axis, on the morning of the occultation, will be as 1000 is to 53. When Saturn was occulted on the 30th October, 1825, a singular phenomenon was ob-

served—that part of the ring of Saturn which last emerged from the Moon's dark limb was rendered sensibly more obtuse, and at the instant after separation approximated to a rectilinear boundary: a similar appearance was also observed on the orb as it escaped from behind the dark edge of the Moon.

8^d 5^m—Mercury in conjunction with 1.2 = Libra: difference of latitude 1' and 3'. 12^d—inferior conjunction. 21^d—in aphelion.

30^d—Venus will be at her greatest splendour as a morning star.

26^d 8^h—Mars in conjunction with 1.2 = Libra: difference of latitude 1' and 4'.

Telescopic Objects.—The following telescopic objects will be in favourable positions for observation during the month:

Taurus.—The Pleiades are a cluster of stars in the neck of Taurus, the brightest stars of which are Asterope, Taigeta, Maia, Celino, Electra, Pleione, Merope, and Atlas. The Hyades are an asterism in the face of Taurus: Aldebaran represents the southern eye, and the northern. Aldebaran is a double star, also the following: 9, α , γ , τ , ϕ , χ , 4, 30, 62, 66, 88, 103, 105, 111, 114, 117, and 118. Triple stars δ and ϵ ; above 1.2 δ is a triple star. 140, near to Propus, is a quintuple star; north of ζ is a nebula with a whitish light, elongated like the flame of a taper; 41 is supposed to be a variable star.

Orion.—Betelgeux and Bellatrix, the stars in the shoulders of Orion, present a remarkable contrast of colour; χ is composed of five stars; between ν and ζ is a cluster of stars; near 73 a cluster; between Betelgeux and λ a cluster; Rigel, the bright star in the foot of Orion, is a beautiful double star; the following are also double— δ , ζ , γ , λ , ϕ , ψ , 23, 26, 32, 33, 52, 59, and 68; 9 is a quintuple star; ϵ is a double-triple star; ι is a multiple star; near 67 and 70 is a multiple star, consisting of twelve stars. The nebula in the sword-handle of Orion is one of the most remarkable in the heavens; two new stars have been discovered near the four that form the trapezium in the nebula, one of which is supposed to be a variable star.

Occultations in the Hyades.—Oct. 23 (see Lit. Gaz. No. 767). The emersion of γ Tauri was not seen, owing to the lunar disc being obscured by strata of dark clouds.

	H.	M.	S.
1 ϕ —Immersion.....	9	27	38

This star appeared to linger at the edge of the disc previous to immersion.

	H.	M.	S.
2 ϕ —Immersion.....	9	38	33
..... emersion.....	10	4	42
1 ϕ —emersion.....	10	16	29
Aldebaran—Immersion.....	12	58	12
..... emersion.....	14	4	8

The singular phenomenon of the projection of Aldebaran on the lunar disc was never so distinctly seen as on this occasion. At 58^m 1^s the rate of motion of the star seemed to be slower; at 58^m 4^s it was apparently arrested, and clung to the disc till 58^m 8^s; from this time till its final immersion (58^m 12^s) it appeared completely within the lunar disc, thus:

When thus situated, it had lost its ruddy colour, and appeared perfectly white, or of the colour of the Moon. At its emersion nothing particular was observed; the star shone forth at once with its usual colour and brilliancy. The sky was beautifully clear.

Delford.

J. T. BARKER.

COMMITTEE OF SCIENCE OF THE ZOOLOGICAL SOCIETY.

TUESDAY, Oct. 25. Mr. Cox in the chair. The remainder of Dr. Bancroft's letter was read on the specimens he had sent to the Society. He particularly referred to a fine yellow snake of great beauty, thirty-eight inches in length, of the genus *coluber*.

Mr. Owen made some further observations on the anatomy of the crocodile. He pointed out the resemblance between its anatomy and that of birds, in the different excretory ducts terminating in one external opening or *cloaca*. He particularly described two small ducts communicating with the peritoneal cavity. He compared this with analogous openings in the shark and ray, and which have been supposed to be in some degree subservient to respiration, similar to the *spiracula* of insects or the lamprey. Mr. Owen also made some observations on the anatomy of the dogong, a specimen of which had been received, although in a very putrid and decomposed state. Some living specimens of the common bat, *vespertilio murinus*, were on the table.

FINE ARTS.

NEW PUBLICATIONS.

Illustrations of the Continental Annual. From Drawings by Samuel Prout, Esq. F.S.A. Smith, Elder, and Co.

As the proprietor of this clever publication justly says, "it is unnecessary to apologise for the appearance of a new Landscape Annual, at a period when a taste for the fine arts seems to keep pace so fairly, in this country, with the love of foreign travel;" "a fashionable appetite," he slyly adds, to which he "was desirous of administering at a much less expense than its gratification has hitherto cost."

The merits of Mr. Prout are much too well known to render any eulogium on our part necessary. The amateurs of the arts, by a comparison of the plates under our notice with those of *The Landscape Annual*, from drawings by Mr. Stanfield, will be able to estimate the respective qualities of these two eminent artists. There is one distinct difference between the publications, and it is agreeable, as producing variety; namely, that the subjects in the *Continental Annual* are chiefly, although not exclusively, public and other buildings. In the clear and

brilliant manner in which Mr. Prout treats such subjects, he has been ably seconded by the gravers of Messrs. J. Le Keux, J. T. Willmore, E. J. Roberts, W. Wallis, T. Barber, J. H. Kernot, J. Carter, S. Fisher, and W. Floyd. The "Cathedral Tower at Antwerp," the "View in Ghent," the "City and Bridge of Prague," the "Port and Lake of Como," and the "City and Bridge of Dresden," are among our favourites.

Chelsea Pensioners reading the Gazette of the Battle of Waterloo. Painted by David Wilkie, R.A. Engraved by John Burnet. Moon, Boys, and Graves.

We congratulate Mr. Burnet on the completion of his arduous undertaking, and still more, on the completion of it in a manner that reflects the greatest honour on his talents; and that must be in the highest degree satisfactory and gratifying not only to every lover of the arts, but to every lover of his country; with one of the most splendid and important triumphs of whose arms this noble and interesting print is so intimately connected. As several years have elapsed since the exhibition of the original picture at Somerset House, many of our readers may not have seen it; and we cannot more explicitly communicate to them a notion of its general character and object, than by quoting a part of the description affixed to the key to the print.

"This picture was painted for his Grace the Duke of Wellington, in the year 1822, and commemorates that great and final victory which, at Waterloo, closed our triumphs over Napoleon on land, as that of Trafalgar closed them by sea. The scene is laid in that picturesque street or way leading from Pimlico to Chelsea Hospital, in which trees, public-houses, and the fine architecture of *Wren*, intermingle; and the time is the season when pensioners receive their pay, and indulge themselves with spending it in the open air. The painter has gathered together veterans and invalids of all regiments, of all countries, and of all campaigns, from the days of Wolfe to those of Wellington; he has seated them, with their wives and their companions, at a social carouse; the flagon is busy, cheered on by the fife and the bagpipe; and the whole are excited by the hourly expectation of news from abroad of a great and decisive battle between the British and the French. Into the midst of this scene a soldier of the Lancers comes on the spur, with the *Gazette* of the Battle of Waterloo. The revelry ceases, only for a more joyous renewal; windows and doors are filled by eager and gaping listeners; while a veteran soldier of Wolfe's reads the account aloud."

Of all the beauties of this fine and animated composition, the greatest is undoubtedly the expression of the different heads. This is a quality which was most likely to suffer in a transfer to copper; and yet this is precisely the quality in which Mr. Burnet seems to us to have been most happy. It is true, that in the general breadth and effect, in the force and prominence of some parts, in the due subordination of others, in the characteristic representation of the multiplied details, in the aerial tone of the back-ground, in the delicacy of finish, and in technical execution, he has acquitted himself admirably; but his success in that most difficult of all achievements, preserving the expression of the various countenances, has been pre-eminent. Whether our attention is drawn to the pensioner who is reading the *Gazette*, to the Highlander who is

eagerly questioning the lancer, to the sergeant who is exultingly throwing up his child into the air, to the sable musician who is listening with delight to the details of the battle, to the soldier's wife who is anxiously examining the list of killed and wounded, to the guardsman who is stretching from a distant window to try to ascertain the cause of all the agitation, to the gourmand who does not allow the good news to interrupt his feast, to the girl who is coquettishly adjusting the combs in her hair, or, last, and perhaps best of all, to the veteran whose dulled faculties can scarcely be made to comprehend the glorious intelligence,—we are equally struck with the vividness and fidelity of the expression.

Comparatively unimportant as the matter may be, we cannot pass unnoticed the exquisite texture and tint of the paper on which the proofs of this masterly plate have been worked off.

DRAMA.

DRURY LANE.

ON Monday *King John* was performed by Macready with masterly skill and powerful effect; and Miss Phillips, for the first time, assumed the part of *Lady Constance*. We will not enter into a detailed criticism of her personation of this trying character, but content ourselves with saying, that in it Miss Phillips afforded striking additional proof of the rapid development of those talents which, we have all along foreseen, (though often under circumstances little favourable to her), must raise her to the foremost rank in the highest branch of her profession. It was hardly fair to put Miss Kenneth into *Arthur*; for, clever as she is, she is not an actress of all work.

COVENT GARDEN.

SHAKESPEARE'S *Henry the Eighth*, always a dull acting play, but occasionally attractive from the number of its processions, was revived here on Monday with considerable splendour; for we were not only treated with the banquet, the trial, and the christening, as heretofore, but we had also the coronation of Anne Bullen, "selected from the most authentic documents." Besides these inducements, there was an alteration in the cast of some of the leading characters; and as we look upon the appropriation of the *dramatis personæ* to be of more importance than any mere piece of pageantry, however splendid, we shall give the preference to the actors, and leave the scenes and dresses to the last. On this occasion Miss Kemble appeared, for the first time, in *Queen Katharine*; and we regret that we cannot bestow on her performance that unqualified praise it has so often been our pleasure to award her. As far as a correct reading of the part—as far as a judicious delivery of the words—as far as a perfect knowledge of stage effect, and a strict attention to stage business, could go, so far Miss Kemble may claim our commendation. The meek sorrows and the virtuous distress of the much-injured queen were well portrayed; but when quiet dignity or bitter scorn were requisite, as in her replies to *Wolsey* and her usher in the trial scene, there was a comparative falling off and failure of effect. Miss Kemble also is too petite in figure, and too youthful in appearance, for the representative of one who has been twenty years a wife, is six years older than her husband, and has borne him many children. If, however, the daughter failed in what was in some measure unavoidable, the father went to an opposite extreme in what might have

been remedied with ease,—for he made himself considerably older and uglier than was at all required of him. Mr. Kemble may recollect, that at the period of the opening of the play, Henry is under forty years of age; and although he is described and drawn as of a full habit and a bluff countenance, yet we can see no reason (but, according to all history, the very reverse,) for his being turned into a “huge hill of flesh,” or for exhibiting a face and head like nothing we have ever seen, excepting, perhaps, in some of “Martin’s” companions at the opposite establishment. Neither can we give him much credit for his delineation of the character, which was far from being acted with his usual skill: besides which, he had frequent need of the assistance of the prompter,—a fault in him we never had occasion to remark before. Mr. Young’s *Wolsley* is not one of his happiest performances; but he played with care; and his “farewell” and advice to Cromwell were given with so much feeling as to call down well-merited applause. Miss Tree was sufficiently attractive in *Anne Bullen* to “tempt a weaker appetite,” and please the fancy of a less licentious monarch. Mr. J. Mason, treading in his uncle’s steps, was a respectable *Cromwell*; and Mrs. Gibbs and Keeley were able representatives of the prurient Lady Denny and the “merry gamester my Lord Sands.” The play passed off heavily for the first four acts; but in the fifth the gods fell foul upon the bishops, and then we had nothing but riot and disturbance. Egerton, who played “his Grace of Canterbury,” looked very grave upon the matter, and conducted himself with so much decorum as to have deserved a better fate; but Meadows, who enacted “my Lord of Winchester,” richly deserved the vengeance of the offended deities; for a more graceless and vulgar wearer of the lawn and mitre it would have been difficult to find: indeed, we cannot see the necessity (although it has always been the custom) of giving this part to a low comedian; there might have been found many actors in the company who would have done more justice to it. The ceremony of the coronation in the Abbey was splendid in the extreme, but we think the show would be improved by the omission of the out-door procession. Some of the dresses, when so near the lamps, look a little the worse for wear; and some of the supernumeraries who are thrust into them are very queer-looking sort of persons. The *Lord Chancellor*, amongst others, excited in no small degree the contempt and laughter of the audience. We were glad to see so good a house; and when one of our theatres is turned into a menagerie, it is but fair that those who have yet some respect left for Shakespeare and the drama should have an opportunity of encouraging a legitimate performance at the other. The new scenery is pretty and appropriate.

On Thursday a Mr. S. Bennett, who, if we remember rightly, tried the same part some four or five years ago, repeated the character of *Simpson* in *Simpson & Co.* He is a dapper little man, of considerable talent, on which we shall deliver our opinion more at large hereafter.

The drama to-night, *the Army of the North*, by Mr. Planché, is, we learn, founded on the escape of Romana from Funen—an event which so greatly inspired the dawning cause of the Spanish patriots. It is an interesting subject.

THE ADELPHI.

THE nightly bill of fare at this theatre continues, and must long continue, to tempt crowded audiences: we have not even a cri-

tical complaint to offer, except that there is, perhaps, too much to enjoy. For ourselves, we should be more than satisfied with *Victorine*, and the *Lions of the Mysore*: the former a piece of mingled character and touching pathos—the latter the most laughable burlesque that has been seen upon the English stage for many years. In a slight preceding notice we spoke of *Victorine* (on its first representation) as a very delightful and well-sustained drama; but it is now greatly improved, and a more natural and perfect performance than that of Mrs. Yates in the heroine never was seen. In all the changes of her part,—the light-hearted sempstress, the high-lived giddy yet occasionally remorse-stricken duchess, the ruined and repentant window, and, last of all, the *Victorine* cured of her inclination to folly, and happier than ever,—she depicts the various feelings with a degree of truth and effect which stamps her at the head of this style of acting. Yates, too, is admirable: laughable and amusing in the two younger acts, (if we may so call them,) his aged *roué*, in the last, is deception in appearance, and almost too good in delineation. Nor should Mrs. Fitzwilliam be forgotten in our panegyric; she is only second to Mrs. Yates because her character is second. Her last scenes, as the old and reduced orange-seller, could not be surpassed. To say that Reeve, Buckstone, and O. Smith, also contribute largely in their several lines to fill up the attractions of this excellent piece, is simply to inform our readers that they cannot have a superior treat in anything upon the boards at this time. With regard to the *Lions of the Mysore*, we know not how to describe them; but we can give an idea of their powers, by confessing (horresco reference) that we, in common with boxes, pit, and gallery, laughed loudly at them nearly throughout their gambols. Reeve, as the herolion, is inexpressibly ludicrous; nor is Wilkinson in the tiger, Buckstone in the kangaroo, (or its ghost, we believe,) Mrs. Fitzwilliam in the wild cat, the length of a tail behind him in whim and humour. Yates, as manager and *boa constrictor*, cements the menagerie most happily together; and after sympathising with *Victorine*, we find hearty relief in these more than beasts.

OLYMPIC.

A NEW burlesque, entitled *Gervase Skinner*, was produced here for the first time on Monday. It is taken from the tale of the same name in Hook’s *Sayings and Doings*, and went off, as theatrical folks say, “very pleasantly.” Liston was the representative of Gervase, and did enough to make us wish for more: he excited so much mirth with a shaved head, as, we should think, would make him henceforth forswear his raven locks. The other *dramatis personæ* are not of much consequence. A little fracas relative to the encore of a song by Madame Vestris took place in the course of the evening: by way of advice, we say that neither a petulant air nor a pouting lip are half so pretty in a female, or so profitable to a theatre, as winning manners and inviting smiles.

On Thursday a little piece, called the *Love-Spell*, founded on Scribe’s popular opera *Le Philtre*, was also produced here, to the credit of an enterprising and active management. It is the production, we hear, of Mr. Ryde, the author of only “*One Fault*” before, at the City Theatre; but this cannot be called a second. He has selected very cleverly from a full drama, and cut it down to a pretty little piece, well calculated to gratify any audience. The performers acquitted themselves to ad-

miration; and, on the whole, this whet of Auber’s music has excited our appetite for the whole meal, promised at Drury on Thursday.

VARIETIES.

The Pine.—A pine-tree has been discovered in the Umpqua country, to the southward of the Columbia, the circumference of which is 57 feet; its height 216 feet, without branches!

Fire-Escape.—Mr. Week, brewer, Stockwell, has invented a fire-escape; with which, we observe from the newspapers, some very satisfactory experiments were made last Wednesday. It consists of a large sheet of canvass, so disposed as to admit of individuals throwing themselves into it from any height, without the danger of broken limbs, or hurt of any kind.

Royal Society of Literature.—A meeting of the building committee and council of this Society took place on Monday, in their new house, in St. Margaret’s Place (such, we believe, is to be the name of the side of the new street opposite St. Martin’s church), when the various necessary arrangements were made for opening the ensuing session. The principal room is very handsome; and the whole design reflects honour even on the skill and taste of Mr. Decimus Burton, who in the most handsome manner presented it gratuitously to the Society.

The Pitt Press.—On Tuesday week, Lord Camden, Lord Farnborough, and Mr. Banks, visited Cambridge, as a committee of the Pitt Club, accompanied by several other noblemen, dignitaries of the church, and gentlemen, to lay the foundation of the public building, to be called the *Pitt Press*, erected out of the surplus of the fund subscribed for a monument to the memory of that great patriot and distinguished statesman. A more admirable use could not have been made of this fund. The ceremony, as described in the *Cambridge Chronicle*, was very impressive; and it is to be hoped that the diffusion of much that is good for man to know will proceed from this auspicious establishment.

Theatres.—In these discordant times there are stirrs every where, and we cannot expect the public theatres to escape. We have elsewhere noticed Madame Vestris’s Ellistonian appeal to her pit—the more’s the pity—but this was not the only occasion in which she had to come forward. On another night she also had to deal with some refractory subjects, and disobedient to the goddess of the stage: some of the evils out of Pandora’s box surely alight among them. Then at Drury, Mr. Wallack had to call in the police to quell the drunken loyalty of some gentlemen, who insisted upon some half-dozen God save’s the King. On Monday the Adelphi was disturbed by an alarm of fire, which required all the manager’s presence of mind and firmness to prevent leading to a fatal alarm;—and they hiss the Bishops in Covent Garden!

Pun.—A punster said that a young lady, desirous of being married, was a *belle* that wanted *ringing*.—*American Paper*.

Paris in London.—Heaven forbid! Yet such is the title of a new journal, No. I. of which has just been sent to us. London is wicked enough as it is: what would it be with Paris in its capacious stomach? The paper is, nevertheless, a pleasant *mélange*—we quote an anecdote or two from it.

“The poor Baron de F——, so good, so little, so thin, raised the report of his own death. ‘Good heavens! this report is without foundation,’ said Madame de C——; ‘for to-day, on his paying me a visit, I discovered him,

though not immediately; for out of spite he had hid himself behind his cane.'

"A romantic individual was asked why he shewed greater attachment to a very thin lady than to another who was more lusty. 'It is,' said he, 'because I am nearer her heart.'

"An individual named Shakespear drowned himself lately in Paris: on learning the news, another remarked, 'that it was a great loss to the English stage; but he thought that that author had been dead many years.'

"A humorous young fellow having bought a water-proof hat, and wishing to play off a joke, washed his head, and whilst it was steaming with water, he ran to the hat-maker and complained of his deceiving him. 'Ah!' said the hatter, 'I see how it is, sir—you came out in the rain.'"

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLIII. Oct. 29.]

A new edition will shortly appear of Conversations on Intellectual Philosophy.

Nicotiana, or the Smoker and Snuff-taker's Companion. Cameron, a Novel, is nearly ready for publication.

The Shakespearean Dictionary, being a complete Collection of the Expressions of Shakespeare, in Prose and Verse, from a few Words to fifty or more Lines, to each extract is prefixed an appropriate Synonym, and the whole is arranged in alphabetical order. [This ought to be a complete Concordance, a publication much wanted.—Ed. L. G.]

A Familiar Compendium of the Law of Debtor and Creditor, by John H. Brady.

The Jew, a novel, so long announced, is about to appear.

Letters of a German Prince; being a Journal of a Tour in England, Ireland, and France, in 1829 and 1829: translated from the German.

Mr. C. Swain, author of "Metrical Essays," has nearly ready for publication, the Mind, a Poem, in Two Parts, with other Poems; embodying a second edition of the Beauties of the Mind, a Poetical Sketch.

The new edition of Mr. Stebbing's Lives of the Italian Poets is to comprise several additional Lives, including that of Ugo Foscolo, with extracts from his private Letters, and particulars relating to his last hours.

LIST OF NEW BOOKS.

Wilton's Medical Case-Book, oblong 8vo. 6s. cloth.—Brown's Sketches and Anecdotes of Quadrupeds, royal 18mo. 10s. bds.—Comic Offering for 1828, fcp. 12s. bds.—Kennedy's History of the Indian Cholera, 8vo. 10s. 6d. bds.—The Song of Albion, by Henry Sewall Stokes, 8vo. 9s. bds.—Poole's Account-Book for 1831, 3s. sewed.—The False Step, 3 vols. post 8vo. 11. 11s. 6d. bds.—Romance of History, Italy, by Charles Macfarlane, 3 vols. post 8vo. 11. 11s. 6d. bds.—Little Library, the Public Buildings of the City of London, square 18mo. 3s. 6d. hf.-bd.—Crosby's Housekeeper's Account-Book, 8vo. 8s. 6d. morocco.—Dodley's Cellar-Book for 1832, 18s. 6d. sewed.—Continental Annual, by William Kennedy, 8vo. 8s. 6d. morocco.—Royal 8vo. India proofs, 11. 10s. morocco: Illustrations to ditto, proofs, 18s.; on India paper, 11. 5s.: before letters, 11. 11s. 6d.—A New Metrical Psalter, 32mo. 3s. 6d. cloth.—Hughes's Divines, No. XVIII. Hall's Contemplations, Vol. I. 8vo. 7s. 6d. bds.—Valpy's Classical Library, No. XXIII. Plutarch, Vol. I. fcp. 8vo. 4s. 6d. bds.—Roscoe's Novelist's Library, Vol. V. Tom Jones, Vol. I. fcp. 5s. bds.—Dr. Nares' Life of Lord Burghley, Vol. III. 4to. 3s. 3s. bds.—Lives of Female Sovereigns, 2 vols. post 8vo. 21s. bds.—The Columbia River, by Ross Cook, 2 vols. 8vo. 11. 4s. bds.—Standard Novels, Vol. IX. Frankenstein complete, and the Ghost Seer, Vol. I. fcp. 6s. bds.—The Elements of Chemistry familiarly explained and illustrated, 18mo. 6s. bds.

TO CORRESPONDENTS.

We are obliged, by temporary matters, to defer Reviews of Letters from England and Ireland; the Romance of History (Italy); and several other novelties; besides some continuations. We must also ask the indulgence of many correspondents.

The story of the Young Queen in Ackermann's Juvenile Forget Me Not, which, from its signature, we attributed to Miss Isabel Hill, is not, we are informed, from the pen of that lady, whose productions we have so frequently had occasion to notice with laudation.

The Author of "the False Step" assures us that it is a first attempt; an assurance which increases our expectation in regard to what she may hereafter publish, having, as observed in our remarks upon it, been led by its merits to suppose it proceeded from a more experienced hand.

The communication relative to Palenque, which we appended as a note to our remarks on these interesting ruins, in our last No., was, we learn, addressed to the *Globe* newspaper, and not to the *Times*, which only copied it from the former. In town one sees the evening papers less regularly than those of the morning, which may account for our misquotation.

ADVERTISEMENTS,

Connected with Literature and the Arts.

UNIVERSITY OF LONDON.—The following Classes open on Tuesday, the 1st of November, when Mr. Malden will deliver an Introductory Lecture at Three o'clock.

On Wednesday, at Three o'clock, the Professor of Mathematics will deliver an Introductory Lecture.
Latin, T. H. Key, Esq. M.A. Fee for the whole Session, 71. 10s.
Greek, H. Malden, Esq. M.A. 71. 10s.
English and Rhetoric, Dr. Blair, 5s.
French, M. Merlet, 5s.
German, —, 5s.
Italian, A. Panizzi, Esq. 5s.
Hebrew, H. Hurwitz, Esq. 5s.
Mathematics, G. J. P. White, Esq. B.A. 71.
Philosophy of the Mind and Logic, Rev. J. Hoppus, 5s.
History, —.
Natural Philosophy and Astronomy, Rev. Dr. Lardner, 71.
Zoology, Dr. Grant, for 3 Months, 5s.
Botany, J. Lindley, Esq. for 8 Months, 3s.
Political Economy, J. R. McCulloch, Esq. 5s.
English Law, A. Amos, Esq. M.A. 5s.
The Medical School opened on Monday, the 3d inst.
The Court have determined upon devoting the great Library to the reception of the London University School. The preparations for this purpose will probably be complete before the Christmas Holidays.

THOMAS COATES.

Council Room, Oct. 19, 1831.

The Prospectus of the General Classes is now printed, and may be had at the Office of the University, where all Fees are to be paid; at Mr. Taylor's, Bookseller to the University, 20, Upper Wood Street; and of Messrs. Farbury and Co. Leadenhall Street; Jennings and Smith, Cheapside; Richardson, 25, Cornhill; Huntley, 3, Paul's Churchyard; Black, Young, and Young, Tavistock Street; Smith, 179, Strand; C. Knight, Pall Mall East; and Treuttel and Co. Soho Square.

KING'S COLLEGE, LONDON.

Zoological Class.
Professor Rennie will, on Wednesday the 3d of November next, at Three o'clock in the Afternoon, deliver the Opening Lecture of his Course on "The Habits of Animals;" and he will continue this Course, at the same Hour, every ensuing Wednesday, through a Series of Twelve Lectures. The Fee for the Course is 11. 1s.

Besides the above popular Course, Professor Rennie is preparing a Systematic Scientific Course, the particulars of which will be duly announced.

W. OTTER, M.A. Principal.

26th October, 1831.

THE PROOF PLATES TO HEATH'S

PICTURESQUE ANNUAL, from Drawings by Clarkson Stanfield, engraved by the most celebrated Engravers, consisting of Twenty-six highly-finished Plates, in a Portfolio.
India Proofs, 51. 2s.; India Proofs, M. 3s.; before letters, 41. 4s.

Also,
The Proof Plates to the Keepsake for 1832, consisting of 17 beautiful Plates, engraved in the most highly finished manner.
India Proofs, 51. 2s.; India Proofs, M. 3s.; before letters, 41. 4s.

Published for the Proprietor, by Moon, Boys, and Graves, 6, Pall Mall; to whom Orders are respectfully requested to be sent.

Just published, a new Drawing Annual, entitled

THE NATIONAL DRAWING-BOOK;
in Lithography, by G. W. Davis. Containing Studies in Landscapes, Flowers, Trees, Birds, Horses, Sheep, Dogs, Shipping, Carriages, Waggon, the Human Figure, &c. &c., in Outline and Shade. Neatly bound, 7s.; or in Numbers at 1s. each.

By the same Author, the 2d edition of
The Child's own Drawing-Book. Half-bound, 6s. And

The Juvenile Drawing-Book; containing 100 Designs in Outline and Shade, half-bound, 2s.
London: D. Colvill, Chiswell Street; Ackermann, Strand; and Simpkin and Marshall, Stationers' Court.

TO ARTISTS, ARCHITECTS, AND DRAFTSMEN.

The utmost attention has been given to the Manufacture of Drawing Pencils in Cedar by S. Mordan and Co. who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing those objections and annoyances so frequently complained of in Drawing Pencils. All who wish to be satisfied as to the genuineness of these Pencils, may see them manufactured at No. 85, Castle Street, Fishwick, which establishment has the honour, exclusively, to supply all the Government Offices.

Sold retail by all respectable Stationers, &c. throughout the United Kingdom. S. Mordan and Co.'s name is on each Pencil.

BOOKS PUBLISHED THIS DAY.

Price 6s. the Twentieth Number of
THE BRITISH CRITIC, QUARTERLY THEOLOGICAL REVIEW, and ECCLESIASTICAL RECORD.

Contents.—On the Study of the Fathers of the Church—Tod's Annals and Antiquities of Rajasthan—Chalmers on Endowments—Hall's Voyages and Travels—Dr. Russell's View of Ancient and Modern Egypt—Dr. Channing's Works—Dissertation on the Reign of Charles I.—Collinson on the Propagation of the Gospel—Slade's Parochial Sermons—Life and Correspondence of Dr. Baile—Holden's Christian Expounder—Lancaster on Confirmation—Mills's Consecration Sermon—Sermons on the Controversy between Mr. Baile and Dr. Burton—Fishes—State of the Dioceses in England and Wales—Proceedings of the Universities. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Portrait of Washington Irving.

FRASER'S MAGAZINE for TOWN and COUNTRY. Price 3s. 6d.

The November Number contains:—Life and Times of Bishop Ken—Ane Flight through Faery Land, by a Modern Pythagorean—The Ancient Commerce of England, by John Galt, Esq.—Crawford John, by the Ettrick Shepherd—French, German, and English Philosophy—Lays of the Twaddle School, No. II.: L. E. L. and Lady Morgan—Gallery of Literary Characters, No. XVIII., with a full-length Portrait of Washington Irving—England and the Continent in the West—Tales from Tiers—Song from the French—Parliamentary Eloquence, No. V.: House of Lords—Temperance Societies—What must be done with the Lord?—The Re-election of Alderman Key—The Life of Mazzini—the Barons of the Press—Oliver Yorke's Leave—Reaction against Reform.

James Fraser, 215, Regent Street, London; John Anderson, jun. Edinburgh; W. R. M'Phun, Glasgow; and Grant and Co. Dublin.

* The 3d edition of the Number for September 1829 is now ready, and may be had to complete Sets.

Superior Presents.—Portrait Annual: Noble Present. Thirty-six Portraits, engraved in the highest style, after original Paintings by Sir Thomas Lawrence, Reynolds, Shee, Beecher, Phillips, Jackson, Hoppner, &c. half-bound in morocco, price Two Guineas, Vols. I. and II. of

THE NATIONAL PORTRAIT GALLERY OF ILLUSTRIOUS and EMINENT PERSONAGES, particularly of the Nineteenth Century. With Memoirs.

By WILLIAM JERDAN, Esq.
Price of each volume, half-bound in morocco, and may be taken separately: Prints, imperial 8vo. 51. 2s.; India Proofs, 51. 8s.; the King's Edition, royal 4to. becoming scarce, 51. 5s. * Those who wish to possess themselves of a series of portraits of the illustrious characters whose names are distinguished in the political or the scientific records of our country,—whose raised its dignity, and improved its intellectual character,—may have that wish abundantly gratified by adding this very superior work to their respective libraries. The portraits are truly splendid.—*Herald.*

Irish Present.
In 1 vol. 4to. containing 31 Views, price 21s.; India Proofs, 51. 2s.; elegantly half-bound in morocco, and gilt edges, 51. 2s.; India Proofs, 51. 7s. 6d.

Ireland Illustrated; from original Drawings by G. Petrie, W. H. Bartlett, and T. M. Baynes. With Descriptions by G. N. Wright, Esq. R.H.A.

"We know not what its sale may be; but if set all equal to its merits, it has a place upon the table of every house in Ireland."—*Saunders's News Letter.*

Lancashire Present.
In 1 vol. 4to. containing 105 Views, price 51s.; India Proofs, 51. 14s.; half-bound in morocco, gilt edges, 11. 14s.; India Proofs, 51.

Lancashire Illustrated; from original Drawings by S. Austin, G. and C. Pyne, and J. Harwood.

"The drawings have evidently been taken by eminent artists, and the engravings are executed in the first style."—*Liverpool Courier.*

Fisher, Son, and Co.; Simpkin and Marshall; and Whittaker, Treacher, and Co.

In 12mo. price 5s.

A TREATISE ON the NATURE and CAUSES OF DOUBT in RELIGIOUS QUESTIONS, (with a particular Reference to Christianity). With an Appendix on some common Difficulties, Lists of Books, &c. &c.

"It is not without something in science have no doubts. He never truly believed, who was not made first sensible and convinced of unbelief. Never be afraid to doubt, if only you have the disposition to believe; and doubt in order that you may end in believing the truth."—*Leighton, in Catechism's Aids.*
London: Printed for Longman, Rees, Orme, Brown, and Green, Paternoster Row.

FRENCH FAMILY LIBRARY.—This day are published, Vols. XIV. XV. XVI. (containing Vols. 3, 4, 5, of Racine), of the First, or Dramatic Series of the French Family Library.

The Authors already published, at 5s. 6d. common paper, and 4s. 6d. fine paper, each volume, are—Molière, 7 vols. demy 8vo. with Portrait—Corneille, 4 vols. demy 8vo. with Portrait—Racine, 5 vols. demy 8vo. with Portrait.

Voltaire is in the press, and will complete the Dramatic Series.

Printed for Treuttel, Wirtz, and Co. 20, Soho Square.

In 9 vols. 8vo. with a Portrait, newly engraved, after Sir G. Kneller's, price 51. 12s. boards, the 12th edition, of

THE WORKS OF JOHN LOCKE.

THE TRUTH of the GOSPEL HISTORY,
 argued from our Lord's Conduct with reference to his
 Crucifixion.
 By the Rev. ARTHUR JOHNSON, M.A.
 12mo. 4s. 6d.

A Grammar of the Hebrew Language. By
 Moses Stuart, Associate Professor of Sacred Literature in the
 Institution at Andover, U. S. 4th edition, reprinted with the
 concurrence of the Author, in 1 vol. 8vo. boards, 16s.

This Hebrew Grammar is considered by many as the best ex-
 tant—such was the opinion of the late Dr. Nicol, Regius-Professor
 and it is now recommended by Dr. Pusey, the present Re-
 gius-Professor. Dr. Lee, Professor of Arabic at Cambridge, says,
 in the preface to his Hebrew Grammar, "Dr. Gesenius is closely
 followed by Professor Stuart in the very excellent Hebrew Gram-
 mar which he has published."

Sophocles; literally translated into English
 prose, from the Greek, with Notes. The 2d edition, very much
 improved, 8vo. boards, 15s.

**Enripides. The Hecuba, Orestes, Phœni-
 cian Virgins, an Medea, of Euripides, literally translated into**
 Prose, from the Text, Porson, with Notes. The 2d edition,
 revised and corrected, 8vo. boards, 8s.

The Hippolytus and Alcestis of Euripides,
 literally translated into English Prose, with Notes, 8vo. boards,
 4s. 6d.

Aristophanes. The Comedies of Plutus and
 the Frog, literally translated into English Prose, with copious
 Notes. 8vo. 2s.

In Turkey morocco, gilt, price 12s.

THE AMULET, for 1832.

Edited by S. C. HALL.

The Twelve Plates that illustrate the present volume will, it is
 presumed, be considered among the most successful specimens of
 art ever produced in this country. They consist of Four Works
 from the pencil of Sir Thomas Lawrence; the Countess of Blen-
 leigh, the Lady Cawdor, the Marchioness of Londonderry and
 her Son, and "Sophia," the Greek Girl, by Pickershill—the
 Death of Euclides, by Haydon—Venice, by C. Stanfield—the Rising
 of the Nile, by D. Roberts—Corinne, by the Baron Gerard—the
 Death of the First-born, by George Hayter, &c.

The Literary portion of the Amulet will be found to consist
 chiefly of Articles of permanent interest and value.
 A very limited number of Proofs of the Plates have been taken,
 price 50s.; uncoloured, of which there are but Twenty-five Sets,
 price 2s. 10s.—for these early application is necessary.

Also, just published, bound in arabesque morocco, gilt, price 2s.

The Juvenile Forget-Me-Not (the Fifth
 Volume of the Series). Edited by Mrs. S. C. Hall. Containing
 a number of fine Engravings on Steel and on Wood, and the
 Contributions of several of the most popular Writers for the
 Young.

"The Juvenile Forget-Me-Not of the present year has all the
 valuable qualities of its predecessors; and we can unreservedly
 and warmly recommend it to every parent and teacher."—*Literary*
Gazette.

Fruits, Vegetables, &c.

New edition, in 8vo. price 7s.

PHILLIPS'S COMPANION for the
ORCHARD; or, History of Fruits, with Directions for
 their Culture, comprising the most approved Methods of retard-
 ing and ripening of Fruits, so as to ensure, in all seasons, the en-
 joyment of those Vegetable Delicacies; new and curious Particu-
 lars of the Pine Apple, &c.

II.

**Phillips's Companion for the Kitchen Gar-
 den; or, History of Cultivated Vegetables.** Comprising an Ac-
 count of the various Uses made of them in different Countries.

Sylva; or, a Discourse on Forest Trees and
 the Propagation of Timber. By John Evelyn, F.R.S. With
 Notes, by A. Hunter, M.D. F.R.S. &c. The 6th edition, revised,
 in 2 vols. royal 4to. printed uniformly with "Evelyn's Memoirs,"
 and embellished with 46 Plates, 3s. 2s.

"A diligent perusal of this noble work may animate our nobil-
 ity and gentry to improve their estates by the never-failing ma-
 nners of land, may lead infinite delight as well as profit in this
 book."—*Henry Colburn and Richard Bentley, New Burlington Street.*

In 2 vols. 12mo. price 31s. boards,

**CAMPAIGNS AND CRUISES in VENE-
 ZUELA AND NEW GRANADA, and the PACIFIC**
 OCEAN, from 1817 to 1830, with Sketches of the West Coast of
 South America, &c. Also, Tales of Venezuela, illustrative of
 Revolutionary Men, Manners, &c.

"A great mass of information, description, military narrative,
 anecdote, is here collected, and collected in a very pleasant
 intelligent manner."—*Literary Gazette*.

Printed for Longman, Rees, Orme, Brown, and Green.

THE LITERARY SOUVENIR

for 1832.

Edited by ALARIC A. WATTS.

Containing, as usual, Twelve highly finished Line Engravings,
 (including several of the most celebrated Pictures in modern Art),
 from the Pencil of Sir Thomas Lawrence, Stothard, Turner,
 Howard, E. Chalon, Northcote, Roberts, Buxall, Montolain,
 Deveria, A. and T. Johannot.

Four of the subjects are from the pencils of the most dis-
 tinguished French artists, and were furnished expressly for the
 work.

CONVEYANCER'S EVIDENCE.

By THOMAS COVENTRY, Esq.

Barrister-at-Law.

In assuming the office of Mediator between Buyer and Seller,
 Borrower and Lender, I have considered, first, what the one can
 strictly require; second, what the other may justly refuse; and,
 third, the medium course dictated by fair dealing.
 London: J. and W. T. Clarke, Portugal Street, Lincoln's Inn.

THE NEW MONTHLY MAGAZINE,

and LITERARY JOURNAL.

Edited by E. L. BULWER, Esq.

A new Editor and new Contributors have been added to the
 former Conductor and Correspondents of this Journal. With
 fresh articles comes an increased ambition. The Conductors of
 the New Monthly Magazine have therefore been more than
 ever deserving the favour of the public. In Politics, a more
 vigorous and systematic tone; in Literature, a more earnest
 and enlarged attention to criticism; in Miscellaneous matter, a more
 careful selection of those articles that relate not only to the day,
 but to those topics of the day the most important and the most
 generally interesting;—will, the Proprietors trust, form those
 characteristics by which they shall improve on the past, and hope
 for distinction for the future.

The Number for November will contain, among various other
 interesting Articles.—1. Address to the Public.—2. The State of
 the Country.—3. The Cholera arrested.—4. The Temper of the
 House of Commons.—5. Society.—6. The Room in which Canning
 died.—7. Discussions on the French Peasage.—8. Ourselves, our
 Correspondents, and the Public.—9. The World as it is; a Tale.—
 10. Samuel Rogers and his Works (with a Portrait).—11. Con-
 versations with an Ambitious Student.—12. The Annals.—13.
 The Monthly Commentary; the Bench of Bishops, &c.
 Communications to the Editor are requested to be addressed,
 free of postage, to the Publishers.

Henry Colburn and Richard Bentley, New Burlington Street.

Interesting and Useful Presents to Youth.

In a neat pocket volume, illustrated with highly finished Engravings and several pieces of Music, price 7s. 6d.

KILLARNEY LEGENDS.

Edited by T. CROFTON CROKER, Esq.

"This is a right merry book, with a side-splitting power of fun, and a soul-stirring portion of powerful descriptive matter."—*Exeter Gazette*.

In 2 vols. 16mo. embellished with 22 Engravings, price, bound in cloth, 12s.; coloured Plates, 18s.; elegantly bound, gilt edges, 14s.; coloured Plates, 22s.

Scripture Natural History for Youth. By Esther Hewlett, now Copley.

"A more useful, or more pleasing present can scarcely be made to a young person than these interesting volumes. Their plan is novel, and its execution highly creditable to the author. Neither would we regret their utility to juvenile life—more advanced years may read and receive instruction; and adult piety may be improved by the instructions they give, and the meditations they suggest."—*York Courant*.

"Although there are many titles before the public on this subject, yet we have not seen one that embraces, in so brief a compass, so much useful matter."—*Atlas*.

In 2 vols. 16mo. embellished with 122 Engravings, price, neatly bound in cloth 18s.; elegantly bound, gilt edges, 20s.

Scripture History for Youth. By the Same Author.

"This is a very excellent work, and cannot be too strongly recommended to parents and heads of families. The whole work is admirably adapted to the capacities of young readers, and will not be despised by many of mature age."—*Exeter Gazette*.

In 4 vols. royal 18mo. embellished with 50 coloured Plates of Costumes, and several Woodcuts, price, in cloth, 32s.

The Modern Voyager and Traveller, through Europe, Asia, Africa, and America. By W. Adams, M.A.

In a pocket vol. price 6s.

Roman History for Youth. Illustrated by Seventy-six Engravings, from original Drawings by W. H. Brook, Esq.; engraved by H. W. and J. W. Esq. With a Series of Questions, and References for their Solution. By Thomas Rose. Fisher, Son, and Co.; and Simpkin and Marshall.

Newest Church History.

In 8vo. price 10s. 6d. boards, the First Volume of

THE HISTORY OF THE CHRISTIAN RELIGION AND CHURCH during the THREE FIRST CENTURIES.

By Dr. AUGUSTUS NISANDER.

Containing the History of the Persecutions of the Christians, Church Government, and Christian Life and Worship. Translated from the German.

By HENRY JOHN ROSE, B.D.

Fellow of St. John's College, Cambridge.

By LEITCH RITCHIE, Esq.

Five Hundred Copies are printed on royal 8vo. with Plates on India paper, price 2s. 6d. elegantly bound in rose-coloured morocco.

Early application is necessary to secure these Copies. Proofs of the Plates (a limited number taken) at the following prices—India, before letters, 4s.; India, with Letters, 5s.; Plain Proofs, 3s. 6d.

Printed for Longman, Rees, Orme, Brown, and Green.

In 2 vols. small 8vo. price 10s. In cloth,

HISTORICAL MEMOIRS of the HOUSE OF BOURBON.

"The design of this work is excellent. It was much to be desired that our own history were treated upon the plan of these volumes, which embrace most of the principles that ought to enter into modern historical composition."—*Monthly Review*.

Printed for Longman, Rees, Orme, Brown, and Green.

BOOKS IN THE PRESS.

Nearly ready, the Third and concluding Volume, with a fine Portrait of Queen Elizabeth, MEMOIRS of the great LORD BURGHLEY.

By the Rev. Dr. NARES.

Regius Professor of Modern History in the University of Oxford. Dedicated, by permission, to the Most Noble the Marquess of Salisbury and Exeter.

"This elaborate work is of the highest national interest. It embraces and discusses a multitude of great historical, biographical, religious, and political questions, and throws much light upon an era of almost unparalleled national and universal importance."—*Literary Gazette*.

"This work deserves to find an immediate place in every good historical library."—*Athenaeum*.

Henry Colburn and Richard Bentley, New Burlington Street.

On the 15th of December next will be published, in demy 4to. price 5s. tastefully bound and gilt, and containing 25 highly finished Engravings, &c.

FISHER'S DRAWING-ROOM SCRAP-BOOK. With Poetical Illustrations.

By F. R. FISHER.

Messrs. Fisher, Son, and Jackson, would scarcely feel themselves justified in adding another to the many beautiful Annuals presented as candidates for public favour, did not the Plan of their Work possess a distinct, and what they consider to be an improved, character.

1st. In the increased Number of Engravings—Thirty-six.

2dly. In the Literary Illustrations.

3dly. In the Period of Publication.

4thly. In the Size—Quarter.

Unlike the other Annuals, the Drawing-Room Scrap-Book will not anticipate its proper season; and on that ground alone is entitled to attention as a genuine and desirable novelty for a Christmas Present, or New Year's Gift.

Published by Fisher, Son, and Co.; Simpkin and Marshall;

and Tilt, London.

Rev. Hugh J. Rose's Works.

In a few days will be published, price 2s. boards, the 2d edition, enlarged, of

On November 1st, in small 8vo. 3s. cloth, with a Portrait of Archbishop Secker, the Sixth and concluding Vol. of

SUNDAY LIBRARY, containing Sermons

by Archbishop Secker—Bishops Bloomfield, Heber, Hansard, Malby, Mant, Parsons, and the Rev. G. G. Murray, H. H. Milman, R. Murchison, and Sydney Smith. With Notes, &c.

By the Rev. T. F. DIBDIN, D.D.

Printed for Longman, Rees, Orme, Brown, and Green.

In foolscap 8vo. neatly bound in cloth, price 3s. on the 1st of Nov. will be published, &c.

THE FAMILY TOPOGRAPHER; being a Compendious Account of the Ancient and Present State of the Counties of England. Home Classical Vol. I. comprising Essex, Hertfordshire, Kent, Surrey, Sussex.

Edited by SAMUEL TYTMS.

Plan of the Work.

I. Situation and Extent: the Boundaries, Dimensions, and Ecclesiastical Jurisdiction of the County—II. Ancient Sites and Remains; including those of the Britons, Romans, Anglo-Saxons, and Danes; the Monastic Establishments, and the Church Architecture; Castles, Mansions, Groves, &c.—III. Present State and Appearance: the courses of Canals and Rivers; Remarkable Reminences and Picturesque Scenery, Natural Curiosity, Public Buildings, Seats, Parks, Harbours, and Places returning Merit and Manufacture—IV. History: in a Chronological Table, with a view to its localities—V. A List of Eminent Natives—VI. Miscellaneous Observations.

A Map of each County will be given.

London: J. B. Nichols and Son, 25, Parliament Street.

On the 16th of November will be published, PICKERING'S ALDINE EDITION of the British Poets. Vol. XVII. price 2s. containing the Poems of Milton, Vol. I. with a Port. of Thomas Moore, and Moore.

By the REV. JOHN PICKFORD.

The following have already appeared, and may be purchased separately:—

The Poems of Byron form Vols. I. II.
The Poems of Thomson III. IV.
The Poems of Collins V.
The Poems of Blake VI.
The Poems of Cowper VII. VIII. IX.
The Poems of Barry and Wyatt X. XI.
The Poems of Beattie XII.
The Poems of Pope XIII. XIV. XV.
The Poems of Goldsmith XVI.

"Among the various works now appearing on short intervals, and at low prices, none is more noteworthy than Mr. Pickering's edition of our classical poets. It is edited with great care; next, each poet is preceded by a well-compiled biography; and more especially, because a well-edited collection of our national poetry is an essential in the library of every lover of literature. The editor has been most judiciously chosen; he has not only caught the attention of readers, who might otherwise have passed by these volumes, but he has also secured for them a permanent place in the library of every reader. It is something, certainly, to have an edition so carefully and so judiciously prepared, but it is a profitable manner, and by having up not only present gratification, but materials for future selection and application. We praise the judicious conduct of the biographer of Goldsmith, in arranging the notices from the various publications that have spoken of him, at the end of his career. Biography, the title is good, and one to be followed. The make (there) an interesting collection of one, and would have caused a confusion in the body of the memoir."—*Spectator*, No. 160.

William Pickering, 57, Chancery Lane, London.

On the 31st of October, price 1s. No. II. of THE UNION, MONTHLY MAGAZINE.

Contents:—I. Signs of the Times. II. The Reform Bill—III. Wicks in Westminster Hall. Mr. Russell's Speech—IV. Tales of Legal Fiction. No. 2—V. The Magistrate for 1826 (quite exclusive)—VI. The Bridal Morning—VII. Sketches in Italy, No. 2—VIII. Annuals and Artists: Pythe the Second—IX. The New Literary Police Office—X. Hereditary Literature. XI. Notes on the Month—XII. Fatimism—XIII. Repository. St. J. Wilson, 5, Wellington Street, Strand; and sold by all Booksellers.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, opposite Waterloo Bridge, Strand, and 12, South Molton Street, Oxford Street; sold also by J. Chappell, 10, Regent Street; J. B. B. Northumberland, 4, Ave. Market, London; W. G. Smith, 6, Strand; W. G. Smith and Son, 2, Rotherhithe, and Alderman and Co. Glasgow; and J. Cunningham, Dublin. Agents for America, O. Rich, 15, Red Lion Square, London.

J. MOYSE, 26, Castle Street, Leamington Spa.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 772.

SATURDAY, NOVEMBER 5, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Tour in England, Ireland, and France, in the Years 1828 and 1829; with Remarks on the Manners and Customs of the Inhabitants, and Anecdotes of distinguished Public Characters. In a Series of Letters. By a German Prince. 2 vols. 12mo. London, 1832. E. Wilson.

AN early, and hardly complete, copy of this work having been forwarded to us, we avail ourselves of it, and a great saving of trouble it is, to call the attention of the English public to that which in its original German had attracted our notice, but could not expect to be very generally known in this country except through a translation such as is now before us.

The name of the author, a Prussian of high rank, will be familiar to all our readers in the upper circles, when we mention Prince Puckler Muskau; and we look with much curiosity towards his third volume, promising a view of the fashionable society in London, in which he so conspicuously mixed. The present portion of his lucubrations relates to a tour in Wales, Ireland, and England; and it is long since we have met with a production of the kind more likely, as we say, to make a noise in the world.

It is interesting to hear what a foreigner of the most cultivated mind and great observation really thinks of us, our habits, and manners; and the prince has, in truth, not been guilty of much concealment of his opinions. On the contrary, he makes some remarks, and tells some stories, which cannot be very palatable to the parties concerned. That he is occasionally mistaken, and has also occasionally been rather hoaxed in the accounts given to him by natives, will appear to every well-informed reader; but we wish we could fairly assert, that our own travellers in foreign parts fall into as few exaggerations and blunders. It will also be seen, that in politics the prince is an ultra-liberal; in religion as established by law, a scoffer, though professing the purest moral sentiments, and the most exalted natural love of the Deity. Accordingly, his pages are tinged, and in instances stained, with opinions which many good men will condemn: but as our journal eschews such questions, leading to rancour and controversy, we shall be content with stating the fact, and leaving the argument. It is more consistent with our plan, and more agreeable to our spirit, to turn to the lively narrative and picturesque descriptions of the author; to his dashes of poetry, romance, and German enthusiasm; and to his characteristic traits of men and women.

The letters begin their date at Cheltenham, in July 1828, and are addressed to a certain "Dear Julia," for whose amusement they were nightly composed. While the impressions of the day were vivid on the memory of the writer. From Cheltenham he went to Wales, visiting the principal attractions of that interesting country, Llangollen, Conway Castle, Caernarvon, Snowdon, Capel Cerig, Beddgelert,

&c. &c. &c., and thence passed to Dublin. From the Welsh trip, swollen and disguised by the introduction of some inappropriate German criticisms on foreign works, and a bitter burlesque on "the saints" at home and abroad, we shall not offer many extracts; being desirous to illustrate more at length the Irish portion of these travels. The following tale of execution by slate, which the Prince received as gospel at the slate quarries near Bangor, will scarcely be credited by sceptics who never saw slates but on house-roofs, or in the hands of school-boys.

"It was like a subterranean world! Above the blasted walls of slate, smooth as a mirror, and several hundred feet high, scarcely enough of the blue heaven was visible to enable me to distinguish mid-day from twilight. The earth on which we stood was likewise blasted rock; just in the middle was a deep cleft six or eight feet wide. Some children of the workmen were amusing themselves in leaping across this chasm, for the sake of earning a few pence. The perpendicular sides were hung with men, who looked like dark birds, striking the rock with their long picks, and throwing down masses of slate which fell with a sharp and clattering sound. But on a sudden the whole mountain seemed to totter, loud cries of warning re-echoed from various points,—the mine was sprung. A large mass of rock loosened itself slowly and majestically from above, fell down with a mighty plunge, and while dust and splinters darkened the air like smoke, the thunder rang around in wild echoes. These operations, which are of almost daily necessity in one part or other of the quarry, are so dangerous, that, according to the statement of the overseer himself, they calculate on an average of a hundred and fifty men wounded, and seven or eight killed, in a year. An hospital, exclusively devoted to the workmen on this property, receives the wounded; and on my way I had met, without being aware of it, the body of one who had fallen the day before yesterday; 'car c'est comme un champ de bataille.' The people who escorted it were so smartly dressed and so decorated with flowers, that I at first took the procession for a wedding, and was shocked when, in answer to my inquiry for the bridegroom, one of the attendants pointed in silence to the coffin which followed at some distance. The overseer assured me that half these accidents were owing to the indifference of the men, who are too careless to remove in time and to a sufficient distance, though at every explosion they have full warning given them. The slate invariably splits in sharp-edged flakes, so that an inconsiderable piece thrown to a great distance, is often sufficient to cut a man's hand, leg, or even head, clean off. On one occasion, this last, as I was assured, actually happened."

At Caernarvon we have an explanation of the Prince of Wales's motto, usually rendered "I serve."

"The Welsh, in consequence of the oppressions of English governors in the earlier

times of partial and momentary conquest, had declared to the king that they would obey none but a prince of their own nation. Edward therefore sent for his wife Eleanor in the depth of winter, that she might lie-in in Caernarvon castle. She bore a prince; upon which the king summoned the nobles and chiefs of the land, and asked them solemnly whether they would submit to the rule of a prince who was born in Wales, and could not speak a word of English. On their giving a joyful and surprised assent, he presented to them his new-born son, exclaiming in broken Welsh, *Eich dyn!* i.e. 'This is your man!' which has been corrupted into the present motto of the English arms, *Ich dien*."

Having fixed his head-quarters for a while at Dublin, our traveller explored the surrounding scenes, and then wended his way to Connaught, Galway, Limerick, Killarney, &c. &c., going to many places rarely seen by the English tourist. From his views of these various parts, and their inhabitants, we select our illustrations. Of Dublin, he states:

"I found the park rather empty, but the streets through which I returned full of movement and bustle. The dirt, the poverty, and the ragged clothing of the common people often exceed all belief. Nevertheless, they seem always good-natured, and sometimes have fits of merriment in the open streets which border on madness—whisky is generally at the bottom of this. I saw a half-naked lad dance the national dance in the market-place, so long and with such violent exertion, that at last he fell down senseless amid the cheers of the spectators, totally exhausted, like a Mohammedan dervise. The streets are crowded with beggar-boys, who buzz around one like flies, incessantly offering their services. Notwithstanding their extreme poverty, you may trust implicitly to their honesty; and wretched, lean, and famished as they appear, you see no traces of melancholy on their open, good-natured countenances. They are the best-bred and most contented beggar-boys in the world."

Among the lions was that great lioness, Lady Morgan, on whom the Prince called with a letter of introduction, "and who (he says) had already sent me a polite invitation, which I had not been able to accept. I was very eager to make the acquaintance of a woman whom I rate so highly as an authoress. I found her, however, very different from what I had pictured her to myself. She is a little frivolous, lively woman, apparently between thirty and forty, neither pretty nor ugly, but by no means disposed to resign her claim to the former, and with really fine and expressive eyes. She has no idea of *maitresse honte* or embarrassment; her manners are not the most refined, and affect the *aisance* and levity of the fashionable world, which, however, do not sit calmly or naturally upon her. She has the English weakness—that of talking incessantly of fashionable acquaintances, and trying to pass for very *recherché*, to a degree quite unworthy of a woman of such distinguished

talents: she is not at all aware how she thus underrates herself. She is not difficult to know; for with more vivacity than good taste, she instantly professes perfect openness, and especially sets forth on every occasion her liberalism and her infidelity—the latter of the somewhat obsolete school of Helvetius and Condillac. In her writings she is far more guarded and dignified than in her conversation. The satire of the latter is, however, not less biting and dexterous than that of her pen, and just as little remarkable for a conscientious regard to truth. You may think that with all these elements two hours flew rapidly away. I had enthusiasm enough to be able to utter some *à propos* which pleased her, and she treated me with marked attention; first, because I happen to have a distinguished title; and, secondly, because she had seen my name as dancing at Almacks', and as present at several *fêtes* of the great leaders of ton—a circumstance which appeared so important in her eyes, that she repeatedly recurred to it."

As we happen to be upon personals, we may as well skip a half volume, and give the author's account of a visit to O'Connell, whose castle he reached after a ride from Kenmare, which amply justified his quotation from Crofton Croker, that "no land is better than the coast of Inveragh to be drowned in the sea; or, if you like that better, to break your neck on shore." His graphic detail of his perils is very amusing; but we hasten to their end at Derrinane, when "At length,—at length a bright light broke through the darkness; the road grew more even; here and there a bit of hedge was visible; and in a few minutes we stopped at the gate of an ancient building standing on the rocky shore, from the windows of which a friendly golden radiance streamed through the night. The tower-clock was striking eleven, and I was, I confess, somewhat anxious as to my dinner; especially as I saw no living being, except a man in a dressing-gown at an upper window. Soon, however, I heard sounds in the house; a handsomely dressed servant appeared, bearing silver candlesticks, and opened the door of a room, in which I saw with astonishment a company of from fifteen to twenty persons sitting at a long table, on which were placed wine and dessert. A tall handsome man, of cheerful and agreeable aspect, rose to receive me, apologised for having given me up in consequence of the lateness of the hour, regretted that I had made such a journey in such terrible weather, presented me in a cursory manner to his family, who formed the majority of the company, and then conducted me to my bed-room. This was the great O'Connell. On my return to the dining-room I found the greater part of the company there assembled. I was most hospitably entertained; and it would be ungrateful not to make honourable mention of Mr. O'Connell's old and capital wine. As soon as the ladies had quitted us, he drew his seat near me, and Ireland was of course the subject of our conversation. He asked me if I had yet seen many of the curiosities of Ireland? whether I had been at the Giant's Causeway? "No," replied I, laughing; "before I visit the Giant's Causeway, I wished to see Ireland's Giants;" and there-with drank a glass of claret to his high undertakings. Daniel O'Connell is indeed no common man,—though the man of the commonalty. His power is so great, that at this moment it only depends on him to raise the standard of rebellion from one end of the island to the other. He is, however, too sharp-sighted, and much too sure of attaining his end by safer

means, to wish to bring on any such crisis. He has certainly shewn great delicacy in availing himself of the temper of the country at this moment, legally, openly, and in the face of the government, to acquire a power scarcely inferior to that of the sovereign; indeed, though without arms or armies, in some instances far surpassing it:—for how would it have been possible for his Majesty George IV. to withhold 40,000 of his faithful Irishmen for three days from whisky-drinking? which O'Connell actually accomplished in the memorable Clare election. The enthusiasm of the people rose to such a height, that they themselves decreed and inflicted a punishment for drunkenness. The delinquent was thrown into a certain part of the river, and held there for two hours, during which time he was made to undergo frequent submersions. The next day I had fuller opportunity of observing O'Connell. On the whole, he exceeded my expectations. His exterior is attractive; and the expression of intelligent good nature, united with determination and prudence, which marks his countenance, is extremely winning. He has, perhaps, more persuasiveness than of genuine, large, and lofty eloquence; and one frequently perceives too much design and manner in his words. Nevertheless, it is impossible not to follow his powerful arguments with interest, to view the martial dignity of his carriage without pleasure, or to refrain from laughing at his wit. It is very certain that he looks much more like a general of Napoleon's than a Dublin advocate. This resemblance is rendered much more striking by the perfection with which he speaks French,—having been educated at the Jesuits' Colleges at Douai and St. Omer. His family is old, and was probably one of the great families of the land. His friends, indeed, maintain that he springs from the ancient kings of Kerry,—an opinion which no doubt adds to the reverence with which he is regarded by the people. He himself told me, —and not without a certain *pretension*,—that one of his cousins was Comte O'Connell, and 'cordon rouge' in France, and another a baron, general, and chamberlain to the Emperor of Austria; but that he was the head of the family. It appeared to me that he was regarded by the other members of it with almost religious enthusiasm. He is about fifty years old, and in excellent preservation, though his youth was rather wild and riotous. Among other things he became notorious, about ten years ago, for a duel he fought. The Protestants, to whom his talents early made him formidable, set on a certain Desterre,—a bully and fighter by profession,—to ride through all the streets of Dublin with a hunting-whip, which, as he declared, he intended to lay on the shoulders of the king of Kerry. The natural consequence was a meeting the next morning, in which O'Connell lodged a bullet in Desterre's heart; Desterre's shot went through his hat. This was his first victory over the Orangemen, which has been followed by so many more important, and, it is to be hoped, will be followed by others more important still. His desire for celebrity seemed to me boundless; and if he should succeed in obtaining emancipation, of which I have no doubt, his career, so far from being closed, will, I think, only then properly begin. But the evils of Ireland, and of the constitution of Great Britain generally, lie too deep to be removed by emancipation. To return to O'Connell; I must mention, that he has received from Nature an invaluable gift for a party-leader; a magnificent voice, united to good lungs and a

strong constitution. His understanding is sharp and quick, and his acquirements out of his profession not inconsiderable. With all this, his manners are, as he said, winning and popular: although what of the actor is perceptible in them, he does not conceal his very high opinion of himself, and are occasionally tinged by what an Englishman would call '*vulgarity*.' Where is there a man more entirely without shade?—Another interesting man, the real though not ostensible head of the Catholics, was present, Father L'Estrange, a friar, and O'Connell's confessor. He may be regarded as the real founder of that Catholic Association so often derided in England, but which, by merely negative powers, by dexterous activity in secret, and by universally organising and training the people to one determinate end, attained a power over them as boundless as that of the hierarchy in the middle ages; with this difference, that the former strove for light and liberty, the latter for darkness and slavery. This is another outbreak of that second great revolution, which, solely by intellectual means, without any admixture of physical force, is advancing to its accomplishment, and whose simple but resistless weapons are public discussion and the press. L'Estrange is a man of philosophical mind and unalterable calmness. His manners are those of an accomplished gentleman, who has traversed Europe in various capacities, has a thorough knowledge of mankind, and, with all his mildness, cannot always conceal the sharp traces of great astuteness. I should call him the ideal of a well-intentioned Jesuit. As O'Connell was busy, I took an early walk with the friar to a desert island, to which we crossed dry-footed over the smooth sand now left by the ebb. Here stand the genuine ruins of Derrinane Abbey, to which O'Connell's House is only an appendix. It is to be repaired by the family, probably when some of their hopes are fulfilled. On our return we found O'Connell on the terrace of his castle, like a chieftain surrounded by his vassals, and by groups of the neighbouring peasantry, who came to receive his instructions, or to whom he laid down the law. This he can the more easily do, being a lawyer; but nobody would dare to appeal from his decisions: O'Connell and the Pope are here equally infallible. Law-suits therefore do not exist within his empire; and this extends not only over his own tenantry, but, I believe, over the whole neighbourhood. I wondered, when I afterwards found both O'Connell and L'Estrange entirely free from religious bigotry, and even remarked in them very tolerant and philosophical views, though they persisted in choosing to continue true Catholics. I wished I had been able to conjure hither some of those furious imbeciles among the English Protestants,—as for instance Mr. L., who cry out at the Catholics as irrational and bigoted; while they themselves alone, in the true sense of the word, cling to the fanatical faith of their politico-religious party, and are firmly predetermined to keep their long ears for ever closed to reason and humanity."

From Derrinane, with the owner of which he so well agreed in sentiment, the prince returned to Kenmare: thence he made an excursion "to Hungry Hill (he tells), a lofty mountain at the end of Bantry Bay, remarkable for its waterfall, and for Thomas O'Rourke's right to the moon on an eagle's back, which began here, and has so often been related in prose and verse. Even in Germany this amusing tale has been repeatedly translated, and has probably fallen into your hands. The hero of the

story is a gamekeeper of Lord B——'s, who is still alive, and almost always drunk. On our return, Colonel W—— introduced him to me at the inn. He is now extremely proud of his celebrity, and seemed to me when I saw him to be projecting another visit to the moon."

This is one of the whimsical Irish appropriations of a fiction to some living individual. Little could Croker dream, when he invented Terence O'Rourke's dream, that it would have its exact truth thus corroborated!

One other extract must now conclude this our first notice of a very striking and amusing work.

Donnabrook Fair.—"I rode out again to-day for the first time to see the fair at Donnabrook, near Dublin, which is a kind of popular festival. Nothing, indeed, can be more national. The poverty, the dirt, and the wild tumult, were as great as the glee and merriment with which the cheapest pleasures were enjoyed. I saw things eaten and drunk with delight which forced me to turn my head quickly away to remain master of my disgust. Heat and dust, crowd and stench (*il faut le dire*), made it impossible to stay long: but these do not annoy the natives. There were many hundred tents, all ragged like the people, and adorned with tawdry rags instead of flags: many contented themselves with a cross on a hoop—one had hoisted a dead and half-putrid cat as a sign! The lowest sort of rope-dancers and posture-masters exercised their toilsome vocation on stages of planks, and dressed in shabby finery, dancing and grimacing in the dreadful heat till they were completely exhausted. A third part of the public lay, or rather rolled about, drunk; others ate, screamed, shouted, and fought. The women rode about, sitting two and three upon an ass, pushed their way through the crowd, smoked with great delight, and coquetted with their sweethearts. The most ridiculous group was one which I should have thought indigenous only to Rio de la Plata. Two beggars were seated on a horse, who, by his wretched plight, seemed to supplicate for them; they had no saddle, and a piece of twine served as reins. As I left the fair, a pair of lovers, excessively drunk, took the same road. It was a rich treat to watch their behaviour. Both were horribly ugly, but treated each other with the greatest tenderness and the most delicate attention. The lover especially displayed a sort of chivalrous politeness. Nothing could be more gallant, and at the same time more respectful, than his repeated efforts to preserve his fair one from falling, although he had no little difficulty in keeping his own balance. From his ingratiating demeanour and her delighted smiles, I could also perceive that he was using every endeavour to entertain her agreeably; and that her answers, notwithstanding her *exalté* state, were given with a coquetry and an air of affectionate intimacy which would have been exquisitely becoming and attractive in a pretty woman. My reverence for truth compels me to add, that not the slightest trace of English brutality was to be perceived: they were more like French people, though their gaiety was mingled with more humour and more genuine good-nature; both of which are national traits of the Irish, and are always doubled by potheen (the best sort of whisky illicitly distilled). Don't reproach me for the vulgarity of the pictures I send you: they are more akin to nature than the painted dolls of our salons."

We conclude, for the present; adding, that the translator has acquitted himself most ably, both in rendering his original, in omitting

common-places, and in supplying notes where needed."

The Romance of History—Italy. By Charles Macfarlane. 3 vols. 12mo. London, 1832. Bull.

THE Romance of Italian History—what a world of adventure and imagination are in that single phrase! Venice, with her brides, the lost and the recovered in one single day; captive queens but stepping from a prison to a throne; pilgrims, knights, with all their picturesque associations;—these are the rich materials which Mr. Macfarlane has most judiciously worked up into spirited and interesting narrative. The manners and events of the time are thus brought forward in their most attractive shape; and the youthful reader will have imbibed, almost unconsciously, a clear idea of the time, and a great body of historical information, while carried on by some pleasant story. The following scene is like a rich arabesque.

The Festival of St. John the Baptist.—"The Vatican itself could hardly have offered a more splendid hierarchical display than that which met the eye when the doors of the temple were thrown open, and the shrine of Saint John, decorated with gold and silver and precious stones, and flanked by two long lines of monks with shaven crowns and robes picturesquely simple, and of priests in costly stoles, was opened to the thronging worshippers. The incense breathed as sweetly, the tapers and the torches of virgin wax shed as brilliant a light, as if the successor of Saint Peter himself had presided at the festival. Moreover, the Lombards had adopted in their churches the inestimable gift of dignity and beauty which St. Gregory had bestowed on the ecclesiastical service in his sublime 'Canto fermo'; and whatever may have been the degree of spiritual unction, the mass and the hymns to the saint were just as well sung at Monza as they could have been at Rome. In ancient days, as in modern, under the Christian creed as under the pagan, it seems to have been the practice, more particularly in the glowing, exhilarating climes of Italy and Greece, to mix festivity and diversion with worship and prayer, and that the spiritual exercises of the morning should be followed by the recreations of the body, and by feasting and dancing, singing and drinking. Even as we now see it in the 'Giorni di festa' at Rome or Naples, did it befall at Monza; for as soon as the splendid ceremonies of the church were over, the scene without assumed all the characters of a country fair and a scene of general rejoicing. Nor was it an unpleasant sight to see the collected thousands scattered on the verdant hills, or laid under the shade of trees, or by the gushing fountains whose cool waves might mitigate the force of the wines of Lombardy and Piedmont; nor was it at all ungrateful to the ear to catch the distant roar of mingled voices speaking various tongues, and the long, loud laugh, and the festive chorus, and the sounds of such musical instruments as barbarians and Italians could collect and play."

* Since writing the foregoing, we have seen the preface to the work, which shows us that the German edition had been reviewed by a no less celebrated critic than Göthe. We are flattered by finding that his opinions coincide so closely with our own respecting it; and we quote one striking passage from his remarks. "The peculiarities of English manners and habits are drawn vividly and distinctly, and without exaggeration. We acquire a lively idea of that wonderful combination, that luxuriant growth,—of that insular life which is based in boundless wealth and civil freedom, in universal monotony and manifold diversity: formal and capricious, active and torpid, energetic and dull, comfortable and tedious, the envy and the derision of the world."

"The back part of their heads was shaved, and in front their thick, matted hair, divided over the forehead, fell down on each side of the face as low as the line of the mouth, over which, as well as across the eyes, motion or the wind would frequently throw it, and shaggy beards of enormous length, from which they are supposed to have derived their name of Longohardi, completed their hirsute appearance. Their dress consisted of loose linen garments, much after the fashion of our Anglo-Saxons, and they were rather gaudily than tastefully ornamented with broad stripes of variegated colours—red, yellow, purple, blue, and green, sewn on transversely. In Italy they had found silks, and silks worked by eastern looms, and dyed with the brilliant dyes of the East, which added considerably to the splendour of their appearance. Their legs were encased in long hose which reached to the ankle, and they wore open sandals on their otherwise naked feet; but many of the courtiers had adopted from the Italians the use of *stivalletti*, or long gaiters made of woollen cloth of a bright red or scarlet colour. The *gasindj*, or domestic and military attendants, had placed against the wall, behind each chieftain, his *asta*, or lance; and, even at the festive board of their sovereign, their heavy swords were heard to rattle, and their iron baskets and their hilts were seen at times to protrude above the level of the table."

The Wandering King is an eventful history of those troubled times: its hero, however, escapes all his manifold dangers, and finally ascends the throne of his ancestors.

"Seven years after this happy restoration, the following facts occurred, which are too interesting and honourable to the Lombard king to be passed over in silence. A certain Wilfred, bishop of York, driven from his home by some intrigue among the Anglo-Saxons, reached the dominions of Bertarid on his way to Rome. Whilst there, messengers arrived from England, offering immense sums to the king if he would throw the bishop into prison, and prevent his going to Rome. The exiled ecclesiastic appeared at the palace, and was informed by the king of the answer he had given his enemies. 'In my younger days I also was driven from my country. I went a hapless wanderer, and sought and found refuge from a certain king of the Huns, and of the sect of the pagans, who, with an oath to his false god, pledged himself never to give me into the hands of mine enemies, nor to betray me. After some time the ambassadors of mine enemies came and promised with an oath to the same king, to give him a bushel full of gold coins if he would place me in their power, that they might kill me. To which the king answered, 'I would expect death from the gods if I committed this iniquity, and trampled on the vow made to my divinities.' Now, how much the more I, who know and adore the true God, ought to be far from such a crime? I would not give my soul to gain the whole world!'"

Mr. Macfarlane says, in his preface, "some few of the tales were written at Naples, in the scenes of the events; and, generally, I have taken my descriptions from notes made during my travels; seldom attempting to describe what I have not seen, or indeed what was not familiar to me from long residences or repeated visits. A little enthusiasm will probably be excused in one, who, considering the present length of his life, has passed a good portion of it in that beautiful country, with little else to do but to see and to admire."

We have quoted this passage to show the advantages our author has possessed, and also to add, that he deserved them, to knowledge and romantic incident he has brought industry and talent; and the Romance of the History of Italy merits well of public favour.

The Village Patriarch. 12mo. pp. 198. *Corn-Law Rhymes.* 3d edition. 12mo. (pp. 115. London, 1831. Steill.

THERE is a great deal of talent that we admire, a great deal of bad taste that we disapprove, and some bad feeling, for which we can make allowances rather than excuses, in these little volumes. The writer before us is evidently a disappointed, and therefore a discontented, man: we are too well acquainted with the hardships and anxieties of a literary career, not to know how they irritate the feelings and sour the temper: add to this, political excitement,—and we marvel at no expression, however violent, we were going to have said ferocious. The author of the *Village Patriarch* is a person of no ordinary stamp; and it must have been grievous, indeed, to such a mind to be constantly putting forth efforts that were unappreciated, and making exertions that met not with their reward. An article in the *New Monthly Magazine* of last April, written in the best spirit of criticism—that of candid and liberal encouragement—first directed public attention to one of the writer's poems: the tone in which this is acknowledged is singularly characteristic of the angry and prejudiced man—"What! in the land of castes and cant, take a poor self-educated man by the hand, and declare to the world that his book is worth reading!" Again, in another place, he speaks of "the absurdity of supposing any of them will notice 'a poor man's book.'" Now, this is exceedingly untrue. That literature is a great lottery, no one who knows any thing of it will deny; but that the mere fact of "the author's being a poor man" would prevent praise being awarded, is in the face of all experience; on the contrary, an adventurous interest has always been felt in the works of what are called "uneducated poets;" and, as far as critics are concerned, the writer may rely upon it, they take an interest in the merit they discover. Of our author's politics we shall only say, he is as prejudiced as passion always is; and that, let an existing abuse be what it will, coarse and virulent language will go but a little way as a remedy. We must also add, that the whole tendency of these works is mischievous. It is the fashion of the present day to rail at "all powers that be;" to fancy that any change must be for the better; and to lay the fault of whatever ills are being endured on the existing government—utterly forgetful of that old truth, though not the less true for being old—

"How small, of all that human hearts endure,
The part that laws or kings can cause or cure!"

The worst of inflammatory writings like the present is, that they give an imaginary point of relief to actual sufferings; for example, though this is no place to decide on the good or evil effects of the corn-laws, still it stands to reason, that it is quite ridiculous to throw upon them the blame of all existing misery: if they were repealed to-morrow, that man is a fool or a knave who would tell the starving poor that there would at once be an end to their wretchedness. Moreover, it is equally irritating and delusive to be eloquent on the much happier condition of our grandfathers! When did this state of prosperity ever exist? We find sorrow, discontent, and poverty, in every period

and every record of human history. The mania for change, the reference of all grievances to a political cause, are reigning and dangerous fashions of the present day. There is no belief into which people may not and do not talk themselves; and our countrymen are doing all they can to persuade themselves and their neighbours that they are the most miserable, the most ill-used, and the most oppressed people in the world. It were far better to weigh a little more our advantages against our disadvantages; and instead of comparing our position with some theory of unattainable perfection, just contrast it with the actual condition of three fourths of the inhabited globe. But no: it is all discontent, and no thankfulness; and such a work as the one now before us, taking some individual hardship as the rule, not the exception—dealing out exciting and violent abuse on all that have the outward seeming of worldly prosperity—and accusing ministers and laws as sole causes of every human misfortune,—such a work as the present is, we do repeat, bad in spirit, and pernicious in tendency. We now turn to the volume itself.

The poet thus describes his hero:—"The *Village Patriarch* is a sort of history, in verse, of a blind old whig or jacobin, who ought to have been sent to the tread-mill. He was, it seems, a bricklayer; and he died of free-trade and the corn-law, at the tender age of a hundred years. Of course, he was buried at the expense of the parish, as whigs and radicals generally are." Inflammatory falsehood enough in one phrase.

Again:

"The unhappy people of the United States cannot bear to read Crabbe. They think him unnatural, and he is so to fight; for in their wretched country cottagers are not paupers, young men are not compelled to marry or become preachers, marriage is not synonymous with misery, and partridge-shooting is not religion to the elect. But I write for Englishmen; and every true Briton, or anti-Huskissonian, ought to buy my goods."

The poet peeps through the patriot, after all. America is the Utopia of our pseudo-politicians—all its advantages, of course, referred to its republican form of government—utterly forgetful of these simple facts; first, that the great advantage which America possesses is, that it is a fertile country thinly peopled—a blessing which would be somewhat diminished if the population of England, Ireland, and Scotland, could suddenly be transported to that favoured soil; and, secondly, that the majority of the backwood settlers endure privations and go through hardships which would startle half the indwellers of our town or country.

Now to the poetry: the first passage we quote is the only specimen we intend giving of our author's peculiar faults; indeed, it embodies them all—viz. ludicrous expressions, unfair conclusions, and violence. Enoch is walking through the town—

"Thou meanest thing that Heav'n endures and spares—
Thou upstart dandy, with the cheek of lead!
How dar'st thou from the wall push those gray hairs?
Dwarf, if he lift a finger, thou art dead!
His thumb could fillip off thy worthless head;
His foot, uplifted, spurn thee o'er the moon.
'Some natural tears he drops, but wipes them soon,'
And thinks how changed his country and his kind
Since he, in England's and in manhood's noon,
Toil'd lightly and earn'd much.

Beadle! how canst thou smite with speech severe,
One who was revered long ere thou wast born?
No homeless, soulless beggar meets thee here,
Although that threadbare coat is patch'd and torn:
His bursting heart repels thy taunt with scorn.

But deems thee human, for thy voice is man's.
You, too, proud dame, whose eye so keenly scans
The king's blind subject on the king's high road:
You, who much wonder, that, with all our plans
To starve the poor, they still should crawl abroad."

First, the absurdity of being kicked over the moon; secondly, when did "England's noon" exist? thirdly, the allusion to the beadle and to the lady—as if a positive wish was felt, and a positive plan existed, "to starve the poor." God knows, people are fearfully regardless one of the other; and it cannot be too often or too forcibly impressed on the rich, the awful responsibility they are under to their Maker, of what account they shall render of the poor "committed to their charge." The rich man who sees want which he can and does not relieve, has been guilty of a positive sin, for which a terrible reckoning will be exacted.—We now turn to what is, whatever authors may think, far the pleasanter part of our task—that of selecting merits. If a fine feeling for natural beauty, an exquisite power of investing those feelings in words, a vein of generous sympathy, and that indefinable music in language which has a sweetness "more than rhyme,"—if these can constitute a poet, the author of the *Village Patriarch* is one in the best and purest acceptation of the word. We proceed to a series of extracts.

A winter landscape.

"Through fiery haze broad glares the angry sun;
The travel'd road returns an iron sound;
Rings in the frosty air the murderous gun;
The fieldfare dies, and heavy to the ground,
Shot in weak flight, the partridge falls, his wound
Purple with water'd drops the crusted snow."

The widow.

"But, mourning better days, the widow here
Still tries to make her little garden bloom—
For she was country born. No weeds appear
Where her poor pinches deplore their prime-time bloom:
To them, alas! no second spring shall come!
And there, in May, the blue gipsy for breath,
And mint and thyme seem find their ways to speak—
Like saddest portraits, painted after death:
And upspring wallflowers, in the choking reek,
For life, for fire, uplift their tattered weeds.
Pale, dwindled lad, that on her slated shop
Sett' moss and grumbled from the frosty lee!
O'er them no more the daffs were shall be:
Poor plants! poor child! pity them and thee:
Yet blame I not wise Mercy's high decree:
They fade, thou diest—but thou to live again,
To bloom in heav'n. And will thy flowers be there?
Heav'n without them would smile for thee in vain.
Thither, poor boy, the primrose shall repair:
There violets breathe of England's dewy air,
And daisies speak of her, that dearest one,
Who then shall bend above thy early bier,
Mourning her feeble boy for ever gone,
Yet long to clasp his dust for ever here!
No, no, it shall not want or flower or tear!
In thy worn band her sorrow will not fail
To place the winter rose, or wind-flower meek;
Then kiss thy marble smile, thy forehead pale,
But not the icy darkness from thy cheek:
Then gaze—then press her heart, that yet shall beat.
And feebly sob, 'My child! we part, to meet.'"

We have read nothing more touching than the above picture. A ruined cottage is also beautiful.

"Neglect long since divorced the jasmine pale
That clasp'd the casement; and the sorrowing oak
Sighs o'er the plot where erst thy choice seven
bloom'd.
Ah! when the cottage garden runs to waste,
Full oft the rank weed tells of hopes outworn."

With one exception, how fine is the following!

"Recall
The deeds of other days; and from the urn
Of things which were, shake words that breathe and burn.
O'er the dark mantle of the night are shed
Sparks of the sun, in starry sparkle proud:
In May's spring, when morn his radiant band
Veils, the rich bloom, with glittering diamonds bow'd,
Is sunny light beneath the sunless cloud."

There is a meanness in a term of artificial ornament as applied to the glorious sky: "starry spangles" is fitter description for a bangle-trimming than for "the poetry of heaven."

The Sabbath.

"But, hark! the chimes of morning die away!
Hark!—to the heart the solemn sweetness steals,
Like the heart's voice, unfelt by none who feels
That God is love, that man is living dust;
Unfelt by none whom ties of brotherhood
Link to his kind; by none who puts his trust
In nought of earth that hath survived the flood,
Save those mute charities, by which the good
Strengthen poor worms, and serve their Maker best."

Fine portrait of a peasant, allowing for the exaggerated beginning:

"Thall thought he be
Of brutes who bite him while he feeds them, still
He feels his intellectual dignity,
Works hard, reads usefully, with no mean skill
Writes, and can reason well of good and ill.
He hears his weekly groat: his tear is shed
For sorrows which his hard-work hand relieves.
Too poor, too proud, too just, too wise to weep,
(For slaves enough already toil for thieves.)
How gratefully his growing mind receives
The food which tyrants struggle to withhold!
Though hourly life his every sense invade,
Beneath the cloud that o'er his home is roll'd,
He yet respects the power which man hath made,
Nor loathes the despot-humbling sons of trade,
But when the silent Sabbath-day arrives,
He seeks the cottage, bordering on the moor,
Where his forefathers pass'd their fowly lives,
Where still his mother dwells, poorest, though poor,
And ever glad to meet him at the door.
Oh, with what rapture he prepares to fly
From streets and courts with crime and sorrow strew'd,
And bids the mountain lift him to the sky!
How proud, to feel his heart not all subdued!
How happy, to shake hands with solitude!
Still, Nature! still he loves thy uplands brown,
The rock that o'er his father's freehold towers!
And strangers, hurrying through the dingy town,
May know his workship by its sweet wild flowers.
Cropp'd on the Sabbath, from the hedge-side bowers,
The hawthorn blossoms in his window droop;
Far from the headlong stream and lucid air
The pallid alpine rose to meet him steep,
As if to soothe a brother in despair.
Exil'd from Nature and her pictures fair,
E'en winter sends a pony to his jail,
Weath'rd of the sunny celandine—the brief
Courageous wind-sown, loveliest of the fall—
The hazel's crimsons—the woodbine's last
The daisy, with its half-closed eye of grief,
Prophets of fragrance, beauty, joy, and song."

The next passage is very characteristic of the writer.

"O that my poetry were like the child
That gathers daisies from the lap of May,
With prattle sweeter than the bloomy wild!
It then might teach poor wisdom to be gay
As flowers, and birds, and rivers, all at play,
And winds, that make the voiceless clouds of morn
Harmonious. But distemper'd, if not mad,
I feed on nature's bane, and mess with scorn.
I would not, could not, if I would, be glad,
But, like shade-loving plants, am happiest sad.
My heart, once soft as woman's tear, is gnarl'd
With gloating on the ill I cannot cure."

Fine image.

"In those fearful days
When, tempest-driv'n, and toss'd on troubled seas,
Thought, like the petrel, loved the whirlwind best,
And o'er the waves, and through the foam with ease,
Rose up into the black cloud's thunderous breast,
To rouse the lightning from his gloomy rest."

Spring landscape.

"Flowers peep, trees bud, boughs tremble, rivers run;
The redwing saith, it is a glorious morn.
Blue are thy heavens, thou! Highest! and thy sun
Shines without cloud, all fire. How sweetly, borne
On wings of morning o'er the leafless thorn,
The tiny wren's small twitter warbles near!
How swiftly flashes in the stream the trout!
Woodbine! our father's ever watchful ear
Knows, by thy rustle, that thy leaves are out.
The trailing bramble hath not yet a sprout;
Yet harshly to the wind the wanton prates,
Not with thy smooth lip, woodbine of the fields!
Thou future treasurer of the bee, that waits
Gladly on thee, Spring's harbinger, when yields
All-bounteous earth her od'rous flowers, and builds
The nightingale, in beauty's fairest land."

We contrast this with a scene in winter.

"How wild, how wondrous, and how changed the scene
Since yesterday! On hill and valley bright
Then look'd broad heav'n all splendid and serene,
And earth and sky were beauty, music, light.
But now the storm-cock shakes the powdery white,
With start impatient, from his whitening wings,
And, on the maple's loaded bough, nestle'd,
Perch'd o'er the buried daisy, water wings,
With modulated throat and speckled breast,
To cheer the hen-bird, drooping in the nest
On dusky eggs with many a dot and streak.

Love of the celandine, and primrose meek,
Star of the leafless hazel, where art thou?
Where is the wind-flower, with its modest cheek?
Larch! hast thou fled from thy denuded bough?
Blossoms that stole their rose-hues from the glow
Of even, blushing into dreams of love?
Flowers of the wintry beam and faithless sky!
Gems of the wither'd bank and shadeless grove!
Ye are where he who mourns you soon must lie;
Beneath the shroud ye slumber—tranquilly,
But not for ever. Yet a sudden hour
Shall thaw the spotless mantle of your sleep,
And bid it, melted into thunder, pour
From mountain, waste, and fell, with foamy sweep,
Whelming the flooded plain in ruin deep.
Yes, little silent minstrels of the wild,
Your voiceless song shall touch the heart again!
And shall no morning dawn on Sorrow's child?
Shall buried mind for ever mute remain
Beneath the sod, from which your beauteous strain
Shall yet arise in music, felt, not heard?
No! faith, hope, love, fear, gladness, frailty, all
Forbidden that man should shut him out. Like the bird
That scorns to sing in Nature's festival,
Our souls shall rise, and fear no second fall;
Our adoration strike a lyre divine."

The annexed, though brief, merit high distinction. Fine line.

"Born to die young, he fears nor man nor death."

Equally fine touch of personal allusion.

"Decision, like a ready sword updrawn,
Reposed, but slept not."

Description of a supernatural sea.

"No winds urged on the billow, living roll,
But whirlwind dwelt within it, like a soul."

Parting.

"The meanest thing to which we bid adieu,
Loses its meanness in the parting hour.
When long neglected, worth seems born anew;
The heart that scorns earth's pageantry and power,
May melt in tears, or break, to quit a flower."

Anticipation of death.

"And o'er his heart the long grass of the grave
Already trembles!"

A church.

"Thou antique fane, that in thy solemn suit
Of carved flowers, and stone-embroidery grand,
(Oh, yet unshaken—solistent, though mute.)
Towers't, like the sculptur'd guardian of the land;
Thy reverend looks that bourn seem to withstand,
And feel nor throb like love, nor chill like fear,
Nor glow like adoration? The leaves fall
Around thee—men fall with them; both are here:
While thou alike view'st brutal robe and pall,
Sovereign of marriage and of funeral;
Witness of ages, and memorial hour
Of generations to eternity
Gone, like the hour that can return no more."

Touching epitaph.

"Here rests a stranger: she had once a name;
Weep for the gentle dust that died of shame."

Fine idea of a blind person.

"The beam of beauty left his cheerful eyes,
To glow more deeply, brightly, in his heart."

These beautiful passages, beautiful in feeling as in their expression, are quite out of keeping with many of their companions, with coarse and absurd imagery and political virulence: for example, where he talks of

"Minkon'd Erin's sty'd and root-fed clown;"

or where it is said the snake moves

"Uncoil'd o'er cranshy roots and fern-stalks dry,
He thinks he sees thee, colour'd like the stone,
With cruel and atrocious Trol eye."

or rant like the following:—

"Sworn anti-catholic, and tried true-blue;
Champion of game-laws and the trade in slaves;
Mouth of the bread-tax; purchased tongue of knaves."

Clerk! thief! contractor! boroughmonger! peer!
His mercy would be cruelty in hell;
His actions say to God, "Submit to me!"
Dey of Starvation, dark and terrible!
Men's purses may submit to thy decree;
But why should conscience have no god but thee,
Thou charioted blasphemer? Hence, away
To Spain, or Naples, with thy loathsome scowl;
Why stay'st thou here, to fuddle tax'd to-day?
Go, be the Inquisition's holiest goul,
And gorge with blood thy sulky paunch of soul!"

Or in the churchyard:—

"Here lies a rogue, whose crime was poverty!
And still Sir Cornlaw sleeps in marble near!
Bones of the treadmill slave! what do ye here?"

Or similes like this:—

"She frown'd, she furr'd, like eggs with bacon fried;"
Or, "The old man's face was like a withered apple."

"Then boys, all glad, as bottled wasps let loose."

Enoch Wray has a dream, the conception of which is fine; but we cannot see what right any poet has to deal in this wholesale damnation. The following is execrable; particularly as it is impossible not to identify the minister so ferociously consigned to this poetical hell.

"Then sprang they on him, and his muscles rent
With cranshy teeth; and still their hate increased
As fast it fed, and joyful sounds forth sent;
Yet from the rapturous banquet oft they ceased,
Exclaiming, in the pauses of the feast,
Ice-hearted dog! when fell the crimson dew
At Wexford, there we died! in dungeons we!
We of slow famine: we at Peterloo!"

Of course our author takes poachers under his especial care; the unfortunate

"Who kill'd the harmless hare that ate his kale:
Atrocious crime! for which he sternly bore
Slow pain and wasting fever in a goal:
He perish'd there."

Will any one who knows any thing of country life allow that this is a true picture? Who are the poachers?—the dishonest and the disreputable of a parish, with whom poaching is any thing but a single act of dishonesty. Where there is human authority, there will always be human abuse; and we do not suppose that the game, any more than other, laws are not harsh upon particular individuals:—we are not even defending them; we only say there is something very absurd in the sentimental interest so many writers of the present day have a fancy for throwing round poachers and smugglers.

We now proceed to the *Corn-Law Rhymes*, which are even more virulent and prejudiced than the *Village Patriarch*. The following remark about Burns is one sample among many of false assertion and perverted views.

"Will they learn from the writings of Burns, and from his life, that, during a certain crusade for ignominy, it was necessary yet perilous, and in his case, fatal, to say, 'the man's the goud for a' that?'" We never heard Burns held up as a political martyr before.

We will not trouble ourselves to quote the precise opinions of the "Sheffield Mechanics' Anti-bread-tax Society;" but simply extract two or three favourable poetical specimens.

Landscape.

"Look on the clouds, the streams, the earth, the sky,
Lo, all is interchange and harmony!"

Where is the gorgeous pomp which yester morn
Curtailed yon orb with amber fold on fold?
Behold it in the blue of Rivelin borne
To feed the all-feeding sea! the molten gold
Is flowing pale in Loxley's crystal cold,
To kindle into beauty tree and flower.
And wake to verdant life hill, vale, and plain.
Cloud trades with river, and exchange is power:
But should the clouds, the streams, the winds disdain
Harmonious intercourse, nor dew nor rain
Would forest-crown the mountains: airless day
Would blast, on Kinderhook, the heathy glow;
No purply green would meekken into gray,
O'er Don at eve; no sound of river's flow
Disturb the sepulchre of all below."

Again.

"When by our Father's voice the skies are riven,
That, like the winnowed chaff, disease may fly;
And seas are shaken by the breath of heaven,
Lost in their depths the living spirit die;
Man views the scene with awe but grateful eye,
And trembling feels, could God abuse his power,
Nor man nor nature would endure an hour.
But there is mercy in his seeming wrath;
It smites to save, not, to destroy; to slay;
And storms have beauty as the lily hath;
Grand are the clouds that, mirrored on the bay,
Roll like the shadows of lost worlds away.
When bursts through the broken gloom the startled light;
Grand are the waves that like the broken gloom
Are smitten into splendour by his might;
And glorious is the storm's tremendous boom,
Although it waleth o'er the watery tomb,
And is a dreadful ode on ocean's drowned."

We conclude with a most affecting and striking poem, "the Death-feast."

"The birth-day, or the wedding-day,
Let happier mourners keep;
To death my festal vows I pay,
And try in vain to weep.
Some grief the strongest soul might shake,
And I such grief have had;
My brain is hot—but they mistake
Who deem that I am mad.
My father died, my mother died,
Four orphans poor were we;
My brother John worked hard, and tried
To smile on Jane and me.
But work grew scarce, while bread grew dear,
And wages lessened too,
For Irish hordes were bidders here
Our half-paid work to do.
Yet still he strove, with falling breath
And sinking cheek, to save
Consumptive Jane from early death—
Then joined her in the grave.
His watery hand in mine I took,
And kissed him till he slept;
O, still I see his dying look!
He tried to smile, and wept!
I bought his coffin with my bed,
My gown bought earth and prayer;
I pawned my mother's ring for bread,
I pawned my father's chair.
My Bible yet remains to sell,
And yet unsoiled shall be;
But language fails my woes to tell—
Even crumbs were scarce with me.
I sold poor Jane's gray linen then,
It cost a groat a-year;
I sold John's hen, and misad the hen
When eggs were selling dear;
For autumn nights seemed wintry cold,
While seldom blazed my fire,
And eight times eight no more I sold
When eggs were getting higher.
But still I glean the moor and heath;
I wash, they say, with skill;
And workhouse-bread ne'er crossed my teeth—
I trust it never will.
But when the day on which John died
Returns with all its gloom,
I seek kind friends, and beg, with pride,
A banquet for the tomb.
One friend, my brother James, at least
Comes then with me to dine;
Let others keep the marriage-feast,
The funeral feast is mine.
For then on him I fondly call,
And then he lives again!
To-morrow is our festival
Of death, and John, and Jane.
Even now, behold! they look on me,
Exulting, from the skies,
While angels round them weep to see
The tears gush from their eyes!
I cannot weep—Why can I not?
My tears refuse to flow:
My feet are cold, my brain is hot—
Is fever madness? No.
Thou smilest, and in scorn—but thou,
Couldst thou forget the dead?
No common beggar curls now,
And begs for burial bread."

And what this poem describes happens, say daily, in England! It is false and cruel—for nothing is more cruel than to hold out a delusion for a hope,—false and cruel, we say, to induce people to believe that the repeal of a set of laws would at once do away with this misery; and political acrimony does not alleviate, but aggravates the wound. But we approve the poem itself: in every shape, in every manner, let the wretched be brought to the notice of the prosperous. We are thoroughly convinced that no station in life is without its own peculiar trouble and distress. The rich man is often bowed to the earth by affliction for which there is no help save in God;—but poverty admits of human alleviation; and sympathy, more than policy, will be its redress.

We now leave these volumes: their author, a Mr. Elliot, we are informed, has genius—the creative, the powerful, the deeply imbued with nature and beauty. Among the higher classes we wish his works universal circulation: the rich and the luxurious can never be too loudly awakened. Among the lower, we must repeat, they are more calculated to do harm than good. Their writer has justly characterised himself: "My thoughts are passions that rush burning from my mind." He

may rely upon it, violence is injurious to the best of causes.

Health's Picturesque Annual.

[Second notice.]

WE were obliged to be very brief in our notice of this most beautiful volume in our last No.: we now proceed to illustrate its literature by extracts, regretting that we have no power to do the same for its numerous and exquisite engravings. We select one of the stories so well told by the writer.

"I saw a small, faint light among the rocks in the distance. I at first conceived that it might proceed from a cottage-window; but, remembering that that part of the mountain was wholly uninhabited, and indeed uninhabitable, I roused myself, and, calling one of the family, inquired what it meant. While I spoke, the light suddenly vanished; but in about a minute re-appeared in another place, as if the bearer had gone round some intervening rock. The storm at that time raged with a fury which threatened to blow our hut, with its men and horses, over the mountains; and the night was so intensely dark, that the edges of the horizon were wholly undistinguishable from the sky. 'There it is again!' said I. 'What is that, in the name of God?' 'It is Lelia's lamp!' cried the young man eagerly, who was a son of our host. 'Awake, father! Ho, Batista! Vittorio! Lelia is on the mountains!' At these cries the whole family sprung up from their lair at once, and, crowding round the window, fixed their eyes upon the light, which continued to appear, although at long intervals, for a considerable part of the night. When interrogated as to the nature of this mystic lamp, the cottagers made no scruple of telling me all they knew, on the sole condition that I should be silent when it appeared, and leave them to mark uninterruptedly the spot where it rested. To render my story intelligible, it is necessary to say that the *minerali* and farmers form two distinct classes in the Valley of Anzasca. The occupation of the former, when pursued as a profession, is reckoned disreputable by the other inhabitants, who obtain their living by regular industry; and, indeed, the manners of the *minerali* offer some excuse for what might otherwise be reckoned an illiberal prejudice. They are addicted to drinking, quarrelsome, overbearing—at one moment rich, and at another starving; and, in short, they are subject to all the calamities, both moral and physical, which beset men who can have no dependence on the product of their labour, ranking in this respect with gamblers, authors, and other vagabonds. They are, notwithstanding, a fine race of men—brave, hardy, and often handsome. They spend freely what they win lightly; and if one day they sleep off their hunger, lying like wild animals basking in the sun, the next, if fortune has been propitious, they swagger about, gallant and gay, the lords of the valley. Like the sons of God, the *minerali* sometimes make love to the daughters of men; and although they seldom possess the hand, they occasionally touch the heart, of the gentle maidens of Anzasca. If their wooing is unsuccessful, there are comrades still wilder than their own, whose arms are always open to receive the desperate and the brave. They change the scene, and betake themselves to the high-ways, when nights are dark and travellers un- wary; or they enlist under the banners of those regular banditti, who rob in thousands, and whose booty is a province or a kingdom. Francesco Martelli was the handsomest gold-seeker

in the valley. He was wild, it is true, but that was the badge of his tribe; and he made up for this by so many good qualities, that the farmers themselves—at least such of them as had not marriageable daughters—delighted in his company. Francesco could sing ballads so sweetly and mournfully, that the old dames leant back in the chimney-corner to weep while he sung. He had that deep and melancholy voice, which, when once heard, lingers in the ear, and when heard again, however unexpectedly, seems like a longing realised. There was only one young lass in the valley who had never heard the songs of Francesco. All the others, seen or unseen, on some pretext or other, had gratified their curiosity. The exception was Lelia, the daughter of one of the richest farmers in Anzasca.

"There came one at last, however, to whom poor Lelia listened. She was sitting alone, according to her usual custom, at the bottom of her father's garden, singing, while she plied her knitting-needle, in the soft, low tone peculiar to her voice, and beyond which it had no compass. The only fence of the garden at this place was a belt of shrubs, which enriched the border of the deep ravine it overlooked. At the bottom of this ravine flowed the river, rapid and yet sullen; and beyond, scarcely distant two hundred yards, a range of precipitous cliffs shut in the horizon. The wild and desolate aspect of the scene was overshadowed and controlled, as it were, by the stern grandeur of these ramparts of nature; and the whole contributed to form such a picture as artists travel a thousand miles to contemplate. Lelia, however, had looked upon it from childhood. It had never been forced upon her imagination by contrast, for she had never travelled five miles from her father's house, and she continued to knit, and sing, and dream, without even raising her eyes. Her voice was rarely loud enough to be caught by the echoes of the opposite rocks; although sometimes it did happen that, carried away by enthusiasm, she produced a tone which was repeated by the fairy minstrels of the glen. On the present occasion she listened with surprise to a similar effect, for her voice had died almost in a whisper. She sang another stanza in a louder key. The challenge was accepted; and a rich, sweet voice took up the strain of her favourite ballad where she had dropped it. Lelia's first impulse was to fly; her second, to sit still and watch for a renewal of the music; and her third, which she obeyed, to steal on tiptoe to the edge of the ravine, and look down into the abyss, from whence the voice seemed to proceed. The echo, she discovered, was a young man, engaged in navigating a raft down the river—such as is used by the peasantry of the Alps to float themselves and their wares to market, and which at this moment was stranded on the shore, at the foot of the garden. He leant upon an oar, as if in the act of pushing off his clumsy boat; but his face was upturned, like one watching for the appearance of a star; and Lelia felt a sudden conviction, she knew not why, that he had seen her through the trees while she sat singing, and had adopted this method of attracting her attention without alarming her. If such had been his purpose, he seemed to have no ulterior view; for, after gazing for an instant, he withdrew his eyes in confusion, and, pushing off the raft, dropped rapidly down the river, and was soon out of sight.

"It was a week before she again saw this Apollo of her girlish imagination. It seemed as if in the interval they had had time to get

acquainted! They exchanged salutations—the next time they spoke—and the next time they conversed. There was nothing mysterious in their communications. He was probably a farmer's son of the upper valley, who had been attracted, like others, by the fame of the heiress of old Niccoli. He, indeed, knew nothing of books, and he loved poetry more for the sake of music than its own: but what of that?—the writings of God were around and within them; and these, if they did not understand, they at least felt. He was bold and vigorous of mind; and this is beauty to the fair and timid. He skimmed along the edge of the precipice, and sprung from rock to rock in the torrent, as fearless as the chamois. He was beautiful, and brave, and proud; and this glorious creature, with radiant eyes, and glowing cheeks, laid himself down at her feet, to gaze upon her face, as poets worship the moon! The world, before so monotonous, so blank, so drear, was now a heaven to poor Lelia. One thing only perplexed her: they were sufficiently long—according to the calculations of sixteen—and sufficiently well acquainted; their sentiments had been avowed without disguise; their faith plighted beyond recall: and as yet her lover had never mentioned his name! Lelia, reflecting on this circumstance, condemned, for the moment, her precipitation; but there was now no help for it, and she could only resolve to extort the secret—*if* secret it was—at the next meeting. 'My name!' said the lover, in reply to her frank and sudden question; 'you will know it soon enough.' 'But I will not be said nay. You must tell me now—or at all events to-morrow night.' 'Why to-morrow night?' 'Because a young, rich, and handsome suitor, on whom my father's heart is set, is then to propose, in proper form, for this poor hand; and, let the confession cost what it may, I will not overthrow the dearest plans of my only parent without giving a reason which will satisfy even him. Oh, you do not know him! Wealth weighs as nothing in the scale against his daughter's happiness. You may be poor for aught I know; but you are good, and honourable, and, therefore, in his eyes, no unfitting match for Lelia.' It was almost dark; but Lelia thought she perceived a smile on her lover's face while she spoke, and a gay suspicion flashed through her mind, which made her heart beat and her cheeks tingle. He did not answer for many minutes; a struggle of some kind seemed to agitate him; but at length, in a suppressed voice, he said—'To-morrow night, then.' 'Here?' 'No, in your father's house; in the presence of—my rival.'

His appearance, as may be supposed, is more agreeable to the maiden than to her father, and the following scene ensues. The lover says, "Your real objection to me is that I am poor. It is a strong one. If I chose to take your daughter without a dowry, I would take her in spite of you all; but I will leave her—even to that thing without a soul—rather than subject so gentle and fragile a being to the privations and vicissitudes of a life like mine. I demand, therefore, not simply your daughter, but a dowry, if only a small one; and you have the right to require that on my part I shall not be empty-handed. She is young, and there can be, and ought to be, no hurry with her marriage: but give me only a year—a single year; name a reasonable sum; and if by the appointed time I cannot tell the money into your hand, I hereby engage to relinquish every claim which her generous preference has given me upon your daughter's

hand.' 'It is well put,' replied the cold and cautious voice in the assembly. 'A year, at any rate, would have elapsed between the present betrothing and the damsel's marriage. If the young man, before the bells of twelve, on this night twelvemonth, layeth down upon the table, either in coined money, or in gold, or golden ore, the same sum which we were here ready to guarantee on the part of my grandson, why I, for one, shall not object to the maiden's whim—*provided it continues so long*—being consulted, in the disposal of her hand, in preference to her father's judgment and desires. The sum is only three thousand livres!' * * *

"Sirs," said Francesco, in perplexity mingled with anger, 'the sum of three thousand livres—' He was interrupted by another forced laugh of derision. 'It is a fair proposal,' repeated the relations: 'agree, neighbour Niccoli, agree!' 'I agree,' said Niccoli disdainfully. 'It is agreed!' replied Francesco, in a burst of haughty indignation; and with a swelling heart he withdrew. A very remarkable change appeared to take place from that moment in the character and habits of the mineralo. He not only deserted the company of his riotous associates, but even that of the few respectable persons to whose houses he had obtained admission, either by his talents for singing, or the comparative propriety of his conduct. Day after day he laboured in his precarious avocation. The changes of the seasons were not now admitted as excuses. The storm did not drive him to the wine-shed, and the rain did not confine him to his hut. Day after day, and often night after night, he was to be found in the field—on the mountains—by the sides of the rain-courses—on the shores of the torrent. He rarely indulged himself even in the recreation of meeting his mistress, for whom all this labour was submitted to. Gold, not as a means but as an end, seemed to be his thought by day, and his dream by night, the object and end of his existence. When they did meet, in darkness, and loneliness, and mystery, it was but to exchange a few hurried sentences of hope and comfort, and affected reliance upon fortune. On these occasions, tears, and tremblings, and hysterical sobbings, sometimes told, on her part, at once the hollowness of her words, and the weakness of her constitution; but on his, all was, or seemed to be, enthusiasm and steadfast expectation. * * *

"The year touched upon its close; and the sum which the gold-seeker had amassed, although great almost to a miracle, was still far, very far, from sufficient. The last day of the year arrived, ushered in by storm, and thunderings, and lightnings; and the evening fell cold and dark upon the despairing labours of Francesco. He was on the side of the mountain opposite Niccoli's house; and, as daylight died in the valley, he saw, with inexpressible bitterness of soul, by the number of lights in the windows, that the fête was not forgotten. Some trifling success, however, induced him, like a drowning man grasping at a straw, to continue his search. He was on the spot indicated by a dream of his enthusiastic mistress; and she had conjured him not to abandon the attempt till the bell of the distant church should silence their hopes for ever. His success continued. He was working with the pick-axe, and had discovered a very small perpendicular vein; and it was just possible that this, although altogether inadequate in itself, might be crossed at a greater depth by a horizontal one, and thus form one of the *gruppi*, or nests, in which the ore is plentiful, and easily extracted. To work, however, was dif-

ficult, and to work long impossible. His strength was almost exhausted; the storm beat fiercely in his face; and the darkness increased every moment. His heart wholly failed him—his limbs trembled—a cold perspiration bedewed his brow; and, as the last rays of daylight departed from the mountain-side, he fell senseless upon the ground. How long he remained in this state he did not know; but he was recalled to life by a sound resembling, as he imagined, a human cry. The storm howled more wildly than ever along the side of the mountain, and it was now pitch-dark; but on turning round his head, he saw, at a little distance above where he lay, a small, steady light. Francesco's heart began to quake. The light advanced towards him, and he perceived that it was borne by a figure arrayed in white from head to foot. 'Lelia!' cried he in amazement, mingled with superstitious terror, as he recognised the features of his young fair mistress. 'Waste not time in words,' said she; 'much may yet be done; and I have the most perfect assurance that now at least I am not deceived. Up, and be of good heart! Work—for here is light. I will sit down in the shelter, bleak though it be, of the cliff, and aid you with my prayers, since I cannot with my hands.' Francesco seized the axe, and, stirred half with shame, half with admiration, by the courage of the generous girl, resumed his labour with new vigour. 'Be of good heart,' continued Lelia, 'and all will yet be well. Bravely—bravely done!—be sure the saints have heard us!' Only once she uttered any thing resembling a complaint: 'It is so cold!' said she; 'make haste, dearest; for I cannot find my way home, if I would, without the light.' By and by she repeated more frequently the injunction to 'make haste.' Francesco's heart bled while he thought of the sufferings of the sick and delicate girl on such a night, in such a place; and his blows fell desperately on the stubborn rock. He was now at a little distance from the spot where she sat; and was just about to beg her to bring the light nearer, when she spoke again. 'Make haste—make haste!' she said; 'the time is almost come—I shall be wanted—I am wanted—I can stay no longer—farewell!' Francesco looked up—but the light was already gone. It was so strange, this sudden desertion! If determined to go, why did she go alone?—aware, as she must have been, that his remaining in the dark could be of no use. Could it be that her heart had changed, the moment her hopes had vanished? It was a bitter and ungenerous thought; nevertheless, it served to bridle the speed with which Francesco at first sprung forward to overtake his mistress. He had not gone far, however, when a sudden thrill arrested his progress. His heart ceased to beat, he grew faint, and would have fallen to the ground, but for the support of a rock against which he staggered. When he recovered, he retraced his steps as accurately as it was possible to do in utter darkness. He knew not whether he found the exact spot on which Lelia had sat—but he was sure of the surrounding localities; and, if she was still there, her white dress would no doubt gleam even through the thick night which surrounded her. With a lightened heart—for, compared with the phantom of the mind which had presented itself, all things seemed endurable—he began again to descend the mountain. In a place so singularly wild, where the rocks were piled around in combinations at once fantastic and sublime, it was not wonderful that the light carried by his mistress should be wholly invisible to him, even had it

that I may geese hiz back be metall'd like a lamprey, that haz no bone, but a lyne like a lute-string. Well, sir, let him passe and hiz feetz, and this dayz pastime with all; for heer iz as mooch as I can remember me for Thursdays entertainment."

The following relates to a more striking political event, in another of the queen's progresses.

"Lord Burghley has been particularly accused of dealing treacherously and unkindly by the Duke of Norfolk; and yet, previous to his execution, that unhappy nobleman commended his children, in a very remarkable manner, to the care and guardianship of the lord treasurer; and even on this progress, though the queen, in some instances, seemed to place a confidence in her Catholic subjects, certain severities took place, which have been differently accounted for: one, at whose house even she had been received and entertained, was soon after cast into prison, and what was accounted an idol (intended for an image of the Virgin) burnt by the queen's command. This person was the owner of Euston Hall; and the particulars are to be found in a letter addressed to the Earl of Shrewsbury, by the celebrated hunter of recusants, Topcliffe. Some passages we shall transcribe. After speaking of the queen's health on the progress, he writes, 'The next good news (but in account the highest), her majesty has served God with great zeal, and comfortable examples; for, by her counsel, two notorious Papists; young Rookwood (the master of Euston Hall, where her majesty did lye upon Sunday now a fortnight), and one Downes, a gentleman, were both committed, the one to the town prison at Norwich, the other to the county prison there, for obstinate Papistry; and VII. more gentlemen of worship were committed to several houses in Norwich, as prisoners.' In some accounts these severities are said to have been inflicted upon them merely because they were Papists; and the queen's conduct is arraigned in no measured terms for so unfeeling a requital of the hospitality with which she had been treated. But we are inclined to suspect that some deception had been practised on her majesty, from the following passage in the same letter:—'This Rookwood is a Papist of kind newly crept out of his late wardship. Her majesty, by some means I know not, was lodged at his house, Euston, far unmeet for her highness, but fitter for the blackguard. Nevertheless (the gentleman brought into her majesty's presence by like device), her excellent majesty gave to Rookwood ordinary thanks for his bad house, and her fair hand to kiss; after which it was braved at. But my lord chamberlain, nobly and gravely understanding that Rookwood was excommunicated for Papistry, called him before him, demanded of him how he durst presume to attempt her real presence, he, unfit to accompany any Christian person—forthwith said he was fitter for the stocks—commanded him out of the court, and yet to attend her council's pleasure—and at Norwich he was committed.' It is easy to collect from this, that Rookwood was not committed for mere Papistry, but for some indiscretions betokening a contempt of the court, which the lord chamberlain was moved to resent. He appears to have drawn the queen to his house rather to insult than honour her, if not worse; and to have made a mockery of her very courtiers. He had evidently been in hold before, and incurred a sentence of excommunication for extreme obstinacy; and, if the conjecture of Mr. Lodge be true, that this was probably the same Rookwood who suffered death in 1605, for his con-

cern in the Gunpowder-plot, we may surely conclude that he was no common recusant, but a very bold and dangerous one, and in association with other suspicious persons at the very time."

We conclude with the death of this distinguished minister.

"His death was not sudden, nor his pain in sickness great; for he continued languishing two or three months, yet went abroad to take air in his coach all that time, retiring himself from the court, sometimes to his house at *Theobalds*, and sometimes at London; his greatest infirmity appearing to be the weakness of his stomach. It was also thought his mind was troubled that he could not work a peace for his country, which he earnestly laboured and desired of any thing, seeking to leave it as he had long kept it. For there was no other worldly thing to give him cause of grief: he had the favour of his prince, the love of his people, great offices, honours, livings, good children, and all blessings the world could afford him; yet he contemned the world, and desired nothing but death, either because he had lived long enough, and desired to be in heaven, or else because he could not live to do that good for his country he would—or rather, as is most likely, both; for he had seen and tasted so much both of the sweet and sour of the world as made him weary to live, and knew so much of the joys of his salvation, wherein was his onely comfort, as gave him cause to desire death, when it was God's good pleasure, as he often said: but how or whatsoever it was, the signe was infallibly good. He contemned this life, and expected the next; for there was no earthly thing wherein he took comfort, but in contemplation, reading or hearing the Scriptures, Psalmes, and Praieres. About ten or twelve daies before he died, he grew weak, and so dryvenne to kepe his bed, complaining onely of a pain in his breast, which was thought to be the humor of the goute (wherewith he was so long possessed) falling to that place, without any ague, fever, or sign of distemper or danger, and that paine not great nor continuall, but by fits, and so continued till within one night before his death. At six of the clock at night, the phisitions finding no distemper in his pulse or bodie, but assuring his life, affirming it was impossible he should be hartsicke that had so good temper, and so perfect pulse and senses; yet at seven of the clock following, he fell into a convulsion like to the shaking of an ague. Now, quoth he, the Lord be praised, the tyme is come. And calling his children, blessed them, and took his leave, commanding them to love and feare God, and love one another. He also praid for the queen, that she might live longe and die in peace. Then he called for Thomas Bellot, his steward, one of his executors, and delivered him his will, saieing, I have ever found thee true to me, and I nowe trust thee with all. Who like a godlie honest man, praid his lordship, as he had lived religiously, so now to remember his Saviour Christ, by whose blood he was to have forgiveness of his sins; with manie the like speeches used by his chaplaines, to whom he answered, it was done already, for he was assured God had forgiven his sins, and would save his soul."

Family Classical Library, No. XXIII.

Plutarch, Vol. I. Valpy.

A most popular ancient author commences No. 23 of this excellent series; and if former portions were acceptable, there can be no doubt that Langhorne's *Plutarch* will at least

equal any of its classical compeers. Heads from gems are given as embellishments; and the volume is, in every respect, entitled to general favour.

The Amethyst; or, Christian's Annual. Edited by Richard Huie, M.D. and R. Kaye Gréville, LL.D. Edinburgh, 1832, Olliphant; Glasgow, Collins; London, Simpkin and Co.; Hamilton, Adams, and Co.; Dublin, Curry, jun. and Co.

A VERY neat and well-intentioned little volume; in reality, a collection of religious essays and sermons, together with some serious poetry; and we agree with the editors that there is no reason why as attractive a form as possible should not be given to sacred and serious instruction.

Dr. Lardner's Cabinet Cyclopædia, Vol. XXIV. Useful Arts, Vol. I. Manufactures in Metal, Iron, and Steel. London, Longman and Co.

THIS volume appears to contain all useful information on the subject of which it treats, and must therefore be acceptable to those concerned in manufactures in metal. We select one passage, which bears a reference to the fine arts.

"For several years past sheet steel has been used in large quantities, instead of copper-plates, by the engravers. By this fortunate application of so durable and, it may be added, so economical a material, not only has a new field been discovered, admirably suited to yield in perfection the richest and finest graphic productions which the ingenuity of modern art can accomplish, but to do so through an amazingly numerous series of impressions, without perceptible deterioration. The art of engraving on iron or steel, for purposes of ornament, and even for printing in certain cases, is by no means a discovery of modern times; but the substitution of the latter material for copper, and which has invited the superiority of the British *burin* to achievements hitherto unattempted by our artists, is entirely a modern practice."

Dibdin's Sunday Library, Vol. VI.

Longman and Co.

THIS volume, with a portrait and memoir of Archbishop Secker, contains two sermons by that learned prelate, and eighteen by other eminent divines, including the present Bishop of London, Bishop Malby, Archbishop Pott, Sidney Smith, Mr. Milnes, Dr. D'Oyly, &c. It is a little library for a churchman, and a treasure for the pious among the laity.

A Dictionary of Biography; comprising the most eminent Characters of all Ages, Nations, and Professions. Embellished with numerous Portraits. Double cols. post 8vo. pp. 584. London, Tegg; Dublin, Cumming; Glasgow, Griffin and Co.

AN extremely neat, ingenious, and useful volume, containing from four to five thousand remarkable names, with short notices of their owners. The slight outline portraits add greatly to its interest; and we could not mention a work of the kind more deserving of a place on the book-shelf for reference when occasion requires.

The Miser; a Poem. 8vo. pp. 78. Baldwin and Co.

WE are afraid this is one of the poetical aspirations which neither the taste nor purse of the present day encourageth.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

THE vacation of this useful institution terminated on Wednesday, when the members resumed their labours; William Tooke, Esq., recently re-elected a vice-president, in the chair. The secretary, Mr. Aikin, after reading the minutes of the last meeting, announced the heads of a variety of communications, which were referred to the different committees: many of them will immediately come under the consideration of those of mechanics, polite arts, and chemistry. Among other subjects which have been received, were an instrument for taking angles, a system of weights and measures, a table for performing multiplication and division, lock gates, a dissected map of the constellations, a mangle, a fire-escape, a horse-collar, a saw-mill, a life-buoy, a life-boat, a method of preventing the collision of steam-vessels, a trap for rats, a pile-driver, a method of supplying oil to the bushes of millstones, a cup for effervescing mixtures, curling-irons, a new plan of painting portable frescoes, on destroying caterpillars, on the dry-rot in timber, a method of lighting and putting out street-lamps, a clamp for boot-makers and harness-makers, &c.

The Society have thus commenced a session which promises to be as pregnant with business as any that have preceded; and we were much gratified by observing that many of its most valuable members were present: we particularly allude to those who have so long and sedulously promoted the objects and interests of the institution.

Several valuable presents were mentioned, and, after the names, &c. of persons wishing to become members had been read, the Society adjourned. Soon after Christmas the evening illustrations are to commence.

NEW PATENTS

Granted by his Majesty for Inventions.—Sealed, 1831.

As the grant of patents tends to throw much light on the progress of science and the useful arts in England, we have made arrangements for a regular register of these documents.—*Ed. L. G.*

To Andrew Ure, of Finsbury Square, in the parish of St. Luke's, in the county of Middlesex, doctor in medicine, for his invention of an improved apparatus for evaporating syrups, and extracting juices. 23d September—6 months, for enrolment of specification.

To William Bingham, of St. Mary Hall, Esq., and William Duke, gunmaker, both of Oxford, for their invention of certain improvements on fire-arms of different descriptions. 24th September—6 months.

To Henry Hope Wernick, of North Terrace, Camberwell, in the county of Surrey, gentleman, in consequence of a communication made to him by a certain foreigner residing abroad, he is in possession of an invention for improvements in apparatus or methods for preserving lives of persons and property when in danger by shipwreck, by speedily converting boats or small vessels of ordinary description into life-boats, and other apparatus or means applicable to the same objects. 24th September—6 months.

To James Lang, of Greenock, North Britain, flax dresser, for his invention of certain improvements in machinery for spreading, drawing, roving, or spinning flax, hemp, and other fibrous substances, dressed or undressed. 24th September—2 months.

To Joseph Gillott, of Birmingham, in the county of Warwick, steel pen maker, for his invention of an improvement in the making or manufacturing of metallic pens. 27th September—2 months.

To John Myatt, of Tabernacle Walk, Finsbury Square, in the county of Middlesex, tailor, for his invention of an article to be worn on the feet, as a substitute for pattens or clogs, which he denominates Myatt's Health Preserver. 27th September—2 months.

To Oliver St. George, of Great Cumberland Street, in the county of Middlesex, Esq., in consequence of a communication made to him by a certain foreigner residing abroad, he is in possession of an invention of certain improvements in machinery for acquiring power in tides or currents. 28th September—6 months.

To Miles Berry, of the Office for Patents, 66, Chancery Lane, in the parish of St. Andrew's, Holborn, in the

county of Middlesex, engineer and mechanical draftsman, in consequence of a communication made to him by M. Jean Nicholas Senechal, Ingenieur des Ponts et Chaussées, residing at Versailles, in the kingdom of France, he is in possession of an invention or discovery of certain improvements in the boilers or generators of steam and other vapour, and in engines to be worked by steam or vapour for propelling or actuating machinery on land, and boats, vessels, or other floating bodies on water, and also in the mode of condensing such steam or vapour. 29th September—6 months.

To John Heathcote, of Tiverton, in the county of Devon, lace manufacturer, for his invention of certain improvements in the machinery used for the making of bobbin or twist lace net, whereby net and other fabrics may be produced. 3d October—6 months.

Newton and Berry's Office for Patents,
66, Chancery Lane, London.

LITERARY AND LEARNED.

ROYAL SOCIETY OF LITERATURE.

AFTER a council, at which Lord Bexley presided, the first ordinary meeting for the year, of the Royal Society of Literature, was held at the Society's house on Wednesday last. The routine business being disposed of, Mr. Sotheby, at the request of the council, read a portion of his version of the eleventh book of the Odyssey; which was listened to with great pleasure by the assembly. As we have formerly been so favoured, we trust that we may also, on this occasion, be afforded an opportunity of laying this episode before our readers.

KING'S COLLEGE.

Professor Renwick's Introductory Lecture.

THE study of natural history comes powerfully recommended to us from its multiplying to infinity the sources of innocent pleasure, as well as from its tendency to enlarge the mind and improve the taste. This may be exemplified by reference to the biography of great men who have added natural history to other varied studies; among whom we find the names of Aristotle and Lord Bacon the most distinguished. Lord Bacon represents natural history as "fundamental to the erecting and building of a true philosophy;" and Herschel says, that "from it all sciences arise." But instead of its having been studied on the inductive principle, a great portion of what is called natural history consists either of systematic tables and meagre catalogues of species, frequently very erroneous in detail; or of wildly fanciful theories. The former is exemplified in the works of the Linnæan school, the meagreness and inaccuracy of which has been the ruin of philosophic inquiry for many years. Of the latter we have glaring instances in the *hypothetical* school, whose object is to discover a metaphysical chimera called the *natural system*, the pursuit of which has been productive of little else but critical trifling and unphilosophical speculation:—witness the fancy of Savigny, that the sucker of a gnat is not a sucker, but a set of jaws glued together;—witness the terms "false," "spurious," and "imperfect," applied to animals which do not correspond to some fanciful standard of a theorist;—witness Geoffroy St. Hilaire's monstrous fancy, that the legs of crabs are "spurious," or, in other words, ribs which have wandered out from the interior and become spurious legs—(when, he does not say!);—witness MacLeay's still wilder fancy, that all organised beings were originally produced in circles of fives, and then dismissed to wander out of these quinary circles;—witness the wild theory of spontaneous generation, which maintains that animals originate in some occult play of chemical affinities; or asserts them to arise from the "march of nature," from "*propagules animées*," from the "*vis formatrix*," or "*l'espèce des foyers*,"—some dreamy, visionary thing, the theorists cannot tell what; and no-

body, most assuredly, can be the wiser or the better for treasuring up in their memory such vain and vague words, which signify nothing, but are only a learned apology for the absolute ignorance of the theorists. These theories are, for the most part, characterised by their studied exclusion of all reference to a Creator, and differ widely in this from the practice of the higher philosophers, Socrates, Plato, Bacon, Newton, Locke, Ray, Haller, &c.; names which could not be matched by the gainsayers among their Darwins, Lamarcks, Laplaces, and Cuviers. Newton says, it is the very "business of philosophy to reason from phenomena to God;" and to an unprejudiced mind, it must appear impossible to study the works of creation and exclude all allusion to a Creator.

Nothing is more injurious to a pupil's progress than trusting to his teacher, and doing little or nothing himself;—than imagining, when he knows a smattering of terms, that he has a general knowledge of a subject;—than trusting to the authority of books, without personal investigation of facts and arguments. These three latter points were strongly urged on the attention of the students.*

FINE ARTS.

NEW PUBLICATIONS.

Calligraphy. Lacey, St. Paul's Churchyard. We have lying before us a beautiful piece of penmanship, designed and engraved on steel by H. D. Smith; surrounding a miniature portrait of William IV., and commemorative of His Majesty's accession to the throne.

Mr. G. Bennett, as Cassius. Drawn on stone by W. Sharp, from the original by G. F. Stroehling. Dickinson.

As far as we can judge, having seen Mr. Bennett only on the stage, a very correct resemblance.

Sketches from Life. By R. Cruikshanks and others. Steill, Berger, &c.

BUT so-so. The subject of one of these sketches is much too painful for graphic illustration.

One Hundred Cuts to the Comic Annual. Lacey.

SCARCELY subjects for legitimate criticism: certainly not subjects for grave criticism. It is impossible for the pen to give an adequate idea of these whimsical productions of the pencil. We do not envy that solemnity of vimp which they would not disturb.

Morning. Drawn on stone by W. Sharp from the original Sketch by John Hay. Dickinson.

WE do not know which more to admire, taste and elegance of this pretty little drawing, or the skill and delicacy with which it has been transferred to stone.

ARTISTS' AND AMATEURS' CONVERSATION

The first meeting for the season, of the Artists' and Amateurs' Conversazione, took place on Wednesday, at the Freemasons' Tavern. It was well attended, and a considerable number of works of art were laid upon the table. The "amateurs," however, as usual, contributed to the evening's entertainment more largely than "the artists." Indeed, with the exception of a bust, and a model of the hand of the late J. Jackson, R.A. by B.

* In giving an analysis of this lecture, we intended to place in the context between the able and original opponents, respecting classification, &c.—*Ed. L. G.*

H. B. Barlowe, a few studies by Mr. Wood, some miniatures by Mr. Ward, after Sir Thomas Lawrence, and a portfolio of sketches by Mr. Frederick Nash—the whole supply was from the walls or cabinets of the collectors. This is not as it should be. The object of the institution—and in this consists its only real value—is to enable those who are working from day to day in solitude, and apart from such as may encourage and assist their efforts, to exhibit proofs of their abilities and progress in a profession that must be, of necessity, more than any other hidden from the public eye. Such societies may lead to very beneficial results; but not unless the young as well as the more advanced student considers it a part of his duty, at the same time that it is essential to his interests, upon such occasions of social intercourse, to give proof of what he is doing, or has done. Of the seventy members, perhaps forty are professional; yet it is rarely that a dozen contribute aught but their company; and the *conversations* would be little better than a meeting to eat toast and drink tea, but for the generous assistance of a few individuals, who ransack their portfolios, and select the choicest works for the inspection of all who may be present. Mr. Morant, a liberal patron of British art, Mr. Griffiths of Norwood, another, Messrs. Boys and Graves, the printellers, and two or three other gentlemen, are, in fact, the chief supporters of the Artists' and Amateurs' Conversazione: the artists must therefore pardon us if we charge them with ingratitude, as well as want of policy, in the indifference they have so generally manifested towards a society formed almost exclusively for their benefit. The collection on Wednesday, however, notwithstanding the drawback, was of high interest. The more remarkable of the works we may find space to notice. A fine and highly-finished painting by Mulready, the subject from St. Ronan's Well, and intended to form one of the illustrations to the *Waverley Novels*; a number of sketches by Mr. F. Nash, principally from continental scenery; a rich drawing of Venice, and another of the Lake of Como, by Stanfield; the Crucifixion, by Martin; a delicious picture of a young maiden in the costume of the reign of George the First, by Mr. Stone; two excellent drawings of interiors, with figures, by Cattermole; the Rising of the Nile, by David Roberts; an exquisite copy, by Derby, of the famous Earl of Derby and his Countess—the gallant defender of Latham House; copies from paintings, by Sir Thomas Lawrence, of the Countess of Blessington and the Marchioness of Londonderry, by Mr. G. R. Ward; an admirable bust, by Mr. H. B. Barlowe; some exceedingly clever sketches from the life by Mr. Wood; a copy, by Mr. Nixon, of Hogarth's painting of Thomson the poet; the noble print recently published from Wilkie's picture of the Chelsea Pensioners; and a large quantity of engravings.

Several new members have been elected since last year; among others, Lord de Tabley, who, we rejoice to hear, is following the course of his father in his appreciation and patronage of art; Mr. Collins, R.A., Mr. Derby, Mr. F. Nash, and Mr. John Hayter.

SKETCHES OF SOCIETY.

On the Nature, Progress, and Treatment of the Cholera Morbus, or Pestilential Cholera.

The *Pestilential Cholera*, which has ravaged nearly all Asia, and a part of Europe, during every grade of atmospheric temperature and

humidity, in every vicissitude of weather and of season, and in every kind of locality, cannot date further back than 1817, when we see it taking its direful and mysterious origin at Jessore, a populous and unhealthy city in the centre of the Delta of the Ganges. Whether the Indian cholera, sporadic in certain seasons, became malignant and infectious; or whether the pestilential cholera is distinct from all visitations of the disease to which the name of cholera has been attached, is an abstract consideration of little practical utility: it is sufficient that the study of the development and the progress of the disorder has demonstrated the existence of malignant and infectious properties, which have not hitherto been found to accompany the Indian cholera or the cholera morbus of this country; and as "all the atmospheric phenomena and other circumstances (to use the words of Mr. Scott, the editor of the numerous and able reports transmitted to the Madras Medical Board), brought under the head of occasional causes, have with little or no interruption existed from the beginning of time (*quære*, from the remotest periods?) until now, without producing the pestilential cholera, consequently the superaddition of a new cause must be inferred." The origin of some pestiferous diseases is lost in the obscurity of antiquity; but others have both originated and disappeared within the periods of historical traditions; and others, again, belong only to modern times—as the yellow fever and syphilis, which continue to exercise their fearful ravages; and among these we may rank the pestilential cholera, one of the most disastrous diseases that ever afflicted the human race.

On the 28th of August it was reported to the government that a malignant species of cholera had appeared in the populous town of Jessore, and that it was attacking all classes of the natives indiscriminately. The inhabitants were well accustomed to the inroads of the common cholera, but they fled from the attacks of this malignant form of the disease, and business was abandoned for a time. Many cases of cholera had occurred in Calcutta as early as the middle of August, but it was near the end of the month before the malignant disease began to spread; and the opinion, since combated by many medical men, obtained at the time, that it had been imported from Jessore. An official notification of the existence of the malignant cholera in Calcutta was not forwarded till the 15th of September.

From January to May 1818, the contagion extended its ravages in the province of Bengal, from the eastern limits of Purneah Dinagore and Silhet to the extreme borders of Balasore and Cuttack, and from the mouth of the Ganges nearly to its confluence with the Jumna. The pestilence, leaving Bengal, penetrated along the Ganges, its navigable tributaries, and the high roads, into the interior of the country. At Benares 1500 persons perished in two months. In the district of Gorriakpore 30,000 died in half that time; and it visited, with equally fatal results, Lucknow, Cawnpore, Delhi, Agra, Muttra, Meerut, and Bareilly. On the 6th of November, the disease shewed itself in the army assembled under the Marquess of Hastings at Bundelcund, a portion of the Allahabad province. The amount of the deaths has been much exaggerated. From Mr. Kennedy's account,* we find that from the day of attack to

the 8th of December, of the 10,000 fighting men of which the army was composed, 764 alone had fallen victims; and of the camp followers about 8000 perished, or one-tenth of their whole number. It appears, that though a change of quarters produced a beneficial influence on the army, the disease had run through its course of infection before the banks of the Sinde were quitted. The cholera took a direction across the Deccan; at Husseinabad the mortality was very great; it also proceeded, southerly, to the city of Nagpore. From Saugar, adhering to the neighbourhood of the Chumbal, it attacked Sonara, and finally reached Kota, which is built upon a solid rock. Another branch, after ravaging the left division of the army and the Nerbuddah field-force, spread through the states of Nagpore and Poonah, to the Presidency of Bombay; having traversed the peninsula of India in a year from the date of its appearance at Calcutta. While the interior of Hindostan was thus desolated, the disease extended itself along the coasts of Malabar and Coromandel, and reached Madras on the 8th of October. In the northern provinces of Hindostan the cholera travelled to Degrah, Delhi, and Jeypore, and on the western banks of the Jumna; and among many of the towns in the Doab its progress could be distinctly traced from place to place.

From the bay of Bengal the cholera extended eastward along the coast of the Asiatic continent, and through the islands of the Indian ocean, to the farther boundaries of China, and to Timor, near New Holland. In the year 1818 the malady had appeared in Arracan; in 1819, in Penang, Bankok, where 40,000 persons fell victims to its ravages; and in April 1820 it was in Java; in October, Canton was invaded; and in the succeeding year the contagion entered Pekin. By November 1823 it had traversed the Mollucca, or Spice Islands, including the island of Timor, where it appears to have attained the south-eastern limits of its progress; but, still pursuing its north-eastern course, it continued for several years to ravage the interior of China. By 1827 it had passed the Great Wall, and desolated several places in Mongolia. Soon after its appearance in the southern parts of Hindostan, the pestilence passed from the coast of Coromandel to Ceylon; and during December 1818 and the earlier months of 1819, it prevailed in that island with a degree of virulence not previously surpassed. Here, as in the Hooghly, the shipping was affected; and the disease was carried by the *Topaz* frigate to the Mauritius. This is the occurrence which Dr. Johnson treats in the *Times* of the 29th Oct. as "one of the grossest impositions on the credulity of mankind that ever was foisted on the public ear." Muscat, a sea-port town of Arabia, was the first stage of the advance of the pestilence towards Europe. In this town it destroyed 60,000 persons, many of whom expired ten minutes after its invasion. From Muscat it spread to the different parts of the Persian Gulf, to Bahrem, Busheer, and Bassora. At this latter place 18,000 individuals perished, of which 14,000 died in a fortnight. From the Persian Gulf it extended inland in two directions, following the lines of commercial intercourse. On the one hand, the malady was propagated from Busheer into Persia; on the other, it pursued the course of the rivers Tigris and Euphrates into Asiatic Turkey. The po-

* The History of the Contagious Cholera, with Facts explanatory of its Origin and Laws, and of a rational method of Cure. By James Kennedy, Surgeon. London, 1831. Cochrane and Co.—A most admirable performance,

containing a valuable account of the origin and progress of the disease, more especially as it exhibited itself in our Indian possessions, and of the treatment pursued with the greatest success in those climates.

pulation of Shiraz was 40,000 souls; of these 6000 perished in the first days of the attack. During the winter months the pestilence lay stagnant, and broke out again in the ensuing spring (1822). Mosul, Beri, Aentab, and Aleppo, were next infected. In Persia, during the month of September, the pestilence extended to the north of Teheran, in Kurdistan, and Aderbeijan. In the summer and autumn of 1823, Diarbekr and Antioch were attacked; and it ravaged many of the towns situated on the Asiatic shores of the Mediterranean. In the month of August it also extended, in an opposite direction, as far as Baku, on the borders of the Caspian Sea. Lastly, in the month of September, it broke out in the town of Astrakhan, where it continued to manifest itself until the rigour of winter destroyed this branch of the pestilence, and with the Syrio-Egyptian it disappeared for the time being. It appears to be in Persia where the germs of the disease were preserved, and where it reappeared every year for several years in succession, prevailing to a greater or less extent in localities that had been previously infected. The stream that penetrated into the heart of Europe, and which now threatens our own shores, began on the western side of the Caspian, and extending northward ravaged the Tauris. Afterwards, crossing the Russian frontier into Georgia, it entered Tiflis, and carried off several thousands of the inhabitants. Baku was again invaded; and, on the 20th of July, the pestilential cholera appeared once more in the city of Astrakhan.

In Russia, the disease observed the same laws that had marked its progress in India and in other countries. Adhering for some time to the route of navigable rivers and high roads, it ascended the Volga to where that river approaches the Don, where a branch took an overland course, and diverged up and down the river. On the Volga, Tzaritzin, Saratov, and Novogorod, were invaded in the month of August; Kostroma, Jaraslaw, and Moscow, in September; Samara, Simbirsk, Kasan, and Vladimir, in October. It appears that the unclean habits and thick clothing of the Russians materially affected and almost neutralised the beneficial influence of the winter. In the summer of 1831, the progress of the pestilence has been exceedingly extensive; it proceeded in two branches, the one from Volga, on the Dwina river, to Archangel; the other accompanied the Russian troops in the invasion of Poland. In April, it commenced its ravages in Warsaw, reaching Dantzic and Riga in May, and St. Petersburg in June. It reached Berlin on the 31st of August; while the Jassy and Bucharest branch was travelling to Vienna, where it declared itself in September; and in a very short time afterwards the disease had reached Altona and Hamburg.* In the former place, there had been, by the last accounts (Oct. 25th, 1831), only thirteen cases; and in Hamburg, since the commencement, only 445, of which 213 had perished,—a proportion, as at Moscow, of nearly one half. There is, as we shall afterwards expound, every reason to believe, that in more equable climates—in countries where more regard is paid to convenience, cleanliness, and comfort—among people differing in constitution, habits, and manners, as the western Europeans do from the eastern Europeans and from the Asiatic tribes,—the ravages of this fearful malady will be much lessened; and, above all, amidst the charities of social and domestic life, as they are found in our own country, it is likely to prove a far less intractable and fatal disease than it has ever appeared elsewhere.

We give a little comfort, after detailing the progress of the pestilential cholera, because we feel aware that the solace to the subsequent considerations on the contagious and infectious character of the disease, and on its nature and symptoms, must be sought for in a close attention to the means recommended by experience and observation as preventive, and the remedies to be adopted in case of an attack.

The nature of the pestilence is best inferred from a faithful history of the phenomena manifested by it during its progress, and of the changes which it produces in the organisation. Among the most remarkable of the former, after its extensive distribution, are the independence which it appears to have of circumstances that generally exert considerable influence on epidemic, contagious, and infectious diseases.

Unlike epidemics, it was not affected by locality; its phenomena were the same at Mascata, in the centre of the arid deserts of Arabia, and at Bassora, amid the marshes of the Euphrates; at Letugues, on the borders of the Mediterranean, and at Kermanshah, in the centre of Persia, 150 leagues from any sea. It has attacked, without any diminution in its violence or its character, towns like Kota and Mordine, situated on high hills, far from any marsh, and well ventilated by a dry air; and it has shewn itself in others, as at Mossoul, on the Tigris, where the atmosphere is loaded with humidity. It has attacked without distinction the inhabitants of villages or of capitals, the crews of the boats on the Ganges or of the Volga, and those of the ships of the line in the Russian and English fleets. Lastly, it has shewn itself under the same forms in pagodas, in caravanserais, in monasteries, in barracks, in prisons, in harems, in tents, and in palaces. It has moved through countries independently of the race of men who inhabited them, and has affected equally the Hindoo, the Chinese, the Mongul, the Turk,—the Slavonian, the Scandinavian, and the Teutonic tribes.

This independence of the hygrometric state of the atmosphere, of climate, and, more or less, of temperature, combined with an almost total indifference to seasons, point out the pestilential cholera as at once differing from all epidemic diseases; while we further find that it is even franked from the conditions of the yellow fever, which allow of its propagation only in the lower strata of the atmosphere. The pestilential cholera traversed the plain of Malwa, which has 2000 feet of elevation above the level of the sea, and the plain of Nepal, which, according to Kirkpatrick and Crawford, is 5000 feet above the same level. It penetrated to Erzeroum, a city as lofty as Mexico, (7000 feet, Browne); and finally attacked the hermitages on Mount Ararat. The proofs against the contagious nature of the disease are equally numerous,—we mean the propagation of the disease by contact,—not so with regard to its infectious characters, or the propagation from the atmosphere where the disorder exists, or from the effluvia of a single individual.

We must first of all premise, that the existence either of infection or contagion is an inference drawn from the phenomena of disease. If a vapour or gas can be contagious, then the pestilential cholera is so; but not in the restriction which should be given to that term; though in both cases, if the infectious or contagious character of a disease can be deduced from well-attested facts, of the com-

munication of that disease by coming into proximity to, or contact with, a person affected by it, the same fact cannot be disproved; because others have been placed in similar circumstances and have not had the disease. The history of the progress, and the phenomena of propagation, of the pestilential cholera, do not go to shew that actual contact is necessary for the communication of the malady; on the contrary, M^r Poy, and some of the medical men who visited Warsaw, failed to propagate the malady by inoculation, or by tasting the matters vomited by the affected; and M. Pinel inoculated himself, not only with the blood of a person labouring under pestilential cholera, but also with the mucus of the intestines taken from the body. If, then, this remarkable and malignant disease is neither endemic, that is to say, peculiar to any country, epidemic, prevailing at particular seasons, or contagious, communicated by contact, and yet the phenomena of its origin and progress mark it as propagated by the intercourse of nations and the communication of man, it must be simply infectious, and that apparently not at great distances; and Drs. Russell and Barry, in their latest reports, seem to think, not even infectious from the clothes or apparel of a diseased person; but this is liable to some doubts. Isphahan saved itself by denying entrance to an affected caravan, which took the disease to Yezd; the German colony of Sa-repta interrupted all communication, and was not ravaged; the French, having shot themselves up in the towns of Syria which were affected, escaped the malady; in India the inhabitants of jails have also been known to escape the pest; and in the town of Permoki, some prisoners being affected by the disease, a sanitary cordon was placed round the prisons, and the town preserved from infection.

The body may receive infection in several different ways: by food; by the absorbents, or by the respiratory system. The symptoms of the disease, and the pathological appearances of the stomach and intestines, led some to think that they were the seat of the disease; but this opinion was not supported by a sufficient number of corroborative facts to be ever much in vogue. The sudden coldness and clamminess of the surface of the body, from the determination of the blood to the larger organs; the annihilation of the pulse at the wrist and temples; the incapability of drawing blood from the superficial veins; and the obstruction of the exhaling system,—combined with the fact, that the naked races of mankind, the Hindoos, for example (four millions of whom are said to have fallen victims to the disease), were most exposed to its attacks,—led others to consider the skin, or the absorbent system, as the first affected by the infection. It is a curious fact, that the arrival of this pestilence at Moscow was preceded by a cloud of little green flies, which darkened the air, and covered persons from head to foot when they entered the street, and which are known in Asia as flies of the plague. These flies have, by some medical men,^b been thought to have a considerable influence in propagating the disease. Dr. Hahnemann also supposes the disease to be caused by insects, but which are invisible to the naked eye, and adhere to the hair, skin, and clothes. In this case the use of camphor in vapour, friction, and internally, would be indicated.

The Russian medical men thought, from post mortem examinations at Astrakhan, that poly-

* The Syrio-Egyptian branch has also broken out with renewed fury. At Cairo, from the 19th of August to the 1st of September, above 9,000 persons had died.

^b Neale on Animal Contagion. The Egyptian plague, similarly infectious, is attended by a similar phenomenon.

were uniformly found on both sides of the spinal marrow; and the same parasitic growths have been found to attend the disease in India, only they occurred in the heart. They cannot, however, claim our attention as connected with the origin of the cholera.

Mr. Kersmann also advanced a theory founded upon the supposed absence of free acetic acid in the human blood, while a quantity corresponding to the amount lost might be traced in the intestines; but the existence of acetic acid, at any time, in the human blood, is a new fact, contested by the most celebrated chemists, and liable to very considerable doubts.

It appears much more probable, however, that the coldness of the skin, and loss of vitality in the surface of the body, are secondary symptoms, dependent on the affection of the heart, which is simultaneous with that of the organs of digestion and assimilation, and which would appear to result from the introduction of the poison through the medium of the air or the lungs. Pinael proposes for a disease of this character the name of *triplanchnia*, considering it as an infection of the ganglion of the great sympathetic nerve. A writer in the *Foreign Quarterly Review* says, on this subject, "That the vital energy of the nerves distributed to the respiratory, the circulatory, and the secreting organs, is either uncommonly depressed or entirely annihilated, is shown by the uniform and characteristic symptoms constituting the malady." The state of the respiration, the coldness of the expired air, the retraction of the epigastrium, and oppression on the chest, indicate that the collapse and congestion of lungs presented by them soon after death, has actually commenced during life. The diminished action and constant pain of the heart shows an imperfect action of this organ, which is no longer supplied with healthy blood; and this suspension of power is accompanied by a total cessation of all circulating and secreting actions. The organic class of nerves, which form a sphere of intimate union with each of its parts, supplies the lungs, the heart, and the blood-vessels, and all the digestive, assimilating, and secreting viscera; and when powerfully impressed in any one part, experiences a co-ordinate effect throughout the whole. Hence the sudden stoppage of all the natural secretions; the almost total cessation of circulation; the loss of power in the stomach and intestines; the congestions of the large vessels and the lungs; the sympathetic effects on the brain; and the loss of all voluntary power. The evacuations, and more especially the cramps and convulsions, which are sometimes so powerful as to leave the patient, who died during an access, rolled up like a ball, are efforts of nature to expel what is injurious, and to rally what is sinking, and are connected with this sudden diminution of the vital powers and the congestions of the nervous centres.

The symptoms will now be easily understood. They are—*In the head*: a sense of weight, sometimes aching, in the frontal regions. The senses are mostly retained to the last. *In the lungs*: respiration is difficult and laborious, embarrassed with sighs; inspiration interrupted; voice almost lost; countenance full of consternation. *Heart and vascular system*: oppression and pain in the region of the heart; the action of the heart and arteries diminished; no pulse at the wrist or temples; surface of the body and extremities cold; mouth dry. *Stomach*: sensation of great, oftentimes of violent, pain at the epigastrium—(French authors always express it as an atrocious pain!); frequent vomitings. *Intestines and assimila-*

ting organs: the abdomen swells; there is a constant desire to go to stool; pain on pressure; soon a violent ejection of matters, first of all green, then black, but often varying in colour; deposition of a clayey-like substance, with a white slimy fluid, which is found to line the coats of the intestines; no bile. The patient sometimes perishes before any re-action commences; often before all the symptoms are developed, which also undergo some slight variations in particular idiosyncrasies. Re-action shews itself by pricking of the fingers and hands, extending to the wrist and fore-arms, to the legs and thighs, and to the lower part of the abdomen and thorax. Internal Heat; hiccough; cramps of the arms and legs, and of the whole body; spasms of the stomach and intestines. It is naturally to be supposed, that in a violent pestilential disease of this kind, every function and every organ is more or less sympathetically affected; thus the eyes are sunk and glossy. (Dr. Smith says he could perceive a ring round them previous to the attacks.) Hemorrhages sometimes supervene at the nose; hearting is indistinct; the tinge of the skin is purplish, and the nails are coloured; the lips are livid; the eye cannot weep; all the glandular system appears affected; no urine is secreted or discharged during the disease. There is trembling of the hands, and total prostration of strength. The examination of bodies which have died of this disease exhibits the appearances which might be expected under these circumstances: congestion of blood in the vital organs; the lungs, the heart, the liver; ulceration of the coats, and spots in the stomach and intestines; bile in the gall-bladder; serous fluids in the ventricles of the brain. The intestines and stomach have also exhibited appearances of acute inflammation.

In the treatment of this disease, ignorant as we are of its real nature, we must not only obviate symptoms, but anticipate them, from our knowledge of the course which they run in the generality of cases. On the first attack, bleeding will relieve congestion, will give the organs increased facility for re-action, and will probably diminish the violence of that re-action; but in a short time it may be very hurtful. The period when it is too late to bleed will be marked by the loss of temperature of the surface and extremities, which symptoms must be combated by friction. Camphorated spirits of wine increase the cold by their rapid evaporation; dry frictions with hot flannels will be found to answer the purpose better. Vapour-baths, if at hand; sinapisms of linseed-meal and mustard, equal parts, to the feet, abdomen, and stomach; blisters have been used between the shoulders—they should be tried, or the moxa (which has been applied in Russia to the *sero-biculus cordis*) over the ganglion of the great sympathetic; artificial heat. In the internal treatment, the inspiration of oxygen must be immediately resorted to, to restore the lungs to their functions. Nitrous oxide may likewise be used. The body may also be restored by hot wine and spices, or other gentle stimulants. If the first symptoms are accompanied with pain, laudanum or extract of lettuce may be exhibited in moderate quantities, but in doses of rapid succession: when the spasms come on, equal parts of laudanum and sulphuric ether, or opium and camphor. Essential oils may be exhibited, more especially cajeput. Calomel in large doses was included in the treatment in India; it should not be disregarded here. The magistery bismuth has also been found of decided utility. If the spasms continue, and the ejections are violent, trust to large doses of ether,

or other diffusible stimuli, as phosphorus dissolved in oil. Use injections of the liquor ammoniac and starch; and apply externally hot fomentations of poppy-heads and hyoscyamus leaves.

With regard to the predisposing and exciting causes of the disease, they are also involved in much obscurity.

It has been said, and with much apparent plausibility, that the weak are more liable to the disease than the robust; but the very opposite statements have also been made, and it certainly appears that females are not more liable, and, in general, not so much so, as men. Indeed, the constitution of a person, if by that term we mean the resources which he possesses against disease, may affect the chances of his recovery, but not those of his being infected; though there can be little doubt, that what ever tends directly or indirectly to debilitate or fatigue the body, whatever lowers its vital energy—as excesses of every description, low and unwholesome diet, (Ainslie Whitelaw has published some cases of cholera morbus produced by eating bad rice),—disposes to the operation of the exciting cause of the malady. On the other hand, whatever tends to support this energy, and preserve in their due regularity the healthy functions of the frame, serves to render it impregnable to this agent. Those who dread not the attack of infectious disease, and who yet exercise sufficient prudence in avoiding unnecessary exposure, may justly be considered as subject to fewest risks; but experience has shewn that no moral courage can avert its painful attacks. Difference of rank does not appear to affect its propagation, nor local habitations to avert its progress. In Teheran it penetrated the palace—it entered the harem at Shiraz—and it has ravaged the serai of Cairo.

The affluent will be less exposed, because able to take more preventive means against infection: among these may be mentioned abutions with the chloride of lime and the chloride of the oxide of sodium; the mouth may also be washed with the same lotion; water impregnated with chlorine may be allowed to evaporate in the rooms. During the prevalence of cholera the use of Epsom salts should be specially avoided. In prescribing rules of diet, previous habits should always be taken into consideration. The man who has for years been accustomed to luxurious living and a moderate allowance of wine, will certainly be less predisposed to cholera in continuing these indulgences; than if he hastily adopted a spare regimen; and the man who has lived abstemiously will have his chance of exemption increased by persevering in his abstemious system. Every extreme, however, habitual or occasional, ought to be guarded against.

DRAMA.

DRURY LANE.

THE Love Charm on Thursday, by Planché, and Auber's music adapted by Bishop, afforded a great treat to a full audience at this theatre. Mr. and Mrs. Wood, H. Phillips, Mr. Seguin, and Miss Field, sustained the principal characters delightfully. The music is generally fine; some of it very characteristic and beautiful. We have no time now for details: the opera was perfectly successful.

COVENT GARDEN.

On Saturday a new drama, in two acts, called *the Army of the North*, or *the Spaniard's Secret*, was performed for the first time. It

is, as we intimated last week, from the pen of Mr. Planché; but it is by no means equal to the *Brigand*, or *Charles the Twelfth*, or, indeed, to any of his former productions. To enter into a detail of the plot is unnecessary: the principal weight of the drama lies upon Miss Taylor, who acts the character of a French spy, and whose purposes are alternately swayed by the duty she owes to her employers, and the affection she has conceived for a Spanish aide-de-camp. From this conflict there arises, as may be supposed, a certain degree of interest, and the lady, we must acknowledge, does full justice to the author; but the incidents are few in number, and contain nothing either very novel or very striking. Keeley has a little part, (a cowardly consul,) which he makes very prominent; and Power, as an Irish colonel in the French service, fills up a trifling sketch with his usual talent. The scenery is good, and the performance was received without opposition.

On the same evening Mr. S. Bennett made his second appearance in *Simpson and Co.*; but we regret that we cannot confirm the favourable report we had heard respecting him. In *Simpson*, at all events, he does not appear to advantage. It is a part that requires to be acted as it is written—neatly and pointedly—and not with the long pauses and occasional grimaces which Mr. Bennett thinks necessary to exhibit. In low comedy he may probably be more at home; but, in truth, he is an unworthy representative of the head of the firm of *Simpson and Co.* Mr. Mason acted *Bromley*, but by no means well: he seems to be an industrious and sensible young man; comedy, however, is clearly not his forte; and with Abbott and Wrench in the theatre, there is no occasion for his appearing in such characters. Miss Taylor was good in *Mrs. Bromley*, and Miss Lee respectable in *Mrs. Fitz-Allen*; but the only sterling piece of acting in the whole comedy was the *Mrs. Simpson* of Miss E. Tree. This was really excellent; and if comedies are ever to come into fashion again, we earnestly recommend to the managers to make more use of, and fairly to encourage, the constantly improving talent of this lovely and engaging actress.

On Thursday, *Fra Diavolo* gave us the welcome debut of Braham, supported by Wilson, Penson, Morley, Stansbury, Reynoldson, Miss Cawse, and Miss Romer. The whole beautiful music of Auber, executed in the best style, must render this opera one of the most popular on the stage; and we only regret that our hurry on a Friday prevents us from dwelling on the superb singing and excellent acting of Braham, the "linked sweetestnesses" of Wilson and Romer, the combined dramatic and musical talent displayed by Miss Cawse, the buffo humour of Penson, and, in short, the ability and exertion of the whole corps.

VARIETIES.

Play-bills.—The warning in the regular play-bills printed by the printers for the theatre is by no means unnecessary: we saw one of the unauthorised bills at Covent Garden on Saturday, in which nearly as many particulars were wrong as right: thus, in *Simpson and Co.*, Mrs. Simpson was stated to be by Mrs. Gibbs, and Mrs. Bromley by Miss E. Tree; whereas, in fact, the former was played (and admirably played) by Miss E. Tree, and the latter by Miss Taylor. Such forged bills mislead strangers.

Hood's Comic Annual is this year dedicated to the King, and is announced, as usual, in a

whimsical style; "The public in general, and the livery of London in particular, are respectfully informed, that in spite of Sir Peter Laurie, the Comic Annual, like the lord mayor, intends to come forward, for 'one cheer more.' It will appear in the same month with the new chief magistrate; and the usual quantity of prose and verse, with a new service of plates, are in active preparation for the occasion. Having twice served its office before, there is little necessity for any declaration of its unpolitical principles; but its studious aim being to be 'open to all parties,' it pledges itself to attend impartially, (for twelve shillings,) to any requisition that may be addressed to Mr. Tilt, 86, Fleet Street; modestly suggesting, that in compliance with the decided spirit of the times, the purchaser should inquire for the Comic Annual—the whole Comic Annual—and nothing but the Comic Annual."

The Garrick Club.—This club is proceeding with its formation, under a committee of twenty-four noblemen and gentlemen, appointed at the general meeting; among whom the Earl of Mulgrave, Lord Kinnaird, Lord E. Thynne, Sir George Warrender, and other distinguished individuals, take a very active part. They have bought Probat's Hotel, in King Street, Covent Garden; very spacious premises, which, with a few necessary alterations, will speedily be ready for the reception of the Club. The eligible situation of this house, in the vicinity of the theatres, is a great advantage to an institution which contemplates their patronage and improvement. We are happy to add, that the number of original members is being rapidly filled up, and that the subscriptions (so essential to the outfit of such a concern) are paid in as fast as could be anticipated while so many members are out of town.

Chevalier Neukomm.—We observe, in the *Harmonicon*, that this gentleman, with whose musical compositions we have expressed ourselves so greatly delighted, and whose productions at the late Derby Festival obtained so much celebrity, in the most liberal manner presented the copyright of his fine oratorio of Mount Sinai to the Derby Infirmary. So charitable and generous an act ought not to be passed without public acknowledgment, and we gladly record it. The critic in the *Harmonicon* speaks in almost rapturous terms of the oratorio; so that its publication is likely to be a source of very considerable benefit to the poor and suffering to whom it has been given.

By Permission.—The following pun, by a noble lord, is inserted by permission. His lordship on being told that Exeter Theatre was burnt, exclaimed, "Enter a fire; *Exit a Theatre*."

In reply to a friend, who observed, "Surely, W——, you don't take snuff?"

Take snuff, my dear B——! Ay, and smoke cigars too: Did you e'er know a coxcomb that didn't? Don't you?

To the Same.

George says, with looks of high disdain,
That wit is borrow'd. Ah! 'tis true;
But why should you, dear George, complain?
None ever borrow'd wit from you.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLIV. Nov. 6.]

Messrs. Colburn and Bentley announce a French edition of Paris, ou le Livre des Cent-et-un, of which the first volume has just appeared at Paris. The work is to contain a series of Tales, Sketches, and Essays, by a Hundred and One celebrated French living writers.

A Compendious History of the Council of Trent, by the Rev. B. W. Matthias, A.M., Chaplain of Bethesda. A new edition of the Rudiments of the Latin Tongue, with Notes, &c. by Thomas Rudimann, M.A.; with Additions by John Hall.

Letters from France, Savoy, Italy, Germany, Denmark, &c. by George Downes, A.M.

A new and improved edition of Mr. Campbell's Poetical Works, with the addition of all his latest Poems, is about to appear.

A Latin Grammar, by the Rev. Thomas Flynn, A.M., author of "A Greek Grammar."

A French edition of the Memoirs of the Duchesse of Abrantes; and also an English translation.

A new edition of the late Dean Gwynne's Lectures on the Four last Books of the Pentateuch.

The Rev. Mr. Stewart's Narrative of his Visit to the South Seas in the United States Ship Vincennes, in 1839 and 1840.

A new edition, corrected, of Traits and Stories of the Irish Peasantry; with Etchings by Brooke.

An embossed Physician's account, for immediate publication, a little volume, to be entitled, the Catechism of Health; or, Plain and Simple Rules for its Preservation; with Observations on the Nature, Treatment, and Cure of Cholera.

We have tried hard to reduce one of the prose tales of the Keepsake within the limits of a quotation, without spoiling it by abridgment; but have not been able to satisfy ourselves. We must therefore defer, if not altogether abandon, the task; neither of which we can do, without again bestowing our strong commendation upon these parts, as well as upon the volume generally.

LIST OF NEW BOOKS.

Keepsake for 1839, 8vo. 21s. silk; large paper, 2l. 12s. 6d. silk. Bishop Malby's Sermons, 8vo. 16s. 6d. bds.—Hear. TO CORRESPONDENTS.

63 We have this day given a *précis* of the CHOLERA to our trust, though condensed, one of the most clear and useful views yet presented to the public on this most important subject. A map of its progress, from its origin to the present hour, was intended to accompany this paper; but we are compelled to delay it till next week, when we shall enable our readers to trace the disease through all its routes, climates, and dates. As we are neither alarmists, drug-sellers, nor theorists, and entertain only one wish, that of furnishing the best information possible to our country, we beg earnestly to recommend this account to general attention.

The plague in Egypt is not the Cholera: we shall also turn to this in our next.

Original Poetry, Musical Review, Reports of several Scientific Societies, &c. are necessarily postponed, in consequence of the article on Cholera occupying so much space.

M. T. has wasted a good halfpenny worth of paper by writing verses: it is a loss.

G. H.'s suggestion has often been offered to us, and frequently answered, that the practice would subject the *Gazette* to a heavy stamp duty, amounting to perhaps 200*l.* a-year; and the information is always to be found in our list of new publications.

ERRATA.—For *Landscape*, p. 760, col. 1, line 3 from bottom, read *Picturesque*.—Page 701, col. 2, line 30-9, "horresco reference," the last word, not being Latin, ought to have been italic.

ADVERTISEMENTS.

Connected with Literature and the Arts.

TO ARTISTS, ARCHITECTS, and DRAFTSMEN.

The utmost attention has been given to the Manufacture of Drawing Pencils in Cedar by S. Mordan and Co., who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing those objections and annoyances so frequently complained of in Drawing Pencils. All who wish to be satisfied as to the genuineness of these Pencils, may see them manufactured at No. 22, Castle Street, Finsbury, which establishment now has the honour, exclusively, to supply all the Government Offices.

Sold retail by all respectable Stationers, &c. throughout the United Kingdom. S. Mordan and Co.'s name is on each Pencil.

HORNE'S PUBLIC SUBSCRIPTION LIBRARY, No. 1, Queen Street, Chesham, consisting of an extensive Collection of Works in the various Departments of Literature.

I T A L Y.

By JOSIAH CONDER.

Author of the "Modern Traveller."

"Conder's Italy will in future be the travelling companion of every man bent upon a thorough investigation of that interesting land. He is the best compiler of the day, and this is no small praise. Such compilation as Mr. Conder's requires industry of a laborious nature, considerable knowledge, a methodical head, judgment, taste. Are these qualities to be met with every where? Look at the manner in which compilations are usually performed, and the question is answered.—Mr. Conder is the compiler of the "Modern Traveller," the best and completest geographical and descriptive work in any language."—*Spectator*, April 1861.
"We sincerely congratulate the public upon the appearance of a work, which really is an accurate and complete account of modern Italy."—*Astoria Journal*, May 1861.

The Modern Traveller; a Description, Geographical, Historical, and Topographical, of the various Countries of the Globe. In 30 vols. price 52. 4s. cloth boards.
New editions of the different Countries may be had separate, price 5s. 6d. per vol. cloth boards, as under:—Palestine, 1 vol.—Byria and Asia Minor, 2.—Arabia, 1.—Egypt, 2.—India, 4.—Birmah, Siam, &c. 1.—Persia and China, 2.—Turkey, 1.—Russia, 1.—Spain and Portugal, 2.—Africa, 3.—United States and Canada, 2.—Mexico and Guatemala, 2.—Colombia, 1.—Peru, 1.—Brazil and Buenos Ayres, 2.
"No work can be found in our language, or any other, equal to supply the place of the "Modern Traveller."—*Literary Standard*.
"Conder's "Modern Traveller" covers all the libraries taken together."—*Fraser's Magazine*, August 1861.
Printed for James Duncan, 87, Paternoster Row.

Important Works on Botany and Natural History, Published by Treuttel, Wirtz, and Richter, 80, Soho Square.

Henry Colburn and Richard Bentley, New Burlington Street.

In 3 small vols. Plates, price 18s.
FRAGMENTS OF VOYAGES AND TRAVELS; being an Account of Captain Hall's Naval Life and early Voyages.
 "This book is modestly recommended by the author to the use of young persons chiefly; but we believe that few persons of any age, however advanced, will peruse it without being conscious of a salutary spice of admonition silently penetrating to some disordered corner of their heart, and correcting a latent evil: its evidence throughout a delicate perception of the consequences of our conduct as it regards the feelings of others, which bears more particularly upon the duties of the higher stations of life."—*United Service Journal*, July, 1881.
 Printed for Robert Cadell, Edinburgh; and Whittaker and Co. London.

Who have also published,

The English Translation of Count Lavallée's Memoirs. Written by Himself.
 "We have perused this autobiography with much eagerness and delight."—*Spectator*.
 Henry Colburn and Richard Bentley, New Burlington Street.

Leopold's Hebrew Grammar, with Points.
 In 8vo. price 6s. boards, the 4th edition of
THE SCHOLAR'S INSTRUCTOR—a Hebrew Grammar with Points.
 By ISRAEL LYONS,
 Formerly Teacher of the Hebrew Language in the University of Cambridge.
 Revised and corrected by HENRY JACOB.
 Glasgow: Printed by A. and J. M. Dunlop, and sold by C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, London.

Handsome printed in 2 large vols. 8vo. with a Portrait, beautifully engraved by Dean, price 17. 8s. boards,
THE LIFE and TIMES of WILLIAM LAUD, D.D. Lord Archbishop of Canterbury.
 By JOHN PARKER LAWSON, M.A.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. with Plates, price 16s. boards, dedicated, by permission, to His late Majesty.

LECTURES on the ELEMENTS of HIEROGLYPHICS and EGYPTIAN ANTIQUITIES.
 By the MARQUESS SPINETO.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, London; and sold by Deighton, and Stevenson, Cambridge; and Parker, Oxford.

Burke's Works complete, with General Index.
 In 16 vols. 8vo. price 6l. 17s. boards.
THE WORKS of the Right Honourable EDMUND BURKE.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.
 "A few Copies may be had on royal paper, price 8l. 12s. in boards. Also several of the latter Volumes, in demy and royal 8vo. and 4to. to complete Sets."

In 8vo. price 12s. boards, the 2d edition, revised, of
A PARAPHRASTIC TRANSLATION of the APOSTOLICAL EPISTLES, with Notes.
 By PHILIP NICHOLAS SHUTTLEWORTH, D.D.
 Warden of New College, Oxford; and Rector of Forley, Wilts.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.
 Of whom may be had, by the same Author,
Sermons on some of the Leading Principles of Christianity. 2d edition, 8vo. 12s.

In 1 vol. post 8vo. 12s. in cloth,
A DICTIONARY of QUOTATIONS
 from various Authors, in Ancient and Modern Languages, with English Translations, and illustrated by Remarks and Explanations.
 By HUGH MOORE, Esq.
 Whittaker, Treacher, and Co. Ave Maria Lane.

CREATION DISPLAYED, a Poem, in Two Parts; the Second Part including the Fall of Man. With Illustrations from Milton.
 By J. BRITANNIA.
 Longman and Co. London; and Levey, Chesham.

BOOKS IN THE PRESS.
 Albemarle Street, Oct. 1881.
LIFE and WORKS of BYRON.
 The Prospectus, with Specimens of the Letter-press and Engravings, of the first complete and uniform Edition of the Life and Works of Lord Byron, to be published in Monthly Volumes, corresponding with the New Edition of the *Waverley Novels*, will be had of Mr. Murray, and of every Bookseller and Newsman. The publication will commence on the 1st of January next, and the price of each Volume will be only Five Shillings.

On Dec. 1st will be published,
TRADITIONS of LANCASHIRE, Second Series. Dedicated to the Right Hon. Lord Stanley.
 By J. ROBY, M.R.S.L.
 The Publishers pledge themselves that this concluding Series will be brought out in a style in every respect equal, if not superior, to the First Series of the *Traditions of Lancashire*.
 The Plates will be engraved by Finden, from Drawings by Pickering. The Woodcuts by Williams, &c. from Drawings by Frank Howard.
 Price, to Subscribers, royal 8vo. with Proof and Engravings, on India paper, 4l. 4s.; royal 8vo. with Proof only, on India paper, 3l. 2s.; demy 8vo. 2l. 2s.
 A few Copies of the First Series may still be had at the same price.
 Printed for Longman, Rees, Orme, Brown, and Green.

Next week will be published,
CAMERON. A Novel. In 3 vols.
 II.
Lives of the Italian Poets. By the Rev. H. Stebbing. 2d edition, with several additional Lives, including that of Ugo Foscolo. 3 vols.

III.
Conversations on Intellectual Philosophy. 3d edition, in 2 vols. price 16s.
 "To the young these conversations are invaluable."—*Lancet* Gazette.

Just published,
 IV.
The Anatomy of Society. By J. A. St. John. In 2 vols. small 8vo.
 "These compositions teem with thought, with the speculations and illustrations of a meditative, liberal, cultivated, and chemical mind."—*Morning Herald*.
 Printed for Edward Bull, New Public Subscription Library, 25, Holles Street, Cavendish Square.

In a few days, price 5s. boards,
SELECTIONS from the POEMS of ROBERT SOUTHEY, Esq. Poet Laureate, &c. &c.
 Lastly published,
Selections from the Poems of W. Wordsworth, Esq. Chiefly for the Use of Schools and Young Persons.
 Edward Moxon, 64, New Bond Street.

Literary Notice.
 The following New Works are just ready for publication, by Messrs. Colburn and Bentley, New Burlington Street.
 In 2 vols. demy 8vo.
MEMOIRS of the DUCHESSE d'ABRANTES.

A Translation of this interesting Work, comprising Recollections of General Junot, and other celebrated Persons, is preparing, and will be published in a few days.

II.
Cavendish; or, the Patrician at Sea. In 3 vols. post 8vo.

III.
A Visit to the South Seas, in the United States Ship Vincennes, in 1839 and 1840, comprising Samoa, Brazil, Peru, Manila, the Cape of Good Hope, St. Helena, &c. forming the most recent Account of the Christian Missions in the South Sea Islands. By C. B. Stewart, A.M. Chaplain in the United States Navy.

IV.
Paris; ou, le Livre des Cent-et-un.
 "A Translation of the above, under the title of 'The Parisian Sketch-book, by a Hundred French Writers,' is preparing, and will be ready for publication immediately."

V.
Alice Paulet. A Sequel to "Sydenham." By the Author of "Sydenham." 2 vols. post 8vo.

VI.
The British Dominions in North America. including an Account of the Present State of Upper and Lower Canada, New Brunswick, Nova Scotia, the Islands of Newfoundland, Prince Edward, and Cape Breton. By Lieut.-Colonel Bouchette, Surveyor-General of Lower Canada. In 2 vols. With numerous Plates, Plans, &c.

VII.
The Catechism of Health; or, Plain and Simple Rules for the Preservation of Health; to which are added, Observations on the Nature, Treatment, and Cure of Cholera. By an Eminent Physician. In a small vol. price 1s.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 12, South Molton Street, Baker Street; sold also by J. Chappell, 10, Regent Square; T. Marlborough, Ave Maria Lane, Ludgate Hill; A. Mack, Edinburgh; Smith and Son, D. Robertson, and others; and Co. Glasgow; and J. Cunningham, Dublin. This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 773.

SATURDAY, NOVEMBER 12, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The British Dominions in North America, &c.
By J. Bouchette, Esq. 2 vols. 4to. London, 1831. Colburn and Bentley.

HAVING a previous knowledge of the long and meritorious labours of Mr. Bouchette in the British North American provinces, we are induced, though at a late period in the week, to renew our acquaintance with them, through the medium of a new, and as yet unpublished, production, entitled *Bouchette's British Dominions in North America*. Looking to the extensive (we had almost said exclusive) sources of information possessed by this gentleman, we cannot say that we rise with entire satisfaction from the literary refection he has on this occasion provided; for although professedly only a topographical and statistical account of our colonies, and comprehending as it certainly does a very copious variety of details on these heads, yet we think there are many subjects in connexion which might have been entered into, or enlarged upon, with much advantage to the reputation of the author, and the information of the reader. Public attention has of late been much directed to the North American colonies; and the intrinsic value and political weight of these appanages of the empire has been the theme of a prolonged inquiry, and as yet undecided discussion. Emigration, and the timber-trade questions, resolved themselves naturally into these important considerations. Into the first of these subjects Mr. Bouchette enters at considerable length; and we have much pleasure in hearing from him the still increasing success of the lately founded townships in Upper Canada, and the encouraging prospects to new settlers. Among the variety of valuable information furnished by him, we should have been glad to have found his opinions, whether the tenure in *seigneurie*, or of free and common *socage*, is most advantageous, and of more immediate benefit to the provinces; and whether the dense and surplus Canadian population does not imperatively call for the creation of new *seigneuries* for their location on the crown lands; as, in consequence of the unconquerable attachment they manifest for their ancient laws and customs, all attempts to distribute them in townships have been quite nugatory. As regards the advantages derived from the excessive impulse given to the timber-trade, we are much pleased to catch an expression of the author's opinion in unison with our own. The chief business of the population should be agriculture; and we are quite sure that the progress of our colonies has rather been retarded than forwarded by the direction of the spare numbers of the labouring classes to the getting out of pine timber, and the digging for gypsum; but for these, the exportation of grain, which affords a remunerating price, would have greatly increased, and the fisheries might not have been so much engrossed by an enterprising neighbour. Mr. Bouchette's descriptions of the topography of these provinces are penned with all the ac-

curacy of a surveyor; and if acquainted with Mr. Galt's no less faithful sketches of the inhabitants, the reader may easily, in his own mind, people the landscape. The progress of society, as rapid in these colonies as their spring vegetation, is methodically traced and described, from the first peopling of the solitude of the pine-forest, through all the gradations of improvement, to the assumption of the characters of towns and even cities, upon the same site. The genius of the mother country is distinctly manifest in many of the early advancements and infant foundations of her colonies; and we may cite as an example the numerous canals now in progress, or completed, in these provinces for the more expeditious transits of merchandise, or as precautionary defences against foreign aggression.

Of the state of society the author does not profess to give any account; and not being original in this particular, it is almost needless to remark, that education is another subject on which he scarcely touches. Of the portions of these volumes which relate to the provinces of Upper and Lower Canada, we report in terms of commendation; but as respects those of Nova Scotia and New Brunswick, they do not contain much that has not been gathered from preceding publications,—particularly from Mr. Haliburton's account of Nova Scotia, the best provincial history with which we are acquainted. We had almost forgotten to speak in terms of unequalled praise of the fidelity and execution of the views which adorn the pages: the lithography is extremely creditable to the artist. We have great difficulty in selecting a specimen for the opinion of our readers; all the striking features of foaming fall and lake have been so frequently and so lately troubled by Captain Hall and others, that we would rather let them rest and subside in peace. Perhaps a description of Kingston, the naval arsenal, and of the flourishing settlements in the neighbourhood, finishing with a summary of the improvements in the lower province, will have some little claim for freshness and variety.

The town of Kingston, the largest and most populous of the Upper Province, is very advantageously seated on the north side of the river St. Lawrence, or rather at the eastern extremity of Lake Ontario: it is in latitude 44° 8' north, and in longitude 76° 40' west from Greenwich. On the ground upon which it is built formerly stood Fort Frontenac, an old French post. Its foundation took place in 1783; and by gradual increase it now presents a front of nearly three quarters of a mile, and in 1828 contained a population ascertained by census to amount to 3528 inhabitants, exclusive of the troops in garrison; including the latter, and making due allowance for two years' increase, its population may now be computed at not less than 5,500 souls. The streets are regularly planned, running at right angles with each other, but not paved. The number of houses may be estimated at about six hundred and seventy. Most of them are well built of stone: many of them spacious and commo-

dious: but very few are remarkable for the taste or elegance of their structure. An extensive wooden bridge of much solidity and beauty has recently been thrown over the narrowest part of the channel, between Point Frederick and the town. It exceeds six hundred yards in length, and has materially added to the scenery of the place and the convenience of its inhabitants. The public buildings are a government-house, a court-house, a Protestant and a Catholic church, a market-house, a gaol, and hospital, besides the garrison, block-houses, government magazines, and stores. This town has obtained considerable mercantile importance within the last twenty years: wharfs have been constructed, and many spacious warehouses erected, that are usually filled with merchandise: in fact, it is now become the main entrepôt between Montreal and all the settlements along the lakes to the westward. From the commencement of spring until the latter end of autumn, great activity prevails; vessels of from eighty to nearly two hundred tons, employed in navigating the lake, are continually receiving and discharging their cargoes, as well as the bateaux used in the river; and the magnificent steam-boats that ply between Kingston, York, and Niagara, contribute largely to the lively animation of the scene. Its commercial importance must also be considerably enhanced by the opening of the Rideau canal, which will necessarily render it the emporium of the whole trade of the two provinces, whether carried on by the St. Lawrence or through the Ottawa. The harbour is well sheltered and convenient, accessible to ships not requiring more than three fathoms water, with good anchorage close to the north-eastern extremity of the town. The entrance to it is defended by a battery on Missisaga Point, and another on Point Frederick; which, with the shoal stretching from the former, with only five feet of water upon it, are quite sufficient for its protection. Opposite to the town, and distant about half a mile, is a long low peninsula, forming the west side of Navy Bay. The extremity of it is called Point Frederick. Point Henry is the extremity of another peninsula, but of higher and more commanding ground, that forms the eastern side of it. This is the principal depôt of the royal navy on Lake Ontario, and where the ships are laid up during the winter. The anchorage is good, but somewhat exposed to south and south-west winds. It is very well defended by batteries and block-houses on Point Frederick, and by a strong fort on Point Henry. On the western side of Navy Bay are the dock-yard, large store-houses, slips for building ships of war, naval barracks, wharfs, and several dwelling-houses for the master builder and other artificers, for whom, since their occupations have been so unremitting, it has been found necessary to erect habitations on the spot. In this yard the ships composing the present British Ontario armament were built and equipped. The construction of the St. Lawrence, a first-rate, mounting one hundred and two

guns, will sufficiently prove that the power of this fleet may hereafter be increased to a vast extent. At Sacket's Harbour, the rival of Kingston as a naval dépôt, the maritime forces of the United States are kept. During the war large vessels were there put upon the stocks, one of which was represented as exceeding in dimensions the largest man-of-war in the British service, being two hundred and ten feet in length on her lower gun-deck. It is a fact singular enough, and well worthy of remark, that the largest armed ships in the world should thus be found in the heart of an immense continent, on the fresh waters of an interior lake, and at so remote a distance from their more familiar element, the ocean. As a rival station to the American one of Sacket Harbour, Navy Bay is entitled to every consideration; and as long as it becomes an object to maintain a naval superiority on the lake, the greatest attention must be paid to this establishment; particularly when we observe with what care our rivals complete such of their ships as were begun during the war, and also the measures they are adopting generally, to be enabled to contend against us, at a future period, with numerical strength in their favour; and, in fact, the methods they pursue are well calculated to obtain the object they steadily keep in view. The conduct of an enterprising neighbour should always be narrowly observed, and a countervailing power be prepared, commensurate to the means of aggression, in the event of hostilities. The Americans build their ships much faster than we do on our side, and for this reason, strength is the chief object with them; and if that be obtained, they care but little about beauty of model or elegance of finishing: in fact, they receive no other polish than what is given them by the axe and the adze. On the other hand, we employ as much time upon ours as we should in the European dock-yards. They are undoubtedly as strong as the Americans; they are handsomer, and much better finished; but they are far more expensive, and will not endure a longer period of service. When we reflect, that ships built on this lake will not last more than five, or at most six years of actual service, it may be a subject not unworthy of consideration, whether we cannot, with some advantage to ourselves, adopt the methods of our opponents; and if we have a fleet as strongly built, equal in number and size to theirs, and capable of keeping up the unrivalled splendour of our national banner, be satisfied with it, although it be not a rival in beauty and splendid decorations to that which has awed every enemy into submission.

"The thriving village of Perth is situated in the township of Drummond, on a branch of the Rideau, and occupies a central position between the Grand River and the St. Lawrence, communicating by tolerably good roads with Kingston to the south, and By Town to the northward, at the opposite extremities of the Rideau canal. The first establishment fostered by government was made in 1815 by British emigrants, chiefly from Scotland, many of whom are now at the head of excellent farms, possess comfortable habitations, and reap the fruits of their perseverance and industry. The population of the village does not probably exceed, as yet, three hundred and fifty or four hundred souls; but its relative situation with the surrounding country and the canal, making it the natural entrepôt of the settlements on the St. Lawrence, and those of the Ottawa river, promises to contribute to its rapid aggrandisement and prosperity, independently of

the advantages it derives from being seated in the midst of a fertile and luxuriant tract of country. The military settlements of Lanark and Richmond have also experienced the benefits of government patronage; and occupying, as they do, a propitious locality and excellent soil, are very prosperous, and fast increasing in their agricultural improvements and population. By Town, in Nepean, is situated on the southern bank of the Ottawa, a little below the beautiful falls of the Chaudière, and opposite the flourishing village of Hull in Lower Canada. It stands upon a high and bold eminence surrounding Canal Bay, and occupies both banks of the canal; that part lying to the east being called the Lower, and that to the west, from a superiority of local elevation, the Upper Town. The streets are laid out with much regularity, and of a liberal width, that will hereafter contribute to the convenience, salubrity, and elegance of the place. The number of houses now built is not far short of one hundred and fifty, most of which are constructed of wood, frequently in a style of neatness and taste that reflects great credit upon the inhabitants. On the elevated banks of the bay, the hospital, an extensive stone building, and three stone barracks, stand conspicuous; and nearly on a level with them, and on the eastern side of the bay, is delightfully situated the residence of Colonel By, the commanding royal engineer on that station. From his veranda the most splendid view is beheld that the magnificent scenery of the Canadas affords. The bold eminence that embosoms Entrance Bay; the broken and wild shores opposite, beyond which are seen a part of the flourishing settlements and the church of Hull; the verdant and picturesque islands between both banks, and occasional canoes, barges, and rafts plying the broad surface of the Grand River, or descending its tumultuous stream, are the immediate objects that command the notice of the beholder. In remoter perspective the eye dwells upon a succession of varied and beautiful bridges, abutting upon precipitous and craggy rocks, and abrupt islands, between which the waters are urged with wonderful agitation and violence. Beyond them, and above their level, the glittering surface of the river is discovered in its descent through the broad and majestic rapid Des Chênes, until the waters are precipitated in immense volumes over the verge of the rock, forming the falls of the Great and Little Chaudière. From the abyss into which they are involved with terrific force, revolving columns of mist perpetually ascend in refulgent whiteness, and as they descend in spray beneath a glowing sunshine, frequently form a partial but bright iris, that seems triumphantly to overarch a section of the bridge. The landscape of the Union Bridges, although not taken exactly from this enchanting spot, may convey some idea of the scope and splendour of the prospect which we have attempted briefly to describe, and partly secure to it that admiration to which it is so richly entitled. The talent evinced by Colonel By, and the zeal he has displayed in the prosecution of the great and momentous works intrusted to his professional skill, are strikingly demonstrated by the vigour with which the operations are carried on upon the Rideau Canal, and the emulation and spirit that pervade the settlements that have grown out of this stupendous undertaking.

"Ascending along the shores of Lake Chaudière, the next objects of note first presenting themselves are the rising colonies in front of the townships of March and Tarbolton; they are chiefly composed of families of high respect-

ability, possessed in general of adequate means to avail themselves of the advantages that are incident to a newly opened country. Higher up, at the foot of the various cascades of the Chats, is the establishment of John Sheriff, Esq. pleasantly situated in a very romantic and desirable spot. Above this, an impervious wilderness extends to the north-westward along the rapids of the Chats, and part of the lake of the same name, until human habitations reappear in the township of Macnab. High up, on the bold and abrupt shore of the broad and picturesque lake of the Chats, the Highland chief Macnab has selected a romantic residence, Kinell Lodge, which he has succeeded, through the most unshaken perseverance, in rendering exceedingly comfortable.* His unexampled exertions in forming and fostering the settlements of the township, of which he may be considered the founder and the leader, have not been attended with all the success that was desirable, or which he anticipated. Most, if not the whole, of the inhabitants were members of his clan, whom he brought from the Highlands at considerable trouble and expense, with a view of improving their condition and ameliorating their circumstances. However, they do not appear to have fully appreciated the benefits intended to be conferred, nor the multiplicity and magnitude of the obstacles that were surmounted in locating them to their new lands, although they in some measure must themselves have participated in the difficulties incident to the formation of an early settlement in the heart of an absolute wilderness. The colony is nevertheless making sensible progress in its improvements, and will doubtless in a few years be a valuable accession of industry, loyalty, and strength, to the province.

"In taking a general and comprehensive view of Upper Canada, and glancing retrospectively to what it was fifteen years back, the accelerated march of its prosperity and improvement is remarkably striking. Within that period, the mass of the country has been surveyed, settlements formed in almost every township, and towns and villages have sprung up with extraordinary energy in various directions. Canals of an elegance and utility, and of dimensions unrivalled, if equalled, on this continent, have been opened through the province. The Welland and the Rideau canals remove from the frontier, the internal communication by water, from the remotest British settlements of the St. Lawrence, to the sea. The Burlington and Desjardins canals afford important advantages to the fertile district in which they are situated. The navigation of the lakes and rivers has undergone the greatest amelioration. Eight or ten steam-boats, some of them of great elegance, now form several complete and convenient lines of communication between the remote parts of the country. Manufactures and mechanics have also made

* "The characteristic hospitality that distinguished our reception by the gallant chief, when in 1828 we were returning down the Ottawa, after having explored its rapids and lakes, as far up as Grand Cañon, we cannot pass over in silence. To voyageurs in the remote wilds of Canada, necessarily strangers for the time to the sweets of civilisation, the unexpected comforts of a well-furnished board, and the cordiality of a Highland welcome, are blessings that fall upon the soul like dew upon the flower. 'The sun was just resigning to the moon the empire of the skies,' when we took our leave of the noble chieftain to descend the formidable rapids of the Chats. As we glided from the foot of the bold bank, the gay plaid and cap of the noble Gael were seen waving on the proud eminence, and the shrill notes of the piper filled the air with their wild cadences. They died away as we approached the head of the rapids. Our caps were flurried, and the flags (for our canoe was gallantly decked with them) waved in adieu, and we entered the vortex of the swift and whirling stream."

considerable progress; coarse linens and woolen cloths are successfully manufactured for domestic use by most good farmers; and manufactory of iron are established at Marmora and Charlotteville. Saw and grist mills (there are upwards of five hundred of them), distilleries and breweries, are to be found in all the settled parts of the province. The principal towns in most districts contain proper public buildings, such as churches, court-houses, gaols, warehouses, &c. At York, a provincial bank is established under legislative authority, with branches at Kingston and Niagara. District schools, under the general superintendence of a board, and the immediate direction of trustees, are established throughout the province; and a college, upon the principle of similar institutions in England, has been founded and recently opened in the capital of the colony. The learned professions—the members of which are in general numerous—have also their ornaments; and eight or ten presses issue weekly newspapers, for the most part very intelligently edited, and circulating widely through the province. Post towns are frequent, and afford conveniently the means of communication with celerity and safety."

The Affianced One. By the Author of "Gertrude." 3 vols. 12mo. London, 1832. Bull. A PICTURESQUE and Italian story, evidently written by one well acquainted with the *locale* described. Its merits are, an interesting heroine—some graphic sketches of Milanese society—and a novel *dénouement*. Its faults are, a narrative too wire-drawn—a style too desultory—in short, making three volumes out of the materials for half that extent of page and margin. We shall give one or two extracts, like scenes in a panorama.

"In the neighbourhood of Milan, and romantically situated on the side of a vine-clad hill, stood the ancient convent of La Santa Theresa, forming a beautiful but melancholy feature in the landscape: its gray cloisters, embowered in luxuriant orange-trees, and its high walls, exciting a regretful sensation that the hand of man should thus shut out with gloomy superstition the surrounding beauties of nature. The convent-bell tolled mournfully and at intervals. The last rays of the sun ceased to illumine the painted windows of the chapel, from the interior of which issued a strain of solemn but soothing melody, and a slight breeze, bearing on its balmy wings ten thousand sweet odours, fanned the sultry atmosphere. Within the convent-garden the scene was interesting, and so expressive of repose divested of gloom, that even a prejudiced eye might cease to wonder at the living entombment of its inmates, or a humane mind to pity those victims of false enthusiasm or family aggrandisement. The flowers, in the cultivation of which lay the chief enjoyment of the cloistered sisters, bloomed in all the luxuriance of an Italian spring, and every corner of the vast garden was embellished with roses and hyacinths, myrtles and geraniums, filling the air with an almost overpowering fragrance. Winding paths, cut through the flowery grass, were overshadowed by laurels, acacias, and orange-trees. The aged abbess, leaning upon her staff, with silver hair and long black veil, walked slowly up the broad and gravelled middle walk. Groups of nuns glided to and fro between the trees, with the bending air and downcast eye which a conventional life almost invariably imparts. And the glimpses of their floating garments, now approaching, now receding among the dark foli-

age, produced a pretty and striking effect. Some were busily employed in watering the flowers which drooped after the noon-day heat; some sat under the spreading branches of the trees, and wreathed together chaplets of flowers to ornament the Madonna; others were engaged in low conversation, and a few lay on the grass fast asleep. A joyous band of children traversed the garden, the *pensionnaires* of the convent, in all the noisy mirth of scholars dismissed from their embroidery-frames and prayer-books, yet stopping to curtsy to the Signora Badessa whenever their gay steps encountered her in her solemn walk."

Italian portrait.

"Her excellency was on her way to the Casino Nobile, having passed the day in *villeggiatura*—that is, in yawning and playing at tarocco under the trees, at her beautiful villa in the neighbourhood of Milan. Her dress was splendid in the extreme. Her cashmere was from Paris; her velvet gown from Victorine; yet no one could have mistaken the Signora for a native of any other country than her own. Nor was the careless negligence of her superb toilette, and the bad taste observable in the *clinquant* which mingled with her fine jewels, at all similar to the tastelessness of an ill-dressed Englishwoman—equally little did it resemble that *lucus à natura*, an ill-dressed Frenchwoman. In the poorest *contadina* is never to be observed that cockney air, that indescribable vulgarity, aping gentility, which is peculiar to England—which, in the shape of a rose-coloured spencer and green parasol, shocked the sensitive nerves of poor Monsieur Torbin among the ruins. There may be negligence among the lower orders in Italy—and dirt, Heaven knows, there also is—but there is something *en grand* even in their mixture of rags and finery, in the tattered petticoat and hair tastefully arranged with tarnished silver, like the figures of the Madonnas in their own country churches. This taste is undoubtedly maintained by that religion which accustoms the eye even of the lowest classes to splendour; which raises the imagination, however untouched it may leave the heart. The uncombed hair of the first reformers, and the stripping of all ornaments from the Protestant churches, may be reckoned among the causes of the total absence of taste observable in the costume of the English and Scotch peasantry. Little good is to be done in this world without a certain intermixture of evil, and it is fortunate when that evil happens to be trifling compared with the beneficial results arising from a wise reformation. Who would regret that a row of smiling cottages, planted with thriving trees, and filled with a happy peasantry, had shut out a beautiful point of view? Or that cultivated corn-fields had formerly, when covered with brushwood, afforded excellent ground for the chase?"

Young Englishmen's sentimentalities abroad.

"And various young Englishmen were observable, rapt, enchanted, fancying themselves in Elysium, as they sat by the side of some splendid Italian beauty, whose full veiled eyes, dark hair, and sunny smile—

'Might shake the saintship of an anchorite.'

All might see that these youthful worshippers of foreign loveliness had just set foot upon Italia's shore. How insipid in their eyes are their fair countrywomen! How wanting in expression! how cold, reserved, and uninteresting! And how charming sound those words, but half understood, flowing from the lips of that noble Duchess, who, with an air at once so lofty and so tender, bends upon that young

Milord Ingless those eyes, whose light seems caught from a holier world! And if a loud word, or unmelodious laugh should escape from the syren, it is pardoned, as the manner of a foreigner. And when she talks of the Scala, and the Corso, and Signor Vignano, how infinitely more interesting than the hackneyed sounds of the park, the opera, and Mr. Ebers! But, except in some instances, this illusion does not last long; these youthful worshippers of Italian beauty return home in a few years, with long sentimental faces, heaving mysterious sighs, and wearing mysterious rings, chains, and incased miniatures; which, if rashly opened by some profane hand, would perchance be found to contain the striking likeness of a favourite pointer."

Opera at the Scala.

"The scene was brilliant and beautiful in the highest degree. The exterior draperies of the boxes are at once rich and simple, the parterre vast and spacious. Each tier, of which there are six, contains six-and-forty boxes, and each box is a handsomely furnished private apartment, with silk hangings and velvet cushions, and opening into another room, well lighted, and where supper, ices, and refreshments, occupy the company during the uninteresting parts of the opera. Nothing can be more agreeable than splendid music, which all may listen to who please, yet which does not impede the conversation of those who, labouring under Shakespeare's anathema, prefer their own voices to the softest melody. The imperial box, placed in the centre, was splendidly illuminated, and the archduke and his suite sat in a blaze of light—the crown and cross of Austria shone brightly—while the concentration of light on the stage and on the viceroy's box, threw the rest of the theatre into a partial obscurity, a mild and agreeable twilight. The imperial box is fitted up with much magnificence, and the ante-chamber adjoining conducts into a bed-room, where his highness may, if he pleases, sleep amidst a concord of sweet sounds—

'Of music such as charmed sleep.'

The merchants, who sat in their parterre, conversed upon money-matters with the utmost vivacity, and transacted their affairs to the air of

'Ah! se di mali miei.'

with as much intentness as in their own counting-houses. The warblings of Pasta were all unheeded amid the more interesting sounds of promissory-notes, bills of exchange, inventories, indemnity-bonds, bills of lading, and dividends from the funds; for Orpheus, who moved stones and stocks by his melody, might have sung himself hoarse on the Stock Exchange without attracting attention. Some talked politics, but in a very measured tone, and with a glance at the *gens-d'armes*, who mingled with the audience, looking as if they said, with Cardinal Mazarin, '*Cantano? Pagaranno.*'

We end by protesting against the way in which Lorenza is treated; but, as Liston justly observes, "them authors have no more heart than a spring cabbage."

Poland under the Dominion of Russia. By Harro Harring. 12mo. pp. 276. London, 1831. Cochrane.

THIS is a strange, flighty book, written by a Frieland, who seems to have visited Warsaw under a cloud, and to have stayed there, in the Russian service, very much against the grain. He paints the Archduke Constantine as an abominable military martinet and despot—a sort of Paul in his freaks and cruelties. Though

we gather some intelligence respecting Poland from these pages, we cannot say that they supply a desideratum thus indicated by the writer:—"The want of information respecting Poland must be regarded by many as a matter of surprise; considering that the journals of the day manifest no deficiency of correspondence from all corners of the world."

Does not the poor ignoramus know, that more than nine-tenths of such letters are manufactured on the spot where they are published? It would puzzle the journals much to shew their distant post-marks!

By the following it will appear that Harro Harring is no novice in authorship:—

"In Poland the traveller cannot fail to remark the tinge of orientalism which pervades every thing around him: he sees Jews, Turkish pipes, dark eyes, voluptuous expression, a disposition to debauchery and despotism, which cannot be more arbitrary even in Turkey. In Kalish our coffee had an oriental flavour. We proceeded to the post-office, to go through the required ceremonies. Our trunks had already been searched on our arrival, and they had been full half an hour under inspection before we went to the hotel. My books now became the subjects of examination; and when the inspector informed me that they must be sealed up and forwarded to Warsaw, I produced a list of their titles, and declared myself the author of the 'Student of Salamanca,' of the 'Mainottes,' the 'Bliztoni,' and the 'Psariot.' 'The Student of Salam ... Mainot ... Bliz ... Ps ... Psariot!' mumbled the inspector, while he scanned me from head to foot. 'I will be personally responsible for the contents of these books,' said I; 'I am the author, and will present myself to the censor at Warsaw.' 'Hem!' replied the inspector, 'if you are the author, it is of very little use to send the books forward alone. But what are the books about?' 'Oh! they contain essays on whist and boston, flying machines, and Bavarian puddings,' said I; and the inspector turned to another trunk."

Of Baron Sass, high in the Russian administration at Warsaw, we are told:—

"The deceased baron was about the middle height, and rather corpulent; his hair was gray, his eyes keen and intelligent, and his whole appearance indicated that he was no enemy to the bottle. He was a great lover of the belles-lettres, and particularly admired the poetic writings of Lord Byron, whose works, in various editions, were always to be seen on his table. He frequently amused himself by their perusal, and was fond of repeating the passages which struck him as remarkable for beauty. He was evidently much gratified when his friends listened attentively, while he read or repeated his own epigrams and poetic effusions, none of which were indifferent, while some possessed extraordinary merit. He conceived the original idea of composing a novel from letters interchanged between two individuals. Conjointly with me, he commenced the execution of this plan, he being at the time in England, and I in Italy; and our mutual correspondence was to be interwoven so as to form a connected whole. The adventures of an English family on their travels formed the subject of my letters. This plan appears to me so capable of being rendered amusing and interesting, that I am surprised no man of literary talent, but the unfortunate Baron Sass, has attempted its execution. He always wore a great number of brilliant decorations; but this armour of orders was insufficient to shield him against the daggers or bullets of the exasperated Poles."

We have noticed that this is a flighty book: mark the subjoined:—

"Reader, can you form any idea of how the earth looked before it was formed? Perhaps you cannot, but I can—for I have travelled through Prussian Poland. Among the many pictures which are constantly present in my recollection, the aspect of that country is the most remarkable: it is a compound of sand, marsh, clay, straw, and dung. A prominent point in the picture is a village. To give it this denomination is perhaps an insult to all other miserable villages on the face of the earth; but, nevertheless, it is a village."

Now, how the earth before it was formed could illustrate any idea of Polish villages, is to us an enigma, not "having travelled through Prussian Poland."

Again:—

"Next morning, when I awoke in the chaise at the last post, I laboured under a frightful depression of spirits. I felt as if approaching the end of the world. It was the dawn of a cold spring morning—but in these desolate regions there was no indication of spring. Here the four seasons appear to be engaged in a criminal process respecting the death of nature. There are only three elements and a half; namely, air, earth, marsh, and just enough fire to light a pipe. At length I observed, on the left of the road, a stone building: this was the Prussian custom-house, or whatever it might be called. The postilion presented his ticket, and the toll-gate flew open. It closed again with a loud crash, which thrilled every nerve within me."

Heaven preserve us! But "the Polish women are beautiful: but that is not all—they are exquisitely beautiful. I am almost convinced that Eve must have been a Pole."

The following is somewhat more within the regions of common sense.

"The beauty of the Polish Jewesses has a character quite the reverse of that which constitutes the charm of the Christian females. Dignity, feeling, tender melancholy, and not unfrequently deep-seated sorrow, is expressed in the features of the fair daughters of Israel, whose notions of virtue and decorum are as rigid as the laws of their forefathers. But of course this rule, like every other, has its exceptions. Few will deny that beauty consists less in the form than in the expression of the features; and many women who are pronounced beautiful, produce but little, or perhaps even an unfavourable impression, merely from the want of intellectual spirit. The utmost beauty of form combined with expression leaves nothing to be wished for. This will be acknowledged by all who have beheld the Jewesses of Poland. Their faithful adherence to their national costume serves to heighten their natural attractions. Wherever the French fashions prevail, they generally have a pernicious influence on the female mind. French fashion introduces French coquetry, French corruption, and all its baneful consequences."

Of the popular dance, the Mazurka, we are told:—"The celebrated Polish national dance was originally a war dance of the province of Mazur (Masovia). The allusion in the text may remind the reader of the phrase—'To dance the Carmagnole,' which was common at the commencement of the first French revolution."

We conclude with an extract of some length, the best which the work affords, as a specimen of the author.

"'Prayer to God, or service to the emperor, is never lost:' so says a Russian proverb; and

it is usually repeated with the conviction that the service is more important than the prayer. The term *service* includes, in its signification, unconditional obedience to the authority of a superior, even though that superior should be only one class above the person he commands. This blind obedience extends from the general or minister, down to the common soldier or clerk, through all offices and classes in which service confers dignity. An *affair of service*, as it is styled, takes place of all other considerations; and the man who has quietly realised a fortune at the expense of the state affects the most scrupulous conscientiousness in the fulfilment of any prescribed duties which are calculated to make him feel the full extent of his own slavery. Every verbal command given by a military officer to a soldier, or by a civil officer to a *dentshik*, or vassal, is answered by the words *Slushay hospodin* (I obey my lord); and the individual who gives the order may confidently trust to its punctual fulfilment, as its neglect would be punished by a severe flogging. While a Russian is receiving commands, he stands stock-still, like a soldier, without moving leg or arm; and at the close of every sentence delivered by his lord, he murmurs 'Slushay hospodin.' The slavish subjection of the lower ranks, and the arrogance of Russian upstarts, which in Warsaw are carried to such unlimited extent, are nevertheless quite at variance with the national character of the Poles. The Russian classification of ranks is, moreover, offensive to the pride of the Polish nobility, whom it deprives of their dignity, and reduces to a mortifying inferiority. The natural pride of the Poles is extraordinary. It animates every rank, from the prince to the beggar, and manifests itself at every opportunity. But this pride is in unison with the national feeling; and however vain and empty it may be, the source whence it springs—a spirit of nationality—is honourable, and not unfrequently leads to great actions. In thus acknowledging the good qualities which distinguish the Poles as a nation, I am not blind to their faults; and among these I number levity, vanity, proneness to break their word, unfairness in judging of other nations, and extravagant prejudice in favour of every thing Polish. These traits in the shady side of the Polish national character I observed to be universal, with a few exceptions, which I must make in favour of men of very superior education. Spirit is a quality in which the Poles are never deficient. One of the most marked distinctions between the Poles and the Russians appears to me to be, that the former are remarkable for spirit, and the latter for judgment. Even the Polish beggar is animated by a spirit which glows for his country when the slightest occasion calls it forth; and the Russian bondman possesses a degree of judgment and good sense which is always present and available at the required moment. Warsaw swarms with Russian civil officers, most of whom are obliged to wear their official costume. The streets, too, are thronged with Russian equipages, for a Russian finds it easy to live in good style in Warsaw. There he receives his salary in silver roubles, while in Russia it would be paid to him only in paper. At the noon promenade in Warsaw, Russian carriages and four are seen driving one after another from the suburb of Cracow to St. Alexander's church; and on the foot pavement Russian uniforms predominate. A coachman in the Polish national livery is seldom seen in Warsaw; and if by a rare chance an old Pole should venture to shew himself in his national

costume, he seems to glide along like a midnight ghost. In short, the national feeling of the Poles was, at this time, painfully wounded at every step in Warsaw, and it may easily be conceived that continued grievances preying upon the minds of all classes of the people grew at last into a bitter national hatred which longed for revenge. Relying on the franchises conceded to them by the constitution which the emperor had sworn to maintain, it is not surprising that a few individuals should form the bold idea of asserting those rights which had been violated by absolute power. That power was, however, so fearfully strong and unlimited, that the courage of the Poles, who attempted to oppose it, and resolved to sacrifice their lives for constitutional freedom, presents one of the most extraordinary phenomena which history has on record."

Divines of the Church of England, &c. By the Rev. T. S. Hughes. No. XVIII. Hall's Contemplations, Vol. I. Valpy.

A BIOGRAPHICAL sketch of Bishop Hall is prefixed to this publication, the commencement of his voluminous works. His Satires, and his Calvinistic belief in the special interpositions of Providence, are lightly touched upon, though the sources of a prodigious quantity of imitation since. There are also some extracts from a narrative of a tour to the Netherlands, &c. which is quaint and curious. The learned writer's preference for land travelling rather than sea voyages is thus expressed :

"The sea brooked not me, nor I it : an unquiet element, made only for wonder and use, not for pleasure. Alighted once from that wooden conveyance and uneven way, I be-thought myself how fondly our life is committed to an unsteady and reeling piece of wood, fickle winds, restless waters, while we may set foot on steadfast and constant earth."

But the part which he took with his brethren of the bench of bishops, at the disastrous period in which he lived, will be read with the greatest interest at this time, when there are so many points of resemblance in the aspect of political affairs. In Nov. 1641, he was translated to the see of Norwich; and the memoir proceeds:—"Which event is the last of those recorded among his *Specialities*, except, indeed, that of '*taking the Tower by the way*.' The bishop resumes the train of his narrative, broken off at this period, in his tract entitled '*Hard Measure*;' 'the bare reading of which,' according to the confession even of an adversary, 'is enough to make any one melancholy, that has the least sense either of humanity or Christianity in him.' That last-mentioned calamity which assailed the bishop, his commitment to the Tower, was the consequence of his name appearing among the signatures of the twelve bishops to the celebrated protest which was drawn up by Archbishop Williams, remonstrating against the legality of all legislative acts during the compulsory absence of the prelates from the house. 'This document having been read, the peers, after some debate, requested a conference with the commons, 'upon high and dangerous consequence to the fundamental privileges and being of parliaments.' The lower house took very little time for consideration; but, in the course of half an hour, came to the resolution of accusing the unfortunate bishops on a charge of high treason, and sent up their impeachment to the lords by Mr. Glyn. They were immediately sent for by the usher of the black rod; but as their lodgings were in various parts of the town, it was eight o'clock at night, on the 30th December, 'and in all the

extremity of frost,' when these venerable personages, 'who little thought they had done any thing worthy of chiding, were called to their knees at the bar, and charged severally with *high treason*.' From thence, having been sequestered from parliament, they were all removed to the Tower, except the Bishops of Durham and Litchfield, who, on account of their age and infirmities, were allowed to remain in custody of the black rod. The same indulgence was solicited for the Bishop of Norwich; but he blesses God's providence for the denial of a favour, which would have ruined him by its expense. A bill was now brought into parliament, 'for taking away all temporal jurisdiction from those in holy orders;' Dr. Warner, Bishop of Rochester, being the only prelate in the house to defend the cause of his brethren, when it passed. The king signed this bill, in opposition to his better judgment, through the persuasion of some about him, who were weak enough to believe that it might tend to preserve the establishment. Charles then found himself in such a situation that he could deny nothing to the dominant faction; and this imprudent act is said to have been one of those which weighed most heavily on his mind at the last sad moments of his existence. The house of commons thought it expedient to publish nine reasons against allowing the bishops to vote in parliament. These were ably met by Hall in his '*Short Answer*,' &c., 'an Examination' of which was ordered to be published by a committee of the commons. Soon after these transactions, the king committed the imprudent step of entering the house with his guards, to seize the accused members; failing in which, he retired from his capital, and set up the standard of war. But though the commons might impeach the prelates of high treason, and the lords receive the charge, it was not so easy to establish it, whilst any observance was paid to the laws and constitution of England. When, therefore, after many vexatious proceedings, this truth was discovered, the commons drew up another bill, declaring the bishops to be 'delinquents of a very high nature;' and the forfeiture of their temporal and spiritual estates was decreed, with the reservation of a small annual sum for their maintenance. 'In this,' says Bishop Hall, 'they were pleased that his share should come to four hundred pounds per annum.' With the exception of a few hours, when they were permitted to be out on bail, which slight accommodation raised a cry amongst the insolent and factious rabble, that the bishops were 'let loose,' these venerable men were confined till the 5th of May, 1642, after having been more than once exposed to the danger of their lives by the insults of a brutal mob; and even then they were not set at liberty, without giving a bond for five thousand pounds, 'with a clause of revocation at a short warning, if occasion should require.' In addition to his '*Hard Measure*,' Bishop Hall has left an interesting record, which illustrates this calamitous period of his life, in a treatise called '*The Free Prisoner, or the Comfort of Restraint*;' wherein he blesses God for *those walls*, out of which these excellent men could not have been safe from the rage of an incensed multitude. 'Poor seduced souls!' says he, 'they were taught it was piety to be cruel: they were mispersuaded to hate and condemn us, for that which should have procured their reverence and honour, even that holy station which we hold in God's church; and to curse those of us who had deserved nothing but their thanks and prayers, railing on our profession in the streets, and

rejoicing in our supposed ruin. 'Father, forgive them, for they know not what they do.'

"The bishop enjoyed but a very short interval of tranquillity; for in April, 1643, an ordinance was promulgated for sequestering into the hands of commissioners the estates of all notorious delinquents; amongst whom this excellent prelate, with those who had lately been his fellow-prisoners, was of course included. But, as if the confiscation of his ecclesiastical revenue was not a sufficient punishment for his firm loyalty and strenuous defence of church government, every species of insult, rapine, and injustice, was practised against his person and property by the base minions of republican tyranny. At the time of this cruel sequestration, when he was expecting to receive the profits of the foregoing half-year for the maintenance of his family, his rents were stopped, with all the arrears, which, in compassion to his tenants, he had allowed them time to pay. In the month of April the sequestrators came to seize on his property, personal as well as real. An exact inventory of his goods was taken, in which not even a dozen of trenchers, or his children's pictures, were omitted: even the wearing apparel of his family would have been included, but for the interposition of Alderman Tooty and Sheriff Rawley. It was determined that all his furniture should be disposed of by a public auction; and this would have actually taken place, had not a religious gentlewoman, named Goodwin, been so moved with compassion, that she kindly laid down the sum at which it was valued, and left it for the use of the family until it could be repurchased. Mr. Cook, a worthy divine in the bishop's diocese, also gave a bond to the sequestrators for his books, which was afterwards paid out of the poor pittance allowed for his maintenance. Thus the *righteous man* was not *wholly forsaken*. But, in addition to other evils, he was now exposed to grievous insults even in his palace, and at the most unseasonable hours. At one time a London trooper, with attendants, came before the family was up, and threatened to break open the gates, if they were not admitted. Under the pretence of searching for arms and ammunition, this wretch ransacked the whole house; where, finding only a couple of muskets, he took away with him one of two horses, after the venerable prelate had told him 'that his age would not allow him to travel on foot.' And when this fellow heard afterwards that the bishop had sold the remaining horse for the support of himself and family, he vehemently expostulated with him on account of the transaction. In the mean time not a farthing of the parliamentary allowance was paid to the bishop; and when the Norwich committee confirmed to him this pitiful stipend, they were *inhibited** by their superiors in London; with an intimation, however, that if the bishop's wife had need of maintenance, a fifth part of his 'rents and revenues' might be allowed her, on application made to the committee of lords and commons. Her suit was accordingly forwarded, and granted after a long delay; but the accounts of the sequestrators were so confused and perplexed, that it never could be discovered what a fifth part was; and 'they were content,' says Hall, 'that I should eat my books, by setting-off the sum engaged for them out of the fifth part.' Meantime the synodals and all the spiritual profits of the diocese were kept

* We have put this and the following half dozen words, in the next page, in italics to shew how little the author has consulted polish in his style.—Ed. L. G.

back, except the fees for ordinations and institutions; and these continued only a short time; for when the covenant was introduced, and taken by many of the clergy and laity, his power of ordination was violently inhibited;* and when, regardless of this inhibition,* he ordained some persons in his private chapel, a violent mob beset the palace, demanding the instant appearance of the bishop, and summoning him before the mayor at the guild-hall. But, although this meek and venerable personage bore all personal injuries and indignities with perfect composure and resignation, he was resolved not to compromise the dignity of his station. 'I asked them,' he says, 'when they ever heard of a bishop of Norwich appearing before a mayor? I knew my own place, and would take that way of answer which I thought fit; and so I dismissed them, who had given out that day, that had they known before of my ordaining, they would have pulled me, and those I ordained, out of chapel by the ears.' But although the insolent mob retreated this time before the spirited rebuke of the aged prelate, at another they clambered over his palace-walls and made a forcible entrance, to search, as they pretended, for delinquents; when the bishop was obliged to send out secretly, and raise the officers to his rescue. Again they came, headed by a sheriff and alderman, to demolish the painted windows of his chapel, the subjects of which they termed superstitious pictures and relics of idolatry: nor was it without breaking off the heads of these figures, which the furious populace declared to be popes, that he could preserve the bodies from destruction. But though the bishop received nothing, something was still required of him. According to his affecting narrative, 'they were not ashamed, after they had taken away and sold all his goods and personal estate, to come to him for assessments and monthly payments for that estate which they had taken; and they took distresses from him, upon his just denial, vehemently requiring him to find the wonted arms of his predecessors, when they had left him nothing.' But no violence shewn towards his own person or property grieved this good bishop so much as that committed against his church. 'I have heard him oft,' says Whitefoot in his funeral sermon, 'beware the spoils of the church; yet very rarely did he so much as mention his own losses, but took joyfully the spoiling of his goods.' The account which he has left of the devastation committed in his cathedral, one of those noble monuments which still attest the piety and taste of our ancestors, may serve as a specimen of what was done by the Iconoclasts in various parts of the kingdom. 'It is no other than tragical to relate the carriage of that furious sacrilege, whereof our eyes and ears were sad witnesses, under the authority and presence of Linsey, Tofts the sheriff, and Greenwood. Lord! what work was there: what clattering of glasses—what beating down of walls—what tearing-up of monuments—what pulling down of seats—what wresting-out of irons and brass from the windows and graves—what defacing of arms—what demolishing of curious stone-work, that had not any representation in the world, but only the cost of the founder and skill of the mason—what toting and piping on the devoted organ-pipes—and what a hideous triumph on the market-day, before all the country, when, in a kind of sacrilegious and profane procession, all the organ-pipes, vestments, both copes and surplices, together with the leaden cross which had been newly sawn down from over the

* See note in preceding page.

green-yard pulpit, and the service-book and singing-books that could be had, were carried to the fire in the public market-place; a lewd wretch walking before the train, his cope trailing in the dirt, with a service-book in his hand, imitating in impious scorn the tune, and usurping the words of the Litany used formerly in the church! Near the public cross all these monuments of idolatry must be sacrificed to the fire, not without much ostentation of a zealous joy in discharging ordnance, to the cost of some who professed how much they had longed to see that day. Neither was it any news, on this guild-day, to have the cathedral, now open on all sides, to be filled with musketeers, waiting for the mayor's return, drinking and tobaccoing as freely as if it had turned ale-house.'

Hall died in Sept. 1656, aged 82.

Tour of a German Prince, &c. 2 vols. Wilson.

[Second notice.]

IN resuming our review of these entertaining volumes we shall commence with some further illustrations of the writer's favourable opinion of Ireland and the Irish people, in despite of all their poverty and wretchedness. We have, among the rest, a striking specimen of

Irish Honesty.—"Scarcely had I seated myself at table (at Avoca), when I was told that some one wished to speak to me. A young man whom I had never seen was shewn in, and presented to me a pocket-book, which, to my no small astonishment, I recognised as my own; containing, besides other important papers which I always carry about me, all the money I had taken for my journey. I had, Lord knows how, dropped it out of my breast-pocket in the summer-house; and had, therefore, no small reason to congratulate myself on so honourable and obliging a finder. In England I should hardly have had the good fortune to see my pocket-book again, even if a 'gentleman' had found it; he would probably have let it lie in peace—or kept it. I must here take occasion to explain to you what this far-famed epithet 'gentleman' means, since the signification affixed to it is inimitably characteristic of the English. A 'gentleman' is neither a man of noble birth, nor a man of noble sentiments (*weeder ein Edelmann noch ein edler Mann*—neither a nobleman nor a noble man); but, in strictness, a man of independent means and perfect knowledge of the usages of good society. He who serves or works for the public in any way (the higher functionaries of the state, and here and there a poet or artist of the first category only excepted), is no 'gentleman,' or at best only a half a one. I was greatly astonished at hearing a certain well-known personage, with whom all lovers of horses, native and foreign, are well acquainted, who is rich, who is on a footing of intimacy with many dukes and lords, and enjoys great consideration, but who presides at a weekly auction of horses (thereby doing useful service to the public),—say of himself, 'I can't imagine how the Duke of B— could commission me to carry a challenge to Count M—; he ought to have employed a gentleman—those things are not in my way.' A really poor man, who is not in a situation to contract debts, can on no terms be a 'gentleman.' On the contrary, a rich scamp, who has had what is called a good education, so long as he preserves his 'character' (reputation) dexterously, passes for a 'perfect gentleman.' In the exclusive society of London there are yet finer nuances. A man, for instance, who were to

manifest any timidity or courtesy towards women, instead of treating them in a familiar, confident, and nonchalant manner, would awaken the suspicion that he was 'no gentleman;' but should the luckless man ask twice for soup at dinner, or appear in evening dress at a breakfast which begins at three in the afternoon and ends at midnight—he may be a prince and a millionaire, but he is 'no gentleman.' But let us back from Babylon's tyrannous jargon to the freedom of the hills."

Another example of the freedom of the prince's strictures is contained in the annexed extract:—

"An interval of ten miles of uninteresting country lay between this walk and my arrival at the gate of the park of P—, one of the most extensive and beautiful in Ireland. But it was Sunday—the lord of the domain a saint—and of course the gate locked. On this day, according to his view of the matter, a pious man must on no account leave his house, except to enclose himself within the gloomy walls of a damp church—on no account rejoice himself in God's own wondrous and magnificent temple. This was a sin to which Lord P— would by no means afford encouragement, and at his recent departure had therefore prohibited the opening of his gate. Instructed by the adventure which you may recollect befell me in England, I made no attempt at winning a passage by means of a gift, but pursued my way along a wall, over which from time to time I cast a longing and stolen glance at the magnificent waterfall and the enchanting scene. Thou beneficent God! thought I—in what different ways art thou worshipped! One man roasts his neighbour to thy honour; another fashions thee as Apis; some represent thee more partial and unjust than the devil himself; others think they offer thee the most acceptable service when they deface thy loveliest gifts, or deprive themselves and others of the enjoyment of them. Oh, Lord P—! you will not read these lines; but it were good for you if you could, and if you would lay them to heart! Full many a poor man, who sweats through the whole week that he may pay you your rent, would feel his heart expand with joy on a Sunday in your beautiful park, and would bless the goodness of that God who has not left him wholly destitute—who has spread out before his eyes the glory and the beauty of creation. And this joy would be reflected back upon yourself;—but perhaps you are not even present—perhaps you send your pious commands from afar? You are, perhaps, like so many of your colleagues, one of those 'absentees' who by the hands of ravenous and merciless agents strip the people of their last rag, rob them of their last potato, to enrich the charitans of London, Paris, or Italy. Then, indeed, if that be the case, your religion can hardly go beyond superstitious veneration for the Sunday, and for the ceremonies of your priests."

Speaking of Lord Byron, it is asserted (and, applied to thousands of instances, most truly asserted)—

"I can never refrain from laughing at the English, who pass such pitiful cockney judgments on this their second poet (for, after Shakspeare, the palm is surely his), because he ridiculed their pedantry, because he could not adapt himself to the manners and usages of their little nook, nor share in their cold super-

* There is a ridiculous use of initials in these volumes, where the parties are perfectly well known—in this instance the name of Powerscourt is filled up in a funny page. How absurd!

sition; because their insipidity was sickening to him, and because he denounced their arrogance and hypocrisy. Many of them cross themselves (inwardly) when they mention him; and even the women, though their cheeks glow with enthusiasm when they read him, in public take part vehemently against their secret favourite."

We remarked in our last paper that the opinions or views of observant foreigners were generally instructive or amusing: the following picture of our national manners will, we think, bear us out.

"Living at inns affords one a good opportunity of observing the middle classes. Every man here shews himself as he is, and seems to feel himself alone. I have already told you that English travellers of this class (I include all the inhabitants of the three kingdoms who have English manners and habits) usually pass their time, when not out of doors, in a common room called the coffee-room. In the evening this coffee-room is lighted with lamps; candles are carried, if called for, to the gentlemen who sit at the separate little tables. It has often surprised me that in a country in which luxury and refinement on all the wants of life are so universal, even in the best provincial inns (and often in London) tallow candles are commonly used. Wax candles are an unwonted luxury; and if you ask for them, you are treated with redoubled civility, but your bills are also doubled throughout. It is very diverting to observe the perfect uniformity with which all behave, as if machines out of one workshop. This is particularly observable in their eating: though placed at separate tables, and no individual taking the slightest notice of any other, they all seem to have exactly the same usages, exactly the same gastronomic tastes. Nobody eats soup, which, unless bespoken beforehand, is not to be had. (This is the reason, by the by, for which my old Saxon servant left me. He declared that he could not exist any longer in such a state of barbarism—without soup!) A large joint of roast meat is commonly carried from one to another, and each cuts off what he likes. This is accompanied by potatoes or other vegetables, boiled in water; and a 'plat de ménage' filled with sauces is placed on every table; beer is poured out, and there, in a common way, ends the dinner. Only the luxurious eat fish before the meat. But now follows the second stage:—the table-cloth is removed; clean plate, and knife and fork laid; wine and a wine-glass, and a few miserable apples or pears, with stony ship-biscuits, are brought: and now the diner seems to begin to enjoy tranquillity and comfort. His countenance assumes an expression of satisfaction; apparently sunk in profound meditation, leaning back in his chair and looking fixedly straight before him, he suffers a sip of wine to glide down his throat from time to time, only breaking the death-like silence by now and then laboriously cranching his rocky biscuits. When the wine is finished, follows stage the third,—that of digestion. All motion now ceases: his appetite being satiated, he falls into a sort of magnetic sleep, only distinguishable from the natural by the open eyes. After this has lasted for half an hour or an hour, all at once it ceases; he cries out, as if under the influence of some sudden possession, 'Waiter, my slippers;' and seizing a candle, walks off gravely to his chamber to meet his slippers and repose. This farce, acted by five or six men at once, has often amused me more than a puppet-show; and I must add, that with the exception of the

incident of the slippers, pretty nearly the same scene is represented in the first clubs of the metropolis. I scarcely ever saw an Englishman read at dinner; I am not sure that they don't think it an act of indecorum—perhaps of impiety—like singing or dancing on a Sunday, for instance. Perhaps, however, it is only a rule of dietetics converted by time into a law which no vivacity of temper can break through."

The annexed has too much of truth in it; but in architecture and sculpture we seem to be above taking a hint, however just and useful.

"A monument has been erected at the entrance of the harbour [Dublin], in honour of the king's memorable visit (memorable that it is, for its disappointing all hopes and expectations). It is designed and executed with the sort of taste which seems to lie like a curse on all the public buildings of Great Britain: it is a small, ridiculous stump of an obelisk, perched on the corner of a natural rock; it stands on four balls, and looks precisely as if the first blast of wind would roll it into the sea. One cannot suppress the wish that this may happen;—the sooner the better. The royal crown is stuck at the top like a lid on a mustard-pot; and the whole, contrasted with the noble dimensions of the harbour and surrounding buildings, is so small and 'mesquin' that it might be taken for the whim of a private man, but certainly never for a national monument. Perhaps the architect was a *mauvais plaisant*, and meant it satirically; as an epigram it is deserving of praise."

But return we to Connaught for the veritable picturesque—the sublime and beautiful of the Emerald Isle.

"My host (says the prince), Captain W., is one of the 'notables' of his county; but his house is not better than that of a German nobleman of moderate estate. English elegance and English luxury are not to be thought of; wax-lights are unknown; port and sherry, but above all, 'whisky punch,' are the only beverages: the coffee is detestable; but the food excellent, nutritious, and plentiful. The house is not over-clean; the small establishment very respectable, from length of service, zeal, and attachment, but of a somewhat unwashed and boorish appearance. From my chamber-windows I penetrate into all the mysteries of the domestic economy, which is too modest to spread out the dunghills as chief *point de vue*, as in North Germany. The rain (for, alas! it does rain) runs merrily through my windows, and falls in romantic cascades from the window-sill to the floor, where an old carpet thirstily drinks the stream. The furniture is rather tottering; but I have tables enough (a great matter to me, with my multitude of things), and the bed seems at least large and hard enough. In my chimney burns, or rather smoulders, capital turf, which not only gives heat, but covers every thing with fine ashes, like an eruption of Vesuvius. All this does not sound brilliant;—but how largely are these trifles outweighed by the patriarchal hospitality, the cheerful, easy, unaffected kindness of the family. It is as if my visit were a distinguished favour, for which all seem to feel indebted to me as for some real service. I like my host very much; he is seventy-two years old, and still hale and vigorous as a man of fifty. He must have been very handsome, and has given the world twelve sons and seven daughters,—all by the same wife, who is still living, though just now too unwell for me to see her. Some of the sons and daughters have

been long married, and the old man sees his grandsons of twelve at play with his youngest daughter of fourteen. The greater part of the family is now here, which makes the abode rather a noisy one; this is increased by the musical talents of the daughters, who daily perform on an instrument horribly out of tune,—a circumstance which seems not to annoy them in the slightest degree.* The men generally talk about horses and dogs, and are somewhat uninstructed. To-day a country squire of the neighbourhood searched long and patiently in a map of Europe for the United States:—at last his brother-in-law gave him the fortunate suggestion of trying his luck on the map of the world. The occasion of the search was, that the old gentleman wanted to shew me Halifax and B— town, which latter takes its name from him. He laid the first stone of both during the American war, in which he commanded seven hundred men, and loves to recall those days of his youth and importance. The scrupulous and chivalrous courtesy of his manners, the constant and ready sacrifice of his own convenience to others, are proofs of the education of times long passed by, and mark his age more surely than his appearance does. Our amusements for some days to come are arranged as follows:—In the morning we go to church; the day after to the town of Galway, to see some horse-races, in which the poor animals not only run a German mile, but in the course of it have to leap several walls! They are ridden by gentlemen. In the evening is a ball, at which I am promised a sight of all the beauty of the neighbourhood. To tell you the truth, touched as I am by the kindness shewn me in this house, I rather dread a long stay: I should, however, vex these excellent, cordial people if I shewed it; '*Je m'excuse donc de bonne grace*.' * * * The manners here are so old-fashioned, that the master of the house every day drinks to my health, and we have no napkins at table, for which pocket-handkerchiefs or the corners of the table-cloth are obliged to serve as deputies."

At an ordination at Tuam, which the author treats in his common burlesque style where religious ceremonies are concerned, he tells us—"The text was chosen, strangely enough, from the story of the passage of the evil spirits into the herd of swine; and after this had been discussed for an hour, the four priests were ordained."

The account of the races is in better taste.

"Galway, Sept. 8th.

"We arrived very late on the 'race-course,' and saw little of this day's sport. The sight of the people was, however, extremely curious and interesting to me. In many points of view this nation is really semi-barbarous. The universal want of decent clothing among the lower classes, even on festivals like the present—their utter inability to resist ardent spirits, so long as they have a penny in their pockets—the sudden and continual wild quarrels and national pitched battles with the shillelah (a murderous sort of stick which every man keeps hidden under his rags), in which hundreds take part in a minute, and do not desist till several are left dead or wounded on the field—the frightful war-whoop which they set up on these occasions—the revenge for an affront or injury, which is cherished and inherited by whole villages,—on the other hand, the light-hearted

* "I have often had occasion to remark, that the love of music in England is a mere affair of fashion. There is no nation in Europe which pays music better, or understands it worse."

carelessness which never thinks of the coming day; the heartfelt merriment, forgetful of all want and suffering—the kind hospitality which ungrudgingly shares their last morsel—the unreserved cordiality with the stranger who makes any advances to them—the natural fluency and eloquence which they have ever at command;—all are characteristics of a half-civilised people. Hundreds of drunken men accompanied our carriages as we drove from the race-course to the town, and more than ten times fights arose among them. The confluence of guests was so great that we with difficulty found a miserable lodging: our dinner was, however, good, and very abundant. Galway was chiefly built by the Spaniards. Some descendants of the ancient families still exist, as do several very curious houses of that period. It struck me as characteristic, that in a town of forty thousand inhabitants there was not a single bookseller's shop or circulating library to be found. The suburbs and all the villages through which we passed on our way, were of a kind which I should vainly attempt to liken to any thing ever seen before—pigsties are palaces in comparison; and I often saw numerous groups of children (for the prolificness of the Irish people seems to keep pace with their wretchedness), naked as they came into the world, roll and paddle about with the ducks in the filthy kennels, with the greatest delight."

Our next quotation is a fairy legend.

"An old man who has the care of the woods of Castle Hackett, and has the reputation of knowing more than other men about the 'good people,' told us these circumstances connected with the death of his son, in the style of a romance. 'I knew it,' said he, 'four days before—I knew he would die; for, as I was going home that evening about twilight, I saw them scouring in a wild chase over the plain. Their red dresses fluttered in the wind; and the lakes turned to ice as they came near, and walls and trees bowed themselves to the earth before them; and they rode over the tops of the thickest as if it were over the green grass. In front rode the queen, on a white stag-like horse; and by her I saw, with a shudder, my son, whom she smiled upon and caressed; while he, with a fevered eye, looked wistfully at her, till all were past Castle Hackett. Then I knew that it was all over with him—that same day he took to his bed—on the third I carried him to the grave. There was not a handsomer or a better lad in Connemara, and it was for that the queen chose him.'"

Another superstition is thus related:—

"We have had a strange accomplishment of a prophecy. Miss Kitty, one of my host's daughters, and a very nice girl, had her fortune told yesterday by the gipsies. I was by, and heard the woman say to her, among many common-place predictions, 'Be upon your guard; for a shot will be fired in at your window, and your stay in B—— will not be long after that.' We thought the prediction rather serious, and communicated it to the family on our return, but were only laughed at. The next morning early, we were all alarmed by the firing of two shots; Miss Kitty rushed down stairs half-dressed, and nearly fainting from terror; and every one in the house ran to see what was the matter. We found that two of Kitty's younger brothers, who had been on a visit to Mrs. M——, had returned quite unexpectedly to fetch their sister, had played the silly trick of firing their fowling-pieces up at her window, and had done it so awkwardly that they had broken it. They were soundly rated, and then drove off with Miss Kitty; so

that every thing happened precisely as the old woman,—Heaven only knows how!—had seen in the lines of her hand."

Our author is fierce and furious against Orangemen; a specimen of which class he thus describes:—

"I will give you the quintessence of his conversation. 'I have served my king for nearly thirty years in almost every part of the world, and want rest. Nevertheless, it is my most ardent wish, which I daily pray God to grant, that I may live to see a 'good sound rebellion' in Ireland. If I were called out to serve again, or if I were to lay down my life the very day it broke out, I should make the sacrifice willingly, could I but be sure that the blood of five millions of Catholics would flow at the same time with my own. Rebellion!—that's the point at which I want to see them, at which I wait for them, and to which they must be led on, that we may make an end of them at once; for there can be no peace in Ireland till the whole race is exterminated, and nothing but an open rebellion, and an English army to put it down, can effect this!'"

From Irish politics we pass to Irish gaiety: in travelling to Galway, the writer says:—

"We saw a number of labourers sitting by the road-side on heaps of stone, which they were breaking. My companion said, 'Those are conquerors; their whole business is to break in pieces and destroy, and they rise on the ruins they make.' Meanwhile our driver blew his horn to announce the post, for which, as with us, every thing must make way: the tone, however, came forth with such difficulty and sounded so piteously, that we all laughed. A pretty boy, of about twelve, looking like a personification of happiness and joy, though half-naked, was sitting on a heap of stones, hammering. He shouted with mischievous glee, and called out to the angry driver, 'Oh, ho, friend, your trumpet has caught cold; it is as hoarse as my old grandmother: cure it directly with a glass of potheen, or it will die of a consumption before you reach Galway!' A loud laugh from all the labourers followed as chorus. 'There,' said my companion, 'there you see our people,—starvation and laughter,—that is their lot. Would you believe that, from the number of labourers and the scarcity of labour, not one of these men earns enough to buy sufficient food; and yet every one of them will spare something to his priest: and if you go into his cabin will give you half of his last potato, and a joke into the bargain.'"

Fulcher's Lady's Memorandum-Book and Poetical Miscellany, 1832. *Poems from Fulcher's Lady's Memorandum-Book*, &c. &c. Sudbury, Fulcher; London, Suttaby and Co.

The first of these pretty little tomes is a very neat pocket-book; the second is a selection from the pages of its predecessors, and contains some graceful poetry by various popular authors. The following, by Mary Howitt, is full of that thoughtful sweetness, that associating human feeling and natural images, in which she is so peculiarly happy.

"The Snow-drop.

The snowdrop! 'tis an English flower,
And grows beneath our garden trees;
For every heart it has a dower
Of old and dear remembrances.
All look upon it, and straightway
Recall their youth like yesterday;
Their sunny years when forth they went
Wandering in weariless content;
Their little plot of garden ground,
The pleasant orchard's quiet bound;
Their father's home, so free from care,
And the familiar faces there.

The household voices kind and sweet,
That knew no feigning—hushed and gone!
The mother that was sure to greet
Their coming with a welcome tone;
The brothers that were children then,
Now anxious, thoughtful, toiling men;
And the kind sisters, whose glad mirth
Was like a sunshine on the earth.
These come back to the heart supreme,
Flower of our youth! at look of thine;
And thou, among the dimmed and gone,
Art an unaltered thing alone!
Unchanged, unchanged—the very flower
That grew in Eden drooping,
Which now beside the peasant's door
Awakes his merry children's glee,
Even as it filled his heart with joy
Beside his mother's door—a boy;
The same, and to his heart it brings
The freshness of those vanished springs.
Bloom, then, fair flower! in sun and shade,
For deep thought in thy cup is laid,
And careless children, in their glee,
A sacred memory make of thee."

There are some pretty landscapes, one or two of which are painted again in words by our old friend, Bernard Barton; and Miss Acton, and an anonymous writer, G. W. F., have helped to vary these pages. We should add that, bound in crimson and gold, the whole does much credit to the taste of Sudbury.

The Family Topographer: being a Compendious Account of the Ancient and Present State of the Counties of England. By Sam. Tymms. Vol. I.—Home Circuit. London, 1832. Nichols and Son.

THIS is the first portion of a publication intended to be a compendious account of the histories and antiquities of the counties of England; and of which the editor says, the plan is so extensive as to embrace a notice of nearly every thing of interest or importance in the history, statistics, and localities of each country, viz. situation and extent—ancient state and remains—present state and appearance—history—eminent natives—and miscellaneous matters. The little volume before us contains Essex, Herts, Kent, Surrey, and Sussex; and in its general features is executed in the most satisfactory manner; affording all the information that could be desired within so small a compass, and pointing the way to more where it may be wanted. We copy a few of the miscellanies for the sake of their curiosity.

"At Lenham is a remarkable inscription, stating that Robert Thompson, Esq. was grandchild to Mary Honeywood, wife of Robert Honeywood, of Charing, who had at her decease 367 children lawfully descended from her: 16 of her own body, 114 grand-children, 228 of the third generation, and 9 in the fourth. She lies buried in this church, but her monument is at Marks Hall, Essex. Here is a stone confessional chair."

"At Rochester is an almshouse founded by one of the representatives, with this remarkable inscription: 'Richard Watts, Esq. by his will, dated 22d August, 1579, founded this charity for six poor travellers, who not being rogues or proctors, may receive gratis, for one night, lodging, entertainment, and four-pence each.' The reason assigned for this aversion to proctors is, that the one employed to make his will during an illness, from which he recovered, had constituted himself heir to his estates. Much land in this and other counties is held of Rochester Castle by the tenure of perfect castle guard: on St. Andrew's day, old style, a banner is hung out at the house of the receiver of the rents, and every tenant neglecting then to discharge his proper rent, is liable to have it doubled every time the tide passes the adjacent bridge during the time it remains unpaid."

"At Waterbury, in 1562, was buried Thomas Boothe, aged 112."

"In Working churchyard grows a kind of plant, about the thickness of a bulrush, with a top like asparagus, shooting up nearly to the surface of the earth, above which it never appears, and when the corpse is quite consumed the plant dies away. This observation has been made in other churchyards, when the soil is a light red sand."

"At Broadwater, died, December 9, 1734, John Burnet, aged 109. He had six wives, three of whom he married and buried after he had entered his 101st year."

These are samples of the mixed intelligence with which the *Family Topographer* abounds: we cannot say much for the information furnished by the following entry:

"At Sible Hedingham was buried its native Sir John Hawkwood, who has acquired immortal but not very honourable renown."

Editors should be more explicit. But we will not end our notice with carping at a work which every way merits our approbation.

Memory, and other Poems. By Hawkins A. D'Alton. 18mo. pp. 82. London, 1831. J. Kendrick.

THE sooner *Memory* is forgotten the better: it is the attempt of a fervent mind, but no poetry.

The New Bankrupt Act, 1 and 2 Will. IV. cap. 56. With an Introduction, Notes, and Index. By a Barrister. 12mo. pp. 38. London, 1831. Simpkin and Marshall.

THIS is a reprint of the Lord Chancellor's act, with an introduction and notes, which explain the precise alterations made in the law clearly and concisely. As the act is of very general interest, we are glad to see it here presented in a convenient form, and at a moderate price; and we recommend it as well to our unprofessional as to our professional readers.

Torini: a Tale of Italy. 12mo. pp. 112. London, 1831. Rolandi.

EVIDENTLY the production of a young author; one delighting in horrors, murder, and sudden death. We are reluctant to say much about a slight and unpretending volume, and shall therefore content ourselves by hinting the necessity of a less exaggerated taste.

Kidd's Picturesque Pocket Companion to the Regent's Park, Zoological Gardens, &c. With Map, and numerous Illustrations on Wood. By G. W. Bonner. London, 1832. W. Kidd.

THE lions of the Regent's Park, including the living lions of the Zoological menagerie, have been so often described in our several periodical journals, as to leave but little new to be said on the subject. Yet we find, on turning over the elegant little tract before us, that there is a wider field for the picturesque in the survey of these gardens than we had previously expected, where every object reminds you of the productions of art, except the zoological prisoners in their wire-worked dens and cages. The merits of this *Pocket Companion*, therefore, consist in the embellishments rather than the letter-press, which is, however, quite sufficient; many of the wood engravings being among the best specimens of the art we have hitherto met with. "Macclesfield Bridge" (over the canal) is quite a gem, both as to drawing and engraving. "Mr. Jenkins' Thatched Cottage," with its ivy mantle, (within the inner circle), is also a beautiful bit of the picturesque. "The Marquess of Hertford's," and the other

mansions within the drive; the principal objects in the Zoological Gardens; and a third on the lake, are also sweet specimens of the present state of wood-cutting; while they serve to convey a perfect idea of the several objects, and form both a pleasing and a cheap guide to the Regent's Park and its various attractions.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

THE Society on Wednesday evening received several reports from their committees, which they confirmed. When we consider the number of communications which have been made to this institution, and the extent of the rewards which have been bestowed at different times, we are rather surprised that there should yet remain claimants for the Society's encouragement. Such, however, is the nature of man, something or other is continually being forwarded to the institution, though the communicants may not always prove successful, as the subjects annexed, which were negatived by the Society, will evince, viz.:—a transparent dial-plate for a time-piece; a swivel rein; a machine for boot and shoe makers; a grate-pan and a fire-escape.

Several communications, which had been received since the last meeting, were announced by the Secretary:—on the manufacture of church-bells; a cylinder for a steam-engine; a mode of preventing the collision of steam-boats, &c.; a method of heating hot-houses by hot water; a machine for weighing coals on board ship; and a method of communicating between a stranded vessel and the shore, which were referred to the respective committees. Many presents were mentioned as having been received.

LINNEAN SOCIETY.

Nov. 1. A. B. Lambert, Esq. V.P. in the chair.—This being the first meeting after the recess, it was numerously attended; and upwards of a hundred books on various branches of natural history were presented to the Society.—A letter was read from the venerable ornithologist, Dr. Latham, announcing that two birds of the short-tailed tern (*sterna plumbea*) were shot near Winchester, in the beginning of last month, and are the first that have been noticed in this country, the species being a native of North America.—There was also read a communication by Robert Brown, Esq. entitled, "Observations on the organs and mode of fecundation in Orchideæ and Asclepiadæ." This paper, full of profound remarks on the structure and economy of the parts of fructification in these two tribes of plants, is to be concluded next meeting.

HORTICULTURAL SOCIETY.

ON Nov. 1, the Horticultural Society resumed its meetings; but at this wintry season there is not much to attract notice in the gardener's way. The storing of autumn fruits for preservation is nevertheless an important object in domestic economy; and it is rather surprising, when we consider the advance of chemical science, that greater improvements have not been made in this process.

GEOLOGICAL SOCIETY.

WEDNESDAY week being the first evening of the session, the Society assembled at their apartments in Somerset House; R. I. Murchison, Esq., President, in the chair. Two fellows were elected, and the president then

communicated a paper from Dr. Turnbull Christie, containing the observations made by the author in the neighbourhood of Palermo, and during his journey from that city by Cefalu and Nicosia to Catania, and thence along the eastern coast to Cape Passero. The memoir described, in detail, the secondary and newer deposits which constitute that part of Sicily, but dwelt more particularly on the bone caves and bone breccia which occur near Palermo and Syracuse, and on the data which they afford of the relative period when the coasts of Sicily were raised above the present level of the sea. The paper was illustrated by numerous sections and a large collection of specimens, which was presented to the Society. The author of this memoir, who had arrived thus far on his journey to India, has undertaken the laborious task of investigating the geology and meteorology of Hindostan, and for that purpose had provided himself with complete sets of necessary instruments. The tables were covered by numerous other contributions, both to the museums and the library. Among the donors to the former were Capt. King, R.N. (the collection made during his survey of Terra del Fuego, &c.), Dr. Buckland, the directors of the United Mexican Mining Association, &c.

ZOOLOGICAL SOCIETY.

THE monthly meeting of this Society was held at Bruton Street, on Thursday, Nov. 3; Joseph Sabine, Esq. in the chair. The report stated that the number of visitors to the gardens during the last month was 16,244, and the sum paid at the gate was 711. 14s.: the amount received at the museum was 19. 14s. It was further stated that several presents had been received since the last meeting, particularly an armadillo and a Honduras turkey, from the Earl of Ilchester. Of the latter bird, only two skins had before been received in Europe, and no specimen had ever been landed alive in this country. Its plumage, when adult, is of the most beautiful golden bronze colour; and the accession of such a bird to the menagerie is most valuable and interesting. The noble lord has distinguished himself by his patronage of the science of zoology.—Notice was given of a motion for the appointment of a garden committee, to suggest to the council such horticultural improvements and embellishments as might appear desirable. It was mentioned that a purchase of 3000 valuable Dutch roots had been made for the garden. A most magnificent donation was referred to, which will be reported at the next meeting.

ROYAL GEOGRAPHICAL SOCIETY.

A SPECIAL general meeting of this Society is summoned for Monday evening next, immediately after the ordinary meeting is concluded. Its purport is, "To bestow his Majesty's first premium of fifty guineas for the encouragement of geographical science and discovery, on Mr. Richard Lander, for his discoveries in Africa. Also to receive a report of the Council respecting the union of the African Association with the Royal Geographical Society."

The paper to be read: "Is the Quorra the Niger of antiquity?" By Colonel Leake.

SCIENTIFIC MEETING AT YORK.

WE announced, some time ago, that men of science were going on a thorny pilgrimage to York, to lay their offerings at the shrine of Nature, which, unfortunately, like the sphinx, her emblem, with her fair woman's face and neck, shews also the claws of a lioness. Whether, really, the murmurs of some unjustly

neglected men blew an adverse wind—whether the catholic influence of a much-discussed parliamentary measure—or whether the golden harvest generally reaped in anticipation by the devotees of science has been again blasted, we do not know; certainly to the latter fact alone we attribute the absence of any continental savans: equally evident is it, that great neglect has been shewn on the part of many of our countrymen, in not promoting, by their presence, or their communications, an object so truly deserving of their patronage, both as serving to diffuse a taste for scientific pursuits in the different towns of the United Kingdom, and as reflecting credit upon the unanimity of feeling that existed, at least in one cause, and the general enthusiasm which was felt for its promotion. The pride of science bears no relation to the real value of its researches, that is to say, to its utility to mankind; on the contrary, it is proportionate only to the abstractness of the subject. The astronomers smile good naturedly, which is much worse than to look with contempt, on the labours of the experimental philosophers—the chemist smiles at the geologist—the zoologist at the botanist—the entomologist at the zoophyte-gatherer and microscope-examiner, who is lost among the sands of the ocean, while the other professors stand, like birds of the sea, each in all the solitude and desolation of an isolated rock.

An association of the kind proposed might, by bringing individuals into personal acquaintance, have wrought miraculous changes in this state of things; but the very first meeting has been a decided failure, which we may also partly attribute to the want of publicity given to its proceedings and to its results.

The meetings commenced on the 26th of September, in the museum of the Yorkshire Philosophical Society; Lord Milton in the chair. The Rev. W. H. Harcourt detailed the views of the congress, which was to found a British association for the advancement of science, having for its principal objects to give a stronger impulse and more systematic direction to the efforts of men of science,—to remove the national obstacles (*quære*, what are the national obstacles?) that now exist to its advancement, and extend the intercourse with foreign philosophers. He was not of opinion that this association was called for by the declining state of science, for he did not believe that it was declining while he could quote the names of *Davy*, *Wollaston*, and *Young* (all three dead!); but he thought the association was called for by the increasing love of science, and the growing number of scientific institutions in the country. The reverend gentleman concluded, by proposing resolutions, the final consideration of which was left to the committee, consisting of authors of communications to philosophical societies. There were meetings after this twice a-day during the week, interspersed with promenades in the museum, lectures, and concerts. We do not object to this mode of proceeding—the harmonious union of man with nature, and the spirit of peaceful living communion with the universe that is generated by the researches of science, may find a new zest in musical utterance, or in high cheerful devotion to the better sex. As we are ignorant of most of the papers, except by name, we cannot enter upon their merits, though the part of them which has already appeared before the public may rather be considered as lectures than as novel scientific communications. Dr. Brewster read memoirs on the determination of minerals by means of polarised light,—on a new instrument for de-

termining precious stones,—on the structure of the crystalline lens,—on a new analysis of solar light. Mr. Murchison communicated the principal results of Mr. Gilbertson's researches concerning the shells of existing species which are found in the gravel bed and silt of Lancashire. Mr. Dalton read memoirs on the quantity of food and insensible perspiration, from experiments made upon his own person; and on the specific gravity of the human body. Dr. Henry read an essay on the philosophical character of Priestley; and a memoir on a peculiar phenomenon belonging to the copper ore of Anglesea. Mr. Phillips read an account of the new volcanic island: Mr. Allan, a notice of a large aquamarine in the possession of the Duke of Braganza: Mr. Robison, on a barometer of linseed oil, and the means of purifying it from its gaseous contents: Mr. Forbes, on the horary oscillations of the barometer: Sir James South, on an anomaly in the passage of the satellites of Jupiter over the disc of the planet. The translation of a memoir, on a method of rendering visible the traces of erased writing, by Professor Gazzeri, of Florence, was read. Dr. Brewster mentioned the similar evolution, by the application of heat, of the legends of worn-out coins and medals; and mentioned his surprise at first reading on such a medal, when placed on hot iron, in letters of flame, the legend, *Benedictum sit nomen Dei*. Mr. W. Hutton was, as usual, occupied with the great whin sill; and Mr. Johnston similarly engaged with the new metal Vanadium. Mr. Potter read memoirs on a reflecting microscope lately constructed by him; and a memoir on the refraction of light. Mr. Witham read a memoir on fossil vegetation. Dr. Daubeny lectured on the connexion between mineral springs and volcanic action, and on the gaseous contents of Taff's Well, near Cardiff; and explained the principle of some experiments made by the Rev. W. Taylor on certain modes of increasing the intensity of gas light without increased consumption of gas. The Rev. W. V. Harcourt exhibited to the meeting a new lamp, invented by him for the purpose of economical illumination, by the consumption of the cheaper kinds of oils.

On Friday a large party of the members of the Association proceeded, according to invitation, to enjoy the hospitality of Bishopthorpe Palace. And on Saturday evening, the business being concluded, Lord Morpeth addressed the meeting at some length, and moved that thanks be given to Dr. Brewster, and the other authors who favoured them with communications. Mr. Murchison returned thanks, as also Dr. Brewster and Mr. Dalton; and Mr. Harcourt declared the meeting adjourned to next year to Oxford: the officers for the ensuing year being—President, Dr. Buckland; Vice-Presidents, Dr. Brewster and Professor Whewell; Secretary, Dr. Daubeny.

When we announce the place of meeting for the ensuing year, let us hope that the approbation of the design of this association, which has been so universally expressed by scientific men, will lead them, on future occasions, to take a more active part in its proceedings; that it may finally be the means of promoting the comforts and augmenting the resources of civilised man, and may confer fresh lustre on British science.

NEW LAMP.

WE have been favoured by Mr. Hall, of Greek Street, with the experimental trial of an improved lamp invented by him, and now produced for public consideration. We burnt it during a whole evening, about seven hours,

and were perfectly satisfied that it possessed a great superiority over any light hitherto exhibited. The flame produced is entirely white, and without smoke; and the effect so luminous and clear, that we read rather small print distinctly by it at the distance of many yards. We had no opportunity of ascertaining the exact intensity, as compared with other lamps or with gas, in a philosophical way, but the difference to the common eye is so striking, as to require no demonstration to establish it; and we have no hesitation in stating our opinion, that this mode of lighting is a discovery of extraordinary value, and likely to be most extensively useful. Employed in the streets, it would be a perfect illumination, and in houses it is certainly a brilliant improvement. The secret consists in a preparation of the oil; and Mr. Hall assures us that it is cheaper than sperm oil, with the great advantage of burning without an offensive odour. On the whole, we recommend this lamp to the attention of the scientific world and to the public at large.

NEW PATENTS

Granted by his Majesty for Inventions.—Sealed, 1831.

To Samuel Croley, of Cottage Lane, City Road, in the county of Middlesex, gas-meter manufacturer, for his invention of an improved gas-meter. 3d October—6 months.

To Daniel Dunscomb Bradford, a citizen of the United States of North America, but now residing in Dorset Place, in the parish of St. Mary-le-bone, in the county of Middlesex, in consequence of a communication made to him by Solomon Andrews, residing at Amboy, New Jersey, in the said United States of North America, he is in possession of an invention of certain improvements in lamps. 4th October—6 months.

To Peter Young, of Fenchurch Street, in the city of London, rope and sail maker, in consequence of a communication made to him by a certain foreigner residing abroad, he is in possession of an invention of a new mode of manufacturing mangel-worms, for the purpose of producing various known articles of commerce. 6th October—6 months.

To John Christopher, of New Bond Street, in the city of London, merchant, for his invention of an improvement in clothes-buttons. 7th October—6 months.

To William Drake, of Bedford, near the city of Bristol, tanner, for his invention of an improvement or improvements in tanning hides and skins. 7th October—6 months.

To George Lowe, of Brick Lane, in the parish of St. Luke's, Old Street, in the county of Middlesex, civil engineer, for his invention of an improvement or improvements in, and connected with, the manufacture of gas for illumination. 13th October—6 months.

To William Hale, of Colchester, in the county of Essex, machinist, for his invention of improvements in machinery or apparatus for propelling vessels, which improvements are also applicable for raising or forcing fluids. 13th October—6 months.

To William Ainsworth Jupp, of Marston, in the county of Chester, gentleman, for his invention of certain improvements in drawing or extracting salt from salt pans. 14th October—6 months.

To John Smith and William Dolier, both of Liverpool, gentlemen, for their invention of a durable copy-book or writing-tablet, and improved delutable ink to be used therewith. 14th October—6 months.

To John Cowdroy, of Britannia Street, Hoxton New Road, in the county of Middlesex, gentleman, for his invention of certain improvements in machinery or apparatus to be used in the process of making or manufacturing bread and biscuits. 14th October—6 months.

To Thomas Henry Pollard, of Park Street, Grosvenor Square, in the county of Middlesex, estate and house agent, for his invention of certain improvements in chimneys, by the application of a mechanical apparatus as smoke-conductor. 19th October—3 months.

Newton and Berry.

FINE ARTS.

NEW PUBLICATIONS.

The English School. Nos. XX. to XXV.

Tilt.

As memoranda of many of the finest works of English artists, these little plates continue to be very interesting. It will be judicious, however, to confine them to such productions as are distinguished by beauty of form; for of those the excellence of which consists in effect, they, of course, cannot convey the slightest idea.

History of the County Palatine of Lancaster.
Parts VIII. and IX. Fisher, Son, and Jackson.

OF the portion of this valuable topographical publication which belongs to the Fine Arts, we can continue to speak with undiminished praise.

Landscape Illustrations of the Waverley Novels.
Engraved by W. and E. Finden. Part XIX. Tilt.

As usual, four beautiful views, viz. "Liverpool, 1664," drawn by S. Austin; "Woodstock," drawn by W. Westall, A.R.A.; "Dumfries," drawn by A. Chisholm; and "Old St. Cuthbert's Church," drawn by D. Roberts, from a sketch by J. Skene. The view of Liverpool is especially interesting, as affording a striking contrast to the present condition of that magnificent port; and the view of Dumfries, as exhibiting Burns's mausoleum.

CHOLERA MORBUS.

[Agreeably to our promise, we this week give a map, copied from a foreign chart, of the progress of Cholera, since its appearance at Jemore in 1817, to the present time. Jemore is distinguished as a dark spot, a little from Calcutta, on the Hooghly river; and the principal ramifications of the disease are traced by a black line, with dates marking its fatal progress till it reached Hamburg. Thence we lament to be obliged to continue the line across to Sunderland; but that must now be done.* It will be seen that we have not designated Vienna, Pesth, Berlin, Astrakhan, Cairo, and numerous towns in Hungary and the Austrian territories, which have since been ravaged, on the map,—the public knowledge of the prevalence of Cholera at these places being adequately supplied by our text in the last and present *Gazettes*. We cannot conclude without again pointing attention to the facts, that at Sunderland the comparatively small number of cases within more than a week, affords great encouragement to the belief, that the disease will not be so terrible in this country as elsewhere;—that the statement respecting its unfrequent attack upon children, is another cheering proof that moral courage is a strong preservative; for children are not subject to fear like grown-up persons, of weak nerves and timid dispositions, and therefore less liable to be affected.]

On the Infectious Character of the Pestilential Cholera, and on the proposed Means for preventing its Propagation.

IT has been remarked, that the pestilential cholera "travels not with the erratic course of a contagious distemper, but with a march steadily progressive, in a particular direction."† We have this week presented our readers with a chart of this "march;" and we leave it to their judgment, whether the following of the high roads of the communications of men, the universal law by which it appears to have spread over cities, travelled with caravans, navigated with ships, and ascended the course of much-frequented rivers, do not speak more decisively of a propagation dependent on the intercourse of the human species, than an "erratic course" (which we should think would be more characteristic of an epidemic) could possibly have done. But there are some curious facts contained in

the history of this propagation upon which it behoves us to dwell, however briefly, if we wish to anticipate correctly the probable dissemination and effects of this disease in our own country. The distinction which we made in the last *Gazette* between *contagious* and *infectious*, has been considered as a mere verbal distinction, but it certainly is not so; and we must, in continuing the history of cholera, insist upon the difference; for a simply contagious disease cannot be propagated at short distances, nor by garments, furniture, or merchandise, and exhibits particular phenomena, both with regard to the time that it may remain latent in the body of the person afflicted, and with regard to the predisposition to disease of different individuals; while its infectious character consists in the emanation from the body of the individual affected, of matter which contains the germs of the disease, and which may attach itself to organic or inorganic objects. These, again, may change their place, or move to distances, without losing the baneful power of communicating their poison to predisposed individuals. Contagion we must consider as a propagation of the disease from contact with the individual's self, or with his excretions or secretions;—infection, from the vicinity to the immediate or imported effluvia or miasma of the patient.

We have before demonstrated the non-contagious properties of the cholera, as proved by the inoculation of medical men, and other facts, while the history of the disease equally exhibited its infectious character. It has been remarked, by various writers on this subject, that in Europe, with all the apparatus of lazarettos, and cordons, and plague-boards, the disease has spread as widely, while the mortality has been proportionally greater than in India. But have these preventive means been directed against a contagious or an infectious disorder? There are many striking facts in the progress of the cholera which prove that when quarantine measures were in force, it was propagated by neglect (Sunderland), or by infection, as at Moscow, where the medical board asserted that the cholera was not propagated by means of merchandise, and deprecated purification, as injurious to the value of the articles. This was done while the other quarantine regulations were in force; and the results are now before the world. Egypt has probably been indebted for this scourge to the same inattention, as their regulations were transmitted by the French board of health, and do not contain advice on this subject; and the same neglect led the Emperors of Russia and Austria and the King of Prussia to give up in despair their unsuccessful sanitary cordons.

The attention of all enlightened men will now be turned towards the peculiar characters which the disease will exhibit in this country, and we shall consequently compare its appearance and progress here with the phenomena it exhibited in other European countries. It appears that a vessel came from Hamburg—it has been stated Riga—and passed up the river at Sunderland to Deptford to perform quarantine. This was so ineffectual, that persons were attacked on shore; and one individual having been taken to the Infirmary, communicated the disease after death to a nurse. This nurse was taken ill on Tuesday, at one o'clock, and expired at eight in the evening. The cases up to Saturday, November 8, were only five. The daughter-in-law of one of the patients, who had also caught the infection, has recovered; and on the 7th there were only three new cases; a Mrs. Wilson, who had no advice for sixteen

hours after the attack, and who died in twenty-four hours—a man, Ellington, *et.* 50, who died in six or eight hours—and D. Ellerman, who was sinking fast by the latest accounts. There have been only twenty cases since the disease first made its appearance—a source of more real comfort than any thing we can say on the chances of infection. Dr. Daun, who has been sent to Sunderland by government, and other medical men who have seen the disease, are of opinion that these were cases of Asiatic cholera, though, from the meagre details which have yet reached us, there is nothing to distinguish them from the cases which appeared at Port Glasgow in the months of July and August 1831,* and which Dr. Daun pronounced to be British cholera. Now, if we scrutinise the European progress of the cholera, it will be seen that it came into great cities often in the same undecided manner—that it would even take an eccentric course, and pass by a town that lay immediately in its path, to appear in another, which it must have reached by a circuitous route—that it would diffuse itself immediately over a town so generally, and at such remote points, as to preclude all idea of mere connexion with infected persons—and that it exhibited the still more marvellous, though well-established feature, of being diffused even by those who are themselves exempt from it. Struck by the peculiarity of the progress of this disease during the first few days of its existence in an English town, and ignorant of the phenomena exhibited by it during its progress across Europe, the *Courier* of Thursday evening, in a leading article, well suited for the lovers of the supernatural, asserted its existence every where—that it was at London, as well as at Sunderland, only that certain circumstances were wanting to develop the poisonous germ.

The cholera was at Astrakhan in 1823, and in July 1830 it again approached that city by sea from the trans-Caucasian little sea-port of Bakou, and from Tiflis through the gates of the Caucasus; and the official documents now published† prove indubitably that the disease spread from Georgia to that town by the only means of communication existing between the two places. From Tiflis it touched all the intermediate points on the road to the gates of the Caucasus; and it appeared at Moudok, Zerdin, and Kisan, on the other side of this range of mountains. Every thing remained quiet in Astrakhan till the 20th of July: the disease was confined to the Sedtoff quarantine place; but on that fatal day three men were attacked in the city. On the 27th it reached the suburbs, and extended over the province. There are several peculiar features of uniformity in the progress of the cholera; and even in its eccentricities we recognise the action of circumstances which influence human intercourse. These are, 1st, that in its progress it has always been traced along the great thoroughfares of a country, attacking places in succession; 2dly, it does not attack a large space of territory of a new country at once, but gradually,—the first point of attack being invariably on a frontier or a coast, as in Russia, Orenburg, and Astra-

* We cannot omit mentioning a very remarkable circumstance connected with the "march" of Cholera, for the truth of which we can vouch. A very able teacher in one of our public institutions, who had bestowed much pains in ascertaining the advance of Cholera, two months ago declared, from his observation of the north-western direction in which it appeared to him generally to move, that if it reached our shores, it would strike them somewhere to the north of Hull!!!

† Letter to Sir Henry Halliday, Bart. M.D. &c. on the Tendency of the proposed Regulations for Cholera, &c. By G. H. Bell. Edinburgh, 1831. W. Blackwood & Co. We particularly recommend this short but valuable letter to all our readers.

* See a curious and interesting pamphlet, entitled *Observations on Cholera* as it appeared at Port Glasgow. By John Marshall, M.D. Edinburgh, 1831. Waugh and Innes.—Dr. Marshall will see that our information is derived from very varied sources; and had he placed more importance in facts than in words, we think that he would hardly have unbest his dignity to charge us with pilfering an expression.

† Die Asiatische Cholera in Russland, in den Jahren 1830-30, nach Russischen Quellen bearbeitet. Von D. Lichtenstadt. Berlin, 1831.

khan; 3dly, whenever it invades a new country it begins in a great commercial mart; and 4thly, the rapidity of the propagation of the disease appears to be proportionate to the distances and to the means of communication.* The cholera ascended the Volga to Twer, a distance of 550 leagues, in a little more than two months. Its progress was equally rapid at the very same time along the Don to Woronetz, and no less so on the banks of the Dnieper; so that in six months the disease had traversed Russia, from the Caucasian provinces to the governments of Twer and Yaroslaf, a distance of 700 leagues. Among Russian works, the *Actes et Observations qui ont rapport au Cholera d'Orenbourg*, published by the Medical Board of St. Petersburg, and *Remarques sur le Cholera à Astrakhan* in 1830, by Dr. Salomon, are replete with proof of the same peculiarities of infectious character; and we have before us a curious little work, *Observations faites sur le Cholera Morbus dans le quartier de la Yakimanka à Moscou, en 1830, par Zoubkoff, Naturaliste* (Moscow, 1830), in which the author, although strongly opposed to the infectious nature of the disease, acknowledges that he himself scarcely ever went into the proximity of an affected person without experiencing symptoms of the disease—symptoms which twice laid him on a sick bed. An infected barge took the disease to St. Petersburg, and in three days it broke out in a dozen parts of the town, widely separated from each other.† This is one of the startling facts which have always led contagionists to doubt; while, the disease being once established, the total exemption of some from the influence of contagion, makes the anti-contagionists increase with the increase of the disease.

We cannot, if we wish to make any remarks upon the proposed means for preventing the progress of the disease, enter into details upon the gradual mode of its dissemination: suffice it, that after finding the inutility of sanitary cordons, the King of Prussia abolished them altogether; and the Emperor of Austria almost apologises to his people for ever having established them. It appears that, from the 13th of June to the 18th of October, the disease had existed in 2960 places in the Austrian dominions, when the total number of persons attacked was 335,711. Of these, 151,620 have recovered, 151,734 died, and 32,957 still remained under medical treatment. The disorder had ceased in 1001 places, and had appeared in 125 other places.

It is almost certain, from the facts contained in the history of this very malignant disorder, that, though propagated across countries and

along the lines of the communication of men, it cannot be arrested by the ordinary quarantine measures; and it is further almost demonstrated, that a number of individuals may be exposed to the contact or neighbourhood of a diseased person, and the malady may only be communicated to one or two. Only one member of a family may be attacked,* while, at the same time, individuals whose business and occupation kept them at a distance from the seat of the malady have been afflicted by its poisonous influence. Upon a knowledge of these facts we should found the conduct to be pursued by government or by individuals. There can be no doubt that severe quarantine measures, as proposed by the Board of Health, are injurious to the interests of society, to the commerce of the country, and are equally disastrous to the sick and healthy. "He (the cholera) becomes more bloated and venomous by confinement; he thrives on the thick foul vapours of the lazar-house; he is the monster 'that doth make the meat it feeds on.' We should beware, then, how we attempt to isolate the disease."—(*London Medical Gazette*, Oct. 29, 1831.) We do not mean to imply that regulations for putting shipping into quarantine should be neglected; but the idea of putting the houses under such regulations is prejudicial in the extreme: it entails secrecy, it causes a panic, and impedes the philanthropic exertions of relatives or of medical men; and if it be true, as it appears to be from the statements that have been laid before the public—statements contained in the history of the progress of the malady, and not in the assertions of any individual—that the chances of communication are pretty equal, they become absurd, as they are unnecessary.

"Were these regulations harmless," says Dr. Hamilton Bell, "or did there exist any reasonable expectation that if enforced they could stay the progress of the disease, or confine it to the house or family in which it may first appear, such a sacrifice for the common benefit might be expected. But I will venture to say, that, even on that hypothesis, it would be found almost impracticable to enforce the regulations against even one or two families; while, if the disease is to manifest itself here with the wide-spreading desolation which has marked its progress elsewhere, your regulations would not only be nugatory, but any attempt to carry them into execution would be attended with consequences even more fatal than the spreading of the disease itself, and would multiply tenfold the mortality among those attacked." Dr. Young† also gives his opinion as decidedly at variance with the authority of the Board of Health in recommending "the immediate separation of the uninfected from the sick." And though we do not like the abuse of the most learned of their profession, given by a portion of the daily press, we decidedly consider that putting any such measures in force would be decidedly impolitic and cruel, and will never meet with approbation except from the cowardly and the selfish. Under the impression of terror likely to be produced by these regulations, it is likewise to be expected that the domestics of the wealthier classes will fly the house as soon as a case of the disease occurs; the wretched inmates would have to depend upon the worst description of mercenaries, or must devote themselves to duties or labours for which they are by health, habit, or

prejudice, totally unfit; and the obnoxious surveillance under which those affected by the disease are proposed to be placed will inevitably lead to the evasion of the rules of the legislature, and even to the neglect of medical advice, for fear of giving publicity to the case. We will not dwell upon the necessity of allaying panic and alarm; the best remedy for this will be found in an attentive consideration of the phenomena of the disease, and the mode of its propagation. It is a new pestilence, and we do not know the character of constitution most liable to be affected; but there is not much more to be dreaded than from the ordinary accidents and afflictions to which we are daily exposed as human beings, and which we must be prepared to meet with the caution that is based on knowledge, and the fortitude which we derive from correct religious feeling. In the impossibility to avert, let us, to the best of our means, endeavour to preserve ourselves from this pestilential malady; but in doing so, let us never for a moment be unmindful of what will be in duty expected from us by those who may be the victims of its painful attacks.

To what we have thus stated, we beg leave to add a note from one of the most eminent medical practitioners in London: every light thrown upon the important subject under consideration must be welcome to the public.

At this moment of alarm from the presence of one of the most awful visitations with which it has pleased the Almighty at any time to afflict so large a portion of mankind, it appears a laudable and legitimate object to offer comfort, by presenting to the public any means of prevention or cure, by informing it of the opinions of those medical men who have made this the subject of their inquiry, however novel may be the plan proposed.

Hitherto we have seen nothing in the public prints that is likely to give consolation, or that tends to lessen the danger of this epidemic; but, on the contrary, rather to induce one of the most exciting of all causes to this disease—fear.

The physicians of our own country have all directed their attention rather to the means of cure when the dreaded blow is struck, than to the consideration of prevention—at least as far as refers to medicinal means—prescribing only cleanliness, diet, and general means for the purpose of avoiding rather than of preparing the system against the malignancy of the cholera.

If, however, we find in the history of modern discoveries in medical science, the name of a man old to practice, and yet standing conspicuously forward in his attempts to advance the principles on which that science is founded, no small attention should be paid to the means which he and those of his school have proposed to remedy disease.

Dr. Hahnemann, to whom we allude, is not to be considered as a tyro forming a chimerical hypothesis imagined by an inventive mind, and fostered in his closet unaided by practice; but as one of mature age, having acquired reputation and wealth sufficient to prove his success as a physician. At this period, instead of being satisfied that he had performed his duty to mankind, he has given the energies of his mind to the investigation of those principles upon which only a true system of medicine could be founded. The fruit of this laborious research he has long since put forth in his work, the *Organon*, unfortunately little known in this country, although his practice, and that of his widely-extending school, has made a rapid progress in many parts of the continent.

The broad principle upon which he conducts his mode of cure, and which he has termed *Homoëopathic* (*homœopathes*), is founded upon the following dogma.

THE DOGMA.—Every disease is cured most speedily, mildly, and certainly, by such a medicine as in the healthy subject is capable of producing a similar disease. In the application of this dogma, he has also discovered that the medical agents employed must be administered in the minutest quantity and in the most attenuated form. Proceeding, then, upon this principle, we find, in the trials of various medicines upon healthy persons, that each drug has a tendency to produce its own specific disease. From such trials he has formed his *materia medica pura*.

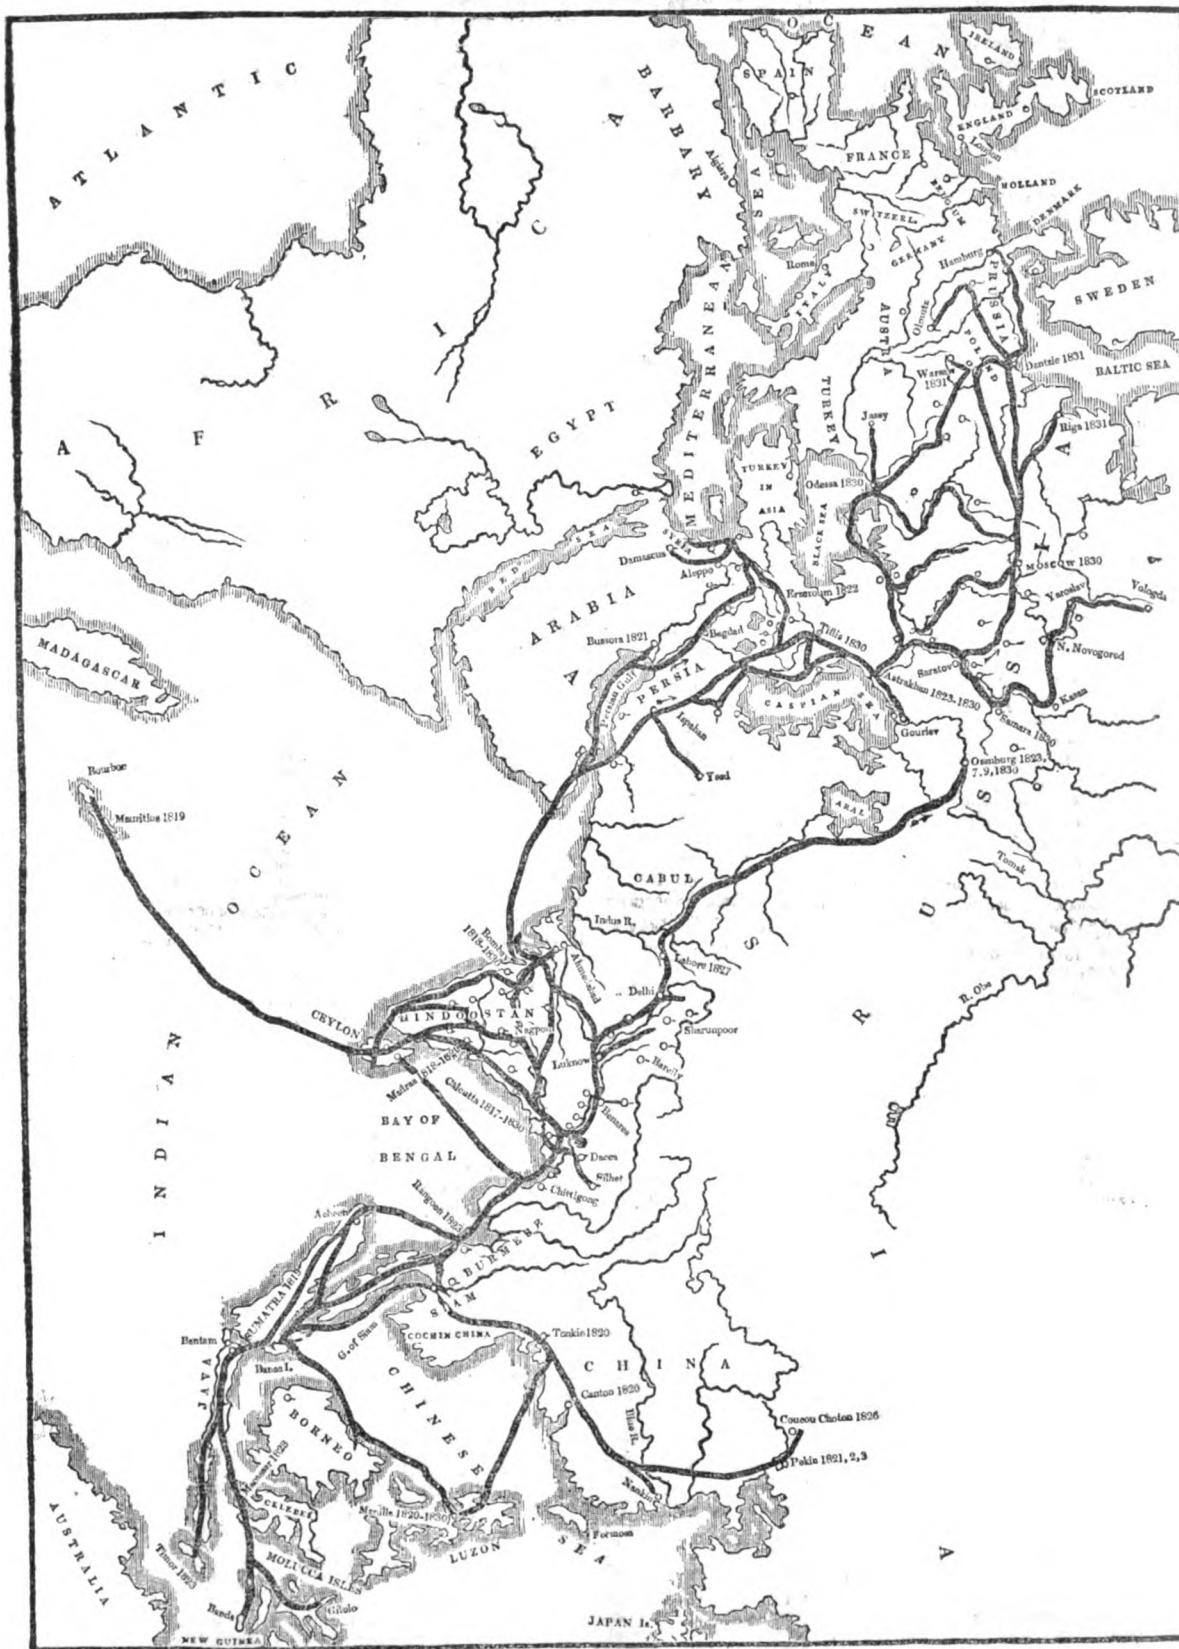

Therefore, according to his principle, a medicine cures such a disease as embraces the group of symptoms similar to its own. Believing, then, the truth of this doctrine, what should be the preventive and curative agents in cholera? We answer, camphor and arsenic. The strong similarity of the symptoms of these medicines (administered to healthy subjects) to those of cholera may be easily shewn from Hahnemann's *Materia Medica*. [These taken in the smallest possible quantities as preventives, might, if this principle be well founded, avert the disease.—*Ed. L. G.*]

* Quarterly Review, No. XCI. p. 183.

† Observations on the Nature and Treatment of the Cholera Morbus now prevailing epidemically in St. Petersburg. By G. W. Lefevre, M.D., &c. London, 1831. Longman and Co.—This work is accompanied by a tabular view of the progress of the cholera in St. Petersburg; and from its details and perspicuity may occupy a prominent situation among the numerous works on this subject with which the press at present teems. Drs. Russell and Barry have just published the opinions which a careful study of the phenomena of the disease, both in St. Petersburg and Hamburg, have enabled them to form: the germs of the disease were, they say (as stated above), brought to St. Petersburg by the boats and barks. The disease was propagated in two ways: one which may be called personal, by the dispersion over the whole city of passengers and boatmen coming from infected places;—the other, which may be termed atmospheric, by emanations from the barks and their contents, suspended in and carried by currents of air to susceptible persons independently of direct communication. But they at the same time state, that the epidemic of St. Petersburg did not possess those absolute and indiscriminate communicable qualities attached to plague and small-pox; and that the risk of infection incurred by healthy persons, susceptible, who approached the sick of that disease, was in direct proportion to the want of ventilation and cleanliness and space around the latter.

* Practical Remarks on the disease called Cholera, which now exists on the Continent of Europe. By John Goss, Surgeon, &c. Pp. 27. London, 1831. Longman and Co. A harmless, but also a very useless pamphlet.

† Remarks on the Cholera Morbus, &c. By H. Young, M.D. London, 1831. Smith, Elder, and Co.

DRAMA.

EXCEPT the *Esile*, produced with great effect at Drury Lane, with Macready, Farrer, Harley, Miss Phillips, &c., we have no dramatic novelty to report upon this week; and we have to regret that our Musical Review is also obliged to give place to the engrossing subject which occupies the preceding pages.

VARIETIES.

Frog.—A horned frog, or lizard, has lately been deposited in the Columbian Institute at Washington city. It was brought from the prairies of Upper Arkansas. It lived without food or drink from April to December, 1830. It is said that the sprinkle of a few drops of rain kills this animal.—*Vermont State Gazette.*

Royal Music.—It appears, from the Paris journals, that Don Pedro, the ex-emperor of Brazil, has been amusing his royal leisure by composing an overture, the performance of which, at the Théâtre Italien, he superintended with the appliances of an orchestral leader. This is more innocent than Nero fiddling.

Mr. Buckingham.—Mr. Buckingham is, we observe from the newspapers, giving lectures in Staffordshire, where the good people of the Potteries affect him strongly. A grand vase is about to be manufactured and presented to him; and there is a proposition to start him as a candidate for Sheffield for the reformed parliament.

On Sunday the visitors to the *Jardin des Plantes*, says a Paris journal, were attracted by a terrific combat which arose between two black bears confined together in one of the sunk fosses, and which at length terminated in favour of the strongest, who, after strangling his brother Bruin, literally tore him to pieces! A multitude of persons were crowded together upon the parapet which surrounded the scene of action.

Zoological.—His Majesty, it is stated, has presented all the royal animals in the Tower to the Zoological Society: four lions, leopards, bears, bloodhounds, &c. &c., about thirty in number, constitute this magnificent gift.

Royal Academy.—Last Monday, Mr. William Wyon, the justly celebrated die-engraver, was elected an Associate of the Royal Academy.

Nunismatics.—On the 5th, a sad Guy Faux trick was played by some burglars in Paris, who broke into the Royal Library and succeeded in carrying off a large booty of ancient and valuable coins and medals. The loss is estimated at 100,000 francs, and mutilates one of the finest collections in the world; consisting of several thousand medals, gold medals of the Roman emperors, Greek medals, and other precious antiquities.

Sandals for Horses.—An English saddler, named Tade, says *Le Petit Courrier des Dames*, has invented a sandal for horses. It is fastened on with strings of leather instead of nails, and is so managed that it may be put on or removed, as the rider wishes or wants, in less than a minute. The object of this invention is to enable the rider to replace at once, during a journey, any of the iron shoes which may be lost, and to continue his journey without fear of exposing the animal to the accidents which might result from the loss of a shoe. The lightness of the shoe, which weighs no more than half the iron one, and its portable form, as it can be carried with ease in the pocket or behind the saddle, are great improvements; a still greater is, that it may be taken off when horses are grazing, even for a short time.—*Morning Paper.*

Roman Coins.—At least five thousand Roman coins, of various periods, weighing six-and-thirty pounds, have been lately found at Silly, in France, near Argentan, in the department of the Orne. The mode of their discovery was singular. Two or three pieces of silver were observed by some labourers to have been turned up to the surface of the earth by moles. This induced them to dig, and at the depth of only a foot they came to a broken vase of red clay, filled with the treasure.

The Morea.—We have before us the prospectus of the French scientific expedition to the Morea: M. B. de St. Vincent has read it in the Royal Academy of Sciences, where it was listened to with unabated attention. The publication of the results of the expedition will consist of two parts—forming, however, one work. The text of the section devoted to the physical sciences will form three volumes imperial 4to., to which will be added an atlas, in folio, of about 100 maps and plates. The first volume will contain a historical introduction, the narrative of the journey, and the separate itineraries of the several members of the commission. The second, a chapter on the ancient geography of the country, an accurate table of the positions of the places, memoirs on the islands which have merited special attention, and, lastly, a very detailed geological and mineralogical description of the Morea. The third volume will be entirely dedicated to the description of the animals and plants.

The ex-minister Peyronnet has employed the leisure of his imprisonment in composing a work entitled, *Questions de Jurisdiction parlementaire, ou Examen juridique de l'Accusation et du Jugement porté contre les premiers ministres de Charles X.*—Paris in London.

Madame Pasta leaves Paris next week for La Scala, at Milan, and Madame Caradori for Venice; Mademoiselle Blais is at Turin; Madame Lalande at Madrid; Donzelli and Zuchelli sang at Bologna with no great success; the first was found to have too much voice, the second too little. Malibran is going to Paris, where she will not sing under 1,530 francs per night!—*Ibid.*

As an old woman was lately walking through one of the streets of Paris at midnight, a patrol called out, "Who's there?" "It is I, patrol; don't be afraid."—*Ibid.*

The New Crown.—A stanch but figurative anti-reformer was declaiming the other day on the riots at Bristol. "I declare, he exclaimed, that I no longer consider the king's crown to be safe: no, there is no crown now but the crown of Reform; and that, instead of blazing with precious jewels, is only set with Bristol stones!"

Singular Child.—An official communication of the secretary of state for the department of the interior, in Mexico, states, that a female child, fair and healthy, had been born in the mines of Catorce, and was three months old, which had two heads—while one mouth was at the breast, the other sucked its hand. The latter went to sleep first; but the two heads cried or were quiet simultaneously.—*Franklin Herald.*

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLV. Nov. 15.]

We are happy to hear that Mr. Galt is employed on a Life of the late Marquess of Londonderry. When we consider the share his lordship took in the Irish Union, and in the most important negotiations that ever affected the political state of Europe, we must anticipate a valuable and interesting production from Mr. Galt's pen.

A Treatise on Urethral and Vesical Lithotripsy, by W. B. Costello, Esq. and M. Civiale.

A volume of highly moral Plays, by a Lady; comprising—Keep your Temper, a Comedy; the Fate of

Ivan, a Tragedy; Miss Betsy Bull, or the Johnnies in Spain, a Melo-drama.

The Author of the *Collegians* has, we understand, a new novel on the eve of publication.

LIST OF NEW BOOKS.

Cameos from the Antique; or, the Cabinet of Mythology, intended as a Sequel to the Poetical Primer, by Mrs. Lawrence, 18mo. 2s. 6d. hf.-bd.—Pictures, Scriptural and Historical; or, the Cabinet of History; intended as a Sequel to the Poetical Primer, by Mrs. Lawrence, 18mo. 4s. hf.-bd., or the 3 vols. bound in green silk, 10s.—Bowler's Shakespeare, with Smirke's Illustrations, 1 vol. 8vo. 11. 10s. cloth.—Lefevre on Chorea, 8vo. 6s. bds.—Practical Remarks on the Disease called Chorea, by John Goss, 8s. 1s. sewed.—Rough Sketches of the Life of an Old Soldier, by Lieut.-Col. J. Leach, 8vo. 12s. bds.—Morton on Lactation, 8vo. 5s. bds.—Brady's Law of Debtor and Creditor, 12mo. 5s. bds.—Chance's Treatise on Powers, 2 vols. royal 8vo. 21. 5s. bds.—Rev. J. R. Prevailing wind, S.W. till the 6th, when it became N.W.

Frequent rain during the 5th and 6th; the other days generally clear.

Rain fallen, .175 of an inch.

Edmonton.

CHARLES H. ADAMS.

Latitude..... 51° 37' 33" N.

Longitude... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society, October 1831.

Thermometer—Highest.....	60.00°	7th.
Lowest.....	30.00	29th.
Mean.....	51.9133	
Barometer—Highest.....	30.15	17th, 18th.
Lowest.....	29.03	1st.
Mean.....	29.6056	

Number of days of rain, 19.

Quantity of rain in inches and decimals, 3.6374.

Winds.—1 East—1 West—1 North—4 South—1 North-east—9 South-east—14 South-west—0 North-west.

General Observations.—The month was extraordinarily warm—the extreme of heat above the maximum of last month; and the mean was nearly five degrees higher than the average of the means in the same month for the last eight years. More rain fell than since October 1827. The barometer was likewise lower than in any corresponding month since 1827—thus proving the effect of humidity upon that instrument. The wind blew from the southward, veering between south-east and south-west, for 7 days. From the 14th to the 20th the weather was particularly fine. On the 29th, a faint aurora borealis was seen in the north-west, which continued from 11 p.m. until after midnight. The evaporation, .14375 of an inch.

TO CORRESPONDENTS.

"Overseer" is mistaken: on the night specified in our dramatic criticism, Mrs. Gibbs did not play *Mrs. Shapam*, and Miss Taylor did. Our pseudo-corrector ought therefore to learn, that it is incumbent on a man to be present when he is being shamed.

Several letters, communications, &c. have reached us too late. Correspondents who desire to secure prompt attention, ought not to postpone writing till towards the close of the week: we can seldom do much after Wednesday, and Thursday receipts always cause us inconvenience and trouble.

C. M. will see that we are busy with the subject upon which he writes; but we do not find any thing in his statements that requires particular mention.

ADVERTISEMENTS,

Connected with Literature and the Arts.

NO ARTISTS, ARCHITECTS, and DRAFTSMEN.

The utmost attention has been given to the Manufacture of Drawing Pencils in Cedar by S. Mordan and Co., who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing those objections and annoyances so frequently complained of in Drawing Pencils. All who wish to be satisfied as to the genuineness of these Pencils, may see them manufactured at No. 25, Castle Street, Finsbury, which establishment now has the honour, exclusively, to supply all the Government Offices. Retail retail by all respectable Stationers, &c. throughout the United Kingdom. S. Mordan and Co.'s name is on each Pencil.

SMITH and DOLIER'S ROYAL TABLETS. Patronised by their Majesties.

This elegant and novel invention is recommended to the notice of the public, as an excellently adapted for pocket memorandums and pencil drawings.

The smaller Tablets are mounted for the pocket, in a variety of bindings, in plain and embossed leather, price from 2s. to 5s.; and the larger ones are fitted up in rose-wood and mahogany frames, for the counter or desk, price from 2s. to 6s.; and for the library table or boudoir, in richly embossed cases and portfolios, of different kinds and colours, price from 6s. to 20s.

These Tablets, which are of a beautiful white surface, receive the pencil with freedom and distinctness, and display, as if by magic, all the drawings which are desired to complete the finest pencil drawings.

The public is requested to observe that the Name of Smith and Dolier is stamped on each Tablet.

The Tablets may be had at the Wholesale Stationers in London, and at most Booksellers and Dealers in Fancy Articles in the Kingdom.

Now ready, beautifully printed in double Columns, uniformly with Burke's Peerage and Baronetage, price 2s. 6d.

BURKE'S EXTINCT, DORMANT, and SUSPENDED PEERAGES; a necessary Companion to all other Peerages.

This work, formed on a plan precisely similar to that of Mr. Burke's very popular Dictionary of the Peerage and Baronetage, comprises the whole of the Peerages of the Three Kingdoms which have been suspended or extinguished since the Conquest, particularising the members of each family, in each generation, and bringing the lineage, in all possible cases, through either collateral or females, down to existing houses. It connects, in many instances, the several lines of nobility; and it will in all cases show the cause which has influenced the revival of an extinct dignity in a new creation.

* * * When it is considered that the most illustrious peers of England were swept away in the devastating conflicts between the Houses of York and Lancaster—in the wars of the Edwards and Henrys—and more recently, in the season of civil commotion, it is presumed that a work of this description, not confined to mere names and dates, but supplying much historical, biographical, and domestic detail, cannot fail to engage public attention, and to be considered as a great desideratum in all libraries. It should be particularly noticed, that this new work will appear nearly as much to extant as to extinct persons of distinction; for though dignities pass away, it rarely occurs that whole families do. The editor has therefore sought, with the utmost assiduity, those branches still remaining amongst the nobility and gentry, which have sprung from old and illustrious stocks, and he trusts that his researches will be found to have been extremely successful.

Henry Colburn and Richard Bentley, New Burlington Street.

In 1 vol. 12mo. with Plates, 10s. boards.

BIOGRAPHICAL SKETCHES and AUTHENTIC ANECDOTES of QUADRUPEDS. Illustrated by numerous Engravings on Steel.

 No. 1. contains the Route from London to Paris. John Murray, Albemarle Street.

THE NEW MONTHLY MAGAZINE.
 Edited by E. L. BULWER, Esq.
 A new Editor and new Contributors have been added to the former Conductor and Correspondents of this Journal. With fresh allies comes an increased ambition. The Conductors of the New Monthly Magazine trust that it will henceforth be more than ever deserving the favour of the public. In Politics, a more vigorous and systematic tone—in Literature, a more earnest and enlarged attention to criticism—in Miscellaneous Matter, a more careful selection of those articles that relate not only to the day, but to those topics of the day, the most important and the most generally interesting—will, the Proprietors trust, form those characteristics by which they shall improve on the past, and hope for distinction for the future.

The November Number contains, among other interesting Papers—Address to the Public—State of the Country—How will the Peers be gained?—by a Reforming Member of Parliament—The Temper of the House of Commons, by a Member in Five Parliaments—The Cholera Disarmed—Society—Why may we blame the Bishops?—The Room in which Canning died—Discussions on the French Peerage—Ourselves, our Correspondents, and the Public—The World as it is; a Tale—Samuel Rogers and his Works (with a Preface)—Contrasts—Anecdotes of a Student—Pantomimic Politics—The King; a Sonnet—Government and Administration—The Derby Festival—The Annuals—Monthly Commentary on Men and Things—Journalism; the People's Secret—The Actress Countesses—The Cholera in the Gazette—Low Prices—William Smith too good for a Bishop—New Levy of Irish Cavalry—Berrants' Advertisements—The Reformers' Hymn—London in London—The Bugears of the Month—The Olympic Games—The Dorset Election, &c. &c. Henry Colburn and Richard Bentley, New Burlington Street.

Price 2s. 6d.
A TREATISE ON THE REARING AND MANAGEMENT OF CHILDREN, Moral and Physical, with a View to the Prevention of Diseases, especially Consumption; being the Substance of a Public Lecture, delivered at Windsor, in the Winter of 1830.
 By WILLIAM MONS, Surgeon and Apothecary, Eton.
 J. B. Brown, Windsor; and Whittaker and Co. Ave Maria Lane, London.

In 2 vols. post 8vo. 12s. 6d.
THE SISTERS' BUDGET; a Collection of Original and Translated Tales in Prose and Verse.
 By the Author of "The Adeline," &c.
 With Contributions from Mrs. Hemans—Miss Mitford—Mrs. Hodgson—Mrs. Kennedy—Mr. Macfarlane—Mr. Kennedy—Mr. Bell—Mr. Malcolm, and some others.
 "Two very pleasant and varied volumes."—*Literary Gazette*.
 Whittaker, Treacher, and Co. Ave Maria Lane.

Price 4s. in cloth.
CHRISTIANITY A DIVINE REVELATION; being a Defence of the Christian Religion against the Assaults of Unbelievers. Dedicated, by permission, to the Lord Bishop of Chester.
 By ROBERT BROADLEY, Curate of Eccles, Lancashire.
 Whittaker, Treacher, and Co. Ave Maria Lane, London; and Banks and Co. Manchester.

Lecture on Cholera Morbus.
 In 8vo. price 6s. boards.
OBSERVATIONS ON THE NATURE AND TREATMENT OF THE CHOLERA MORBUS, now prevailing epidemically in St. Petersburg.
 By D. W. LEPEVRE, M.D.
 Member of the Royal College of Physicians of London, &c. and Physician to the British Embassy, St. Petersburg.
 Printed for Longman, Rees, Orme, Brown, and Green.

CHOLERA.—THE MEDICAL GAZETTE of this day, November 18th (with an additional Sheet, price 1s.), contains a mass of important information on Cholera; demonstrating, among other points, how it spreads, and consequently how it may best be avoided—in relation of certain dangerous doctrines recently promulgated. Also, Critical Notices of several New Works on the subject—Rules of the Parisian Board, &c.—A Lecture of Dr. Elliottson on Medicine—Clinical Observations, by Professor Thomson, on Hydrocephalus—and on London: Published by Longman and Co. every Saturday Morning, price 6d.; and sold by all Booksellers, &c.

Price One Guinea in crimson silk; large paper (only 250 printed), 2l. 12s. 6d.

THE KEEPSAKE for 1832.

MEMOIRS of the great LORD BURGHLEY.
 By the Rev. Dr. NARES.
 Regius Professor of Ecclesiastical History at the University of Oxford. Dedicated, by permission, to the Most Noble the Marquesses of Salisbury and Exeter.

"This elaborate work is of the highest national interest. It embraces and discusses a multitude of great historical, biographical, religious, and political questions, and throws much light upon an era of almost unparalleled national and universal importance."—*Literary Gazette*.
 "This work deserves to find an immediate place in every good historical library."—*Athenaeum*.
 Henry Colburn and Richard Bentley, New Burlington Street.

THE COURT JOURNAL, and Gazette of the Fashionable World.
 In the No. published this day, is commenced a Series of Papers on Brighton, its Residences and Visitors.
 The Publisher begs to remind those who desire to commence taking this publication, that orders should be given to the Book-sellers or Newsmen in their own immediate neighbourhood, to ensure its regular supply.
 This new and popular Weekly Journal of Fashion presents itself as the companion, not merely of the drawing-room and the boudoir, but of the breakfast-table and the study. It supplies information on every topic of passing interest, thus rendering it a Weekly Newspaper, of an entirely new, improved, and valuable nature.

The Court Journal, containing 48 columns, is published every Saturday morning, on a handsome oct. stamped sheet, so that Subscribers may receive and transmit it to their friends, postage free, throughout all parts of the Kingdom.
 Published by HENRY COLBURN, by permission, at the Office, 19, Catherine Street, Strand; and supplied by all Booksellers and News-vendors throughout the Kingdom.

Army and Navy.
THE UNITED SERVICE JOURNAL,
 for November, contains the following interesting Articles: 1. On the Maritime Population of the British Empire. 2. Promotions—3. The Bounty again—4. Sir Walter Scott—5. On the Principle of Subordination—6. The War of Terry Alti—7. Survey of the Western Coast of Africa, 1825-6 (continued)—8. Reminiscences of a Subaltern (continued)—9. Service Afloat during the late War (continued)—10. The Services of Lord de Saumarez—11. Recollections of a Sea-Life, by a Midshipman of the Last Century (continued)—12. Reply to Colonel Macleod's Observations on Rifle-Shells—13. Trials and Incidents. Naval and Military: a Resurrection; the Action of Benevento, and Capture of General Le Ferré; Colonel John Cameron, &c. &c.—General Correspondence: Lord Munster in Explanation of a Passage of his Campaign of 1829, referring to Lord Howden's Congress's Guns—Naval Promotion—A Warning Voice, &c. &c.—Record of the 71st (continued)—Editor's Portfolio—General Orders and Circulars to the Navy and Army—Promotions and Appointments, Naval and Military, &c. &c.
 Henry Colburn and Richard Bentley, New Burlington Street.

REMARKS on the GENERAL TENDENCY of the NATURE and DIGNITY of CHRISTIANITY, addressed to Mrs. Joanna Baillie.
 Sold by Messrs. Rivington, Waterlane Place; and Hatchard, Piccadilly.

BOOKS IN THE PRESS.
LIFE and WORKS of BYRON.
 The Prospectus, with Specimens of the Letter-press and Engravings, of the first complete and uniform Edition of the Life and Works of Lord Byron, to be published in Monthly Volumes, corresponding with the New Edition of the Waverley Novels, may be had of Mr. Murray, and of every Bookseller and Newsmen. The publication will commence on the 1st of January next, and the price of each Volume will be only Five Shillings.

On the 23d of November will be published, price 2s. 6d.
THE ENGLISHMAN'S ALMANAC; or, Daily Calendar of General Information for the United Kingdom, for the Year 1832. Containing Tables of the State of the Weather for every Day, from 1825 to 1832, inclusive, with Rules for prognosticating its Changes—a List of the Poets, including the latest Creations, with the Ages and Masters of each—A Table, shewing the present State of the Representation in the House of Commons, the Names of the Members, and the important Alterations proposed in the Reform Bill, at a single glance—to this is added the Amount of the Population of the various Places which will lose, or now possess, the right of the Elective Franchise. The usual Matters which form the essential contents of an Almanac are varied by Tables of Mortality, of National Expenses, of Imports and Exports from and to the various Countries of the World with which we maintain commercial intercourse, Suggesting by the Element of Health for preventing the Approach of Cholera Morbus, &c. &c.
 Printed for the Company of Stationers, and sold by George Greenhill, at their Hall, in Ludgate Street.
 * * The usual Variety of Almanacs will be published at the same time.

On the 23d of Nov. will be published, price 2s. 6d.
THE TRADESMAN'S and MECHANIC'S ALMANAC for the Year 1832, comprising a Series of Exemplary Biographies, of the History of several living Men who rose from obscurity to fame, is given—New Illustrations of the Effects of Trades and Arts on Human Life—The Hours of Lords and Commons, with an Outline of the proposed Reform Bill—Legal Explanations—Tables of Population; of Life Assurance, (founded on the Government Tables)—Lists of the Countries from which we derive our Foreign Articles, and of those to which we send our Manufactures—with numerous Articles of Information that deserve the attention of the Trading and Operative Community.
 Printed for the Company of Stationers, and sold by George Greenhill, at their Hall, in Ludgate Street.
 * * The usual Variety of Almanacs will be published at the same time.

THE STATIONERS' ALMANAC for the Year 1832, containing, besides the Calendar, a Variety of Tables, (including the Time of High Water at London Bridge, adapted for the Counting-House and for general Use).
 Printed for the Company of Stationers, and sold by George Greenhill, at their Hall, in Ludgate Street.

At the same time will be published,
The London Miniature Almanac, with an Engraving of St. Katherine's Hospital, in the Regent's Park, also the usual Variety of Book and Sheet Almanacs.

On the 23d of Nov. will be published, 3 vols. post 8vo. 32s. 6d.
THE USURER'S DAUGHTER. A Novel.
 By one of the Contributors to Blackwood's Magazine.
 London: Published by W. Simpkin and B. Marshall, Stationers' Hall Court.
 Of whom may be had,
 In 3 vols. post 8vo. 11s. 6d. boards,
Atherton, a Tale of the last Century. By the Author of "Rank and Talent."

On Thursday next, in 1 thick volume 8vo. price 21s.
A TREATISE ON THE DISEASES OF the HEART and GREAT VESSELS; comprising a new View of the Physiology of the Heart's Action.
 By J. HOPE, M.D.
 Formerly House Physician and House Surgeon to the Royal Infirmary, Edinburgh, &c. &c.
 William Kidd, 228, Regent Street, London; and Adam Black, Edinburgh.

In a few days will be published, in 2 vols. 8vo.
AN ESSAY upon NATIONAL CHARACTER; being an Inquiry into some of the principal Causes which contribute to form or modify the Character of Nations in the State of Civilization.
 By RICHARD CHENEVIX, Esq. F.R.S.L. and F.R.S.E.
 Printed for James Duncan, 37, Paternoster Row.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Watlington Street, Waterlane Bridge, Strand, near the Strand Street, &c. &c. Street; sold also by J. Caughey, Mr. Royal Exchange, E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Sax, D. Robertson, and others, and Co. Glasgow; and J. Canning, Dublin. Agents for America, G. B. & H. 18, Red Lion Square, London.
 J. MOYSE, 22, Castle Street, Leicester Square.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 774.

SATURDAY, NOVEMBER 19, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Fables, and other Pieces in Verse. By Mary Maria Colling. With some Account of the Author, in Letters to Robert Southey, Esq. By Mrs. Bray, Author of "Fitz of Fitzford;" "The Talba," &c. &c. 8vo. pp. 178. London, 1831. Longman and Co.

SAY what we will about education, though many are its blessings—about study, though great are its advantages,—they are both of them the works of man, and sometimes bear no fruit; while, as if to put their utmost effects to shame, some vigorous and unassisted mind will achieve all that they have attempted, and assert the paramount supremacy of nature. This is especially seen in the productions of imagination: some of both our first poets and painters, &c., have been wholly of their own or rather of "God's making." It has been well observed, that an uneducated poet is a solecism in language—the mind educates itself: there may be much knowledge, with little information; and habits of reflection are often as much worth as those of reading. We are too apt to fancy that "French, music, and the use of the globes," constitute education. Now, we hold that to observe, feel, think, and remember, are in reality those four points of the mental compass by turning towards which, the mind is formed, and strengthened to its perfection. Of the mysterious and inherent tendency implanted, in some inclining them to certain pursuits, without any visible cause, Mary Colling is a singular instance: but we will give the brief abstract of her history, as told by Mrs. Bray with equal good taste and good feeling.

"Mary Maria Colling, the daughter of Edmund Colling, husbandman, by his wife Anne, was born at Tavistock, August the 20th, 1805. In her childhood she was sent to school to an old woman; not so much to learn any thing, as to be kept out of the way. But little Mary was not to be so neglected; for hearing others taught to read, she had a wish to learn also; and her school-mistress finding she made no progress either in sewing or knitting, undertook the task, more congenial to her pupil, of initiating her into a knowledge of the alphabet and the first rudiments of learning. These she speedily acquired; and being possessed of Watts's Hymns, and a sixpenny book that had in it sundry little stories, with some few pieces in verse, she soon became so perfectly well acquainted with their contents, that she knew both books, from beginning to end, by heart; not, however, making the good old woman fully acquainted with the tenacity of her memory in thus storing itself with what then constituted her whole range of knowledge: so that when her mistress, on account of her negligence with the needle, would sometimes keep her in, after school hours, as a punishment, Mary often managed to soften her displeasure and to gain her own liberty, by repeating something, with the utmost exactness, out of the sixpenny book in which she

was set her daily lessons. Before she was five years old, she could read well enough to entertain her grandmother, who was very fond of her."

She was next placed at the free school, where, however, her mother's illness prevented regular attendance.

"When about thirteen years old, she entirely quitted the school; and at this period a beautiful incident occurred in her life. I wish, in repeating it, I could convey to you any idea of the feeling manner with which she related it to me. 'It grieved her heart,' she said, 'to see that her father could neither write nor read, for his Bible could not speak for him; and so she taught him both, herself, before she went to place.'"

She obtained, when but fourteen, a place in the family of Mrs. General Hughes, where she has remained up to the present time.

"On receiving her wages, it had been her custom to spend as small a sum as she possibly could upon her clothes, and to buy little books with the remainder. I have heard also (though not from herself) that she has been very dutiful and generous out of her small means to her family, giving them assistance whenever she could do so. 'Her master,' she told me, 'had been very kind to her; for though ill-natured people had endeavoured to set him against her, because she loved reading, he had never listened to them, but had bought her several good books for her benefit, and some sermons as a present at Christmas.' Indeed, it appears that the poor girl's simple accomplishments, and keeping herself from idle company and gossips, have excited a good deal of envy amongst the narrow-minded in her own station and degree. Since her old mistress died, her sister had assisted in the family, though Mary manages, and does nearly all the work herself. Not the least interesting portion of her narrative was the good practical sense she displayed in telling me her method of housekeeping, &c. Since a severe illness, however, (and, like most poetical temperaments, she is at all times very nervous,) she is not allowed to do any laborious work beyond her strength.

"Finding, excepting in her Bible, that she had really read very little poetry, I asked her how she came to understand such words as zephyrs, aurora, &c., and that Flora was the goddess of flowers, as I observed allusions to such persons and things continually in her poems. I also asked how she had formed her way of writing, and learnt such bold and forcible expressions? To the former question she replied, 'That she had a dictionary; at the end of it there was an explanation about the gods and goddesses, and there she had learnt it: that if she met with a word in reading which she did not understand, she never past it over, but looked it out in her dictionary, and seldom forgot how a word was spelt if she once saw it in print; and as to her language, she had gained that from hearing Mr. Bray preach. To listen to him was her greatest delight, and she thought she owed much to his sermons. As a

proof of it,' she said, 'he had inspired her to attempt poetry.'

"Some time after this, she began to compose her fables, before she had ever read any, excepting two or three in *prose*, in the sixpenny book she had learnt by heart, when she was about five years old, at school. Lately somebody had lent her Gay's Fables, but she had yet only read a few of them. In the history of this poor girl's mind—which surely is replete with interest—I was anxious to learn what could have induced her to think of writing fables, not having been, from her own account, at all prompted to do so by reading them. She blushed like crimson when I asked her, smiled, and at last I drew out the confession. She said, 'that her master, seeing she did not go out much, or run about like other girls, from kindness to her gave her a slip of garden to amuse herself with cultivating it in her leisure hours; till, at length, all the flower-garden came under her care. The river Tavy flowed at the foot of it; and here she found the greatest delight. She would tell me truth, though she was afraid to speak it, lest I should think her mazed; but when of an evening she was amongst the flower-beds, and saw them all so lively and so beautiful, she used to fancy the flowers talked to her. Thus, a peony growing near her laurel tree, she fancied the one reproaching the other for not being so fine as itself, and so composed her little fable of the 'Peony and the Laurel.' And these kind of thoughts used to come into her head in a moment, and then she turned them into verses and fables."

There is great truth in the following remark.

"When I mentioned to Mr. Bray, that she said she used to fancy the flowers talked to her, and that she had composed fables before she had read any, he remarked, that this poor girl, like *Æsop*, was in a state of servitude; and possibly that persons of their stamp of mind so situated, feeling themselves so far beyond the ordinary society of their own sphere, might be led to seek it in a world they created for themselves by the vivacity of their own imaginations, and thus hold discourse, as it were, with flowers, and trees, and animals. I mentioned, I believe, in a former letter, that she had not been in the habit of writing down her compositions; and that when I asked her how she managed to preserve them, she gave me a truly Devonian reply, assuring me that 'she could mind them,' meaning she could retain them in her memory. I also inquired if any one in the place, besides ourselves, had ever heard her poems. She said 'Yes, a few persons had. That some ill-natured people scorned her for writing them, and some thought it wrong in a poor girl at service; but an old man, whose name was Pearce (and who it appears was the first person intrusted with her secret this way), and a few others, liked them pretty well. Her kind and generous master, also, approved them.'

"She told me that somebody had lent her an old book, containing extracts from different poets. I asked her whose poetry she liked best in it? She answered me, with all the simpli-

city imaginable, 'that there were some extracts from a person whose name was Shakspeare, and she thought she liked them the best.'* Knowing how close a union there is at all times between poetry, flowers, and love, I ventured to ask if she had a sweetheart. She smiled and said, 'Oh, no, she could read and amuse her mind, in her leisure hours, with making verses and with her flower-garden, and that made her quite happy: she did not want one.' I do not think there is any danger that this poor girl's head will be turned by any notice of her. She is very modest, and seems imbued with a deep sense of religious feeling, the surest safeguard against vanity; since such a fault is seldom found in a mind accustomed to serious thoughts on sacred subjects. It is more frequently the vice of those who think too much about themselves, and too little about their God. She has the Devonshire accent, but not coarsely; and, though a perfect country girl in every thing,—in her smile, her cap, her little straw bonnet, and her curtsy,—yet there is nothing vulgar about her. The elevated feelings of her character have given to her manners that indescribable mark of mind, which shews itself amidst the greatest simplicity, and is never to be mistaken. As, in noticing those who are at all distinguished for talent or worth, it is customary to say something of their persons, I may be allowed, perhaps, to state, that nature has been liberal to her in this particular. Her features are regularly handsome, especially the forehead, eyebrows, and eyes; the latter peculiarly so when animated in conversation. And I may here observe, that Mary Colling the servant, and Mary Colling talking about poetry and flowers, scarcely appears to be one and the same person. If I had not seated her for a couple of hours by my side, and won upon her to open her heart, I should never even have guessed the animated interesting being she could become in conversation."

A very romantic history of her grandmother is next narrated; we have only room for the affecting conclusion.

"When the widow grew old, though in extreme poverty, and no longer capable of work, she would willingly have starved rather than have sought relief from the parish; but she was at length prevailed with by her neighbours to accept it. To the last, her reserve, her calm but high spirit, her ardent affection for her grandchild Mary, who was her chief care even on her death-bed, never deserted her; and she expired as she lived, firm, collected, and resigned. Mary Colling perfectly well remembers attending her grandmother on her death-bed; and that not long before she died, she embraced her, and as she bestowed her last blessing, wished 'that she was in Abraham's bosom, and could carry that dear little lamb thither in her own.' The child Mary loved her most affectionately; and, after her eyes were closed in death, for some time she thought her sleeping. She shed many bitter tears, and when she saw her grandmother did not wake up again, she stole to the bed and kissed her. To this hour she remembers her funeral as the saddest day of her own life. And she told me, when I noticed having first seen her in the aisle of Tavistock church, under the reading desk, that she used to sit there from a melancholy recollection, not, however, unmixed with pleasing feelings, that it was *there*, when a child of four or five years old, whilst seated by the knees of

her beloved grandmother, she had first listened to the word of God, and learnt to call upon His name that he would bless her."

There is something very touching in the simple and earnest manner in which Mary expresses her gratitude for Mrs. Bray's kindness; and we must say we are not among the number who would call such kindly encouragement either wasted or injudicious. There is much selfishness in thus turning away from the claims of others. Mary Colling's little volume may, and we hope will, be of pecuniary benefit to the writer; and to the intelligent and imaginative mind, the appreciation and the unfolding of long-treasured and suppressed thoughts is its own "exceeding great reward." We now proceed to the poetry. We like the fables the least; they belong to a style quite past, and are too much the fac-similes of each other. The insolent plant, or flower, insults the more lowly one with its pride, which the other meekly refutes: the effect is weakened by the repetition. To this we must add, that the mythological table at the end of her dictionary has had an injurious effect;—Sol and Aurora have long been left to the poetry of the by-gone. Still, we are not surprised at a young writer's clinging to the beautiful fictions of the classics: to an unhackneyed taste, what an exquisite embodying of the "rosy-fingered morn" must Aurora seem! Two or three of these fables would have been enough. Our own favourites are among the miscellaneous poems. Give any names but Damon and Rosa, now "sacred to ridicule," and what a picture of rustic content is the following!

"The Cottage Grandfather."

While nobles are anxious for honour and state,
The peasants are cheerful and void of debate;
No fame to allure them, no riches to prize,
And all that is wanting contentment supplies.
Their labour with pleasure they daily pursue—
Though small their possessions, their wants are but few;
Content in their stations, though simple their fare,
Strangers to ambition, and strangers to care.
Returning from labour, in yonder green glade
Behold aged Damon hath shouldered his spade;
While Rosa, his grandchild, with health in her face,
Runs out from the cottage to meet his embrace.
The tales of the day she is anxious to tell,
And gives him a nosegay of cowslips to smell:
Thus all his attention she seems to engage,
The pride of his heart, the delight of his age.
In his old rustic settle, when seated is he,
The sweet little prattler climbs up on his knee;
A glow of delight on her cheek is displayed,
While she tells him the pranks that her pet-lamb has played.
The toils of the day are by Damon forgot,
Contentment and peace are the guests of his cot;
He knows no vexation, with health he is blest;
Each day brings him labour, each night gives him rest."

There is a fine touch of description in "Morning Twilight."

"Through the vales the breezes sigh;
Twilight opens her bashful eye;
Peeping from the east, she brings
Dew-drops on her dusky wings;
And the lark, with wak'ning lay,
Upstarts, the harbinger of day."

The lines to the Canary have much sweetness, with the exception of "bird" and "hard" as rhymes.

"To my Canary."

Oh! sweet little captive, how sad is thy strain!
What is it can prompt thee like this to complain?
All these little murmurs I justly may chide;
For daily, thou knowest, thy wants are supplied.
Do the shady trees tempt thee to quit thy abode?
Do the beauties of nature invite thee abroad?
If instinct informs thee 'tis summer's bright day,
I then do not wonder that thou wouldst away.

But where, pretty captive, oh! where wouldst thou go,
When mountains and valleys are buried in snow,
When groves are dismantled and cold the sun's beam,
And winter's chill breath binds each sweet gliding stream?

So pray be contented, my sweet little bird,
For I can assure thee thy fate is not hard;
Though nature's inviting in summer's gay form,
Know, that after the sunshine there follows the storm."

We conclude with some lines to her father.

"To my Father, with a present."

Dear father, with a grateful sense
Your kindness I review;
But to return full recompense
Is more than I can do.

Yet gratitude may joy declare:
Delight inspires my lay,
To think that now 'tis all my care
A something to repay.

This little gift you will receive—
'Tis little, it is true;
But yet accept it, and believe
I'll share my last with you."

A sweet portrait ushers in the volume; the face is singularly intellectual and prepossessing. We give Mrs. Bray very great credit both for the feeling which dictated her undertaking, and for the graceful manner of its execution; and we cordially wish her interesting protégée may meet with that success which will be the best reward to her kind friends.

Constable's Miscellany, Vol. LXXIII. The Civil Wars of Ireland, Vol. I. By W. C. Taylor, Esq., A.B. Edinburgh, 1831. Constable and Co.; London, Hurst, Chance, and Co.

THE Civil Wars of Ireland is, in fact, another name for the history of Ireland, which, we must observe—notwithstanding Mr. Taylor's labours (and, according to the statement in his preface, they are not trifling)—remains to be written. Mr. Taylor sets out by telling us, that "he has, in almost every instance, consulted the original records, and made no assertion which they did not fully support." Now, when we remember the vast quantity of manuscript in the British Museum, the Tower, the State Paper Office, and several private collections in this country (leaving out of the question those preserved in Dublin Castle and Trinity College), relative to Irish history,—when we also look abroad, at the library of the Vatican, &c. &c.—for where is the country in which Irish manuscripts may not be found?—we cannot help receiving Mr. Taylor's declaration of his having, in almost every instance, consulted the original records, with becoming caution; and in this, from a careful perusal of the first volume, which brings down the history of Ireland to the death of Charles I., we find ourselves fully justified.

We have, however, so slight and rapid a sketch of events of the greatest national importance, that it were breaking a fly upon a wheel to enter into severe criticism; and we will therefore, as Mr. Taylor offers no new facts, nor gives us a new view of any subject, select a few anecdotal passages.

Parliamentary representation of Ireland the reign of Elizabeth.—"In the midst of the disorders, Sydney summoned a parliament, at the same time took very extraordinary precautions to secure a majority. Several members were returned for towns that had never been incorporated; not a few of the sheriffs and magistrates returned themselves; and a number of the dependents of the court were nominally elected for places of which they did not even know the name. The latter circumstance is not unparalleled in the modern history of the Irish legislature, if we may credit an anecdote that was publicly related in the Irish parliament. Shortly before the Union, a member

* A letter from an Irish Jesuit at Rome to a friend at home, written in the reign of Charles I. is the Irish character, was lately brought to this country from the Vatican, and presented to an autograph collector, among some specimens of Chinese writing; and a year or two since a curious bronze arm was exhibited to the Society of Antiquaries as an Egyptian relic, which, on examination, was found covered with inscriptions in the Irish character.—Ed. L. G.

* Messrs. Longman, Rees, and Co., with a kindness that did them honour, not long after this letter was written, presented Mary Colling with a copy of Shakspeare's Plays.

for a Munster borough, being in London, wished to hear a debate in the English House of Commons. He presented himself to the door-keeper, and asked to be shewn to the place set apart for Irish members. The door-keeper asked his name, and the place which he represented. The former query was readily answered, but the latter could not meet a reply. 'We are obliged to be particular,' said the officer; 'for Barrington the pickpocket got admittance here some nights since as an Irish member.' 'Really, I forget the name of my borough,' said this worthy representative of an independent constituency; 'but if you bring me the Irish Directory, I will shew it to you immediately.'

Irish Prophecies.—'False prophecies have been often used by the lovers of addition in Ireland, as the most powerful stimulants of its enthusiastic population. It is not long since the whole island was thrown into confusion by a misprint in a ridiculous commentary on the Revelations. Pastorini's Prophecies, as this precious work was named, contained a calculation by which it appeared that the year 1835 would be the era of the restoration of the Catholic religion. It was unfortunately printed 1825; and the alarm which consequently prevailed through the entire of that devoted year, will not easily be forgotten. The question of Emancipation was then in debate. Pastorini's Prophecies, whimsically enough, furnished both parties with an argument—the more valuable because it was perfectly novel. One side used it as a threat, the other as a warning, until the delusion became so extravagant as to cure itself, and perished in a storm of ridicule.'

An Irish Protestant Bishop.—'In the county of Cavan, little or no blood was shed. This was partly owing to the exertions of Philip O'Reilly, the head of his illustrious family, and partly to the respect which the Irish had for the character of Bedell, bishop of Kilmore. Bedell was one of the very few prelates of the established church who regarded the people as the principal objects of his charge. He was deeply impressed with the necessity of winning the affections of his flock, and anxious to redeem the establishment from the opprobrium of being a church without a congregation. For this purpose, he procured a translation of the Bible into Irish, and circulated copies at his own expense. The apostolical simplicity of his character, his affectionate manners, and his pure zeal, attached to him the hearts of the lower ranks; and even the Romish clergy regarded him with esteem and admiration. His house was the place of refuge for all the English who had been driven from lands in the neighbourhood, and there they long continued unmolested, protected by the general respect felt for the bishop. He was subsequently removed to the quarters of the army; but continued to be treated as a companion rather than a prisoner. So convinced was this pious man of the justice of the Irish cause, that he drew up the remonstrance which they transmitted to the Castle, in justification of their having taken up arms. During his illness, he was attended with the greatest care, and his dying moments were soothed by every attention which ardent attachment could dictate. He was interred with military honours by the Irish soldiers, who had no better way of shewing respect to his remains; and, when the grave closed over him, all joined in the simple prayer, "Requiescat in pace, ultimus Anglorum!"'

Irish Landlords.—'The fable of the boy and the goose that laid golden eggs has been often

faithfully and fatally realised in Ireland. The landlord that robs his tenantry of a fair share of their profits, is his own worst enemy; he destroys all motives to industry; he puts a stop to the improvement of his own ground; he actually offers a premium for exhausting the fertility of his own land. If no better motive has any influence over the minds of Irish proprietors, self-interest ought long since to have shewn them the ruin that such shortsighted avarice was bringing on themselves as well as on their country; and it might, if miserable pride had not interfered—the pride of shewing an enormous rent-roll, in which the first figure to the left was rarely significant. 'It is well to have at least the name of the thing,' is recorded as an Anglo-Irish proverb in the earliest times; and this love of the name, without the reality, continues to the present day. It is easy to swell the nominal income, by demanding £10 per acre for ground not worth half the sum; but the tenant will be unable to perform his promise. In many such cases, he will pay very little; in most, nothing.'

There are some odd misprints in this volume—such as "the bay of Limerick in the county of Kerry," p. 196, for *Smerwick*, we presume. As we before stated, we refrain from criticism; and recommend Mr. Taylor's volume as a fairly executed compilation; but as nothing more: and while we readily accord it this praise (sufficient for a contribution to a monthly miscellany or library), we have felt ourselves called on to abate its pretension to any higher character. A sterling history of Ireland is a great desideratum.

The Gem: a Literary Annual. 12mo. pp. 276. London, 1832. Marshall.

WITHOUT taking any very high literary station, this is a pretty and amusing volume. "The Story of Fiesco" is told in the peculiarly graceful style of the author of "May you like it;" there are some pleasant poems by Mr. Praed; "the Disappointed Politician," a lively sketch by Mrs. Moodie; "a Tale of the Desert," by Mr. Carne—one of the best we have seen of his many picturesque and eastern stories. If the worst come to the worst, and revolution, as many "most respectable individuals" apprehend, shall change the position of social life, Mr. Carne will still have a resource; he may set off to the East, and turn story-teller-in-chief to the Arabians. "Jane" is a very interesting tale by Mrs. Norton; and Mr. Hollings has some exquisite poetry. "Lanes to the Wild Fern," by him, we like so much that we shall quote them.

"Thy place is not where art exults to raise the tended flower,
By terraced walk, or decked parterre, or fenced and shel-
Nor where the straightly levelled walls of tangled boughs
The sunbeam sweeps the velvet sward, and streams
through alleys green.

Thy dwelling is the desert heath, the wood, the haunted dell,
And where the wild deer stoops to drink beside the mossy
And by the lake with trembling stars inlaid when earth is still,
And midnight's melancholy pomp is on the distant hill.

But fairer than the lightest bud on spring's fresh couch
Which lies,
And fairer than the gentlest flower which glows 'neath
Or autumn's soft and mellowed tints upon the fading
tree—

Companion of the left and worn I thy leaf appears to me.
For I have loved where thou wert reared in greenest
strength to stray,

And mark thy feathery stem upraised o'er lichen'd ruin,
Or in the fairy moonlight bent to meet the silvering hues
Or glistening yet, when noon was high, with morn's un-
vanished dew,

And if the place were mine to choose, when being's night
should call,
Where, on this ever-verdant earth, to share the sleep of all,
My grave should be the mountain's height, where gusts
were sighing lone,
And thou in graceful pride wert nigh to deck the funeral
It is a vain and baseless trust, by erring thoughts im-
prest;
But how resides its sleepless power within the musing
That yet the soul shall wander back from that far distant
shore,
And linger by its wonted haunts, and where it strove
Thus to its false and frail above the yearning spirit clings,
Thus lingers human love below, with unspiring wings:
And what on life's o'erclouded way one gleam of joy has
cast,
We fondly think shall still allure when life—grief—toll—
are past.

To these we add another, by an old friend—
Bernard Barton.

"The Broken Pitcher; or, What shall I do?"

When Macedonia's madman wept,
A conquer'd world his own;
When Xerxes mourn'd with prescient eye
His armies overthrow;
I pity not the Grecian's pangs,
The Persian's vain remorse—
For who can sympathise with tears
When selfish is their source?

When royal Edward, kindly boy,
In youthful virtue's bloom,
Shed tears, ere he could sign the scroll
That seal'd a subject's doom;
I well remember, ere the fount
Of tears in me was dry,
How, when I read of his, they claimed
My willing sympathy.

But tears there are which seem so bright,
And clouds of care so brief,
That while our sympathy they claim,
They waken not our grief:
Their eloquence surpasses speech,
From nature's fount they flow;
They drop from childhood's guileless eye—
They dwell on childhood's brow.

Such, gentle maiden of the moor,
I fancy thine may be;
And such the pangless sympathy
Thy grief excites in me.
I pity much thy pensive look,
Thy sister's brow of care;
And yet I cannot sorrow long
For such a lovely pair.

For your's are hearts that cannot long
By anguish be depressed:
'The tear forgot as soon as shed,
The sunshine of the breast'—
These are your portion, and with these
You cannot long be sad;
Each eye and brow will soon be bright,
Each heart will soon be glad.
Then turn ye from the gushing spring,
And seek your humble cot;
There tell, with childhood's artless truth,
Your pitcher's hapless lot:
No longer stand in doubt and fear,
And say, "What shall we do?"
Anger to pity must give place
With innocents like you.

And may no heavier grief befall
Your path in after years,
Than this which fills your little hearts
With brief regrets and fears:
Until that hour when closing life
For emblems shall reveal
The pitcher broken at the fount—
The citizen's shattered wheel."

"The Pic-Nic at the Sea-shore," by an American lady, is very amusing: we quote an agreeable picture, to be sure, of a Transatlantic watering-place.

"I was told that many, on arriving at night, could not, on any terms, procure either beds or bed-chambers; that gentlemen had been glad to sleep in gigs, or on the dining-room table; that ladies had been obliged to sit up all night in their travelling dresses, for want of a spot to lie down in; and that, after dusk, there was generally a prowling through the rooms, for the purpose of purloining pillows,—the thieves being those unfortunate fair ones who, in the general scramble, had been able to obtain only bolsters to their beds; and that, next evening, the stolen pillows were stolen over again by the 'last arrivals.'"

Well,

"Call it but pleasure, and the pill goes down."

We must add a signal specimen of ingenuity—the house had no sign; “but in one of the front windows was a lemon, sitting on the bottom of an inverted tumbler, and a bottle of liquor standing beside it—therefore, we knew it to be a tavern.”

There is rather an over-abundant supply of minor poetry; and we recommend the editor, next year, to advise his “talented pens” to leave out the Loves and Graces: Cupid and Venus are as much out of fashion as patches and hoops.

Frankenstein; or, the Modern Prometheus.

By Mary W. Shelley, author of the “Last Man,” “Perkin Warbeck,” &c. *The Ghost-Seer.* From the German of Schiller. Vol. I. *Standard Novels, No. IX.* Colburn and Bentley.

VIGOROUS, terrible, and with its interest sustained to the last, *Frankenstein* is certainly one of the most original works that ever proceeded from a female pen. The merits our feminine writers possess, are tact, feeling, the thoughtfulness born of feeling, a keen perception of the ridiculous, or a touching appeal to sympathy. Not one of all these is the characteristic of the work before us; it appeals to fear, not love; and, contrary to the general *matériel* in the writings of women, has less of the heart in it than the mind. The character of the enthusiastic young student, with whom knowledge is a passion, is powerfully drawn; and we know, in all our imaginative literature, few scenes more appalling than where Frankenstein is pursuing his monstrous and vindictive enemy over the frozen deserts of the ocean. We remember being greatly struck with this work on its first appearance; and our second reading has revived all our early impressions: the romantic excitement of its pages well repays their perusal. We should recommend them on the same principle that physicians prescribe alteratives. A clever frontispiece represents the moment when Frankenstein rushes away in horror from the frightful shape to which his science has at length communicated life. The room and the accessories are good; but the figure is more gigantic than frightful, and the face is deficient in that supernatural hideousness on which the author so especially dwells. The vignette is one of the sweetest in attitude and expression we have seen. *The Ghost-Seer*, which succeeds, is just such a story as we can imagine Schiller telling—picturesque, mysterious, worthy of the Venice in which its scenes are laid. The story is so well characterised in the preface, that we cannot do better than extract the passage.

“This singular romance was written in Dresden, in which town Schiller became enamoured of a beautiful lady, who has been designated, by some of his biographers, as ‘Fraulein A—.’ The intercourse which subsisted between the poet and his charmer appears not to have been of the most reputable kind; but it is certain that, for a time, she held exclusive possession of his heart, and that she even influenced his writings. She was the original of the Princess Eboli, in his play of Don Carlos; and it is probable that his passion for her might have suggested that important part of his story of ‘the Ghost-Seer’ which delineates the mad love entertained by the prince for the lady whose fascinations first enthralled him, as he saw her under the rays of the setting sun, praying in the evening solitude of the church in Venice. During his residence in Dresden, and whilst under the intoxicating influence just mentioned, Schiller’s mind might well be sup-

posed to have been in an unsettled state; but, though unguided by any determinate and wholesome purpose, it ‘hovered among a multitude of vast plans,’ and was on the watch for any object that might give consistency to his views. ‘The Ghost-Seer’ is the first product arising out of this mental fermentation. Its origin may be traced to the tricks of a certain Count Cagliostro, the prince of quacks, whose juggleries were, about that time, turning the heads of the good people at Paris, who paid their money lavishly, in order to be terrified, and to ‘snatch a fearful joy.’”

There is but one fault in this highly wrought narrative, which is, that it does not finish in the same volume. Now this, in our opinion, is one of the greatest errors into which the Library of Standard Novels can fall. We are all aware, that, to the great majority of readers, the end is the most important part of a fiction; and that end they like to learn at once. By the time one, two, three, or more months have elapsed, the interest so highly excited has become a dead letter, the story is half-forgotten, and the gratification of knowing at last is a scant recompense for not knowing its end at first. It is true that the second part of ‘the Ghost-Seer’ was not published in Germany till lately; but it would greatly have added to its English popularity, could both parts have been translated and published together.

It is in vain to give an idea by extract of the intricate proportions of this story; and the narrative we quote is a whole by itself, though it illustrates the progress of that in which it is interwoven. We need only premise, that the Sicilian who tells the tale has just been exposed in some juggling impositions by the same mysterious personage who acts so important a part in his own drama.

“Above five years ago, being at Naples, where I practised my art with success, I became acquainted with a person of the name of Lorenzo del M—, chevalier of the order of St. Stephen—a young and rich nobleman of one of the first families in the kingdom, who loaded me with civilities, and seemed to have a great esteem for my occult science. He told me that the Marquess del M—, his father, was a zealous admirer of the cabala, and would think himself happy in having a philosopher like me (for such he was pleased to call me) under his roof. The marquess resided in one of his country seats on the sea-shore, about seven miles from Naples; and there, almost entirely secluded from the world, he mourned the loss of a beloved son, of whom he had been deprived by a fatal and melancholy accident. The chevalier gave me to understand, that he and his family might perhaps have occasion to employ my secret arts in obtaining some very important intelligence, to procure which every natural means had been exhausted in vain. He added, with a very significant look, that he himself might at some future period consider me as the author of all his earthly happiness. I did not choose to press him for an explanation. The affair was as follows:—Lorenzo, being the youngest son of the marquess, had been destined for the church. The family estates were to devolve to the eldest. Jeronymo, which was the name of the latter, had spent many years on his travels, and returned to his country about seven years prior to the event which I am about to relate, in order to celebrate his marriage with the only daughter of a neighbouring count. This marriage had been determined on by the parents during the infancy of the children, in order to unite the very large fortunes of the two houses. But
